Norman MacLeod. The latter had, in 1772, inherited from his grandfather both the chiefship of Harris and a debt on the property amounting to some £50,000. Captain MacLeod, who skippered the East Indiaman *Mansfield*, did much to stimulate better conditions in Harris, and advocated the generation of a fishing industry. In the face of opposition and ridicule he showed by practical example what could be done to make a success of the herring fishings, introducing a number of east-coast fishermen with Orkney trawls to teach the inhabitants, and reaping a good harvest from the fishings off Rodel, despite the dismal auguries uttered by the Harris-folk. He improved the local harbour [503]
accommodation and erected a storehouse for salt, casks and the 488
like, he built a factory for spinning woollen and cotton thread, 288
and twine for herring-nets; he advanced money to those fishermen 452

and footpaths. Until this time, the greater part of the district of Park was accessible only on foot. Roads were 'at best rough narrow paths where rushes and grass grew between the tracks'. The Act improved the old *frith-rathad* (rough tracks) to such an extent that, says a report of 1902, 'a marked improvement has taken place in school attendance by their formation'. The opening up of the island certainly benefited the people. Though the moor tracks might give a more direct route to Stornoway, the roads at least offered a hard surface for horse-drawn cars and carts. The numbers of vehicles accordingly rose, and for long after the turn of the century the horse enjoyed a monopoly. Motor cars were beginning to be read about in the days-late newspapers brought to the island, but not until 1917 were the first complaints heard about cars tearing up the surfaces of the roads. Slowly but surely the inevitable pioneers emerged with their 'tin lizzies'. By 1925 there were an estimated 250 vehicles in Lewis—and traffic congestion was beginning to be a problem. The relative speed of cars was still something to be wondered at too: it was progress indeed to be able to travel from Ness to Stornoway and back again between a late breakfast and an early tea. But for all this progress, one could still buy a good dog-cart in excellent condition, to seat six people, for £9. A two-seater trap could be had for £6 10s; a set of harness cost 30s. And as for fuel—the best quality oats were 10s 6d per cwt. Indeed, it was not until 1943 that Stornoway Town Council sold its last horse—and only because no one could be found to look after it.

When Sir James Matheson came to Lewis in 1844 there was only one horse-drawn vehicle on the whole island. By 1872 eighty-seven wheeled vehicles were using his new roads. A pioneer of the wheel-carriage service, D. K. Henderson, began business in the 1850s. He was the first to carry mails and held a contract for the Stornoway to Tarbert run until the GPO introduced its own vehicles. As the motor took hold Henderson changed over and was the first to establish a motor-transport business on the island. Not all the local vehicles were of recognised makers' designs. A writer in the *Stornoway Gazette* in the mid-twenties commented on the fact that only the engine and the chassis of the local buses were imported. Bodies were then erected by carpenters . . . and

OVERLAND ROUTES

boat-builders; many of the bodies were 'fearfully and wonderfully made', an understatement that did not go unnoticed by those who had to travel in the emergent public transport. Combined interests led to the formation of the Lewis Motor Owners' Association which agitated for better roads; existing highways were being pot-holed with alarming and uncomfortable rapidity to the detriment of their vehicles.

Very slowly did public transport become co-ordinated for the benefit of the travelling country folk. Routes were planned and approved. In 1932 there were daily tours for visitors to the island, a series begun by the late John Mitchell, a pioneer in the provision of bus services, with Stornoway as the 'Rome' of Harris and Lewis. In 1935 he was granted permission by the Traffic Commissioners to run daily services between Stornoway and Rodel.

The expansion of the Harris Tweed industry was responsible for developing transport, both for conveying yarn to weavers throughout the island and for mill-workers. In May 1933 John Mitchell began a suburban bus service for the people of Stornoway, though more for the conveyance of workers in the fish trade; tweed-mill workers and others were not slow to take advantage of it. In the following month, June, Mitchell ran a bus from Stornoway to the Market Place just outside the town at Bannadrove (Beinn na Drobh—hill of the market), for a 6d fare. In October of the same year, Peter MacAulay provided a twenty-seater Bedford bus for the Carloway to Stornoway run, and this vehicle was not a home-made affair. Meanwhile in Stornoway, a traffic census showed that, on average, 628 vehicles crossed Cromwell Street, the main thoroughfare, every day—and 799 pedal cyclists.

POSTAL SERVICES

Until the late years of the nineteenth century, the lack of postal facilities were not considered a great disadvantage: few people wrote letters.

The *Scots Magazine* in 1756 noted that 'A Post Office is to be established at Stornoway, in the island of Lewis, from the fifth of July next, with packet-boats for maintaining a regular com-

FISHING

of Lord Seaforth's conduct in this matter. They alleged that he 'draiv in hither an number of strangers who daylie resorts to and fra Holland to the Lewes and continent next adjacent (the Ross mainland presumably) and has caused them be answered of all such commodities as these bounds affords, as nameli with fishes and beeves quhilkis with the hyde and tallow, with manie utheris commodities they transport to Holland.'

To satisfy the Royal Burghs, Seaforth had some of his Dutch friends sent away. But several Dutch families remained in Stornoway until the outbreak of hostilities between England and Holland in 1653.

In Harris, similar efforts were promoted by Captain Alexander MacLeod, who in 1779 bought Harris, together with St Kilda, for £15,000 from the commissioners acting on behalf of General Norman MacLeod. The latter had, in 1772, inherited from his grandfather both the chiefship of Harris and a debt on the property amounting to some £50,000. Captain MacLeod, who skippered the East Indiaman *Mansfield*, did much to stimulate better conditions in Harris, and advocated the generation of a fishing industry. In the face of opposition and ridicule he showed by practical example what could be done to make a success of the herring fishings, introducing a number of east-coast fishermen with Orkney trawls to teach the inhabitants, and reaping a good harvest from the fishings off Rodel, despite the dismal auguries uttered by the Harris-folk. He improved the local harbour accommodation and erected a storehouse for salt, casks and the like, he built a factory for spinning woollen and cotton thread, and twine for herring-nets; he advanced money to those fishermen who were interested for the purchase of boats and gear; and he provided them with rent-free cottages with a ground-patch on which they could grow potatoes. He built roads between the village of Tarbert and the two jetties he made there, and he erected a schoolhouse and an inn. But all this hard work to put Harris on some realistic economic basis came to little. The native population were slow to appreciate the potential income lying about them.

The potential of the sea was of course eventually realised, particularly where the fishing grounds were favourable, Stornoway

LORD LEVERHULME'S FISHERIES

When he pulled out of Lewis to go south to Harris, he offered—such was the character of the man—as thanks for the '98 per cent support' he got from the people of Lewis, to each Lewis crofter his own croft as a free gift, and the Lews Castle, together with all his property in Stornoway, to the people of the town.

In 1919, Leverhulme became proprietor of Harris, and concentrated his efforts in Obbe, now called Leverburgh, in South Harris. The harbour at Obbe lacked the natural advantage which Stornoway had, so he spent large sums on making it navigable. Rocky obstacles were blasted away; numerous buoys and beacons were set up to guide vessels into harbour; new quays were built; and kippering sheds, and other buildings necessary for packing and curing herring were erected. Among his other undertakings in Harris were the provision of a mill for making tweeds, and he bore half the cost of the 5½ miles of road between Leverburgh and Finsbay. In 1925, after a visit to the Congo, he died in Brussels. His Harris schemes came to an abrupt end. And the remains of industrial history are still to be seen in the quietness of the little township named after one of the most stormy of business petrels that Britain has ever seen.

Tourism

Tourism has always been a perfunctory and casual affair, until the introduction of the fast ferries which now link the mainland (via Skye) with the Outer Isles. Some 10,000 cars cross each year from Skye to the Hebrides. In 1913, the Stornoway Tourist Association had a struggle to increase the number of visitors to the town, to establish it as a tourist resort. It is much the same today with the Western Isles Tourist Association, which is having difficulty in integrating tourist facilities with crofting activities. In Lewis, the Stornoway Trust has assisted in establishing pony-trekking, a venture which has the potential to mirror the success of a similar one in the Isle of Skye.

PRESENT INDUSTRY

Almost an echo of the kelp-burning industry is the alginate industry. It provides employment for only small numbers, but is a

2: Thompson H-4, 5 (no date) 1973 ES10 Highland Scots ES10
Lewis and Harris

(2,620 ft); grouped around this are the lesser peaks staring stark 631
and treeless to the skies. At the feet of these hills are the small 133
villages straggled along the shores of West Loch Tarbert. Much of this area is owned by the proprietors of Amhuinnsuidh Castle, a magnificent structure built by the Earl of Dunmore in the last century; the hills lying north of it are rich in red deer. The road [491]
past the castle trundles on until it peters out at the far-east village of Hushinish, beside a glorious scimitar-like curve of silver sand. Beyond Hushinish is the Island of Scarp.

The road along the shores of East Loch Tarbert ends at the 631
village of Kyles Scalpay which overlooks Scalpay island. The [491]
Bays of Harris hold in their crevices the scattered groups of houses [361]
here and there, where an inlet of the rocky coast affords some [133]
anchorage and where a patch of ground is suitable for cultivation. Tortuous, winding footpaths have been gradually replaced by [487]
narrow roads connecting the townships. Lack of sufficient re- [161]
munerative employment has led to considerable depopulation. [162]
Fifty years ago the population of the area was just over 5,400; it is now about 2,900.

The south of Harris is better known for its association with Lord Leverhulme. Obbe, later Leverburgh, became the centre of his schemes. He built a large pier, huge kippering sheds, houses for the workers, roads and lighthouses, and blasted away underwater rocks which hindered free navigation. The bulk of this work was complete in 1924, but when he died (in 1925) his successors, in the cold light of economics, decided to close down the embryo industry and realise its assets. The harbour works had cost £250,000; they were sold for £5,000 to a demolition company. Leverhulme's memorials are still to be seen. The west coast of Harris is now becoming known for the long stretches of shell sand and the green machar-land beside it, a true delight for the tourist seeking isolation.

Tarbert is the central village in Harris, with a population of 631
about 400. It is a thriving community, nestling at the foot of 621
Beinn an Teanga and at the head of the sheltered anchorage of East Loch Tarbert—sheltered from the prevailing south-westerly winds and from the Atlantic storms. The car ferries give direct [505]
contact with the Scottish mainland, via Skye, and Tarbert also

3: Geddes K-4, 5 (1919-1952) 1955 ES10 Highland Scots
Lewis and Harris

131 Before the making of
174 roads, it was ease of sailing which united island peoples and their territories. One can wade or drive, at low tide,
• [491] over the fords that unite the Isle of Benbecula with the two Uists, North and South: in fact, a bridge now connects
[505] Benbecula with South Uist. But only the roughest of
[491] hill tracks led through the hills of North Harris from the 'Tarbert' or Isthmus of Harris to the nearest habitation at the head of Loch Seaforth or Loch Erisort, in the Lews. This is a distance of some twenty miles, or a fair day's tramp for an unloaded man, and far too much for a return
[823] journey in one day. Hence separation of territory and name was natural. This separation no longer exists as
131 there is now a good 'bus service from Rodel via Tarbert
178 to Stornoway which links Harris with the daily Kyle to
823 Stornoway steamer. In this book, the Island, or the
494 Islanders, refers to Lewis-and-Harris with its people, as one.

101 Lewis is included in Ross-shire (of which the county town is Dingwall, north of Inverness) and Harris in
131 Inverness-shire, together with the rest of the 'Long
634 Island'. The county boundary cuts across the six-mile isthmus north of the hills of North Harris, from the in-reaching Loch Seaforth WNW. to Loch Resort (Fig. 8). All the Outer Hebrides are now included in the Parliamentary constituency of the Western Isles. Proposals to unite the Island under one District Council, or the Outer Hebrides under one County Council, are more favourably viewed in Stornoway than in Harris or the
632 Southern Isles. Harris forms one civil parish, while Lewis is divided into four: Stornoway, Barvas, Uig and Lochs.
[133] The Lewis parish boundaries traversing the moors are inset
[131] in Fig. 8 so that their trends can be readily grasped, and the inhabited portions of the parishes quickly located (p. 50).

THE ENVIRONMENT

13 The district of Park lies in the parish of Lochs in south-east Lewis, almost cut off from the
101 rest of Lewis and Harris by Loch Erisort to the north and Loch Seaforth to the west. The district may be divided into two regions by Loch Shell and the valley to the west: this subdivision is meaningful physically, historically and from the socio-economic point of view.

13 The northern part of Park is a low, mamillated, ice-scraped plateau at an average altitude of 250 feet and a maximum altitude of about 450 feet, developed on Lewisian gneiss, a resistant acid rock of Pre-Cambrian age. Glacial erosion has scoured the area and expanses of bare rock are everywhere apparent. Coarse drift deposits are scattered throughout the area, but are more continuous along the southern shores of Loch Erisort between Shieldernish and Caversta, and at the head of Loch Ouirn. The cool, humid oceanic climate has led to the widespread accumulation of peat, and in the interior there are extensive areas of blanket bog. The Minch coast is rugged with cliffs attaining a height of 350 feet at Kebock Head, but there are several sheltered bays and inlets around which the crofting townships cling to the steep slopes. Along the more sheltered shores of Loch Erisort cliff features are almost absent and the physical landscape is less harsh and uninviting.

The mountainous area south of Loch Shell, an eastward continuation of the North Harris hills, attains a height of 1,885 feet. Glacial erosion has had more spectacular effects than in northern
8- 14 Park and corries and glacially modified valleys are numerous. Southern Park is now uninhabited but during the early nineteenth century a small population was scattered round the shores of the peninsula on areas of drift deposits.

There are no climatic statistics for Park, but the Stornoway figures can reasonably be applied to northern Park. The mean annual temperature for Stornoway is 47°F. ranging from 41°F in January and February to 56°F. in July. The mean annual rainfall in Stornoway is 50 inches, with May and June the driest months, but on average there are 260 rainy days. Wind, however, is the most notable element in the climate: an average of 155 days have gusts exceeding 38 m.p.h.

Soils are thin and immature, except on isolated patches of deeper drift: vegetation is dominated by heather (calluna vulgaris) purple moor grass (molinia) and sphagnum, and there are few trees, stunted rowans being almost the only species; trees are confined to islands in lochs and cliffs inaccessible to stock.

861 The aspect of Park is thus one of desolate moorland, and the human communities are without exception distributed round the coasts; the Minch coast townships are situated on sheltered bays or inlets and it is clear that the harvest of the sea was the original attraction rather than the agricultural possibilities on steeply sloping, rocky terrain.

18/ Park is the most isolated area of Lewis apart from South-west Uig. A sea-journey of only nine miles separates Lemreway in the south from Stornoway but the overland distance is 36 miles, which takes more than two hours by the daily bus service. Until 1924, there was no through-road beyond Habost although the Congested Districts Board provided a grant for the making of a road between Gravir and Cromore in 1901; in 1913 this road was extended to Garyvard. With the coming of the road, and the decline in the numbers of fishing boats, the people of Park have ceased to travel to Stornoway by sea. In terms of distance, Park is now more isolated than ever before.

101 Isolated, poor agriculturally, and without any industry, Park is a "Region of Difficulty" with
13 a rapidly declining population; basically the environment has little to offer in the twentieth
16 century.

ds . . . . . .

131 Lewis is about 40 miles long. The distance from Stornoway to the west side of the island is about 15 miles. Along a tar-macadam road through Barvas parish 361 from its northeast tip toward the southwest, about 491 18 villages are clustered along a relatively flat coast for as many miles until the land becomes hilly. The road then narrows and takes hairpin twists around blind, 361 stony corners. Villages become fewer, and nestle in protected coves or string haphazardly across the face of the hills.

Shawbost (from the Norse sja or sjo meaning "sea" [632] and bost or bolstadhr meaning "dwelling" or "homestead"), a village in the parish of Barvas, lies on three low hills on the west coast. Shawbost is 18 miles from Stornoway on a circular route in which Stornoway and Shawbost are antipodes.

172 On the south side of Shawbost bay, huddled beside the sea strand, is a cluster of ruins called Sean Bhaile (the old village), believed to have been occupied over 200 years ago when fishing was important in the local [348] economy. Banks of the streams are dotted with the ruins of old grinding mills and ovens for drying grain. [312] Fresh-water springs are still kept clear of rushes, although water is now piped to most houses from a nearby ooo loch. Hundreds of place names are known to the villagers

THE CROFTING TOWNSHIP

The crofting township is not quite akin to the English or Lowland village. Primarily it is a collection of dwellings of families who, as social units, gain their subsistence from the land surrounding the houses. The smallest number for a township is four family units. A functional unit of four men was the minimum necessary for a boat crew, or for the teamwork necessary to cultivate land; co-operation was essential if all four families were to survive. And from this grew the same spirit of communal work which in Lewis is seen at its best in the efforts to reclaim peat bog and turn it into fertile grassland.

Hebridean townships come close to being the nearest approach to a classless society. The shape of a township is largely dictated by the nature of the surrounding land. The shape of most of those in Harris and in Lewis is either scattered or linear (houses disposed in line at varying distances from each other), with little natural cover, either plantation or scrub. Often the main road runs through the township; some have begun to develop lateral roads, to give, from the air, the appearance of planning on a grid system. Where gardens are cultivated, the produce tends to be a summer vegetable supply for the household, little if any finding its way to Stornoway shops for sale. Peat is the usual fuel, though in townships near to the centres of Tarbert and Stornoway coal is burned; the cost of freight, however, makes it expensive.

Most of the townships are owned by commercial companies; individual lairds own some five dozen; the remainder belong to public bodies and trusts. The actual distribution of ownership of land on the island is as follows. Harris is virtually owned by individual lairds; a small percentage is owned by commercial companies. The Lochs region of Lewis has a mixed ownership: commercial companies, lairds, and public trust, the former being the largest. Stornoway parish is wholly owned by public trust. The Ness district is virtually the property of commercial companies; a small fraction belongs to public trust. The Uig district is the same, the smaller proportion, less than 10 per cent, being the concern of an individual laird.

In Lewis, the public body mentioned is the Stornoway Trust,

There were, of course, other types of flights before 1948. In 1937, Captain Fresson took the first sick person off the island on charter—the beginning of the air-ambulance service so valuable to the islanders. During World War II, certain RAF mails were flown between Glasgow and Stornoway, on which there were first covers (December 1943, Glasgow/Stornoway; December 1943, Stornoway/Glasgow; and January 1944, Glasgow/Stornoway). The present air services are supplied by BEA and Loganair Ltd. The BEA plane route is Glasgow/Benbecula/Inverness and return. Loganair offer a service Glasgow/Benbecula/Stornoway and return. In recent years this small firm has built up a most valuable inter-island air link.

OVERLAND ROUTES

The history of overland communications in the island is a short one, though it does, like American history, have many characteristic highlights. In early times getting from one place to another was simply a matter of following well-worn tracks across the moorland, skirting lochsides and marshy lands and just taking the shortest distance possible between starting point and destination. Considering the length and breadth of the island, it is surprising that it was not until Sir James Matheson's appearance in Lewis that road-making was undertaken with any determination. This activity stemmed largely from the desire to get something in return for the outlay involved in keeping literal death from starvation clear of the doors of the island folk.

The report of the Rev James Headrick (prepared for Lord Seaforth in 1800 and published about 1820) indicated that the provision of roads would be of great benefit to the island. A footnote in the report (of probable date 1816) urges assistance from Parliament or the Board of Fisheries to complete the road from Stornoway to Loch Roag, which had been begun by Lord Seaforth. There is a bitter complaint that though the Seaforth property bears a large share in the county assessment, 'not a penny of public money has ever been laid out in Lewis'. Another footnote records that the road from Stornoway to Aignish in the east was made in 1815. No large undertakings followed Mr Headrick's

many recommendations, and though some road making began in 1791, progress was slow; in the course of fifty years, only 45 miles of road were created, less than a mile for each year. When Sir James Matheson took over in 1844 and planned to open up the island, he started with these 45 miles. On his death in 1878 there were more than 200 miles of road on which, with the necessary connecting bridges, he spent £25,593.

In the late autumn of 1882, a great gale swept away the hay and corn crops. This, added to the complete failure of the potato harvest, led to distress throughout the island. At a meeting called in Stornoway in December it was resolved that a memorial be forwarded to Mr Gladstone, then Prime Minister, craving aid from Government resources, or that some form of public works be started. No immediate response was made to this appeal. However, as the matter had been raised, investigations were made and eventually the Western Highlands and Islands (Scotland) Works Act, 1891, passed into law. It authorised, *inter alia*, the expenditure of a sum not exceeding £15,000 on constructing and improving the road between Carloway and Stornoway, and certain other roads approved by the Secretary for Scotland.

That Carloway was chosen as a terminus from Stornoway is significant. At the time it was probably the best fishing centre on the west coast of Lewis. Loch Carloway, which branches eastward from the mouth of Loch Roag, is a safe harbour and offers easy access; and any attempt to develop the real fishing potential of the district was a step in the right direction. At the time, the road from Carloway to Stornoway was a wandering one, 23 miles long, badly formed in many parts and ill-suited to heavy traffic. The proposed road was to be only 16 miles long and would, it was said, afford easy and quick access to Stornoway; fish would arrive there in fresh condition, suitable for transportation by boat to southern markets. As soon as the necessary plans were prepared and a contract drawn up, the work started. Progress was rapid, but financial difficulties arose. The contractor went bankrupt and the engineer was dismissed. The undertaking came to a complete standstill. Of the 16 miles, only 8 were completed. About 5 miles were partially made; the remaining 3 miles lay untouched.

The 1891 Act brought into existence a number of minor roads

men served in the various regiments at the front in South Africa, and over 300 in the Royal Navy.

In 1796 there were sixty-seven slated inhabited houses in the burgh, twenty-six of which had been built since 1784. Before this date most of the houses followed the constructional pattern of those found in rural Lewis. In 1838,

> Stornoway was, within the last twenty years, only a small fishing village, but from the spirited and patriotic exertions of Lord Seaforth, the proprietor, and the grant of irredeemable feus for building, it has become a place of considerable importance as a fishing station. It has a post office; and a packet sails regularly once a week with mail and passengers. No place in the North of Scotland, and in an insulated situation also, has made more rapid strides at improvement, both in a domestic and commercial point of view, than Stornoway.

COMMUNICATIONS

Mention of the sailing packet indicates the tedious manner in which mails came to the town for subsequent distribution in the island. Letters went by mailcoach north to Dingwall, thence by mail-gig west to Achnasheen. Because there was no road from Achnasheen to Poolewe, about thirty miles away, they had to be carried on horseback. The weekly sailing packet then picked up the bags, for which cargo the owners were paid £150 per annum. A letter from London to Stornoway cost 1s 5½d; the smallest enclosure made it double that amount. The mail-packet was often held up by bad weather. It was a wind-blown sailing ship that brought Stornoway the result of the Battle of Trafalgar and the death of Nelson, an event in which a number of Lewismen also took part and died; in St Columba's churchyard at Eye there can still be seen a Trafalgar officer's gravestone. A fortnight after this news arrived, the packet from Poolewe brought its stale message.

In 1844 seventy boats, ranging from 15 to 150 tons, were working out from Stornoway. The *Gazetteer* for Scotland for that year says, 'The grand trade of the place consists in the exchange of the produce of the fisheries and the kelp shores, for British manufactured goods and foreign produce.

population as it is one of accessibility. It is, for e

CHAPTER II

A FIRST IMPRESSION OF SKYE

131 133 Scotland includes among her distinctive characteristics the possession and jurisdiction of more islands, 787, than any other nation in Europe. Stretching along Scotland's west coast for 200 miles in an inner and outer archipelago, the Hebrides account for over 500 of these islands. The Isle of Skye is the largest of the Inner Hebrides. Reference to the map (Figure 2) will show that Skye is forty-nine miles long and from three to twenty-two wide. The coastline measures [184] 350 miles. The total area is 643 square miles. Although less than a mile separates Skye from the mainland at Kyle Akin and Kyle Rhea, the inhabitants are enisled geographically by the sea and culturally by the peripheral position of the Island to the main stream of British society and culture.

The isolation of Skye is due to two basic facts. The topography of the Highland region, with its scenic valleys, cut by sea lochs and flanked by precipitous mountains, has created natural barriers to communication with the cities of Lowland 487 Scotland and England. The second fact is that the transportation 131 133 facilities of the Western Highlands have never been integrated with Great Britain's main communication system. The problem, then, is not as much one of distance from the centers of

[TEXT CONTINUED ON PAGE 30]

Lewis and Harris

(Chondrus), for example, is used as a thickener of milk to make a cheese-like mould. Dulse is also plucked.[1]

The type of coastal form and vegetation alters the relative importance of crofting and fishing—and the balance chosen is significant. (1) Where the coastline is smooth, and leads inland from sandy machar with its clover to sand-ameliorated 'black land' of smooth topography lending itself to ploughing, and the whole is backed by extensive pastures, the tract is relatively well-off for crofting but may be ill-placed for fishing. (2) Where the coast is either indented or salient with rocky loch-sides or steep promontory cliffs, a rolling or rocky topography, little shell sand, and (on the promontories) a shortage of pasture, it is ill-placed for crofting; but it is favourable to fishing either by virtue of sheltered sea lochs or of salient promontories, one or other side of which tends to give relative shelter to the fishing ground (chosen according to the direction of the wind, to avoid being blown on to a dangerous, lee shore). Hence the site of a settlement has had much to do with the choice and opportunities for a communal vocation, from prehistory to the present time, as we shall see.

Significant local characteristics emerge in the names of the ancient districts (inset with the Map of Vegetation, Fig. 8). In the north is Ness (Norse, 'nose' or cape); along the west is Cladach (Gaelic, a stony beach); while in South Harris the western 'Machar' contrasts with the eastern 'Bays'. 'Park', a sheep-run in the early nineteenth century, was the Norse 'East-fell'. In contrast, the parishes of Lewis centre on four churches, linked to the road-system. This radiates from Stornoway in five directions: east, NE., NW., SW., and south to Tarbert,

[1] Pulling dulse (*Rhodymenia*) is one of the 'delights' of Iona as told in a poem long attributed to Saint Columba!

3: Geddes K-4, 5 (1919-1952) 1955 ES10 Highlan
Lewis and

Harris; South Harris is ringed by a road, recently to take in the more isolated 'Bays' town

2. *The Crofts and Crofting Ways*

The prevailing modern unit of cultivation a in the Islands is the croft, the land held indivi each small landholder or 'crofter'. The Angl term croft (Gaelicised as *croit*) meant steadily infield land, manured and never left fallow, a guished from the unmanured outfield with its lo and poor out-turn. This term came into comm the Highlands and Isles in the eighteenth and n centuries with the splitting up of the older unit o tion and tenure, the small joint farm, with its litt fellow-workers or 'small tenants'. By 1830 gro had been replaced by individual holding of crofts, the pasture still held in common, as it is to the pr and an allotted strip of the machar.

The Lewis croft consists of a nominal five crops, of oats, barley (or bere) and potatoes, s with recent additions of turnips, and more ofte hay crop. The word 'nominal' is used becau the nineteenth century the croft had often been s between two or more sons, without addition by re to bring each subdivision up to the acreage of th croft. Moreover, in the hilly southern part of t cultivation is in little patches instead of in continu There, narrow ditches have been dug and the so up to form little ridges about ten feet by four, b by turf. These are known as *feannagan* in Ga English, 'lazy-beds'—a term in use as early as of Burt, two hundred years ago. Thus only a

3: Geddes K-4, 5 (1919-1952) 1955 ES10 Highland Scots
Lewis and Harris

342 adequate air-space, and windows opening at the top and
746 usually kept open by day, in which a woman can work at
178 ease. The Department of Agriculture aided the building
656 of a good standard type. The quality of joinery and
[335] masonry or concrete work improved, one fairly skilled
[333] workman usually directing the householder and friends as amateur builders. The cost of materials was met by a grant, generally of £250, half being repayable by an annual rent of £6 : 10s. for twenty years. Repayments proceeded satisfactorily. No scheme organised by the Department of Agriculture for Scotland won so general a commendation as this of house improvement. It made good use of family initiative and responsibility, with neighbourly co-operation not called for upon a large scale, a township at a time, but in quite a small, personal way. Nevertheless, had more guidance been provided to the builders, the
[464] houses could have been really well built. For lack of this, perhaps, crofters increasingly prefer to pay for skilled work, though helping actively. Appendces I (ii) and II (ii) gives pre-War and post-War statistics.

3. *The Township and its Changing Plan*

361 Where absence of rock and boulder permits ploughing,
[182] the village land is laid out in a series of parallel strips,
[491] aligned with the slope. The road runs either parallel with shore or river, or at right angles to it. The intermixed possession of strips by 'run-rig' characterised the Lowlands before the Enclosures, and is frequent in
[423] the Highlands and Isles. The apparent regularisation of field lines may conceal the fact that an individual holder's plots may be scattered amongst those of others in fixed
[182] run-rig. This is an advantage where quality of land is so patchy, and each man thus gets his share of good and bad

361 The chief advantage of moving uphill to the road has been
178 ease of communication and access to grocers' vans and mill-
311 spinners' lorries; but the disadvantage proves to be the
361 laying on of running water. A much-needed scheme for
491 water supply is now being applied by the Department of
654 Health for Scotland. Scrutiny of a 'quarter-inch' map will indicate the chief facts and tendencies and the conditions they involve.

4. Distribution of Population

162 The distribution of rural population can be closely
311 estimated by inspection of a 'quarter-inch' map, where both the area of cultivation and the house dots are noted. Comparison with parish populations shows that on an average one dot represents seven or eight houses or families and thirty to thirty-five persons. Since there are now no large farms, cultivation indicates crofting, and, therefore, a typical density of one person to a little over half an acre, or 1000–1200 per square mile. Rural numbers over the whole Island show a density of about twenty-five persons per square mile. If the fishing grounds, with a sail here and there on the wide sea, were added, the density would be lower still! A single dot found with cultivation indicates crofts, which are hardly ever found singly. Where no cultivation is shown around a single dot, this generally indicates an isolated stalker's house, a shooting lodge by a road, or a shieling (*dirigh*) out on the moor.

(B) STORNOWAY

1. Site, Plan and Development

361 The plan of Stornoway and its harbour shows three stages in the growth of the town, the first two picked out

CHAPTER NINE

THE ISLAND OF BERNERA AND ADJACENT DISTRICTS OF THE MAINLAND OF ROSS-SHIRE

('Bernera and Barvas Shore')

by

P. Wheeler

131 Of the three main sections of the parish of Uig, the Bernera district, consisting of Bernera Island (Breacleite, Croir, Hacklete, Kirkibost and Tobson) and the 'Shore' (Earshader, Crulivig and London together with the Island of Valtos and the peninsula of Linshader), presents a number of peculiarities due not primarily to physical conditions, but to isolation. Barvas district, though central to most of Uig and similar in many respects, has retained relatively inaccessible overland until the recent building of the road to Ardroil. Bernera District, however, has been cut off from the mainland by the bridge to the main Uig and a further two miles by tractor track over six miles to get from the island, even more than the adjacent mainland settlements of Barvas, Carloway and east-building population. Whether this isolation was relative sufficient vitality to resist the destructive effect of better communications in addition to the general forces eroding rural and especially highland life, remains to be seen.

The district shares the unpropitious physical characteristics described in the introduction. Like the rest of Barvas it is almost totally devoid of valuable mineral resources (1), and the herring and white fish industries have all declined to insignificance and even salmon is exterminated. Lobster fishing is, however, prosecuted by a few men (Appendix 1) to provide a good living but only for a small group of families. The rest depend on crofting or casual employment to eke out the principal source of income, the dole, which is variable, and the problems of permanent or seasonal absence in search of employment have common to the whole district, but little scope for making ends meet with the produce of crofting agriculture.

Settlement history and patterns.

The pattern of settlement in this inhospitable and discouraging environment is partly very old, and partly very recent. At least four brochs are known on Bernera and various standing stones of even earlier date, while continuous occupation from the early Christian era. Traces of old patterns and practices remain, in tangible form as in the persisted in little Bernera, at its oral tradition. All this continuity contrasts towards the very recent network of family relationships that binds the island fabric and to a lesser extent those on the adjacent mainland.

With the exceptions of Tobson, Boeta and Breacleite, all Bernera Island had been cleared by 1851. Resettlement began in 1860 when twelve families were moved from Boeta to Kirkibost, and continued at Hacklete in 1880, and subsequently elsewhere. Occasionally (at Kirkibost) old, pre-clearance crofting patterns were re-adopted, but generally settlement was laid out afresh. The township of Bernera Shore, were also affected by the clearances and resettlement, but to a lesser degree. Some families were left leaving the land under the sheep farmer of West Earshader and Crulivig (Appendix 2). The Bernera Island crofters were allowed to continue their customary use of shellings on the mainland, and the transfer in 1880 of these passages to their present position marked the

(1) A small deposit of bauxite has been exploited in Kirkibost since 1959. Only a few men are employed and the number is not likely to increase.

[TEXT CONTINUED ON PAGE 61]

195 beginning of the resettlement movement which has given the modern crofters of the district almost all the lands formerly occupied by small tenants. This process was completed in the Bernera region even by the township (Inist), 88 working units on the island). If these shares are deducted it will be seen that only Kirkibost and Tobson common grazings exceed in 311 size those of Valtos and Linshader for the existing holdings (see Chapter III for the more detailed 232 information on clearance and resettlement).

364 The ground plans of the existing settlements were considerably, depending mainly on 364 the terrain. Where a township is spread along a fairly straight coast the natural 427 tendency is for the croft boundaries to run at right angles to the coast and for each house to be set on the croft. The best examples of this are Hacklete and Kirkibost, where 'an early nineteenth century (i.e. pre-clearance) crofting township' from which the township was re-settled in 1878. Linshader, London, Crulivig and Earshader also follow the pattern, but here the croft lots are not so regular, but Tobson, with the exception of Valtaig, is unmistakably 'nucleated', a lasting or partial effect of the clearances. Croir also differs: it was laid out in 1851 but the disposition of the planned township, Croir also differs: it organisation. The site of Breacleite is greatly broken by lochs and is very hilly and consequently an essentially regular layout based along a main Loch Breacleite - Loch Big Breacleite axis, appears somewhat complicated. The arrangements in Croir contrast the control exercised by physical conditions at Croir with the subordination of physical conditions to a simple lotting plan at Hacklete, (Figure 28).

Within the township, with the exception of Kirkibost, the distribution of settlement 361 seem to have changed little since the original township, for in most cases the sites of the 361 old and present dwellings are little further apart than is dictated by the contours of the 178 dyrdshore. It would appear probable that black houses are unknown in the nineteenth 178 century except for the farmhouse at 1 Croir (the oldest 'white' house in Bernera). Their 178 houses, (18 Tobson), possibly the lieutenant's house at 1 Boeta, the farmhouse 2 Breacleite at 20 Kirkibost and at West Earshader. However, with the establishment of Congested 178 District Board and of Agriculture grants, housing was improved, early examples 178 being 10 Boeta and 2 Breacleite. The resettled township generally had improved accommodation from the start, but the improvement in housing only accelerated since 1911. In most cases at the present time housing is of very high standard, only one blackhouse and one near blackhouse are still occupied.

312 Water supplies and sanitation are less satisfactory. Most crofts by now have their private water supply, though it is hoped that money allowed may be forthcoming in the near 312 future for improvements. Sanitation varies in standard and in places there are still open 312 latrines, while the inevitable pigsties have water closets. It is worth remarking in this connection that all crofts and most are connected, though not. Electricity has been available since 1952 and is generally used for lighting and cooking, but not for heating. Fuel is cut by the people (peat) and bought (coal). Peat is cheap to those able to gather it themselves. Where, however, help is needed to carry the cut and dried peats to the nearest road, difficulties may arise. The cost of hiring labour for peat cutting may be such that it is cheaper to buy coal.

Communications in Bernera by road is now comparatively easy. Where formerly Loch Roag 364 provided a means of communication between the island and Barvas after the Great War, 364 and the 1927 bridge to Bernera Island, built in 1961, ensured the permanent 364 of access. Linshader is approached by a tarred branch road and the other Bernera districts are open to the narrow and heating road, though four of the six London crofts have no connection with it, and two of the Crulivig crofts, and West Earshader, are somewhat isolated. On Bernera Island the old cart track from the pier at Berrugion across to Tobson and Croir has been somewhat re-aligned since the construction of the 364 of Croir. The old road extend right, as part of the bounds to crofts 2, 3 Croir. The 364 of Croir is still accessible by tractor, though the outlying crofts near Berrugion were still without a road suited to vehicles. The Breacleite crofts are still almost unfarmed. There is a vessel to Hacklete from Breacleite which provides tolerable, though circuitous, communication. Valaisy is one of the most isolated settlements in Bernera, linked with Breacleite rather than with Tobson by the footbridge and causeway paid for by Congested District Board grant about 1903.

CHAPTER ELEVEN

THE CARLOWAY DISTRICT

by

Brian Loughbrough

The seven crofting townships of Upper Carloway, (including Carloway Park), Borroweston, Garenin, Knock Carloway, Dun Carloway and Kirivick form a compact area of land in the north of the Parish of Uig bordering the coast and Loch Carloway. Here the Lewisian gneiss has a thin discontinuous covering of glacial drift which is most extensively developed immediately above the head of Loch Carloway. Three valleys help to determine the layout of the townships and settlements (figure 37). The townships to the north-west of the Carloway river are found on more gentle slopes than those to the south east where the slopes are less uniform and are less uniform and are often broken by short steep rocky faces. The north western area therefore offers an environment where almost continuous cultivation is possible whereas in the south east the frequent rock outcrops have led to fragmented cultivation on minute plots which are inaccessible to the tractor or other mechanised implements.

The soils are heavy and acid even on the skinned land of the boulder clay slopes nor is there any machair to mitigate the acidity of the peaty areas which descend almost to the shores. Only in one place is there any trace of the influence of the sand and this is to be found where the crofts numbered 1 to 3 Garenin border the small bay in the north of that township. Here the fierce gales have blown some of the finer beach deposits on to the croft land.

Much of the peat has been cut from the inner common pastures except in the case of Upper Garloway where active cutting is still taking place in the valley whose flanks are occupied by squatter settlements, to the east of the football pitch. On the common pasture the vegetation varies from peat moss and heather with bracken to fescue and close turf on the skinned land by the road to Dalemore. On the upper common pasture heather and bracken have increased since the abandonment of the shielings and the reduction of the cattle stock; many inhabitants remember that the hills once had a much greener aspect. Nor is this a feature confined to the common pastures; on one croft in Upper Carloway 1.9 acres are completely covered by heather whilst a neighbouring croft has a good crop of oats on similar land. At the loch in both Knock and Upper Carloway areas of former arable land have reverted to moss, the old lazy beds being picked out by lines of reeds.

Settlement. The settlement pattern is one of great interest for it shows in a clear way the effects of the distrinct phases in the historical geography of the area. The evidence of success and failure stands side by side. Before attempting to justify this assertion it is necessary to give a brief account of the physical evolution and distribution of settlement.

The origin of permanent settlement is believed * to have been the permanent occupation of shielings used by people from Bernera until the eighteenth century. Until about 1850 arable land was held run-rig and the houses were huddled together in tight little clusters. When individual crofts were lotted, about 1850, the houses werescattered, each on its croft and generally up to fifty yards from the present road (which was then no more than a rough track). Sea access was then most important but since the advent of modern road transport new houses have been built nearer to the roads, producing the modern markedly linear plan. The roads extend at different heights across the slopes

* based on information supplied by Mr Macleod of 27 Garenin.

[TEXT CONTINUED ON PAGE 101]

and across the croft boundaries and it is along these that the majority of the houses are to be found so that as the roads followed the easiest course open to them so the settlement has moved to the roads.

A particularly interesting example of this kind can be drawn from Upper Carloway where a twofold movement of settlements has taken place; first, from about 150 feet above sea level, where the original black houses were built, there was an uphill movement to the upper of the two roads which cross the township at from 150 to 170 feet above sea level, and, secondly (and more recently), there has been a move to build at from 25 to 30 feet above sea level along the lower road which has become the main axis for the public services. Three main types of building exist then in this township. The first is the blackhouse of which only one or two now remain. Even these are not the primitive type of blackhouse, for they all have proper chimneys. The second is an ill-defined group which includes buildings erected during the later years of the fishing boom and in the period up to the Second World War. These houses are either one or two storied often with the traditional dormer windows; they form the majority. Finally there is the development of the modern bungalows which are built by the crofters but based on plans supplied by the Department of Agriculture. Few have ventured to build away from the level of the lower road.

How then does this pattern of settlement illustrate the changes referred to at the beginning of this section? The original houses were abandoned gradually as the temporary prosperity of the fishing enabled the crofters to build the better houses. These have seen great changes, but in most cases they are still occupied. Some have been extended and improved by their owners whilst others remain without additions almost as they were when first built. That the crofter owns his own house has certainly encouraged replacement in recent times. The generous grants and loans provided by the Department of Agriculture have been utilised to construct the modern bungalows on crofts where the original croft house stands as a byre and where the second house is sometimes inhabited by some relative or person who sublets part of the croft. It is rare to see such successive phases so close together in a landscape.reflecting the varying fortunes of economic enterprise and the influence of government subsidies now so much a part of the life of the crofting township.

Roads and public services.

Carloway's importance as a centre for West Lewis is accounted for by the fact that at the break in the coastline caused by East Loch Roag the main road southwards from Barvas turns inland to Breasclete. Near the point where it crosses the Carloway river at Carloway bridge it is joined by a number of local township roads creating a focus for community services (figure 38).1 Here also the line of the still unfinished 'Pentland' road, projected as a direct link with Stornoway during the fishing boom, reaches Loch Carloway and passes along its north shore to the pier at Borroweston. This substantial pier was the scene of great activity during the period of commercial fishing before the First World War.

The six hundred residents of the immediate Carloway area are served by eight travelling shops as well as by the local stores. Bread, fish, meat, green-groceries, library and bank all come to the end of the croft if not to the crofter's door. Of the vans one is based on Carloway, one on Breasclete and the rest on Stornoway. A mobile film unit visits once each fortnight. The churches and school rightly reflect their importance in the community by the commanding position which they occupy just above the bridge. Here too is the showground; the annual show attracts people from all over the island, being as much a social as an agricultural gathering. Other services are more dispersed but not far away. They include doctor and district nurse, policeman, post office, and football

/facing p. 6/

361 423 182 172

luck in land, but a disadvantage where control of a single area is desired by one man. Regularisation of roads, houses and holdings is relatively modern, for crofts and dwellings were once grouped in hamlets usually close to the seashore. The early hamlets can still be made out from their ruins among the rocks, sometimes sketched in the 'six inch to mile' Ordnance Survey plans. They were without formal order or arrangement, each homestead within its boundary wall. Where ploughing was and is too difficult, the soil is heaped up in ridges, 'lazy-beds', and dug.

361 491

Shawbost, on a rocky part of the west coast (six miles south of Barvas) consists of three main sections: a scatter of houses and ruins by the enclosed loch, two main streets linking the loch to the main coastal road, and inland another short street. The three can be made out on a 'quarter-inch' map. The two main streets were laid out by the Estate Officers following removals in the mid-nineteenth century from another part of the island, Uig, and the third running inland was laid out still later, when population was growing and land was needed. When the third street was laid out, the landlord, Matheson, lent good plough-horses for preliminary reclamation. The irregularly placed black houses near the sea are tending to be rebuilt close to the main road.

175 311

361 178 311 654 491

In addition to this type of movement, farms 'broken up' once more into crofts have been laid out on a regular grid plan, each house placed on a corner of its five, ten, or twenty-acre plot (*e.g.* Galson, Dalebeg, etc.). 'Skinned' land may also be reclaimed for crofts by squatters tolerated by the community, or on a regular grid by agreement of the assembled crofters, guided by the Department of Agriculture. Thus two distinct tendencies are seen: the grid plan in new settlements, road alinement in existing ones.

[Be-Forthbec] [Bhrisetaiel] [Ishcot]

Land of the original township appears to have been divided, as a result, many long-lazies, one of which is still known as Ishcot. Bhrisetaiel was the site of a township which was depopulated at the present population of twenty-three; one is permanently away and two temporarily. Ishcot, 1959. There is a fairly popular shooting-station, with a large number of sheds, accessible by car, for a large family having returned home and six children, five of school age.

In Sutherland and Ross-shire all settlement is below the road and lower; sites are on terraces, and are mostly of recent origin. Bhrisetaiel (sing.) of the Reaches ("Sutherland Estate"), Ishcot (sing.) of the Reaches ("Sutherland Estate"). Ishcot is a small township, with communication was by ferry 1958. Now a cart-track, fairly rutted, to Kinlochbervie. Access to the Corbett-Stornoway road two-mile-a-half miles away.

[illegible]

Bhrisetaiel, also consisting of three crofts, is better situated on the Park and South Lochs road. The three crofts are adapted on a well-drained sloping site, and have a tarmac road and the shore, but the three crofts are on better land and greater accessibility has led to better management and new ideas.

Cultivation in isolated patches reaches up to nearly 100 feet and the lazy-beds have been put together to produce almost a single field. The croft grows neither oats nor potatoes, and now preferring to rotation two one-acre patches, re-seed them, cut the hay in June, and wean the stock on the hill-grazing in July. The croft has 20 ewes and 20 hogs, and the ewes lambed in April and will then be kept on the home in winter. The ewes are cross-bred Cheviot and are sold at seven and one is also sowing down. The crofts average fourteen acres in size but although the acreage is adequate, the tenure of the crofts is in permanent pasture. The total acreage of the three crofts is 42 acres. Stocking: Fishing is now only for domestic use though there is a small jetty on the. [illegible] Fair-weather weaving is performed on two of the six looms.

The future pattern would appear to progress to more grazing and less cultivation. Two out of the six crofts, both at Bhrisetaiel - one vacant - are worked outside the township and thus [illegible] tenancy, being different of access and having little cultivable land. A better social to the crofters, and the vacant croft is being advertised as a grazing unit for crofting tenants. In the Lochinver area, the Crofters' Commission has recently made a vacant croft available to one of the crofts especially with fertilizing and re-seeding for hay and pasture and good crops of crops for sowing. It is hoped to have the common grazing rationalized and this will be proved - a great advantage. Daily communication with Stornoway also means that Bhrisetaiel crofters can market their produce, and the Crofters' Commission has made a grant available for a boat - provided part-time work, such as weaving, is maintained, along with the [illegible] from the Crofter's Commission.

HARBOST
Rachel A. Hiver

Ishcot is scattered around a small bay on the south shore of Loch Eriboll. Settlement is on a low-lying site - rock-strewn, sandy, and boggy - and is exposed to wind and weather. Ishcot is a small township, with communication was by ferry 1958. Now a cart-track, fairly rutted, to Kinlochbervie. Access to the Corbett-Stornoway road two-mile-a-half miles away. Ishcot is a small township, with communication was by ferry 1958. Now a cart-track, fairly rutted, to Kinlochbervie. Access to the Corbett-Stornoway road two-mile-a-half miles away.

[illegible]

[Borgh]

Only a fraction of the land which is cultivated by tractor and this is divided among seven crofts. In spite of the tractor, the average acreage of these cultivated is the object that be will never use it again, the use of the tractor will increase as more as the pressure are also in greater demand for land. Cultivation is carried out by the tractor and the crofters are also greater demand for land. Cultivation is carried out by the tractor and the crofters are also tractor by the disappointed user was the inevitable one that the crofts were smaller than in potatoes, the tractor is not suited to the soil. The nearest to this was given by one of the other crofters, who thought that the tractor was good for the sandy soil of the Machrins.

Stornoway, Sutherland. Shed the crofters practice a five-year crop rotation, mixing potatoes, oats, turnips and grass. Cultivation is carried out by the tractor and the crofters are also greater demand for land. Cultivation is carried out by the tractor and the crofters are also greater demand for land. Cultivation is carried out by the tractor and the crofters are also greater demand for land

and the homes of the ministers and the teacher. Standing 621
together, within a few hundred yards of each other, they 348
provide a focal point for the surrounding area. The remainder
of the buildings which we normally think of as forming a
village nucleus are widely dispersed. The post office, which 621
is also a general store, is just over a mile north of churches 348
and school, in the township of Kilvaxter. Another mile away, 361
off the main road, in Borneskitaig there is a small shop.
South of the churches and school, almost two miles away,
there is a shop and a smithy in Lintmore. The remaining shops
and workshops are similarly scattered hither and yon among
the crofts.

Glendale shows much the same pattern of settlement. 361
Stretching along the shore of Loch Dunvegan, through Glen- 621
dale, at the mouth of the Bealach River, and on along the
shore of Loch Pooltiel, there are 156 crofts in 11 town-
ships. These are the homes of 144 crofters. The total
population is in the neighborhood of 350. Like the people 348
of Kilmuir, the Glendale residents have also become dependent
on roads, and they have tended to build their new houses
near a road of their part. The single church, the post office 621
and the shop stand fairly close together near the center of 348
Glendale. One school is about a mile away in Borrodale,
and the other over a mile away in Colbost. Neither Glendale
nor Kilmuir have a village hall. When the Glendale crofters
have a meeting to discuss the club farm or when the Kilmuir
crofters hold a club meeting, they use the school. Now let 621

By 1845 there was a small crescent of houses along the shore, 1854
about twenty in number, and on the raised terrace there was 1855
a new inn, a church, a post office, a bank, several shops, and 1856
a street of homes. The population had grown to alief 550. 1857
The existence of the village depended on the summer cattle 1858
markets and the fishing industry, which was in the hands of 1859
newcomers.

Following the establishment of Portree and accompanying 1858
the gradual decline in self-sufficiency, the Island was brought 1858
into closer contact with Great Britain by an extension of
regular means of communication.[29] Regular communications, of
course, are a prerequisite for commercialisation. There must
be access to markets for the local produce and access to
consumer goods. Without such access no man can specialize;
with it the Gelathanach has been dislodged to specialise. The 1861
old drove roads, the beaten paths which had served them well
for many centuries, were now supplemented by roads in the
Lowland sense and manner. By the end of the period of 1858
the more accessible townships had been connected with Portree
and the mainland, and a steamer had entered regular service
between Portree and Glasgow. These factors paved the way for
the introduction of commercial sheep farming.

POSTAL SERVICES

A mounted
postman was at that time working between Tarbert and Flod- 205
dabay, halfway down the east coast of South Harris. Before this 175
transfer there was no direct mail link between Harris and Lewis. 192
With the introduction of a bus service, a local mail was intro- 192
duced between Stornoway, Tarbert and Leverburgh, and up to 1942
1955 all mails for Harris were dealt with at Tarbert and Lever- 192
burgh, being dispatched to and received from mainland offices
direct on a three-days-a-week basis. In 1955 a daily delivery ser-
vice was introduced throughout Harris (with the exception of
Scarp), all in-mails being handled at Stornoway.

TELEGRAPH, TELEPHONE AND RADIO

The first telephone in Lewis was installed in 1897. The first tele- 204
graphic office in Lewis in 1872 is on continual breakdown were a 175
constant source of annoyance, particularly to local businessmen
and fishermen. Another cable for money was pulled up but about
1910, between Broad Bay in Lewis and Inveraoidale on the Sot-
tish mainland. This worked duplex to Aberdeen, the 'B' leg of the
cable being used for an Inverness link. At about the same time,
a more-operated Stornoway-Lochmaddy-Castlebay (Barra) tele-
graph circuit was introduced which had to be balanced and corrected
morning before sending could begin. This was the last morse link
in Scotland until its withdrawal in 1948. Though latterly it went
only to Lochmaddy, originally it worked with one wire to Castle-
bay, Lochboisdale, and Lochmaddy, and thence to Tobermory
and Oban. It was a four-wire circuit to Tarbert and Stornoway use
to Castlebay; the batteries were housed in the attic of Stornoway
Post Office. A new trunk telephone service between Lewis and
the mainland began on 21 March 1955, celebrated by an in-
augural call from the Provost of Stornoway to the GPO
in Edinburgh. A four-core cable was laid from Loch Erisort
and Staffin in Skye, complemented with some 25 miles of overland
wire. It had to be balanced after every downpour of rain! The first
telephone was worked over this cable in the early 1930s. The use
to which the fishing trade put the connection can be gauged by the
fact that at the height of the fishing season up to 20,000 messages
were handled each month. The first trans-Atlantic call came in

ISLAND, WORK AND PEOPLE — PT. 1

233 according to the relief, as explained. Thus the Barvas
182 and Ness districts are smooth topography generally speaking,
233 and there is, or rather was, one horse between two crofts,
or one pair between four or five. In rocky Uig or in Lochs,
however, there is only one pony between ten or twelve crofts.
197 Lending or hiring of horses has still to be practised, but
197 within manageable limits, though the increase in 'cars' had
lessened the number of horses, even before the war-time in-
troduction of tractors. Hiring is often done for cash, though
this conflicts with older communal custom. Yet lending
had its difficulties: "The borrowed horse", says the lender
bitterly, in the Gaelic proverb, "is never tired!"
The number of sheep per holding is noticeably highest
in Harris, with one score ewes per holding. The sheep
pasture of North Harris was well spoken of by Dean
Monro, and the link with the home industry of Harris, its
weaving, is evident.
Comparisons with the western mainland show, in
holdings of similar or rather large size, the diminished
amount of cereals now grown there even by crofters. The
increased proportion of grass reflects both the greater
dependence on bought provisions, and also the fact that
the West is not a land to ripen crops, but that it can grow
grass for stock.

4. The Moors as Pasture: Game and Sport

311 In order to estimate the relative value of the rough
311 grazings of Lewis and Harris, it will be useful to compare
these with the moors lying across the Minch and east of
Cape Wrath. There also may be found crofting communities
whose economics are similar to those of Lewis, so
that the stock carried on their pastures will furnish some

Shawbost

632 distinctive geographical features, and nearness to the
363 sea; Caaan a Stiah (or Caaan a Ruch Ruaile, or Baile
103 Stigh, the "town" at the "head" of the road "in" by the
sea), Shulishiir (an area identified with the keeping
of cattle), Gearraidh Mor, Creagan, Fliaig, and Maah a
Shal ("out the back," by a road built relatively recently)
A street which leaves the main road and cuts into the
moor, or common grazing land, is called Grianhaa, from
the name of a nearby loch.
The presence of a large Harris Tweed mill in
Shawbost has contributed to a high standard of living
within the village. It is estimated that only 236 of
the 1,000 people of rural Lewis have cars; about 500 of
the households in Shawbost possess them. In 1970
Shawbost had only one occupied high shiah, or "black
house" built of dry stones and roofed with thatch, which to
many islanders symbolizes a past life of poverty and
adverse times. Modern appliances such as refrigerators,
deep freezers and electric toasters are common in
Shawbost. Most homes also have television sets, and
many have telephones.
The mill in Shawbost employs between 60 and 70
persons to dye, card and spin yarn, to prepare the yarn
in warps which are then delivered to weavers who work
in their own homes, and to darn, wash and market the

311 241 [175] [420] There are 144 crofts in the village (nine of which, in South Shawbost, were added after the turn of the century by non-crofters encamped on common grazing land who applied to the landlord for crofter status). Thirty-four (almost a quarter) of these crofts are vacant; that is, the holders of the crofts live elsewhere. [527] [493] [485] One of the vacant crofts is used by its absentee tenant for holidays, and one sports a trailer (called a "caravan" in Britain) which may be rented to tourists during the summer. The rest are cultivated or used for [428] [427] grazing by crofters or non-crofters in the village who by inheritance or by formal or informal subletting have gained use of the land.

241 A little over half of the crofts are worked as individual units; 44% of the crofts are worked as combined units of two and three. Twenty-four men have the use of two crofts each, and five men the use of three crofts each.

16 A feature of crofting townships usually emphasized is their disproportionately large number of aged people and small number of young people, who tend to migrate to the cities. An age-sex "population pyramid" of the Highlands is not a pyramid but a top-heavy hourglass (see Table I).[1] Most persons of child-bearing age have migrated from the area and the number of children is

288 466 rotation to the weavers who are registered with them.

Other factors also hinder equal distribution of [602] tweeds. Personal considerations enter; for example, the managers of the Shawbost mills feel a responsibili for the weavers in their own village, who are usually kinsmen. Exclusive distribution to local weavers is rationalized by saying that the tweeds must be done urgently; hence they are distributed only to the wea who are known to do tweeds quickly.

288 494 466 The major factor hindering equal distribution of tweeds is the expense which derives from the decentra zation of weavers, that is, the cost of petrol and up of the vans, which is born by the mills. Before Worl [175] [178] War II, the weavers rather than the mills were respon [493] for transporting the tweeds, by cart and horse at fir and then by motorized transport.

288 175 492 494 During this period, independent entrepreneurs carried tweeds in vans and buses at four shillings ea a practice which stimulated the development of public transportation. Although the number of passengers us such vans and buses for public transport fluctuated, the income derived from the cartage of tweeds was in itself large enough to be profitable and to maintain [178] enterprises. An efficient service existed, despite th

88 paucity of passengers, which provided rides to and
75 from town many times a day; but with the "development,"
78 that is, the centralization, of industry, public trans-
72 portation deteriorated. Visitors to the island unfamiliar
94 with this history are struck by practices which they
interpret as coming out of a clockless past, such as
the present custom of stopping the bus midway in its
journey to Stornoway so that the driver can eat dinner
in his mother's house while all passengers wait on board.
Such a custom is fairly recent, and indicates the
deterioration of public services to populations which
are marginal to the centralized source of these services.

88 During World War II, when the demand for tweed was
75 high and the number of weavers small, the weavers staged
58] an effective strike by which they received an increase
in pay and the burden of cartage was shifted from them
to the mills. This did not affect the system of trans-
8] portation until the mills realized it would be cheaper
94] to run their own transport rather than to pay the independ-
ent drivers a "cartage fee." The mills then began to use
13] their own vans to deliver yarn and collect tweeds directly
5 to and from the weavers. Once the mills took over trans-
88 portation, they tended to deliver tweeds to weavers
18 closest to the mills rather than to uphold the principle
94] of equal distribution. This practice (made possible by
66]
61]

584 groups on the sheilings or within the village as they
[834] were growing up, and even during courtship maintained
a joking, somewhat rude interaction. "If he says he
wouldn't touch her with a barge pole, he's obviously
smitten." Someone considering the dangers of marrying
an outsider[1] commented, "A devil you know is better than
a devil you don't know."

584 Now that facilities for transportation have increased
178 couples tend to pair off in cars rather than go in
[493] groups. They may even be seen together on a date in
[535] town. Activities such as dances still begin late in
the night, lasting from about 12:30 a.m. until early
morning. The seriousness of a relationship is kept
secret for as long as possible, but weddings today
require long-term planning because wedding dinners are
514 held in hotels rather than within the village. At an
584 earlier time, serious intentions were announced only a
few weeks before the weddin t a reiteach or dinner
party which signified a betrothal. Reiteach also
means "disentangling" or "reconciling," and was
described by one person as a means of "pouring oil

[1]The term "outsider" usually connotes non-Gaelic-speaking, but may also refer to someone from outside the village.

763 relived and shared. The person's exact age and the
764 identity of his closest kin are discussed. A van is
574 immediately dispatched to bring benches from the church,
● [493] which are set up throughout the house of the deceased,
and over the next few days a constant stream of visitors
[431] fills the benches. The visitors bring tea, sugar,
biscuits and other provisions for the days and nights
of communal trial. The tigh fhaire, "house of watching,"
as this wake is called, continues until the day of the
funeral.

764 In the past, persons sat up all night with the body.
[825] "It took so long to get a coffin. You didn't want to
[178] go in and find half the face eaten away by rats." This
custom is dying out, but lights are usually left on in
the room in which the coffin is placed. When an all-night
wake occurs, the atmosphere is one of relaxed story-telling
and the sad laughter of reminiscence.

764 At least two nights of "waking" usually precede the
574 funeral. During this time, hundreds of villagers attend
[152] the tigh fhaire. Grief is expressed throughout the vast
network in which the dead person was enmeshed. On rare
occasions when a single night precedes burial, the house
is filled to overflowing.

Throughout the day and evening, waves of newcomers
enter, and other sitters slip quietly away. Kinswomen of

764 Today coffins are brought to the cemetery in a
178
● [493] hearse, but the procession still carries the coffin
for a half mile or so to the hearse. The women gather
outside the house in the biting wind, huddled together,
beginning to sob as the heavy line of dark-coated,
slowly-moving men bear part of themselves away. In one
village on the west side, the women circled the coffin
as it left the house, chanting, "You are leaving us, you
are leaving us!"

764 Graveyards are maintained by members of the community.
[767] A cemetery committee collects dues of five shillings a
[435] year from all households for the upkeep of the cemetery.
Relatives and neighbors dig the graves of their fellow
villagers.

767 In 1911, a funeral society called the West of Lewis
Funeral Association was founded with the original
intention of bringing back the bodies of men and women
who had died when they were away from the island "at the
[435] fishing." Persons from Borve to Berneray pay two
shillings a year to the Association, which at present
has about L4,000 invested in bonds. A similar association
exists in other parts of the island. A person may join
between the ages of 12 and 40, after which he is not
eligible for membership. A member who has left the
island must continue to send in his dues, or members of

TRADE AND INDUSTRY

useful crofting ancillary which, unlike many others, is soundly based on a definite commercial demand. Various industries use the extracted acid for some 150 products. The Scottish alginate industry, the second largest in the world, is based on the process of E. C. Stanford, who discovered alginic acid in 1883, though today modern methods are used. For raw materials it has turned to the old kelping shores of the Hebrides and Northern Isles. On the island it has a factory at Keose on Loch Erisort, a site chosen for the easy access afforded to puffers; the factory receives the weed, dries, mills and bags it, and the boats then carry 200-ton loads to Girvan. The factory itself involved some £30,000 of capital layout and has a capacity of 120 wet tons per week—4 wet tons producing 1 dry milled ton. About a dozen Harris and Lewis crofters gather the seaweed crop, the most useful type being bladderwrack or rockweed *(ascophyllum nodosum)*, from the shores at Loch Erisort, East Loch Roag and Bernera in Lewis, Husinish and Scarp in Harris, and Loch Seaforth. Where there is road access the weed is cut by sickle and loaded into a lorry, but more often it is cut at low water to be floated with the incoming tide and rafted to Keose, hauled by motor boat.

A product of the land not readily associated with the Hebrides is bulbs. Bulb-growing deserves a mention, however, if only because the experiment to see whether it could become a commercial possibility in Lewis was carried out by the children of Lionel (Ness) Junior Secondary School. The MacAulay (Rhodesia) Trust made an investment of £150 to cover initial expenses, and success followed. When the original project was completed it was extended, sales bringing the school a useful sum. But an attack of disease brought production to a standstill in 1966.

Another small industry is the aerated-water plant at Ness, which is operating with reasonable success, and could do better if imports of aerated waters from abroad were reduced. A number of recent surveys made in the island have found great interest in such activities as shell-fish processing in Harris to produce semi-preserves, using mostly cockles and mussels. Local knitting already has a name for its products and a potential for extension on a commercial scale; this latter began in late 1966. Some forty years ago knitting specialists went to Lewis to investigate the possibilities

(*above*) Bales of imported Scottish wool on the quay at Stornoway for the Harris Tweed industry

/p. 144/

(*below*) Dyeing wool in a Stornoway mill

clay is exposed, leaving what is vividly called 'skinned' land. And where drift is exposed, the mineral constituents are leached out, and a hard 'moor pan' is left a few inches below the surface.

Seen from the edge of the crofts, the typical 'skinned lands' of bare, blue or brownish clay, littered with stones, suggest a desert. Often, only a few blades of grass or tufts of heather grow on them. Indeed, 'skinned land' seems at first too mild a term, for on it the stones—thickest on top when undisturbed, and bleached by the acids of the peat that overlay them—suggest the prophet's 'field of bones'. One can only ask, is the rest of his vision ever to be fulfilled and life to spring again? In some hilly parts to south and west, not only the 'skin', the topmost layer of peat, but the very soil, the flesh as it were, is still being stripped bare to the bone, the actual rock. The evacuation of the islet of Bernera Beag (Uig) was largely due to this stripping. In the more level parts to the north, however, roadside pits show sections of clay with few stones, covered with perhaps six inches of clay with many stones. It is this top layer which gives the skinned land such a hopelessly stony appearance, and shows that reclamation is less miraculous than it seems.

With the coming of carts and lorries the increasing use of shell sand has become possible, whether for spreading on the land or for slipping into pockets, together with fertilisers, for potato seed. As to soils, shell sand and boulder clay possess complementary qualities in texture and chemical composition. The shell sand of the machars provided an early home for man, the light soil allowing rye, a poor variety of oats, and herbage, to ripen early and mature in late, wet seasons when the clays are sodden with rain. Yet the sand itself is so light that drought is

left the Island. Yet after 1931 many returned, owing to losses and unemployment both in British towns and overseas. When emigrants began to come home the 'Harris' tweed industry had spread to Lewis and offered increasing employment. Some men still fished in family-owned Island boats, and others as paid hands (on boats from the East Coast), though losses and unemployment were suffered.

Inter-war changes were hastened not only by movement beyond the Island—an influence at work for three or four generations before—but by mobility within it. In 1919 a small mail car made its way daily from Stornoway along each of the five main roads, with an occasional passenger. When crofters crossed the Island to Stornoway they went on foot or took the pony and cart at a slow walk: it was a day's journey. Ten years later, Ford vans, bought second-hand, ran daily to Stornoway from every township. Frequency, ease and relative cheapness of movement came late in an Island with no railway: the mobility of the motor for marketing and shopping brought rapid change.

'Hand-loom' weaving had become an important, if precarious, resource, important because of the capital invested and the labour employed, yet precarious because of its dependence upon name and sentiment, not only upon intrinsic value. In Harris many women had spun and woven for sale for over a generation before 1914, mostly weaving pure hand-spun yarn, and they continued to do so. For many years before 1914, an occasional weaver was to be found in villages in Lewis too, generally weaving a handspun weft upon a mill-spun warp. By 1939 it was estimated that there were about 1200 looms in the Island, chiefly weaving mill-spunyarn, most of it spun in the two principal Stornoway mills. A carding mill

178 exists at Tarbert and another was erected in 'the Bays'
286 district by Leverhulme. Leverhulme also appears to have introduced 'Automatic' hand-looms into Lewis.
[423] Today as in the past, the weavers possess a little croft or
[422] a feu, a cow, and a few sheep on the outrun, and perhaps a small boat.

121 Commercial fishing and weaving cannot, however, be
286 satisfactorily combined, for seasonal alternation of occupation entails waste of gear and plant, and interferes with
228 efficiency. Thus in the North Lochs fishing 'creek'
182 (Leurbost neighbourhood, immediately south of Stornoway), weaving became important, but none of the seven
178 large herring fishing boats (still registered in 1930) had been fitted with motors after 1918; they were idle and
[501] rotting, and by 1938 only one was still registered. In South Lochs, however, motor-boats were purchased, but there is little weaving. An obvious reason for the difference is the accessibility of the North Lochs area by road to
[493] Stornoway. Light passenger cars bring yarn to the village, besides groceries, etc., and take away rolls of tweed. South Lochs, on the other hand, considerably further from Stornoway by road, is still within reach for marketing fish. In North Lochs, merchant seamen at home and young men on their return from three months' work on East Coast fishing boats, turned increasingly to the 'Automatic' looms, manipulation being easily learnt; but such intermittent work alone gives little hope of progress. There is no more fascinating problem than the future of improved weaving.

2. *Unemployment and the Island Budget*

174 In the past, the storms of the Atlantic washed up on
731 the Island shores the wreckage of world commerce; and
434

231 summer, were last used for cattle six to eight years ago by people in Brenish, but none are in use today. These shielings were at the western foot of Mealisval, only about a mile from the township. The Brenish 'distant' shielings, about six miles to the south-east of the township across the mountains, were not used after about 1920, while the adjoining Islivig shielings were last used in 1922. Mangersta may have had its original shielings to the east of Loch Melavat about a mile south of the township, but after obtaining the enlargement from Mealasta farm, until about 1939, shielings were used in that area.

314 No peats are cut on the crofts; the peat-cutting areas for all three townships are near
241 the road and in no case far from the township. The common pasture near the crofts bears evidence of former cultivation, but it is at least fifty years ago since crops were grown on it. At this time the townships of Islivig and Brenish were over-populated with many cottars living on the crofts and all possible land on the crofts was already under cultivation. Today, less than half this 'old arable' is being cultivated, and in several cases the land is used solely for hay and grazing.

342 There are now no thatched houses inhabited in the townships and most houses have kitchen and other extensions added. Some crofters have built concrete two-storey byres
312 of modern design. In Brenish, where the hills to the east provide a good catchment area and the Brenish river a good source of supply, all the crofts have their own private piped water supplies, while in Islivig and Mangersta most crofts now have, or are getting, a
317 water supply. All croft houses are supplied with electricity from the grid.

226 Commercial fishing has long ceased and as there are only three boats there is now very
301 little fishing for domestic use, the principal use of the boats being to ferry sheep to the off-shore islands. Weaving is an important occupation. There are seventeen weavers -
286 nine in Brenish, two in Islivig and six in Mangersta, and during 1959 they were kept busy;
464 in 1958, however, few orders were received. Weaving cannot be said to bring in a steady
464 income here, and some of the weavers, and others, find additional employment outside
[304] the township - this includes four men at the hydro-electric scheme at Gisla, three at Mangersta Ministry of Civil Aviation station, three at Aird R.A.F. station and at least
[467] one in the Glen Valtos quarries. In addition, one man owns a tractor which he hires
[445] out, and one, owning a lorry and van, does haulage work. Altogether, out of a total of twenty-seven men under sixty-five who do work, all but three (one just out of school and one a semi-invalid) have other employment in addition to their crofts.

162 The total population for the three townships is one hundred and twenty-one residents, and fourteen permanently away from home. Of the residents, twenty-eight (or 23%) are children of, or below, school age, forty-seven (39%) are in the 15 - 45 age group, 15 (12%) are in the 45 - 65 age group, and 31 (26%) are over 65. Of the resident tenants, thirteen are over 65, twelve under 45, and five between 45 and 65.

181 The relatively young population may help to account, together with the better soils, for this area giving an impression of a fairly prosperous crofting district compared with some of the others in Uig. Amalgamation of crofts into larger units has also gone further. The use of a tractor or horse for ploughing, extensive use of artificial fertilisers, the sowing of grass seeds and the sale of sheep for meat, all seem evidence of a group of people who are determined to make the most of their limited resources.

233 One enterprise, that of the Aird Bheag sheep farm, deserves special mention. Four crofters (three from Brenish and one from Islivig) have purchased from the Uig shooting estate about 3,000 acres of land on the Aird Bheag and Aird Moire peninsulas, five miles south of Mealasta. Here they are running a flock of about five hundred sheep. There is

361 Many of the original houses are ruined or used as byres. Figure 14 shows that new
491 houses have been built near the sites of the old ones but sometimes nearer the road - all
467 but four houses have easy access to the road. Crowlista is linked to the main road by
[464] two miles of rough gravel side-road, and by a footpath and ford via Timsgarry. Vans call
[502] but there is no Post Office, store nor bus service. At present water supplies are poor -
[364] two wells only are in use.
[364]
[491]
[312]

Carnish is served by a short unmetalled road and all houses have good access to this. Water supply is good; water may be stored on the high part of the crofts and piped into the houses. The roads serving Timsgarry too, are unmetalled, but the main road is less than a mile away. This 'main road' from western Uig to Stornoway runs through Ardroil and all
[362] except one of the houses not near to it have good drives suitable for lorries. Ardroil has
[265] a store and Timsgarry a Post Office. One butcher's and two grocers' vans call weekly
[459] and the travelling bank fortnightly. The thrice-weekly bus service to Stornoway (return
[477] fare almost £1) ceased in 1960 because of competition from privately owned vans and cars.

241 The cultivated land is in strips usually large enough for horse or tractor work; the
233 smaller potato patches are hand dug. Few horses are kept now, Timsgarry, Ardroil, and
311 Carnish have one each and Crowlista none. Crofters hire these horses or tractors from
427 Brenish or Enaclete. Oats and potatoes are the only crops grown in quantity, small patches of turnips are found and most crofters grow root vegetables. Kale was seen growing on one Ardroil croft; this was an experiment and seemed to be very successful. Bere and rye are no longer grown. Grass mixtures are sown in order to qualify for cultivation grants. Oats are undersown, or grass seed may be sown after the oat harvest, and left for hay for several years - some sown twelve years age was said still to be giving very good hay, but on the whole very little grass is sown in Crowlista. The acreage of natural grass cut for hay varies a good deal with the weather and the time and labour available. Crofters find this difficult to estimate as well, as often small irregularly shaped pieces are cut, and the figures, therefore, may not be accurate. (Appendix A).

One excellent garden showed that a rich variety of vegetables, fruit and flowers can be grown if adequate shelter is provided and the time for cultivation is available, but few crofters have the necessary knowledge or interest.

242 Lime, dung and artificial manure are widely used, though on some Crowlista crofts
134 the compound fertilisers were in use for the first time in 1959. Shell sand is used on the
224 crofts which have peaty soil. Although it is agreed that seaweed and dung are the ideal fertilisers for potatoes, seaweed is only occasionally used. It is becoming difficult to obtain locally and much heavy work is involved.

231 Each of the thirty-five operative units which carry any stock at all has a cow for domestic milk supply and manure. If the family is large or many visiting relations stay on the croft during the summer the calf has to be sold early; otherwise it will be reared until the cattle sales in September or May. Only eight crofters had two cows; fifty years ago four were commonly kept. Only thirteen of the units had young cattle other than calves. One crofter was rearing a kid for milk.

The bull supplied for these townships and Mangersta is an Aberdeen Angus which is wintered on the Ardroil machair.

233 It was sometimes difficult to obtain factual information about sheep and it is difficult to generalise. Operative units without sheep were those where no suitable labour was available. In a few cases crofters considered that sheep were 'not worth the trouble' - but others were building up their sheep stocks. Individual flocks ranged from ten to two

493 Problems of communication are not, however, solved merely by providing better
494 roads: at least one household in four has a car or van, and this, with the fall in population,
495 has caused a fatal decline in the use of public transport. The Bernera 'bus service was
496 discontinued in August, 1959, for lack of demand. This is not, of course, an isolated example: the problem is common to all the Highlands, and indeed, to all the rural areas of Britain: in Sutherland, for example, the number of registrations of private cars has risen to very nearly 250% since 1945, and the total number of registrations for all classes of vehicles up to 1958 had risen to almost 200%, while the number of hackney carriages, after reaching a peak in 1952, has since declined by 70%.

DISTRICT TOTAL	13.1	13.5	183	188	196	201	1:15.0

Note: in this table, "working units" include all crofts, whether stocked or not, and all other agricultural holdings. Two or more crofts worked together, whether registered under the same tenant or not, are counted as single working units. An agricultural holding is defined as one with at least one cow, or five sheep, or half an acre of cultivation.

[Habost]

134 Drift is found near the shore and laps round the three hills nearly up to the road, predominantly heavy clay with small boulders; this is replaced above the road by peaty loam on rock. At one time, here was grown on the heavy drift. There is peat accumulation on the flat land near the road to a depth of about six feet and there are one or two peat banks.
137 Vegetation is poor; there is no bracken or cover and within the crofts, mourland grasses and sedges predominate on rough land, though there are many lazy-beds sown down to clover and cocks foot. On the hills heather predominates.

195 Habost is the oldest township in Park. In 1843 Maclennan came from Shieldernish and took what are now Nos. 9, 10, 11, 12 and 13 and Ailean Tailear came from Taransay, Harris,
692 to No. 7. By 1886 there were thirteen crofts; in 1907 four cottars were recorded, three being
621 there before 1886; in 1957, No. 11 which had been shared between two brothers since 1906, became legally 11A and 11B making fourteen crofts. There are also fourteen operative units although two are worked from Kershader, both as 'hay and grazing' units, and two are worked as one unit within the township, for there are three non-crofting units.

241 Only sixteen lazy-beds are dug by spade, the rest have been drained with stone drains and
409 ploughed by tractor owned by one crofter who loans it out to Habost and Kershader. There are three 'Croftmasters' (hand-tractors) in the township but these are only heavy enough for
293 bringing in peats, hay and similar light work. The progressive Habost community has fenced off part of the common grazing, to keep the weaned lambs off the croft from August till November and so save fodder for winter when the croft land is open to grazing.

[248] Oats and potatoes alternate in the rotation, with a little sown grass for hay, sown in enclosed
446 parks of about one acre. The tendency now is to increase the number of parks, cut the hay in
231 June and build up the lambs on the new grass. Shell-sand is used to fertilise the parks but
324 elsewhere artificials, such as superphosphates, 'potato manure', potash, nitro-chalk and lime are used in addition to dung and, near the shore, seaweed. Most of the hay is taken from old lazy-beds.

251 The land is heavily overstocked: the soum is equivalent to 79 cow units, and actual stock is
255 144, whilst the figures for sheep are 191 and 618 respectively, including the sheep stocked in
[452] Park Deer Forest by seven of the Habost tenants. Sales of cattle are held at Garyvard in November
[221] and May and sheep and lambs are sold in Stornoway. Lambing was poor in 1958, 50-75 per cent being general, but many breeding ewes and other sheep have died.

241 The only cultivation on the common land belongs to the unofficial holdings. Behind Craigeal, however, there are some old lazy-beds, a well and ruins of a bothy, which has not been used since
[311] before 1852. There used to be shielings on the far side of the common on Beinn Dhuidhe and
[228] below Loch na Ciste but these have not been used since 1888. Habost is one of the agricultural
[228] townships and fishing is only for domestic use; looms are to be found on only four crofts and
[293] trade is slack. One crofter has a lorry for contracting, carrying peats, fertilisers and stock to market and two have butcher's rounds in Lochs. There are two small stores.

361 Settlement is scattered, always on elevated ground, and in many cases the new house has
[512] been built in close proximity to the old house site. All have piped water either from the well or
[554] from a rain tank, drinking water being carried in the latter case. Grants from the Crofting Commission are enabling new building and improvements to be carried out.

[Cromore]

The crofters sowed
241 clover with their oats in 1957; the quality of most of the natural grass could be improved considerably
241 by extending this practice. Several of the crofters have taken advantage of the facilities for obtaining
[246] lime and fertilisers, but seaweed and byre manure are widely used. Only seven crofts have
252 vegetable plots this year but that of No. 23, (partially enclosed by a dry-stone wall) has produced
[324] crops of lettuce, cabbage, turnips and carrots.

221 The souming for Cromore is one cow, one heifer and eight sheep per £1 rental, but is not
231 enforced. The crofters keep the stock which they can manage to maintain through the winter and
253 no one appeared to be dissatisfied with this arrangement. In fact the souming is exceeded by only seven crofters and the total stock for the township is only 75 per cent of the soum. Lambing takes
[324] place in April and May and often a high proportion of ewes and lambs is lost. The sheep are clipped in July and each crofter usually clips his own sheep. He either sells the fleece or has it spun in Stornoway before weaving it himself. The lambs are taken from the ewes during the second week of August and then dipped; November is the tupping period and almost every crofter had his own ram. Most crofts have a cow and a calf and the crofters like the calves to be born in March so that they are six months old in October for the Garyvard sales. The cows are served by an Aberdeen-Angus bull from Crobeg Farm. The township gates are opened in October and the cattle remain within the bounds until May. An interesting regulation enforced by the Grazings Committee is that each family can have only one dog, and that it cannot be taken on to the Common grazing without special permission, or on fank days.

178 Shielings, situated on the common grazing between Caibost and Cromore, were used until
293 the 1890's. Active land use has gradually declined; in the 1920's, much of the outrun was under
231 cultivation and from an an air photograph, it is evident that hay was being taken on the strips
[242] above Cromore in 1946. The present trend is a continuing decrease in the amount of arable land but this year ten crofters formed a group to enclose and improve a ten-acre plot on the common grazing;
[246] it is unfortunate that all crofters are not willing to take part. Peats are now being cut near the road between Caversta and Gravir, about three miles south-south-east of Cromore and one mile north of Gravir.

17 Cromore was once a prosperous fishing village but now it has no fishing boats. Two Cromore
229 fishermen work on other boats (one from Marivig and one from Stornoway) and there are a few men who would welcome the opportunity to start fishing again. There seem little prospect of this,
[324] however. The landing-stage, completed in 1957, is regarded by many as a 'white elephant' and, in fact, at low tide it is useless. So much for the hopes that it might have been used by cargo vessels bringing goods to Park.

293 In Cromore there are fourteen looms for the weaving of Harris Tweed. Tweeds are obtained by
[443] road from two mills in Stornoway and one in Airidhvrusach. At present the average production is only one tweed per loom per week but the weavers could quite easily double their production. During
[287] the past two years this industry has been comparatively prosperous. Knitting is a winter pastime but only for pleasure, although one household possesses a knitting machine.

162 In common with the rest of Park, Cromore has a high proportion of old people. Many from the
166 middle age groups have sought employment on the mainland, and the teenagers, many of whom have
167 been at school in Stornoway, seek jobs there or on the mainland, returning for holidays and assisting
164 with the croft work. Some younger folk are resident to care of aged parents.

[441] Cromore is only eight miles by sea from Stornoway yet all communications with the town are by
[439] road - a distance of thirty-two miles. There is a daily bus service and the sub-postmaster has a van which is occasionally hired. Some people recalled that the only route to Stornoway was once by boat to Crossbost and thence by bus. One resident owns a lorry and this is used for most of the haulage in Cromore, particularly for bringing home peats during the summer. As a result of recent additions to the roads, only three crofts remain inaccessible to vehicular traffic. There are no
[366] shops in Cromore but grocery vans call on Monday, Tuesday, Wednesday, Thursday and Saturday;

or inquires about a person's plans, he says, "You'll do it 763
tomorrow, then, if spared." 195

Occasionally, a man's prestige status can be judged by 764
the foretaste the people have of his funeral. This, too, is 554
disturbing for the newcomers who prefer to face death when the time comes. There is one member of the county people who is extremely popular. Many speak of him as a "true Skyeman." One day he was being discussed by a small group of women. After talking about his interest in Skye and what a good man he was, one summed up their estimation by saying, "Aye, what a wonderful funeral he'll have." What higher compliment could there be? The number who attend a person's funeral and, recently, the number who drive to his funeral are indicative of his status. Even though having a car does not give the [493] owner prestige - to the contrary it may give the people cause to wonder where he got his money - to have "friends" with cars does give prestige. When 200 or 300 men join in the funeral procession to carry the body to the grave, all the "people" of the deceased take pride in telling of the "mobs who came."

In death we find one aspect of the crofter's way of life 764
which puzzles the newcomer, especially the government officials, 554
more than anything else. The old people hoard their money. Welfare workers frequently say, "You never know how much they have until they die." There are a few crofters, mainly returned exiles, who are known to have money but continue to live in tumbled down houses. The newcomer says, "They must like to live that way." Quite to the contrary, the Sgiathanach has [761] traditionally prepared for death early in life. Once the first

/p. 53/

(*below*) The Claddach, Isle of Killegray, in the Sound of Harris, April 1897. The horse and cart was the most convenient means of transport. A spinning wheel is seen in action

and footpaths. Until this time, the greater part of the district of Park was accessible only on foot. Roads were 'at best rough narrow paths where rushes and grass grew between the tracks'. The Act improved the old *frith-rathad* (rough tracks) to such an extent that, says a report of 1902, 'a marked improvement has taken place in school attendance by their formation'. The opening up of the island certainly benefited the people. Though the moor tracks might give a more direct route to Stornoway, the roads at least offered a hard surface for horse-drawn cars and carts. The numbers of vehicles accordingly rose, and for long after the turn of the century the horse enjoyed a monopoly. Motor cars were beginning to be read about in the days-late newspapers brought to the island, but not until 1917 were the first complaints heard about cars tearing up the surfaces of the roads. Slowly but surely the inevitable pioneers emerged with their 'tin lizzies'. By 1925 there were an estimated 250 vehicles in Lewis—and traffic congestion was beginning to be a problem. The relative speed of cars was still something to be wondered at too: it was progress indeed to be able to travel from Ness to Stornoway and back again between a late breakfast and an early tea. But for all this progress, one could still buy a good dog-cart in excellent condition, to seat six people, for £9. A two-seater trap could be had for £6 10s; a set of harness cost 30s. And as for fuel—the best quality oats were 10s 6d per cwt. Indeed, it was not until 1943 that Stornoway Town Council sold its last horse—and only because no one could be found to look after it.

When Sir James Matheson came to Lewis in 1844 there was only one horse-drawn vehicle on the whole island. By 1872 eighty-seven wheeled vehicles were using his new roads. A pioneer of the wheel-carriage service, D. K. Henderson, began business in the 1850s. He was the first to carry mails and held a contract for the Stornoway to Tarbert run until the GPO introduced its own vehicles. As the motor took hold Henderson changed over and was the first to establish a motor-transport business on the island. Not all the local vehicles were of recognised makers' designs. A writer in the *Stornoway Gazette* in the mid-twenties commented on the fact that only the engine and the chassis of the local buses were imported. Bodies were then erected by carpenters . . . and

boat-builders; many of the bodies were 'fearfully and wonderfully made', an understatement that did not go unnoticed by those who had to travel in the emergent public transport. Combined interests led to the formation of the Lewis Motor Owners' Association which agitated for better roads; existing highways were being pot-holed with alarming and uncomfortable rapidity to the detriment of their vehicles.

Very slowly did public transport become co-ordinated for the benefit of the travelling country folk. Routes were planned and approved. In 1932 there were daily tours for visitors to the island, a series begun by the late John Mitchell, a pioneer in the provision of bus services, with Stornoway as the 'Rome' of Harris and Lewis. In 1935 he was granted permission by the Traffic Commissioners to run daily services between Stornoway and Rodel.

The expansion of the Harris Tweed industry was responsible for developing transport, both for conveying yarn to weavers throughout the island and for mill-workers. In May 1933 John Mitchell began a suburban bus service for the people of Stornoway, though more for the conveyance of workers in the fish trade; tweed-mill workers and others were not slow to take advantage of it. In the following month, June, Mitchell ran a bus from Stornoway to the Market Place just outside the town at Bannadrove (Beinn na Drobh—hill of the market), for a 6d fare. In October of the same year, Peter MacAulay provided a twenty-seater Bedford bus for the Carloway to Stornoway run, and this vehicle was not a home-made affair. Meanwhile in Stornoway, a traffic census showed that, on average, 628 vehicles crossed Cromwell Street, the main thoroughfare, every day—and 799 pedal cyclists.

POSTAL SERVICES

Until the late years of the nineteenth century, the lack of postal facilities were not considered a great disadvantage: few people wrote letters.

The *Scots Magazine* in 1756 noted that 'A Post Office is to be established at Stornoway, in the island of Lewis, from the fifth of July next, with packet-boats for maintaining a regular com-

Two Stornoway scenes from the 'Grand Collotype Album of Views in Lewis' published c 1900 by Samuel Lawrence, 'Chemist, Druggist, Perfumer, Stationer and Tobacconist', Cromwell Street, Stornoway. /p. 89/

The removal of crofters from good to poorer ground was a significant factor in the destitution years of the nineteenth century, with the self-sufficiency factor becoming smaller and the dependence on imports (when there was money to buy these) increasing. Today, the crofter is of course not self-supporting, his economy being based on fishing and weaving with the produce of the croft yielding an annual average of some £200.

Acreages under certain crops show this trend to dependence on the produce of mainland farmers. In the island in 1911 some 3,673 acres were under potatoes, the present acreage being about one-third of that. The number of people per acre of potatoes for Scotland as a whole is 22 : 1. In the island it is about 15 : 1, indicating a heavy domestic consumption. Yet substantial imports of this crop are required to satisfy demand; a relevant point is that the milking cow commonly shares the potatoes. The barley crop, once much used in Lewis's former small distilleries, has been reduced to some 10 per cent during the past fifty years. On the other hand, the acreage of sheaf crops, oats, rye and mixed corn, generally fed to cattle, has about doubled. Oats in particular are in favour for cattle fodder; even before the turn of the present century oats were not widely used for human food, and oatmeal has for centuries been imported into the region. The turnip acreage has halved over the past fifty years, perhaps the result of the gradual disappearance of the horse, its steady labour and its dung being required to put good heart in to the land.

As the crofters' cropping policy has changed over the past half century, so has their animal husbandry. Animals are a main selling product, particularly cows and sheep. Horses, of course, have been drastically reduced from their total of 1,672 in 1911, as tractor, lorry and van have taken over their work. And though some cattle are raised, the numbers are now about 60 per cent below those of 1911. At that time the density of cattle per 1,000 acres was heavy (46-60) in the north-east of Lewis, less (31-45) in the north-west, and still less further south. The present average is around 18 beasts per 1,000 acres. This decline, in particular in the milk-yielding animals, has compelled Lewis to import 1,000 gallons of milk a day from the mainland.

It is sheep which today claim pride of place on the croft, valued

rotation to the weavers who are registered with them.

Other factors also hinder equal distribution of tweeds. Personal considerations enter; for example, the managers of the Shawbost mills feel a responsibility for the weavers in their own village, who are usually kinsmen. Exclusive distribution to local weavers is rationalized by saying that the tweeds must be done urgently; hence they are distributed only to the weavers who are known to do tweeds quickly.

The major factor hindering equal distribution of tweeds is the expense which derives from the decentralization of weavers, that is, the cost of petrol and upkeep of the vans, which is born by the mills. Before World War II, the weavers rather than the mills were responsible for transporting the tweeds, by cart and horse at first, and then by motorized transport.

During this period, independent entrepreneurs carried tweeds in vans and buses at four shillings each, a practice which stimulated the development of public transportation. Although the number of passengers using such vans and buses for public transport fluctuated, the income derived from the cartage of tweeds was in itself large enough to be profitable and to maintain the enterprises. An efficient service existed, despite the

paucity of passengers, which provided rides to and from town many times a day; but with the "development," that is, the centralization, of industry, public transportation deteriorated. Visitors to the island unfamiliar with this history are struck by practices which they interpret as coming out of a clockless past, such as the present custom of stopping the bus midway in its journey to Stornoway so that the driver can eat dinner in his mother's house while all passengers wait on board. Such a custom is fairly recent, and indicates the deterioration of public services to populations which are marginal to the centralized source of these services.

During World War II, when the demand for tweed was high and the number of weavers small, the weavers staged an effective strike by which they received an increase in pay and the burden of cartage was shifted from them to the mills. This did not affect the system of transportation until the mills realized it would be cheaper to run their own transport rather than to pay the independent drivers a "cartage fee." The mills then began to use their own vans to deliver yarn and collect tweeds directly to and from the weavers. Once the mills took over transportation, they tended to deliver tweeds to weavers closest to the mills rather than to uphold the principle of equal distribution. This practice (made possible by

463 One of his
326 apprentices was his sister's son, who built another
[874] smithy not far away. "This was the center of gossip.
[604] People gathered there while he shoed horses that came
[521] from Barvas to Carloway."

444 A number of shops were established in Shawbost
178 that sold clothing, cooking ware and groceries. At
[494] one time they numbered six altogether. These shops
also ran the first buses between the village and
[477] Stornoway. Gradually these businesses disappeared
[443] because of competition with larger companies. Mobile
grocery vans and butcher shops and bakers began coming
in the late 50's, and gradually took over the trade in
large parts of the island, undercutting the local busi-
178 nesses. Income from weaving had already weakened self-
434 sufficiency derived from the intensive use of land and
571 sea and also weakened the formerly heavy reliance on
621 local ties and mutual aid. Today an army of town-
44 dwelling entrepreneurs and employees constitute a major
463 proportion of the traffic on the island roads. Grocers,
178 fish dealers, bakers, sellers of soft drinks, garbage
[472] collectors, insurance salesmen, mobile banks, coal
[484] dealers and others extend goods and services from
centralized sources to a market which has money to pay
for them. The island's participation in this extensive
market system is affected by its marginality to the

105 of the converted, who occasionally neglect township and
794 neighborly duties in favor of religious activities. The
621 increase in private transportation during the past 25 years
632 has facilitated the maintenance of closer ties within the
184 clique. The existence of such a strongly bounded subsystem
[494] is an example of a trend toward the weakening of the
township as a social boundary system, but this trend is
countered by other factors that strengthen or help preserve
the township as a bounded system.

105 People come and go from the township, but this appears
632 to maintain rather than weaken township boundaries because
621 behavior different from that prescribed within the township
166 can be performed outside it, and conformist behavior
184 reassumed upon reentry. Those unable to conform with
standards of behavior prescribed within the township are
not likely to return.

[528] Township members who have settled away from the island
come back periodically for recreation and a sense of
[829] belonging. They increase the value of the township and
its way of life in the eyes of the inhabitants, and provide
them with subject matter for conversation until the next
holiday season, when the exiles again return.

105 The boundedness of the township is thus a qualified
632 boundedness that, over the past 100 years and especially
621 since the second world war, has decreased in strength but
184 is nevertheless strong today.
[178]

OVERLAND ROUTES

boat-builders; many of the bodies were 'fearfully and wonderfully made', an understatement that did not go unnoticed by those who had to travel in the emergent public transport. Combined interests led to the formation of the Lewis Motor Owners' Association which agitated for better roads; existing highways were being pot-holed with alarming and uncomfortable rapidity to the detriment of their vehicles.

Very slowly did public transport become co-ordinated for the benefit of the travelling country folk. Routes were planned and approved. In 1932 there were daily tours for visitors to the island, a series begun by the late John Mitchell, a pioneer in the provision of bus services, with Stornoway as the 'Rome' of Harris and Lewis. In 1935 he was granted permission by the Traffic Commissioners to run daily services between Stornoway and Rodel.

The expansion of the Harris Tweed industry was responsible for developing transport, both for conveying yarn to weavers throughout the island and for mill-workers. In May 1933 John Mitchell began a suburban bus service for the people of Stornoway, though more for the conveyance of workers in the fish trade; tweed-mill workers and others were not slow to take advantage of it. In the following month, June, Mitchell ran a bus from Stornoway to the Market Place just outside the town at Bannadrove (Beinn na Drobh—hill of the market), for a 6d fare. In October of the same year, Peter MacAulay provided a twenty-seater Bedford bus for the Carloway to Stornoway run, and this vehicle was not a home-made affair. Meanwhile in Stornoway, a traffic census showed that, on average, 628 vehicles crossed Cromwell Street, the main thoroughfare, every day—and 799 pedal cyclists.

POSTAL SERVICES

Until the late years of the nineteenth century, the lack of postal facilities were not considered a great disadvantage: few people wrote letters.

The *Scots Magazine* in 1756 noted that 'A Post Office is to be established at Stornoway, in the island of Lewis, from the fifth of July next, with packet-boats for maintaining a regular com-

COMMUNICATIONS

munication with the mainland. The mail will be dispatched from Edinburgh every Thursday at eight o'clock at night, and should arrive at Edinburgh every Tuesday morning, but the arrival will sometimes be uncertain.' The development of a postal service in the hinterland of Stornoway was slow. In 1833 only one mail packet ran each week to Lewis, sailing from Poolewe to Stornoway, weather permitting (see Chapter 8), and the island still had only the one post office. By 1880, of course, more contact with the outside world was expected and there were eleven post offices in rural Lewis, with Stornoway's promoted to Head Office status. The latter had been for some time equipped with a money order and Savings Bank department. The telegraph had also been introduced, though no connection to any of the country offices existed; telegrams for all parts of the island other than Stornoway were, as a rule, forwarded by the first mail dispatched after the receipt of the message. By 1902 there were twelve telegraph offices in the country districts of Lewis (Harris was incommunicado with Stornoway, coming under the Inverness-shire arrangements). Some of these offices were set up under orders of the Highlands & Islands Work Board, the service being carried on by the Post Office without guarantee against loss. The office at Port of Ness was subsidised by the Fishery Board and Lloyd's, who had a signalling station at the lighthouse there.

Until 1926, when the long-universal red vans appeared, all mail was transported between the rural areas and Stornoway by private contractors, who used horses and latterly Albion coaches. A motor-launch operated between Callernish and Bernera; mails for South Lochs were conveyed across Loch Erisort from Crossbost to Cromore, and from Laxay to Kershader. In the early 1930s this area was served by mail van working between Stornoway and Lemreway. In 1950 full use was made of the existing BEA air service and, in order that mail from the rural areas could be included, additional main vans were outstationed at Lemreway, Callernish, and Port of Ness. These worked in to meet others working out from the town.

The Harris area was taken under the control of the head postmaster at Stornoway in 1937, having before this date been served by the head postmaster at Lochmaddy, North Uist. A mounted

POSTAL SERVICES

A mounted postman was at that time working between Tarbert and Flodabay, halfway down the east coast of South Harris. Before this transfer there was no direct mail link between Harris and Lewis. With the introduction of a bus service, a local mail was introduced between Stornoway, Tarbert and Leverburgh, and up to 1955 all mails for Harris were dealt with at Tarbert and Leverburgh, being dispatched to and received from mainland offices direct on a three-days-a-week basis. In 1955 a daily delivery service was introduced throughout Harris (with the exception of Scarp), all its mails being handled at Stornoway.

TELEGRAPH, TELEPHONE AND RADIO

The first telephone in Lewis was installed in 1897. The first telegraphic cable was laid in 1872; its continual breakdowns were a constant source of annoyance, particularly to local businessmen and fishcurers. Another cable for morse telegraph was laid about 1910, between Broad Bay in Lewis and Inverasdale on the Scottish mainland. This worked duplex to Aberdeen, the 'B' leg of the cable being used for an Inverness link. At about the same time, a morse-operated Stornoway-Lochmaddy-Castlebay (Barra) telegraph circuit was introduced which had to be balanced every morning before sending could begin. This was the last morse link in Scotland until its withdrawal in 1948. Though latterly it went only to Lochmaddy, originally it worked with one wire to Castlebay, Lochboisdale, and Lochmaddy, and thence to Tobermory and Oban. It was a four-wire circuit to Tarbert and single-wire to Castlebay; the batteries were housed in the attic of Stornoway Post Office. A new trunk telephone service between Lewis and the mainland began on 21 March 1933, celebrated by an inaugural call from the Provost of Stornoway to the GPO in Edinburgh. A four-core cable was laid between Loch Erisort and Staffin in Skye, complemented with some 25 miles of overland wire. It had to be balanced after every shower of rain! The first teleprinter was worked over this cable in the early 1930s. The use to which the fishing trade put the connection can be gauged by the fact that at the height of the fishing season up to 20,000 messages were handled each month. The first trans-Atlantic call came in

A HARRIS VIGNETTE

has direct or indirect communication with Glasgow, Stornoway and North Uist. In summer a thrice-daily bus runs to Stornoway and once a day a bus makes the round trip of East and West Harris. The township, linear in pattern, east to west, includes sixteen shops which cater for most of the needs of the population within reasonable travelling distance; it also has two cafés, a post office, a licensed hotel, a hall for social functions, a masonic hall and two churches. The Sir E. Scott School here is the only secondary school in Harris with an academic stream. Most of the working population is employed in the service industries, the professions and the tweed industry. Tarbert was a fishing port of some significance in the past, and is now a refuelling point for ships.

The absence of organised industry on a large scale, such as Lewis has, is a factor which tends to bring nearer to reality any desire on the part of Harris natives to leave their native soil. There are small pockets of industry, but these are only dabs of easing ointment on the excessive unemployment sore of 27 per cent. The main occupation is of course crofting, the income from it being augmented from a variety of sources. Some crofters concentrate on the production of Harris Tweed, perhaps using the wool from their own sheep; the natural dyes from the lichens which grow on the rocks and from other plants are still used occasionally. Others specialise in knitwear. Recently shell-craft and wood-turning have been added to the traditional crafts, with a view to the tourist market. Fishing, of course, plays a part in the economy in some communities. The interest of such organisations as the Scottish Country Industries Development Trust has been concentrated on the potential in shell-fish processing, and the production of knitwear on a larger scale than exists at present. Roadwork gives employment to about thirty men, but is of course seasonal.

An apparently bright light on the employment horizon showed itself in 1965, with the opening of a quarry at Lingerbay. The mineral quarried was anorthosite, a white granite used as an abrasive in cleaning products. A 99-year lease was taken out by a subsidiary company of William Robertson (Shipowners) Limited, Glasgow. But the quarry was closed in 1967 due to lack of orders.

ISLAND, WORK AND PEOPLE PT. I

Before the making of roads, it was case of sailing which united island peoples and their territories. One can wade or drive, at low tide, over the fords that unite the Isle of Benbecula with the two Uists, North and South: in fact, a bridge now connects Benbecula with South Uist. But only the roughest of hill tracks led through the hills of North Harris from the 'Tarbert' or Isthmus of Harris to the nearest habitation at the head of Loch Seaforth or Loch Erisort, in the Lews. This is a distance of some twenty miles, or a fair day's tramp for an unloaded man, and far too much for a return journey in one day. Hence separation of territory and name was natural. This separation no longer exists as there is now a good 'bus service from Rodel via Tarbert to Stornoway which links Harris with the daily Kyle to Stornoway steamer. In this book, the Island, or the Islanders, refers to Lewis-and-Harris with its people, as one.

Lewis is included in Ross-shire (of which the county town is Dingwall, north of Inverness) and Harris in Inverness-shire, together with the rest of the 'Long Island'. The county boundary cuts across the six-mile isthmus north of the hills of North Harris, from the in-reaching Loch Seaforth WNW. to Loch Resort (Fig. 8). All the Outer Hebrides are now included in the Parliamentary constituency of the Western Isles. Proposals to unite the Island under one District Council, or the Outer Hebrides under one County Council, are more favourably viewed in Stornoway than in Harris or the Southern Isles. Harris forms one civil parish, while Lewis is divided into four: Stornoway, Barvas, Uig and Lochs. The Lewis parish boundaries traversing the moors are inset in Fig. 8 so that their trends can be readily grasped, and the inhabited portions of the parishes quickly located (p. 50).

The circular, corbelled stone "beehive" huts, some still in good repair, are of uncertain date. The best preserved are on the Moragail Deer Forest, in remote situations which make it almost certain that they were only occupied seasonally; those on the Garynahine common pasture are associated with assymmetrically ridged, curving, lazybeds. This, however, need not imply permanent occupation of the site, nor does it solve the problem of age; such lazy-beds are certainly old, possibly pre-potato (c.1790 here) - but the huts do not decay with age and may be very much older.

Early in the eighteenth century the present area of the parish of Uig was held from the Seaforth clan chief by 26 tacksmen, whose names are recorded in the judicial-rental of 1718, (Fig.4). They, presumably, had sub-tenants but of these there is no record. Elsewhere in Lewis the same rental records many small tenants holding direct off the chief but in Uig, apparently, the tacksman and sub-tenant system remained intact. Although we cannot be certain of their precise extent, the distribution of the tacks coincides fairly well with that of the better agricultural ground (Fig.2). Five of them cluster round Uig bay, four were in the Valtos-Reef area, and three around the strait of Little Bernera. All these districts have machair; together they accounted for three quarters of the meal and more than half the sheep and money rents. What is more, these rents represented 27% of the total rental of Lewis, whereas by 1887 Uig yielded only 17% of the rental and by 1901 the proportion was reduced to 14%. The relative decline of Uig is largely due to the growth of Stornoway; this shift in the centre of gravity of Lewis has tended to exaggerate the remoteness and isolation of Uig in the present century.

By the end of the eighteenth century the tacksmen seem to have disappeared; at any rate they are not mentioned in the remarkably detailed account of the parish given in the Old Statistical Account, 1792. Meanwhile the small tenants had multiplied: whereas in 1755 the old parish * had supported 1,312 persons, in 1792 the minister recorded 1,898. At this time there was neither plough nor cart in the parish. The minister was cultivating potatoes and his family were eating them

TABLE 3

AVERAGE STOCK HELD BY EACH FAMILY

	1792	1959
Cattle and calves	9.2	2.1
Sheep	13	37
Horses	1.8	-
Goats	0.8	-
No. of families	387	450

Note: the figures for both dates refer to the area of the old parish.

* The old parish of Uig excluded the Loch Carloway district, from Kirivick north; this area lay in Lochs parish until 1891. Unless the old parish is specified figures quoted have been corrected to conform with the modern boundaries.

1, [See p. 2--Analyst]

Brenish, at the end of the tarred road which also serves Islivig, is forty miles from Stornoway. On the thrice weekly bus the return fare to Stornoway was £1, and freight cost half-a-crown for a hundredweight, but because of competition from privately owned vans the bus service ceased in 1960. Mangersta is reached from the same road by about a mile of untarred side-road of indifferent quality; formerly the only access to it was by a footpath over the sands to the south. General merchandise, fish and meat are supplied by weekly vans; there are no shops. There is a post-office at Islivig; banking facilities are supplied by a mobile bank.

The majority of the crofts are long narrow strips, with those in Mangersta being somewhat more compact. The area ranges from two to nine acres, with an average of about four acres; in Brenish and Islivick only about half is usually arable. All the crofts - or croft-units - are fenced, the work having been completed in Brenish in 1959. There are twenty-nine crofts in the rental for Brenish, ten for Islivick and thirteen for Mangersta; but, owing to amalgamations of various kinds the number of operative units is considerably less - fourteen in Brenish, five in Islivick and ten in Mangersta. There are no cottars.

As soils are reasonably good and comparatively free from rocky outcrops, the arable patches are large enough to be cultivated with a horse or tractor. There is a tractor in Brenish, and four horses, a horse in Mangersta and two in Islivick. All of these are hired for ploughing and carting peats. Very little work is done with the spade, unlike many of the other Uig townships.

While the general rhythm of township work through the year is similar to other areas, here the sheep are wintered up on the hills; some crofters winter lambs on their crofts. Brenish crofters are allowed to winter eight sheep, (or sixteen hogg, or four year-old heifers), on Mealasta Island - hogg are usually sent since their loss, by falling over the cliffs, is less serious than the loss of heifers. Eilean Molach is used by Mangersta crofters, who are allowed two sheep each in summer.

The only crops grown are potatoes and oats, with "black oats" (Avena strigosa) on the sandy soils in Mangersta. Since seed for "black oats" is unobtainable commercially, the crofters save theirown. A grass mixture is sown by the majority of crofters for hay, to qualify for the subsidy.

The extensive hill and mountain pastures are not separately fenced; sheep from all three townships graze over all. If the total sheep stock of the townships (about 3,300) is compared with the souming figures it is found to exceed the soum by about 50%. On the other hand, fewer cattle and horses are kept than formerly so that taking the total stock for all animals (horses, cattle and sheep) and comparing with the actual stock now carried, the area carries only 87% of the stock which the soum allowed. In the two older townships the souming was reckoned according to rent, being one cow, one two-year old and eight sheep for each £1. In Mangersta, however, the soum was one horse, three cows, one heifer, two stirks and twenty-five sheep for each croft.

Lambing percentage is about 80, and ewes form about 60% of the total sheep numbers (excluding lambs). In this district some wedders are kept for three years and then sold for meat, but the main income is from wool, about three pounds weight from each sheep, which sells at up to four shillings a pound.

Most crofters keep one or two cows, and the calves are normally sold in the autumn or spring sales. Brenish and Mangersta each have a bull, and in the three townships there are sixty-seven cattle and thirty calves. Shielings, formerly used for about seven weeks in

493 Problems of communication are not, however, solved merely by providing better
491 roads: at least one household in four has a car or van, and this, with the fall in population,
178 has caused a fatal decline in the use of public transport. The Bernera 'bus service was discontinued in August, 1959, for lack of demand. This is not, of course, an isolated example; the problem is common to all the Highlands, and indeed, to all the rural areas of Britain: in Sutherland, for example, the number of registrations of private cars has risen to very nearly 250% since 1945, and the total number of registrations for all classes of vehicles up to 1958 had risen to almost 200%, while the number of hackney carriages, after reaching a peak in 1952, has since declined by 70%.

SHORE TOTAL	12.8	13.3	473	491	486	504	1:35.1
DISTRICT TOTAL	13.1	13.5	183	188	196	201	1:15.0

Note: in this table, "working units" include all crofts, whether stocked or not, and all other agricultural holdings. Two or more crofts worked together, whether registered under the same tenant or not, are counted as single working units. An agricultural holding is defined as one with at least one cow, or five sheep, or half an acre of cultivation.

23/There is no bull in Garynahine; the Department of Agriculture bull from Callanish is borrowed. Most crofters buy their milk either from the Admiral at the Lodge or from Stornoway whence a dairy delivers daily.

233 Eight crofters keep sheep; stocks vary between 5 and 30 per holding. Two crofters exceed their assuming (there is no equivalence in Garynahine because there has always been plenty of pasture). With a total of only 166 sheep and lambs on 1800 acres common pasture there is no danger of over-grazing.

312 The village has a good piped water supply from Loch Mhurchaidh, and has had elec-
311 tricity since 1954. There are excellent communications: 4 buses a day to Stornoway
311 and also one bus from Uig and one from Bernera passing through Garynahine. These
491 good communications have probably contributed to the declining interest in crofting.

463 There are only three full-time crofters (two of whom draw war pensions). Of the remaining 12 adult men permanently resident, 10 have regular or part time work, the remaining two being to old. Employment is either in Stornoway or at the Lodge. Only
[178] two people do part time weaving. Crofting is rapidly decaying in Garynahine. The croft land is reverting to rough grazing, and there is no indication of renewed interest in the land. Instead, life is becoming increasingly orientated towards Stornoway.

CALLANISH by Anne Iredale and Jennifer Oxenbury

172 Callanish must be one of the original settlement sites of the Hebrides, as it boasts an impressive standing stone circle and two other groups of stones. The stone circle
133 is on a promontory, which projects into East Loch Roag. The promontory rises to about 125 ft, and then the land drops almost to sea-level at the neck (less than half a mile wide)
[361] which joins the promontory to the mainland. The township extends inland for about six miles in a belt roughly two miles wide. This inland area forms the common grazing; it is rough hummocky moorland with the general height rising gradually inland; the highest point is 425 ft.

195 The early crofts were situated close to the stone circle overlooking the Loch. The area was given to crofters who had been cleared from Linshader in the eighteenth century,
427 and it is said that until the Crofter's Act the Callanish crofters had to return to Linshader
361 to work (or one day a year in return for this grant of land. But later the crofts on the
341 more exposed westward facing side of the promontory were cleared and replaced by the 90 acre Callanish Farm. Some ruins of the croft houses still remain. The crofts then spread across the low lying neck to the main road from Stornoway to Breasclete, which
241 now forms the boundary between the crofttland and the common pasture. The crofttland varies in quality, but it is mainly quite good potential arable. Fertiliser and manure are extensively used. Seaweed was widely used in the past but in more recent years the labour of gathering the seaweed has been out-balanced by the lower price of the artificial fertiliser. The main problem of the crofters is one of drainage, and in some parts the drainage channels have to be as wide as the strips of cultivation. Croft 29, situated on a small peninsula from the neck of low lying land, is almost cut off from the mainland at high tide.

175 The croft houses were then in two nuclei; one on each side of the narrow neck. Much
361 later a third nuclei developed, known as Callanish New Park, further north along the
427 Stornoway road, formed by evicted crofters from Bernera; they had put to sea in small boats with their belongings, and they happened to land at this point. They first became squatters on the common grazing but later gained crofter status.

427 There are 47 crofts in Callanish which vary in size from 2 acres to 9.7 acres. Some
311 of the larger crofts are a result of private enterprise; the crofters have, without any

[TEXT CONTINUED ON PAGE 89]

312 There is no piped water supply and after even a short period of dry weather there is a
[604] water shortage. One prosperous crofter (where the crofter does weaving and one member of the family is periodically away with a Norwegian whaling fleet) bought a large modern Bendix electric washer only to find that there was not sufficient water to use it except on
[35] rare occasions. The croft houses have had electricity since 1954, and even the three remaining inhabited thatched houses now have electricity.

311 Although there are only 4 full-time crofters, most of the crofts are carefully and well worked. Only a few crofts are decaying, and there is a tendency for these to be sub-let to the more agriculturally inclined crofters instead of allowing the land to revert; in
[288] addition to the full-time crofters, 31 other men do part-time crofting. Eighteen men weave and this provides their main income, but this figure fluctuates according to the prosperity of the Harris Tweed industry; at present the figure is probably higher than
[166] average. Although 32 people have emigrated from the township since 1939 (many of them
[166] young people who have married on the mainland), there are still several young people and
[162] young families making their homes here. The dominant age-group of permanently resident adults is 15 to 44. Total population is steadily declining, but Callanish has always been a prosperous area and seems likely to remain among the more prosperous crofting communities.

BREASCLETE PARK by Margaret Grice and Doreen J. Phillips.

195 Breasclete Park, also known as New Park, Callanish, was settled by people cleared
427 from Resf in the mid 19th century. Two of the six original crofts have been subdivided, making nine. However, there are only five working units and on one there is no cultivation. There is also a feu house built in 1958.

361 The crofts, which are fenced, form broad strips perpendicular to the Breasclete-
241 Callanish road. Cultivation is mainly by tractor; oats, potatoes and some clover being grown. One progressive crofter has successfully experimented with re-seeding one
231 acre of grazing land on his own croft. Common pasture for the 148 sheep and 6 cattle is shared with Callanish, and for most purposes the Park can be considered a part of that township.

162 The total population is 26 of which 4 are permanently away. There are 6 people over 65, and 8 children under 15.

BREASCLETE by Margaret Grice and Doreen J. Phillips.

131 Breasclete is situated on the east side of East Loch Roag on land which rises gently
133 from the seashore to the moorland and is interrupted by rocky outcrops of gneiss in the northern part. It is separated from the township of Callanish to the south, by a small westerly flowing stream, at the mouth of which is the site of a mill.

491 The road on which most of the houses are situated, follows a curve through the
361 middle of the crofts, but newer houses and some feus have been built along the main
361 Callanish-Carloway road, nearer to the shore. Stornoway is 18 miles away along this road which is turned throughout. Breasclete could be served by the still unfinished Pentland Road, were it to be properly surfaced and this would make the journey shorter
[494] by 4 miles. Two buses in each direction per day connect the township to Stornoway, but high fares make visits to the town infrequent.

312 The township hopes to receive the mains water supply within the next few years, but, at the moment, relies on wells within easy access of most of the houses. Many houses have piped water from private wells, some of which go dry after two or three days good weather although the wells on the lower ground never fail.

361 and across the croft boundaries and it is along these that the majority of the houses are
491 to be found so that as the roads followed the easiest course open to them so the settlement
178 has moved to the roads.

A particularly interesting example of this kind can be drawn from Upper Carloway where a twofold movement of settlements has taken place; first, from about 150 feet above sea level, where the original black houses were built, there was an uphill movement to the upper of the two roads which cross the township at from 150 to 170 feet above sea level, and, secondly (and more recently), there has been a move to build at from 25 to 30 feet above sea level along the lower road which has become the main axis for the publi
342 services. Three main types of building exist then in this township. The first is the blackhouse of which only one or two now remain. Even these are not the primitive type of blackhouse, for they all have proper chimneys. The second is an ill-defined group which includes buildings erected during the later years of the fishing boom and in the period up to the Second World War. These houses are either one or two storied often with the traditional dormer windows; they form the majority. Finally there is the development of the modern bungalows which are built by the crofters but based on plans supplied by the Department of Agriculture. Few have ventured to build away from the level of the lower road.

342 How then does this pattern of settlement illustrate the changes referred to at the
178 beginning of this section? The original houses were abandoned gradually as the tempora prosperity of the fishing enabled the crofters to build the better houses. These have see great changes, but in most cases they are still occupied. Some have been extended and improved by their owners whilst others remain without additions almost as they were wh first built. That the crofter owns his own house has certainly encouraged replacement
[654] in recent times. The generous grants and loans provided by the Department of Agriculture have been utilised to construct the modern bungalows on crofts where the original croft house stands as a byre and where the second house is sometimes inhabited by some relative or person who sublets part of the croft. It is rare to see such successive phase so close together in a landscape reflecting the varying fortunes of economic enterprise and the influence of government subsidies now so much a part of the life of the crofting township.

Roads and public services.

491 Carloway's importance as a centre for West Lewis is accounted for by the fact that at the break in the coastline caused by East Loch Roag the main road southwards from Barvas turns inland to Breasclete. Near the point where it crosses the Carloway river at Carloway bridge it is joined by a number of local township roads creating a focus for community services (figure 38).* Here also the line of the still unfinished 'Pentland' road, projected as a direct link with Stornoway during the fishing boom, reaches Loch Carloway and passes along its north shore to the pier at Borrowston. This substantial pier was the scene of great activity during the period of commercial fishing before the First World War.

368 The six hundred residents of the immediate Carloway area are served by eight travel-
[494] ling shops as well as by the local stores. Bread, fish, meat, green-groceries, library
[494] and bank all come to the end of the croft if not to the crofter's door. Of the vans one is
[162] based on Carloway, one on Breasclete and the rest on Stornoway. A mobile film unit visits once each fortnight. The churches and school rightly reflect their importance in the community by the commanding position which they occupy just above the bridge. Here too is the showground; the annual show attracts people from all over the island, being as much a social as an agricultural gathering. Other services are more dispersed but not far away. They include doctor and district nurse, policeman, post office, and football

[TEXT CONTINUED ON PAGE 103]

*, [Presumably the author means figure 39--Analyst]

[Cromore]

The crofters sowed
241 clover with their oats in 1957; the quality of most of the natural grass could be improved considerably
241 by extending this practice. Several of the crofters have taken advantage of the facilities for obtaining
246 lime and fertilisers, but seaweed and byre manure are widely used. Only seven crofts have
239 vegetable plots this year but that of No. 23, (partially enclosed by a dry-stone wall) has produced
324 crops of lettuce, cabbage, turnips and carrots.

222 The souming for Cromore is one cow, one heifer and eight sheep per £1 rental, but is not
231 enforced. The crofters keep the stock which they can manage to maintain throught the winter and
235 no one appeared to be dissatisfied with this arrangement. In fact the souming is exceeded by only
seven crofters and the total stock for the township is only 75 per cent of the soum. Lambing takes
236 place in April and May and often a high proportion of ewes and lambs is lost. The sheep are
clipped in July and each crofter usually clips his own sheep. He either sells the fleece or has it
spun in Stornoway before weaving it himself. The lambs are taken from the ewes during the second
week of August and then dipped; November is the tupping period and almost every crofter had his
own ram. Most crofts have a cow and a calf and the crofters like the calves to be born in March
so that they are six months old in October for the Garyvard sales. The cows are served by an
Aberdeen-Angus bull from Crobeg Farm. The township gates are opened in October and the cattle
remain within the bounds until May. An interesting regulation enforced by the Grazings Committee
is that each family can have only one dog, and that it cannot be taken on to the Common grazing
without special permission, or on fank days.

178 Shielings, situated on the common grazing between Calbost and Cromore, were used until
253 the 1890's. Active land use has gradually declined: in the 1920's, much of the outrun was under
317 cultivation and from an air photograph, it is evident that hay was being taken on the strips
above Cromore in 1946. The present trend is a continuing decrease in the amount of arable land but
242 this year ten crofters formed a group to enclose and improve a ten-acre plot on the common grazing;
it is unfortunate that all crofters are not willing to take part. Peats are now being cut near the
546 road between Caversta and Gravir, about three miles south- south-east of Cromore and one mile
north of Gravir.

171 Cromore was once a prosperous fishing village but now it has no fishing boats. Two Cromore
239 fishermen work on other boats (one from Marivig and one from Stornoway) and there are a few men
who would welcome the opportunity to start fishing again. There seem little prospect of this,
500 however. The landing-stage, completed in 1957, is regarded by many as a 'white elephant' and,
in fact, at low tide it is useless. So much for the hopes that it might have been used by cargo
vessels bringing goods to Park.

In Cromore there are fourteen looms for the weaving of Harris Tweed. Tweeds are obtained by
289 road from two mills in Stornoway and one in Airidhvruach. At present the average production is
453 only one tweed per loom per week but the weavers could quite easily double their production. During
the past two years this industry has been comparatively prosperous. Knitting is a winter pastime
292 but only for pleasure, although one household possesses a knitting machine.

162 In common with the rest of Park, Cromore has a high proportion of old people. Many from the
166 middle age groups have sought employment on the mainland, and the teenagers, many of whom have
been at school in Stornoway, seek jobs there or on the mainland, returning for holidays and assisting
with the croft work. Some younger folk are resident to care of aged parents.

Cromore is only eight miles by sea from Stornoway yet all communications with the town are by
641 road - a distance of thirty-two miles. There is a daily bus service and the sub-postmaster has a van
639 which is occasionally hired. Some people recalled that the only route to Stornoway was once by
boat to Crossbost and thence by bus. One resident owns a lorry and this is used for most of the
593 haulage in Cromore, particularly for bringing home peats during the summer. As a result of recent
additions to the roads, only three crofts remain inaccessible to vehicular traffic. There are no
366 shops in Cromore but grocery vans call on Monday, Tuesday, Wednesday, Thursday and Saturday;

[Cromore] [Marivig]

366 butchers' vans call on Wednesday and Friday and a fish van once or twice during the week. Goods
498 are also conveyed by the daily bus. Electricity was brought to the village about four years ago
377 and the inhabitants now look forward to a supply of piped water in about two years' time. At present
312 only three or four houses have bathrooms.

The crofts, when worked well, are good enough to provide the existing population with a satis-
241 factory subsistence, but each family unit must have some additional source of income. It seems
236 that the recent subsidies for fishing are good enough to attract fishermen from Cromore and one or
239 two boats might be sent out from the bay if the quay were longer. Weaving has brought prosperity
235 but, as the Park Association states in its Second Progress Report "there is not sufficient weaving
available for the present number of weavers". The proposal to establish a spinning and processing
plant in the Park District made in the 1957 Report, would undoubtedly be of great value to the
000 people of Cromore. The village is sited in a most picturesque spot and one of the inhabitants
suggested that a hotel built on Crobeg Farm would bring some benefit to the community. However,
even if these three increased sources of income became effective, one wonders whether they would
be sufficient to attract the younger generation, already urbanised by schooldays spent in Stornoway.

MARIVIG

Pamela Gough, B. A.

131 Marivig is situated on the western and south-eastern sides of Loch Marivig, a small triangular
sea loch opening to the north-east and sheltered from storms and swells by Torray Island, making
the loch an ideal anchorage and harbour.

133 The land rises steeply from the shore of the loch for twenty-five feet to fifty feet, then slopes
more gradually and irregularly, with frequent precipitous rock outcrops, for two hundred to
five hundred yards to rise steeply to a line of low hills, two hundred and fifty feet to three hundred
feet high, surrounding the loch. All crofts thus have an easterly or north-easterly aspect, not
particularly favourable for agriculture, and only one has any appreciable area of level land
134 uninterrupted by rock outcrops. Soils, derived from glacial drift, are unevenly distributed, thin,
and very stony, and cultivable areas are thus small and widely dispersed.

137 The surrounding hills, which form part of the eight hundred and sixty-three acres of common
grazing, are mainly covered with heather, moor grass or sphagnum bog, while the lower areas
within the township are grassy, but drainage is poor, and rushes are widespread. Bracken is not
yet a problem, and only small areas exist, mainly on the lower slopes of the western side of the
loch. A few rowans and willows survive here also, but otherwise the area is devoid of cover.

There are twenty-four registered crofts in Marivig, twenty-two being inhabited, one vacant
241 and worked by another crofter, and one worked from a house on the common. With the exception
652 of two crofts, one of which is on the common, all the boundaries run from the township dyke, which
closely follows the two hundred foot contour, to the sea in radial fashion (Fig. 4). The size of the crofts
varies from 1.25 acres to 22.25 acres but only seven crofts and less than four or more than eight
acres in size. No croft has more than three acres of land which has ever been cultivated, and
few now cultivate more than one acre. There are thirteen cottars and squatters, five houses being
on the common, three of them cultivating small areas adjacent to their houses.

241 Cultivation is exclusively by spade on the 'lazy-bed' system. Owing to the rocky nature of the
244 terrain, the 'lazy-beds' are narrow, often only one or two yards wide. Potatoes and oats are
244 grown in rotation, and hay taken from lazy beds left fallow. Very few crofters sow grass for hay
237 or undersow their crops. Dung and seaweed are used as fertilisers, with potato fertiliser as the
324 most general 'artificial'. Small enclosed gardens, often somewhat neglected, produce lettuce,
carrots, cabbage and soft fruits on about half the crofts, but no garden produce is marketed.

[Marivig]

231 There are only fifteen cows, two yearlings and four calves in the township, and the crofters with
no cow rely on neighbours, or on tins, for their milk supply. All but two of the crofters keep
sheep, there being four hundred and eleven ewes, one hundred and eighty-five sheep and two hundred
and thirty-four lambs belonging to the township. The common grazing (including the off-shore
islands which are grazed by five different crofters each year) is used for the sheep in summer, while
185 all but one of the crofters winter their sheep within the township dyke on the crofts. Most crofters
keep hens, and surplus eggs are sold to the Stornoway vans.

314 Peats cut on the common are transported by ferry to the crofts, while peats from the north end of
482 the peninsula separating Loch Marivig from the sea must be carried in creels.

Nearly every crofter owns a rowing dinghy which is moored in the loch off the end of his croft,
128 and with this supplements the family food supply. One herring boat, operating nightly from Stornoway
301 and returning to Marivig at weekends, is all that is left of a fairly large fleet which operated
before the war. A second boat, unused for two years, lies shored up on the beach, and two others
are wrecks. Over fifty years ago there was a curing station at Marivig. One crofter fishes lobsters
during the winter and markets them in London.

143 Of the other crofters, only two supplement their incomes by weaving, one by working on the
146 roads while several men work partly on the crofts but are periodically away whaling in South Georgia,
fishing, or on hydro-electric schemes. Several others are in the Merchant Navy. The gradual
166 migration from Marivig, especially of the young people, is reflected in the high average age of the
187 permanent residents, and in the numbers in the school -over one hundred pupils in 1900, thirty-nine
162 (including sixteen from Calbost) in 1946; but only nine (none from Calbost) in 1958. The young
171 people leave the township to train or work on the mainland (generally in Glasgow) or in Stornoway,
while their sisters accept the view that "there is nothing for the young people here".

205 The township has a Post Office and telephone kiosk which also serve Calbost, while lack of a
206 shop is partially compensated by a choice of four vans from Stornoway and one from Gravir. There
266 is a daily bus from Gravir via Marivig to Stornoway and back: the return is over 10/-. The road
290 which reached the township from the west in the late 1920's has a tarred surface and is much
452 better than the later road southwards to Gravir which is untarred. There is no church in Marivig
and most of the population attend the Free Church in Gravir.

Within the township the two arms of the township road serve all but two of the crofts and the
368 sites of the newer houses, few of them more than thirty years old, tend to be near the road, while
361 the ruined houses found on most crofts are often nearer the sea. Only two thatched houses remain
362 and the other inhabited houses are built of stone roofed with asbestos slate, or of corrugated iron.
All the crofts are supplied with electricity from the grid, but very few have a piped water supply;
377 rainwater is collected from the roofs and piped for washing, with a separate piped supply from a
312 well for drinking. All other houses draw water from wells.

829 The stormy winter weather, rocky terrain and poor soil are all blamed by the residents for the
drift of population away from the crofts, but those who remain have little incentive to work the
900 crofts more efficiently owing to the very hard labour involved. It is suggested that with more
intensive cropping and more cattle, each croft could make a comfortable profit and surplus milk,
potatoes and eggs could be marketed in Stornoway - the milk replacing that at present brought
from the mainland. Such development, perhaps on a co-operative basis, together with a revival
of the fishing industry and introduction of a tourist industry, by building a small hotel or guest
house and attracting anglers as well as those who simply wanted scenic beauty, might bring pros-
perity back to a township which otherwise may well be derelict in the next twenty years. But the
capital required for the two latter enterprises is not available within the township.

[Lemreway] [Orinsay]

229 The West Highland Survey Township Card[1] describes Lemreway as "predominantly a fishing
196 township". The remains of an old curing station are visible today and until 1947 there were
boats operating from Lemreway. A declining market, increasing cost of gear for obsolescent
554 and the lack of a landing stage led to the decline of the industry in this township. Today there
617 one fishing boat which lands its catch in Stornoway - working with modern equipment, drift
598 nets, it provides a regular income for a crew of six.

161 An examination of the population statistics proves interesting, especially when compared
162 those for Orinsay. Lemreway's resident population of just over 70 males and 70 females is
considering that there are six unoccupied crofts. Eleven of the crofts have more than one ho
and the cottar population forms over a third of the total residents. More than two-thirds of
resident population is in the two important age groups - between 15 and 64. With over forty
resident males in the working age group, Lemreway provides a striking contrast to other cr
townships in Park.

Fourteen of these men are full-time croft workers, while nine others find work in ancilla
243 occupations such as weaving and fishing. A further eight supplement their croft work with re
241 employment - a postmaster and a postman, a bus driver, a lorry driver and several weaver
236 over thirty people work away from the township permanently, fourteen in the Merchant Navy
235 nine girls in domestic service, while a further nine engage in seasonal work.

Emigration from the township has continued steadily with forty people leaving since 1919.
164 Nevertheless, Lemreway has a larger proportionate resident population than most townships
187
607
597 Only four thatched houses are occupied and housing conditions generally are good. Every
392 has electricity, but, with four exceptions, water has to be carried from springs and wells.
399 of the present houses were constructed in the 1930s and they are usually near to the road.
372 of the old houses remain, some being used as byres, and these were built either along the sh
361 up the slope in the shelter of the hills, where the house was near the sheep, the peat and the
Today supplies of food, peat and even seaweed are brought by road.
917

Mention must be made of the possibilities of the tourist trade in Lemreway with its most
484 attractive situation and reasonable road connections. An approach has been made to the Sco
Youth Hostels Association and while hostellers could not greatly increase the income of the
they would stimulate interest in the area. Accommodation for summer visitors, other than
985 of the crofters, is difficult to find but it seems that at least three houses could be used.

It is possible to be optimistic about the future of Lemreway, as at the moment considera
000 enterprise is being shown. A Ferguson tractor, bought this year by a man returning from
907 is an example. It is to be hired out and could be put to good use in some parts, especially o
511 extend. The attempt to improve the common pasture and the new extensions to neatly painte
all reflect a combined effort in improve conditions. The old economy of crofter-fisherman
243 being adapted to modern times and crofter-weaver, crofter-postman and crofter-bus driver
463 contemporary employment combinations.

The pessimism and apathy noticed in many crofters is to be found in Lemreway but abov
181 is the impression of enterprise. If Lemreway can continue to adapt itself to changing condi
000 it may be able to combat the 'drift to Glasgow' and continue as a successful community.

ORINSAY

Beth Blowers, Brenda Turner and John Wearmouth

131 Orinsay is a small crofting township clustered, in the form of a horseshoe, around the
361 a sheltered bay on the northern side of Loch Shell. Most of the houses are situated within
241 of the shore on a narrow strip of level land, while the crofts extend from the shore on to th

1. The Directors of the Crofting Survey are grateful to Dr. F. Fraser Darling for granting
to the individual Township Cards, which are a storehouse of information. For detailed
113 tents of the cards, see West Highland Survey p. 247.

361 Many of the original houses are ruined or used as byres. Figure 14 shows that new
491 houses have been built near the sites of the old ones but sometimes nearer the road - all
487 but four houses have easy access to the road. Crowlista is linked to the main road by
493 two miles of rough gravel side-road, and by a footpath and ford via Timsgarry. Vans call
205 but there is no Post Office, store nor bus service. At present water supplies are poor -
366 two wells only are in use.
491
312

Carnish is served by a short unmetalled road and all houses have good access to this. supply is good; water may be stored on the high part of the crofts and piped into the house The roads serving Timsgarry too, are unmetalled, but the main road is less than a mile away. This 'main road' from western Uig to Stornoway runs through Ardroil and all except one of the houses not near to it have good drives suitable for lorries. Ardroil has a store and Timsgarry a Post Office. One butcher's and two grocers' vans call weekly and the travelling bank fortnightly. The thrice-weekly bus service to Stornoway (return fare almost £1) ceased in 1960 because of competition from privately owned vans and cars

366
205
453
491

241 The cultivated land is in strips usually large enough for horse or tractor work; the
23 smaller potato patches are hand dug. Few horses are kept now, Timsgarry, Ardroil, and
407 Carnish have one each and Crowlista none. Crofters hire these horses or tractors from Brenish or Enaclete. Oats and potatoes are the only crops grown in quantity, small patches of turnips are found and most crofters grow root vegetables. Kale was seen growing on one Ardroil croft; this was an experiment and seemed to be very successful. Bere and rye are no longer grown. Grass mixtures are sown in order to qualify for cultivation grants. Oats are undersown, or grass seed may be sown after the oat harvest, and left for hay for several years - some sown twelve years age was said still to be giving very good hay, but on the whole very little grass is sown in Crowlista. The acreage of natural grass cut for hay varies a good deal with the weather and the time and labour available. Crofters find this difficult to estimate as well, as often small irregularly shaped pieces are cut, and the figures, therefore, may not be accurate. (Appendix A).

One excellent garden showed that a rich variety of vegetables, fruit and flowers can be grown if adequate shelter is provided and the time for cultivation is available, but few crofters have the necessary knowledge or interest.

242 Lime, dung and artificial manure are widely used, though on some Crowlista crofts
134 the compound fertilisers were in use for the first time in 1959. Shell sand is used on the
324 crofts which have peaty soil. Although it is agreed that seaweed and dung are the ideal fertilisers for potatoes, seaweed is only occasionally used. It is becoming difficult to obtain locally and much heavy work is involved.

231 Each of the thirty-five operative units which carry any stock at all has a cow for domestic milk supply and manure. If the family is large or many visiting relations stay on the croft during the summer the calf has to be sold early; otherwise it will be reared until the cattle sales in September or May. Only eight crofters had two cows; fifty years ago four were commonly kept. Only thirteen of the units had young cattle other than calves. One crofter was rearing a kid for milk.

The bull supplied for these townships and Mangersta is an Aberdeen Angus which is wintered on the Ardroil machair.

233 It was sometimes difficult to obtain factual information about sheep and it is difficult to generalise. Operative units without sheep were those where no suitable labour was available. In a few cases crofters considered that sheep were 'not worth the trouble' - but others were building up their sheep stocks. Individual flocks ranged from ten to two

484 As yet the tourist trade is almost entirely restricted to visiting relations but many
485 houses offer suitable accommodation for people who would appreciate quiet holidays in these very beautiful surroundings. The distance from Stornoway, the difficulty of obtain-
[497] ing varied food supplies - and the weather - were cited as disadvantages! Passengers on a weekly coach tour from Stornoway are supplied with meals at an Ardroil house which has good access to the beach but otherwise the crofters show little interest in the possibilities of tourism.

162 In common with other crofting townships, the greatest problem here is that of an ageing
166 population because the younger people seek employment outside their township. The diagrams[1] illustrate the age-heavy structure of the permanent resident group and also the
464 numbers of the insurable population periodically or permanently away. The lack of suitable work, for young women particularly, is also shown. The ages of the tenants also illustrate this problem. Of the thirty-seven tenants here, twenty or 34% are over sixty-five. Serious, too, is the loss by emigration of people between fifteen and sixty-five. Of the total 'working population', 35% have left this region since 1939. The corresponding figure for Crowlista alone, the older settlement with smaller crofts, is as high as 42%.

241 We found in this part of Uig some crofts efficiently and energetically worked by young
231 tenants, and if reasonable stock prices are obtained the larger crofts can be worked
427 profitably. However no croft will fully support a family; ancillary employment is always
[511] sought by crofters with growing families yet many crofts are carrying less stock than they
[887] might because some tenants are not interested in, or able for, agriculture. The croft is increasingly thought of as a home, as part-time employment - often for older members of the family - and as a place for retirement.

000 It is easy to list schemes for improvement and change:- dairying to supply Stornoway with milk, poultry and pig keeping on a commercial scale, cultivation under glass, the tourist industry, forestry on a small scale, lobster and crab fishing, etc. Such schemes would require capital not available in the townships, careful planning, and tactful administration by people with real knowledge of this area and its people. Meanwhile even the potential production of the crofts is by no means realised.

CHAPTER SIX

AIRD

by

Madge Phillips.

131 The little township of Aird is an isolated and old-established crofting settlement along the western side of the steep and narrow valley of the Amhuinn Gil na h-Airde three miles
133 north of Crowlista. After leaving Loch Meacheit, the river flows northward through a gorge (at the mouth of which are the ruins of the old corn-mill), then across a narrow
427 flood-plain into the rocky bay of Camus na h-Airde. The crofts, roughly fan-shaped in
133 arrangement and varying in size from 3¼ to 7 acres, each originally included a narrow strip of the flood-plain, stretching across from just beyond the right bank of the river, up the steep, rocky slope above the left bank and widening out over the more gently slopes between the 100 ft. and 200 ft. contours. A number of the crofts were subsequently enlarged, gaining extra land on the right bank of the stream, whilst others received additional ground to the north or south.

1. [See figures 12 (facing p.34) and 17 (

5: Caird et al. K-5 (1958) 1959 ES10 Highland Scots ES10 Park

Recent trends also point to a decline in the number of sheep, although more are kept now than fifteen years ago. From 1942-51 the numbers were more than doubled (263-565). A great deal of this increase must have been a result of the ewe subsidy, but part at least may be connected with the war and post-war boom in Harris tweed. By 1955, when the subsidy was suspended, numbers had already begun to decline and have since fallen steadily. This year the township has only 374 breeding ewes while the rearing of only 236 lambs would suggest a further decrease in the future.

All the crofters keep some sheep although individual stocks vary from 15 to 150. For most of the year these sheep are grazed on the common pasture on the moor or on the eighteen acre island in the bay. In August, however, the lambs are gathered in for weaning and dipping; in November the gates are opened and all the sheep allowed to graze on the cleaner pasture within the croft boundaries. If necessary they are given fodder, but from the beginning of January they are encouraged to return to the moor, although the gates are not 'officially' closed until May.

The total area of the common pasture exceeds 1500 acres, but most of this consists of hummocky, waterlogged peat moorland supporting only poor quality coarse grasses and sedges. Over 700 sheep now graze this area and the apparently large common pasture is in reality drastically overstocked, a process which must inevitably harm the animals as well as the land.

No pigs or horses are to be found in the township and each crofter keeps very few hens, normally just sufficient to provide eggs for home consumption. Any surplus eggs which do remain are sold to the Co-operative van, but prices are so low that the keeping of more than a dozen hens is far from profitable.

It can be appreciated that crofts of this size and quality can neither provide the crofter and his family with sufficient income, nor fully occupy the available labour force. As a result, people in the past have turned to the sea. Indeed the West Highland Survey describes Orinsay as "primarily a fishing township". Today the herring fishing has disappeared entirely and only one crofter still does a little lobster fishing, sending his catch direct to Billingsgate.

There are now 45 people resident in Orinsay but an examination of their ages reveals that less than half of them are between 15 and 64 years. Indeed there are only six resident males between these ages, and three of these spend at least part of their time working away from the township on the Eishken estate.

As there is neither a school, post office, shop nor garage in Orinsay, there is no available occupation in the 'service trades'. Therefore, over half of the males between the ages of 15 and 44 are permanently away in the Merchant Navy, returning home only for holidays, while another third are seasonally away with the whalers. Similarly almost half of the females of similar age work in domestic service in Glasgow. It must be realised that most of these people working away assist their families at home, and that a large part of the croft incomes are made up of money sent home, together with pensions and other allowances. Emigration from Orinsay to other areas has continued steadily, twenty people leaving the township since the war.

On the whole, housing conditions are good, due to relatively recent construction. There is only one traditional black-house, and even this house has electricity: only one house is without it. Water supply is not so certain as wells and springs are the only source. The township lacks a telephone and a shop, but is served by travelling vans. A good road, constructed within the last decade, connects Orinsay with Gravir; entering the township via the valley to the north-east, it serves directly all but three of the crofts. A bus leaves daily for Stornoway, about thirty miles distant.

Like so many other crofting townships Orinsay, above all else, gives an impression of congestion. The self-same hills that provide shelter also restrict cultivation. The crux of the situation is that land, extremely marginal in character, is being worked by too many tenants on holdings too small to be economic. With three residents to every two acres of cultivated land, Orinsay must be seen as an 'overspill' - an unfortunate result of the cottar problem in the 'twenties'.

Lewis and Harris

3. *The Significance of Lewis-and-Harris*

181 The Highlands and Western Isles today, "The Land
184 of the Gael", may thus be grouped as two regions. The
361 North-west is mainly of 'township crofting' and distant
101 from the Lowlands—the other mainly of farming, living
[197] nearer to the Lowlands and in touch with them. Throughout the North-west, Gaelic is still the common speech,
[178] even of the children. The old community feeling is strong; it is that, indeed, which keeps the people attached to the villages.

101 From the plains and cities of the South it is a far cry to *Ultima Thule*, as Lewis, like Zetland, is sometimes called
131 even by its own people. Lying some twenty-five to thirty miles across the Minch from the mainland, its nearest links
[496] with the South lie even farther away. From Stornoway it is some seventy-five miles to Kyle of Lochalsh, the railhead for Inverness and North-east Scotland, and 100 miles to Mallaig, the railhead for Fort William and Glasgow. To reach Stornoway over the moors from the west coast
[504] townships is itself a journey. Stornoway is the Island's only port, though passengers are put off at Tarbert, at
[177] Stockinish and at Rodel in Harris. Isolation has always been a dominant factor in the Island's life. From pre-
[178] history through the Middle Ages to modern times, that factor played its changing part.

178 In Lewis, conditions had changed less than elsewhere during the last century; for example, the *New Statistical Account* of South-west Argyll in 1836-35 reads like a description of conditions in Lewis as they were until after 1914! Hence, as already said, the contrasts are very great indeed in the aspect of the country, its fields and houses, and in the number, character and ways of the people. It

4 COMMUNICATIONS

000 FROM the earliest times, the provision of communications in one form or another has been a matter full of incident and high colour. Gaelic folk-song contains many references to
533 the hazards of crossing the impatient waters of the Minch. One
484 such, a waulking song still known today, commemorates the death of Iain Garbh Mac Gille Chaluim, of Raasay in Skye, who was drowned in April 1617 on his way home from visiting the Earl of Seaforth in Lewis; it is said that he was drowned through the workings of his own 'muime', or foster-mother, who employed several famous witches to raise the tempest in which his ship foundered.

121 For well over a century the subject of adequate communications has aroused continuous argument. The strength of any island community lies in its ability to live within itself, while accepting the periodic injection of certain external items necessary for living or for work. A Londoner once expressed amazement at the isolation of Scarp, in West Harris, commenting that in Scarp they would not know what was happening in London. The indisputable rejoinder was 'Nor do they know in London what we would be doing in Scarp.' However, to a large island community, with a certain degree of economic significance, communications are the basic lifeline.

SEA ROUTES

• 50 When in the early 1800s formal sea communications were being
* 175 established between the island and ports on the west coast of
487 Scotland, down as far as the Clyde, most of the islanders were of course little affected. Except for the professional classes (merchants, ministers and the like), they had little use for the sea links
[433] provided for them. Their economy was not yet a cash economy,
* 175 and travel was thus a luxury they could not afford. As the nature
173 of local life began to change with the infiltration of some of the

Chapter 3

CHANGING ECONOMIC STRATEGIES: LAND, SEA AND LOOM

178 In Lewis, the change from a relatively self-
288 sufficient community in which land and sea provided
128 the economic base occurred in the context of the phenomenal rise of the Harris Tweed industry. In the following pages, the history of Harris Tweed is discussed in relation to changing strategies involving exploitation of land, sea and loom. Associated features of social life are discussed. Social boundary systems are defined and discussed in Chapter 4.

A. The Sea

175 Around World War I, nine boats, as long as 27 to
228 30 feet, driven by sails, used to go out regularly from
• [501] the Shawbost harbor. From five to seven men, usually
[491] neighbors, had "shares" in a boat. They would go out
[454] fishing during the night and return the next day. "We
[433] baited our lines with eel, for ling. We would catch maybe two or three hundred. I remember once we caught 1300."

175 On one of the crofts along the strand are the
228 ruins of two curing houses, where the fish were salted
[348] and dried. Ling, cod, skate and halibut were cured
[439] and sold to local merchants for export. "The same as
[171] they do in Iceland this very day. That was the main
175 industry. Then the English came with their steam
648 trawlers; they ruined the fishing here, and then went
228 west to Iceland and the Faroes. In Iceland they get fined for poaching, but here the trawlers often ignore
[433] the three-mile limit. But the fishing was the mainstay here, before the Harris Tweed came along."

175 One man returned from sailing in 1932 and bought a
228 boat for L24. He had 32 lobster pots, and made L7 one
435 June by selling the lobsters at a shilling apiece.
• 501 Another man, who returned from the United States in 1934
[454] because of the depression, bought a share in a 14-foot
[491] boat. It was made in Ness, at the northern tip of Lewis, and cost about L14. He and his partners went out every
[434] night possible; the fish provided an important part of their income. The boat was sold in the 50's. "It wasn't
175 being kept up anyway." Around World War II there were as
228 many as twenty boats; men fished at night, after a day's
501 work. Today there are four 12-foot boats in Shawbost,
178 each shared by four or five men. The boats are used
501 intensively for fishing during certain times of the year,
228

178 but not as often as in the past. In the past boats
• 501 were in danger of being smashed by the strong seas
228 and winds that gained easy access to the Shawbost
[493] harbor; but today, because so many cars are available,
[504] the boats can be sheltered in the more protected bays of Carloway, five miles up the coast to the southwest
[434] of Shawbost. Despite this protection and the increase in income since World War II which would enable more people to buy boats, the number of boats remains small.

175 In the past certain people were esteemed for
821 "knowing the wind and the sea." The sound of the turf coming from different directions presaged different kinds of weather; a line of white across the bay meant bad weather in a few days. A fifty-year-old man says, "My father and grandfather could tell when a storm was coming. They needed to know, and they didn't have radio and television to tell them. I would know the signs, too, if I had listened to them."

175 Not only was there local fishing, but the men used
228 to hire themselves as crew on other fishing boats.
44 Several nicknames reflect this history. One family is
551 known by the nickname "Strachan," the surname of a man who lived on the east coast of Scotland and on whose boat the head of the Shawbost family had once worked as

SINCE THE SECOND WAR

furnished less than 1 per cent of Scottish landings. The war's 228
aftermath brought too many changes for the island to cope with. 175*
Markets had disappeared; food habits had changed; capital was scarce; and many ex-servicemen saw the writing on the wall for fishing as a full-time activity. Also, many sea-going crofters of the pre-war fishing fleet were now dead, memories on fading photographs. Nor had the Western Isles fisheries ever fully caught up with those of the main fishing bases of Britain and the east coast of Scotland. Hence the decline of the herring fishing hit them hardest of all. Today, Stornoway District is handicapped geographically, by distance from the markets; historically, by its late entry into the industry; and economically, in that it failed to participate in the trend towards the centralisation of the industry in share-holding companies within easy reach of London.

In the old days of sail it was easy for men to combine the two 228
occupations of crofting and fishing. When in the early years of • 501
this century power replaced sail (the first motor fishing boats went 178
to work in 1907) and the steam drifter took over from the sailboat, the whole nature of the fishing industry changed. Modern boats and gear had to be acquired if the work was to be profitable. But the islesmen, partly because of lack of capital, partly because of the lack of suitable anchorages and harbours, and partly because the combination of crofting and fishing had created a seasonal tradition incompatible with the use of expensive boats (which needed to be kept continually at sea if they were to pay at all), were unable to adjust themselves to meet the new challenges. In the inter-war years they had no option but to carry on as best they could in their old traditional role. The resultant decline meant that when opportunities did arise for fishermen generally in the form of grants and loan schemes (introduced in 1945 by the Fisheries Division of the Scottish Home Department and subsequently by the White Fish Authority and the Herring Industry Board), the bulk of the men living in the isles were unable to take advantage of them: they lacked the necessary qualifying experience in handling modern boats and equipment, as well as confidence in fishing as a full-time occupation. By 1959 there were only twenty-five boats of 40 ft or more in length based on Hebridean ports. Lewis had only six full-time crews; Harris had five.

AGRICULTURE AND FISHING

228 This lack of a local fleet fishing in the Minch and associated
• 501 waters on a full-time basis has inevitably brought reluctance on
178 the part of Government bodies to invest capital in, say, harbour
[654] improvements, knowing that they would fail to yield an eventual return. Just after the first world war Lord Leverhulme formulated ambitious plans for a full-time fishing fleet based on Stornoway. More than thirty years later, in 1954, the Taylor Commission, set up to investigate the problems of crofting, summed up:

> Gone are the days when the crew of the fishing boat could haul up their craft on the beach and leave it there in safety. The modern seine-netter is much too heavy to be beached in that way and far too costly to be exposed to risk in unsafe anchorages . . . The capital outlay required for their purchase is such that it is not possible to operate them except on a full-time basis. It is still possible for smaller boats to be employed in fishing for lobster or crab, but the general trend of development is against the man who combines fishing with the work of the croft. We do not think it possible to reverse this trend; it should be accepted and an attempt made to establish a full-time fishing industry in Western waters.

228 The first vital step to do just this was taken in January 1959
429 when the MacAulay (Rhodesia) Trust announced the introduc-
452 tion of a scheme to 'increase the number of modern boats with efficient crews operating from or based on Lewis'. This Trust was set up under the will of the late Murdo MacAulay of Ness, who left Lewis with little English, less money, but plenty of Gaelic and enterprising spirit, to acquire a considerable fortune in Rhodesia. He bequeathed the bulk of it to be applied for the good of his island home. Anyone applying for assistance under the scheme was required to give an undertaking that he would prosecute fishing on a full-time basis; further, no one would be assisted unless, in the opinion of the trustees, he was likely to make 'an
228 energetic and successful fisherman'. This pioneering venture
452 directly assisted three young men in Kirkibost, Bernera, to acquire
654 one of the best-equipped lobster boats in Scotland; and secondly it acted as a useful prototype for the Government scheme which was to augment and largely replace it a year later. In January 1960 the Government officially instituted the Outer Hebrides Fisheries Training Scheme. Free training was offered to men pre-

When *LORD LEVERHULME'S FISHERIES*
he pulled out of Lewis to go south to Harris, 159
he offered—such was the character of the man—as thanks for 175*
the '98 per cent support' he got from the people of Lewis, to each 423
Lewis crofter his own croft as a free gift, and the Lews Castle, 431
together with all his property in Stornoway, to the people of the town.

In 1919, Leverhulme became proprietor of Harris, and con- 159
centrated his efforts in Obbe, now called Leverburgh, in South 175*
Harris. The harbour at Obbe lacked the natural advantage which Stornoway had, so he spent large sums on making it navigable. [503]
Rocky obstacles were blasted away; numerous buoys and beacons [228]
were set up to guide vessels into harbour; new quays were built, and kippering sheds, and other buildings necessary for packing
and curing herring were erected. Among his other undertakings [288]
in Harris were the provision of a mill for making tweeds, and he 491
bore half the cost of the 5½ miles of road between Leverburgh and Finsbay. In 1925, after a visit to the Congo, he died in Brussels. His Harris schemes came to an abrupt end. And the remains of industrial history are still to be seen in the quietness of the little township named after one of the most stormy of business petrels that Britain has ever seen.

Tourism

Tourism has always been a perfunctory and casual affair, until 484
the introduction of the fast ferries which now link the mainland [501
(via Skye) with the Outer Isles. Some 10,000 cars cross each year [505
from Skye to the Hebrides. In 1913, the Stornoway Tourist Association had a struggle to increase the number of visitors to the town, to establish it as a tourist resort. It is much the same today with the Western Isles Tourist Association, which is having difficulty in integrating tourist facilities with crofting activities. In Lewis, the Stornoway Trust has assisted in establishing pony-trekking, a venture which has the potential to mirror the success of a similar one in the Isle of Skye.

PRESENT INDUSTRY

Almost an echo of the kelp-burning industry is the alginate in- 824
dustry. It provides employment for only small numbers, but is a 38

This is only relaxed if emergency sailings are necessary. During the second world war attempts were made by Free Church ministers to stop the movement of ships in Stornoway harbour, but needless to say the war effort took precedence.

THE SHIPS

•[501]

When Sir James Matheson bought Lewis in 1844, sea communications were still erratic: a mailboat or packet was running thrice weekly between Stornoway and Poolewe on Scotland's west coast. Sir James decided that a craft based on Stornoway would serve more efficiently both for general trade and for island-to-mainland transport, and he provided a regular steamer service.

[205]

As this craft, the *Mary Jane*, was to carry mails, Sir James thought the Post Office should promote the service, and he struggled with that department for some years, eventually being promised a subsidy of £1,300. Though the scheme was to cost far more and had won no other financial support, the service began in 1846, Sir James being surety for the whole concern. He lost some £17,000. Another of his ships was the PS *Ondine*, which carried mails between Ullapool and Stornoway during the 1870s and '80s.

Quite apart from the Matheson ventures, things had been stirring in the south; the sea communications of the West Highlands and Islands were about to be commercially developed. One of the

[501]

first ships on a regular run between Stornoway and the south was the *Ben Nevis*, a small wooden paddle vessel later to be wrecked south of Campbeltown in 1831 while homeward bound from Stornoway. G. & J. Burns was one of the main companies operating the early West Highland trade, managing to survive the vagaries of fortune until 1851, when its interests were passed to David Hutcheson, its chief clerk, on the condition that the Burns's nephew, David MacBrayne, became one of the partners. This was the beginning of the company so well known today, Messrs David MacBrayne Ltd. The new company started off with a building programme and gave birth to a long line of ships, many of whose names were to become bywords in the Western Isles.

rocks about intrusions or dykes of more resistant crinanite. Second, 632
the better nature of the soil derived from the weatherings of the 133
sandstones and conglomerates has aided reclamation and cultivation.

In the long years of its existence the town has been a focal point 175*
of island history, fanning out to many corners of the world, where 632
it has been merged with the wider history of Britain, the Commonwealth and elsewhere. Detached as it was from the rest of [181]
Scotland by the Minch, Lewis often went its own way. In the 175*
reign of Queen Elizabeth, when England and Sweden plotted 632
against the Scottish crown, the emissaries of these countries met 648
in Stornoway. Later, in April 1719, a council of war was held in a room in Stornoway to plan the overthrow of the Hanoverian dynasty of Britain; included in the assembly were the Earl of Seaforth, the Marquis of Tulibardine, George Keith, the hereditary Earl Marshal of Scotland, and his younger brother James, who was to become the famous Marshal Keith. Prince Charles Edward, though not setting foot in the town, looked at its twinkling lights from across the Bay, at Arnish, while his pilot tried to obtain a boat to take the royal fugitive to France.

The harbour has seen many kinds of ships on its waters. In 504
the twenties, the *Metagama*, the *Marloch*, and the *Canada* came 501 •
to take away almost a generation of young Lewis folk to the new 632
lands across the seas, because their own island could not support [167]
them. The *Iolaire* sank within sight and sound of the harbour mouth and dragged about 200 Lewismen with her into an island memory. The *Cervona*, of Dundee, dropped her anchor just by Arnish lighthouse in July 1904, carrying survivors from the emigrant ship *Norge*, sunk at Rockall with appalling loss of life. The *Victoria and Albert* visited Stornoway in September 1902, [643]
the first visit to the town by a reigning monarch. That was a great 701
day, the result of a letter from Provost Anderson of Stornoway in which he pointed out to His Majesty, King Edward, that with less than 30,000 inhabitants Lewis had 2,300 men in the Royal Naval Reserve, trained at the local Battery, the largest in Britain. There were also 1,100 men in the Seaforth & Cameron Militia, all of whom volunteered for foreign service in 1899, and 900 of whom did garrison duty in Egypt. Between 300 and 400 Lewis-

STORNOWAY

[362]

In 1796 there were sixty-seven slated inhabited houses in the burgh, twenty-six of which had been built since 1784. Before this date most of the houses followed the constructional pattern of those found in rural Lewis. In 1838,

> Stornoway was, within the last twenty years, only a small fishing village, but from the spirited and patriotic exertions of Lord Seaforth, the proprietor, and the grant of irredeemable feus for building, it has become a place of considerable importance as a fishing station. It has a post office; and a packet sails regularly once a week with mail and passengers. No place in the North of Scotland, and in an insulated situation also, has made more rapid strides at improvement, both in a domestic and commercial point of view, than Stornoway.

Mention of the sailing packet indicates the tedious manner in which mails came to the town for subsequent distribution in the island. Letters went by mailcoach north to Dingwall, thence by mail-gig west to Achnasheen. Because there was no road from Achnasheen to Poolewe, about thirty miles away, they had to be carried on horseback. The weekly sailing packet then picked up the bags, for which cargo the owners were paid £150 per annum. A letter from London to Stornoway cost 1s 5½d; the smallest enclosure made it double that amount. The mail-packet was often held up by bad weather. It was a wind-blown sailing ship that brought Stornoway the result of the Battle of Trafalgar and the death of Nelson, an event in which a number of Lewismen also took part and died; in St Columba's churchyard at Eye there can still be seen a Trafalgar officer's gravestone. A fortnight after this news arrived, the packet from Poolewe brought its stale message.

*175
439
632
• [501]

In 1844 seventy boats, ranging from 15 to 150 tons, were working out from Stornoway. The *Gazetteer* for Scotland for that year says, 'The grand trade of the place consists in the exchange of the produce of the fisheries and the kelp shores, for British manufactured goods and foreign produce.

A HARRIS VIGNETTE

Fourteen employees were directly concerned, with another six in 316
the services sector. 464

The potential of the tourist industry is only beginning to be 484
tapped. MacBrayne's drive-on drive-off car ferry, with a capacity [505]
of 50 cars and 600 passengers, makes two or three trips a day between Uig in Skye and Tarbert, the journey taking less than two hours. The mainstays of tourist accommodation in Harris are 484
the Tarbert and Rodel Hotels, both well appointed and owning 485
fishing rights for salmon and trout. Sea fishing is another tourist 529
attraction. Crofters participate in the holiday trade by offering [226]
full board or bed and breakfast, caravans, caravan sites or vacant lets.

An interesting tourist venture has been started at Rhenigidale. 484
A rough, stony track, one of the most tortuous and exciting in 487
Britain, takes its leave from the main road over a ridge. It twists 529
and turns in and out of gullies, over cliffsides and across the steep heather-clad slopes of the Toddum, a dramatic little hill of 1,730 ft which protects Rhenigidale village from the Atlantic gales. The [205]
seven-mile track is the only marked route, though crofters take a shorter way to the north over pathless bogs; the local postman makes a round of about 60 foot miles in the week, walking this track and on to Tarbert three times in all weathers. The village 504
relies on its sheltered harbour with a good natural rock pier: 361
most communication is by water, all food and fuel coming that 505
way. In past times every household owned a boat for lobster and 501 •
shell fishing to supplement both diet and finances. Today the 226
interest in fishing has declined, as has the population. But in 1946 485
Mr Herbert Gatliff paid his first visit to Harris, discovered what the island had to offer, and started a campaign to convince hostelling interests of the need to make some investment in the Western Isles. A croft house in Rhenigidale was in 1961 equipped as a hostel, and under what is now the Gatliff Trust it is maintained for hardy trekkers, the Scottish Youth Hostels Association making a grant for running costs. Many visitors have found that the place offers a degree of happiness corresponding with its remoteness from civilisation.

Summer in Skye gives a fascinating account, written from first-hand experience, of working conditions aboard. *Clansman*'s speed on her first voyage back from Stornoway was 13 knots; she was wrecked on Sanda Island after only fourteen years' service. The company's PS *Glencoe* was originally the *Mary Jane* built by Sir James Matheson for his Stornoway run, launched in 1846. In that year she plied from Stornoway to Portree, Tobermoray, Oban and Glasgow, with calls at Kyleakin, Balmacara and Armadale. She passed to MacBrayne's in 1857, was lengthened and with other alterations emerged for a long life of sea service, braving the terrors of the Minch waters as the saloon steamer *Glencoe*. Refitted with new engines during her lifetime, her first horizontal boilers were replaced in 1883 by others which, in 1901, were succeeded by a haystack boiler from the *Fusilier*. *Glencoe*'s original length was 150 ft, later extended to 165 ft; she was 20 ft broad and after her lengthening had a gross tonnage of 226. Her original machinery was a steeple, one-cylinder 56-in engine of 177 nhp. The end of the much-loved *Glencoe* came in the summer of 1931, when, despite the display of much sentiment, she was broken up at Ardrossan—after eighty-five years of service. When she died she was one of the two oldest working ships in the world.

The PS *Stork* was first built for Messrs Burns's Liverpool service and was later on the Belfast run. Acquired by Hutcheson's in 1858 she was placed on the Glasgow/Stornoway run with the *Clansman*, but in 1860 was sold to the Italian Government. Another brief encounter was the SS *Fingal*, which knew Stornoway for a few short months before being sold for the American Blockade, after capture becoming a Federal gunboat. Then came the SS *Clydesdale*, built in 1862 for the company by J. & G. Thomson and used on the Glasgow/Stornoway twice-weekly cargo and passenger service. She was 197 ft long, 24 ft broad and drew 13½ ft of water; her gross tonnage was latterly 468. Her original engine (120 nhp) was a two-cylinder steeple (40 in—30 in); this was compounded in 1893, when she had a new double-ended boiler installed.

After the first *Clansman* came to grief on Sanda Island, a second ship of the same name was built for the Glasgow/Stornoway run. She was a most attractive two-masted iron ship, with a

There were, of course, other types of flights before 1948. In 1937, Captain Fresson took the first sick person off the island on charter—the beginning of the air-ambulance service so valuable to the islanders. During World War II, certain RAF mails were flown between Glasgow and Stornoway, on which there were first covers (December 1943, Glasgow/Stornoway; December 1943, Stornoway/Glasgow; and January 1944, Glasgow/Stornoway). The present air services are supplied by BEA and Loganair Ltd. The BEA plane route is Glasgow/Benbecula/Inverness and return. Loganair offer a service Glasgow/Benbecula/Stornoway and return. In recent years this small firm has built up a most valuable inter-island air link.

OVERLAND ROUTES

The history of overland communications in the island is a short one, though it does, like American history, have many characteristic highlights. In early times getting from one place to another was simply a matter of following well-worn tracks across the moorland, skirting lochsides and marshy lands and just taking the shortest distance possible between starting point and destination. Considering the length and breadth of the island, it is surprising that it was not until Sir James Matheson's appearance in Lewis that road-making was undertaken with any determination. This activity stemmed largely from the desire to get something in return for the outlay involved in keeping literal death from starvation clear of the doors of the island folk.

The report of the Rev James Headrick (prepared for Lord Seaforth in 1800 and published about 1820) indicated that the provision of roads would be of great benefit to the island. A footnote in the report (of probable date 1816) urges assistance from Parliament or the Board of Fisheries to complete the road from Stornoway to Loch Roag, which had been begun by Lord Seaforth. There is a bitter complaint that though the Seaforth property bears a large share in the county assessment, 'not a penny of public money has ever been laid out in Lewis'. Another footnote records that the road from Stornoway to Aignish in the east was made in 1815. No large undertakings followed Mr Headrick's

many recommendations, and though some road making began in 1791, progress was slow; in the course of fifty years, only 45 miles of road were created, less than a mile for each year. When Sir James Matheson took over in 1844 and planned to open up the island, he started with these 45 miles. On his death in 1878 there were more than 200 miles of road on which, with the necessary connecting bridges, he spent £25,593.

In the late autumn of 1882, a great gale swept away the hay and corn crops. This, added to the complete failure of the potato harvest, led to distress throughout the island. At a meeting called in Stornoway in December it was resolved that a memorial be forwarded to Mr Gladstone, then Prime Minister, craving aid from Government resources, or that some form of public works be started. No immediate response was made to this appeal. However, as the matter had been raised, investigations were made and eventually the Western Highlands and Islands (Scotland) Works Act, 1891, passed into law. It authorised, *inter alia*, the expenditure of a sum not exceeding £15,000 on constructing and improving the road between Carloway and Stornoway, and certain other roads approved by the Secretary for Scotland.

That Carloway was chosen as a terminus from Stornoway is significant. At the time it was probably the best fishing centre on the west coast of Lewis. Loch Carloway, which branches eastward from the mouth of Loch Roag, is a safe harbour and offers easy access; and any attempt to develop the real fishing potential of the district was a step in the right direction. At the time, the road from Carloway to Stornoway was a wandering one, 23 miles long, badly formed in many parts and ill-suited to heavy traffic. The proposed road was to be only 16 miles long and would, it was said, afford easy and quick access to Stornoway; fish would arrive there in fresh condition, suitable for transportation by boat to southern markets. As soon as the necessary plans were prepared and a contract drawn up, the work started. Progress was rapid, but financial difficulties arose. The contractor went bankrupt and the engineer was dismissed. The undertaking came to a complete standstill. Of the 16 miles, only 8 were completed. About 5 miles were partially made; the remaining 3 miles lay untouched.

The 1891 Act brought into existence a number of minor roads

175 427 233 319 359 449 426 The new proprietor was no better placed than Seaforth to change the fundamental causes of recurrent poverty and distress. But at least he had funds to ameliorate his tenants' lot and to allow experiments in land reclamation and industrial development. Existing sheep farms were extended and others formed. Land reclamation went forward hand in hand with industrial experiments such as distillation of paraffin from peat and brick and tile-making. A programme of road building was begun (the first roads beyond Stornoway were begun in 1791, but there were only 45 miles of road by 1836). In Uig the results were very obvious. Further clearances took place particularly from Timsgarry, Carnish (21 tenants), Reef (22 tenants), Garynahine, Dun Carloway. The small tenants of Valtos and Kneep were only saved from eviction by the intervention of the Fisheries Board, for they were important places for white fishing. By the 1850's, although the population of Uig was more than double that in 1755, and 60% greater than in 1800, it was crowded into little more than half the area. Emigration enforced by clearances reduced the population of Bernera and South Uig by nearly 500 between 1851 and 1861. 162 162

175 427 311 233 No other part of Lewis saw so many farms; nowhere else did the small tenants suffer so much from eviction. That was not all. Those who remained undisturbed were deprived of some of their traditional grazings and access to the rest was sometimes restricted. Moreover they had to make room for many of the evicted families in their own townships, thereby further increasing the problem of congestion caused by the rapid natural increase of population. Thus, for example, about 1825 there had been 22 families in Valtos and Kneep. By about 1880 there were almost 100. But, during the same period these townships were deprived of their island grazings - Pabay, Vacsay, Floday and Wiay - formerly used for wintering cattle - and of part of their hill grazings (the traditional shielings). Use of the hill-grazings was restricted, too. Thus, for example, only one day was allowed to pull heather for ropes; if men were away fishing or for other reasons, could not attend on that day, they risked punishment by going on any other. Such stories could be multiplied many times. 161 162

103 In the Bernera district, by the 1850's, only Tobson, Bosta and Breaclete (on the island) and Earshader and Crulivig (on the mainland) were left for the crofter families. Moreover their traditional summer grazings, which lay south east of the Deer Forest which was formed out of the Scaliscro sheep farm about 1850. Apparently their use of the old shielings was tolerated until 1878, after which date they were directed to the area north of the present road and which they have continued to use until the present day. Thus the shieling huts shown in fig.5 all post-date 1878; the area in which they lie may have been part of the West Earshader tacksman's holding. The date of discontinuance of that tack is not known but the house, now empty, was for long occupied by squatters and the old lazy beds around it still form part of a large squatter holding.

It is noteworthy that almost all the clearances were in the Bernera and South Uig districts and this is reflected in population changes between 1841 and 1851, shown in table 4.

The cleared areas included extensive hill and mountain grazings and some of the best wintering ground, including all the machairs except Valtos and Kneep. The East Loch Roag and Carloway districts were less attractive to the new farmers; as is so commonly the case in Lewis, their rough grazings lay on gently sloping low plateaux and were consequently ill-drained and of poor quality. About 1852 Dun Carloway was let as a tack but was never successfully farmed and was soon returned to crofter-occupation; it may never have been wholly cleared of crofters. Garynahine, at the southern end of East Loch Roag, next to Linshader, was also turned into a farm about 1852. Here the hill grazing was more extensive and, though seriously reduced by a crofter settlement scheme c. 1936, it remains

175 361 beginning of the resettlement movement which has given the modern crofters of the district almost all the lands formerly occupied by small tenants. This process was completed in the Bernera region soon after 1918, and the problem now - one which is obviously going to become increasingly important - is not to give the crofters more land, but to find active crofters for the existing holdings (see Chapter III for more detailed information on clearance and resettlement).

361 632 427 The ground plans of the existing settlements vary considerably, depending mainly on the terrain. Where a township is spread along a fairly straight coast the natural tendency is for the croft boundaries to run at right angles to the coast and for each house to be set on its own croft. The best examples of this are Hacklete and Kirkibost, where an early nineteenth century (i.e. pre-clearance) lotting was readopted when the township was re-settled in 1878. Linshader, Lundale, Crulivig and Earshader also follow the same type of layout as nearly as possible, but Tobson, with the exception of Valasay, is intermediate between a lotted and an unconsolidated township. Croir also differs: it was laid out in 1921 but the disposition of the potential arable forbade a coastwise organisation. The site of Breaclete is greatly broken by lochs and a sea inlet, and consequently an essentially regular layout based along a main Loch Breaclete - Loch Beg Breaclete axis, appears somewhat complicated. The accompanying diagrams contrast the control exercised by physical conditions at Croir with the subordination of physical conditions to a simple lotting plan at Hacklete, (Figure 28).

361 342 178 632 Within the townships, with the exception of Kirkibost, the distribution of settlement seems to have changed little since the original lottings, for in most cases the sites of the old and present dwellings are little further apart than is dictated by constructional problems. It would appear generally that black houses were universal in the nineteenth century except for the farmhouse at 1 Croir (the oldest 'white' house in Bernera), Thule House, (18 Tobson), possibly the tacksman's house at 11 Hacklete, the former farmhouses at 20 Kirkibost and at West Earshader. However, with the establishment of Congested Districts Board and of Board of Agriculture grants, housing was improved, early examples being 5 Hacklete and 10 Breaclete. The resettled townships generally had improved accommodation from the start. Improvement has greatly accelerated since 1951. In most cases at the present time housing is of very high standard, only one blackhouse and one near blackhouse are still occupied.

312 514 164 354 Water supplies and sanitation are less satisfactory. Most crofts by now have their private water supply, thought it is hoped that mains schemes may be constructed within the next few years. Sanitation varies in standard and in places there are still open ditches, but all the newer houses have water closets. It is worth remarking in this connection that tuberculosis is almost eliminated. Electricity has been available since 1952 to all crofts and most are connected, though not necessarily in every room. Cooking is sometimes by electricity but more commonly by Calor gas and a peat-fired range or stove (open or enclosed). Peat is cheap to those able to gather it themselves. Where, however, help is needed to carry the cut and dried peats to the nearest road, difficulties may arise. The cost of hiring labour for peat cutting may be such that it is cheaper to buy coal.

491 494 Access to Bernera by road is now comparatively easy. Where formerly Loch Roag provided the highway of communication, the road built to Earshader after the Great War, and the £87,000. bridge to Bernera Island, built in 1953, have caused a revaluation of sites. Linshader is approached by a tarred branch road and the other Bernera shore townships lie upon the narrow and twisting main road, though four of the six Lundale crofts have no connection with it, and two of the Crulivig crofts, and West Earshader, are somewhat isolated. On Bernera Island the old cart track from the pier at Barraglom across to Tobson and Croir has been somewhat re-aligned since the construction of the bridge. This is a good tarred road, as is part of the branch to crofts 3...8 Croir. The old road to Kirkibost was tarred in 1959, though three outlying crofts near Barraglom were still without a road suited to vehicles, and the branch within Breaclete remained untarred. There is a new road to Hacklete from Breaclete which provides tolerable, though circuitous, communication. Valasay is one of the most isolated settlements in Bernera, linked with Breaclete rather than with Tobson by the footbridge and causeway paid for by Congested Districts Board grant about 1903.

427 authority, simply moved their fences and enclosed part of the common grazing. For
311 example the crofter at 37, instead of having only the 6.7 acres of the croft has now almost
10 acres of land, of which the remaining 3 acres have been 'acquired' by enclosing part of
195 the adjacent common pasture. Some of the crofts are in two or three pieces, and in some
311 cases this came about in the late nineteenth century when the proprietor's wife, Lady
Matheson objected to the position of some of the croft houses because they were too close
427 to the standing stones. Croft houses 25 and 26, then near the stones, were moved to the
other side of the village and given parts of crofts 1 and 2 for their houses. Crofts 1 and
2 were given parts of crofts 25 and 26 as compensation for the parts of their crofts they
had lost. Croft 27 also lost part of its croftland close to the stones so that an enclosure
could be made around the stones. About the same period, before the passing of the
Crofter's Act (1886), when the village was still 'ruled' by the township constable, and
several other changes took place. Croft 27 and 28 used to be where the croft houses are
at present and the surrounding adjacent area only; but it is said that the tenants of these
two houses, being influential with the constable, obtained part of Callanish Farm. Simi-
larly the tenants of crofts 30, 31 and 35 divided part of croft 19; these changes have
become permanent. The most recently formed croft was taken from the common pasture
in 1890. Since then three feus have been created, but two of these are holiday houses and
the third has only 0.5 acres of land.

241 There are 36 working croft units with a total of 134.4 acres reputed arable. All but
4 croft units grow oats, and there are 20 acres under oats (appendix C). Of the
remaining cultivated land 9 acres are potatoes and 5 acres sown hay. Most of the
land is cultivated by tractor; there are 6 tractors in the township. In the past there
were several horses but now there is only one. Five crofters still cultivate by spade.
The crops are sown in April, and the hay is usually harvested in August and the oats a
month later according to the weather.

231 Thirty-one cows, six heifers and 25 calves are kept in the township and tethered most
of the year on the crofts. It is usual for the crofters without a cow to graze one of their
neighbour's cows for part of the year in exchange for milk. There is beef-type short-
horn bull belonging to the Department of Agriculture, which is kept on Callanish Farm.

233 The 5,302 acres of common pasture support an individually owned stock of 904 sheep
311 and 561 lambs. Several crofters exceed their souming, but there is no shortage of
grazing. Some of the sheep graze on Garynahine township pasture. Callanish also has
the use of the pasture on Orasay island; each year some of the sheep (one sheep or ram
221 per croft) are taken across by boat for a period. The breeding ewes are brought in for
233 tupping on November 14th, after the harvest is complete, and lambing takes place in
April. The crofters open their gates for winter grazing from November 1st to May 10th;
in addition Callanish Farm (which has no sheep) is open for winter grazing. The sheep
are sheared in July, and the lambs are taken from the ewes a month later. The lambs
are dipped in November and the other sheep in December. Shielings at Flodavat are
known to have been in use until 1921.

491 Communications are quite good; the village is close to a main road to Stornoway, and
131 there are four buses a day. But within the village itself many of the so-called roads are
merely rough tracks, and one croft, number 29, is inaccessible by motor vehicle; it is
• [494] over a mile from the nearest track, separated from it by rough peat land. This year a
grant from the council was made towards the cost of construction of a road to this croft;
but several of the Callanish crofters who cut peat on the intervening land refused to allow
a road to be built; and so croft 29 is still almost cut off from the rest of the village.
131 There are two shops in Callanish (one with a petrol pump); grocery, butchers' and fish
[366] vans deliver frequently. Callanish also has a stone jetty which in the past was important.
[504] There was a ferry for mail and passengers from here across to Uig and Bernera calling
at Linshader, which gradually declined in importance until the 1920s when it ceased to
[505] call at Linshader. The ferry to Bernera finally ceased in 1940 when the ferryman (who
lived at Callanish Farm) left for war service. After this the jetty was still used by small
private boats (e.g. Callanish church serves Linshader, and many people came to church
by boat until recently), but gradually it has fallen into disuse.

COMMUNICATIONS

501 505 175 Inverness cargo and passenger service, and the SS *Chieftain*. This latter was over 1,000 tons gross, with a clipper bow, single funnel, two masts, extensive passenger accommodation, triple-expansion engines, and silent-working electric winches.

[205] In 1929, the TSS *Lochness* was put into commission for the Mallaig/Kyle/Stornoway mail service. Of 777 tons gross, and built of steel, she was 200 ft long, 34 ft broad and drew 10½ ft. Her propelling machinery consisted of two sets of 150 nhp triple-expansion engines supplied by steam from single-ended, oil-fired Scotch boilers. These gave a full speed of about 14 knots. Many questions were raised in Parliament about the alleged inadequacy of the *Lochness* accommodation, particularly for third-class passengers, and the complaints led to the promise of a better ship. But the second world war intervened and it was not until 1945 that the *Loch Seaforth* (TMSV) was ordered. She was on duty in December 1947 and the *Lochness* transferred to the Islands route from Oban.

[205] MacBrayne's mail contract of December 1938 stipulated that the company would provide two vessels, one to be for the Stornoway mail service. This proposed ship was delayed until 1945 when the order for *Loch Seaforth* was placed with Messrs Denny's shipyard. This vessel was the first of the MacBrayne fleet to be fitted with radar and was much larger than any of her predecessors on the Stornoway mail service. She had a gross tonnage of 1,089 and was 229ft in length. In 1972 the *Loch Seaforth* was withdrawn from the Stornoway service. Her place was taken by the *Clansman* ferry for a short period until the '*Iona*' took over to inaugurate a new ferry service between Ullapool and Stornoway rather than the traditional Kyle-Stornoway link. The facilities on the *Iona* for vehicles are good but the passenger accommodation is indifferent.

The first official hint of the coming of drive-on/drive-off car ferries for the Western Isles was made at the commissioning of David MacBrayne's *Loch Arkaig* in 1960. Under the Highlands and Islands Shipping Services Act, 1960, three vessels were built for the Secretary of State for Scotland, and were chartered by him to David MacBrayne Ltd for the new ferry services. One of these ships is the *Hebrides*, a twin-screw passenger and vehicle ferry

for the steamers, he thought that any improvements in connection with the fishing industry should be paid for largely by the fish-curers themselves—though he did spend about £1,000 on constructing fish-curing houses. Why Sir James, with his experience of business, should have taken this attitude is not clear; certainly the fishing industry could have been given just the right impetus with his interest, personal and financial. As it was, the industry was left to develop on its own lines, with odd injections from time to time.

Fluctuating prosperity

That the potential in the fishing grounds of the Minch was enormous was realised before 1850 by fish-curers from the Scottish mainland. But deep-sea-going boats were needed, and so new designs were called for. James Methven of Leith, a pioneer of deep-sea herring fishing, sank capital into the development of a large class of boats known as the 'Anstruther build', or in the islands as 'Eanstrach'. These craft served the islanders well, and Lewis prospered, as did Stornoway. In the five years 1870 to 1875, for example, the average number of barrels of herring cured at Stornoway for export was some 80,000. From 1875 to 1900 the average Stornoway district catch of white fish, much of it caught by local boats and some of it cured at Carloway, was worth over £100,000; it was sent to Ireland and the Clyde. After 1900, fresh-trawled fish replaced the cured and the market fell away. In 1921, the market value of cured fish from Stornoway was about £500, ½ per cent of the 1900 value.

The herring fishing held its own, against the decline of the white fish. Stornoway, as Lochboisdale in the Southern Isles, became for a while one of the world's most important fishing ports. Prosperity was in the air; even when the fishings did eventually fall away, there still remained, decades later, the whiff of past success among the neglected curing sheds, the hangdown boats in the quays, and the silent kippering houses. From 1917 to 1935, the annual landings of herrings (in crans) varied from 25,486 (in 1934) to 221,519 (in 1927). In that year, a record one, it was reported that 'even landsmen could hear the roar of herrings in Loch Erisort. So dense were the shoals that their progress in the

water could be heard on shore.' Yet cash returns were poor: demand was falling off as foreign markets organised their own fleets, and the Scottish fishing industry as a whole was not commercially efficient. In 1936 landings were 40,829 crans; in 1937, 31,969.

From about 1850, Stornoway had begun to see the nucleus of what was to be a great fishing fleet in its harbours; but it had

A 'Zulu', a type of old fishing wherry used in Lewis at the turn of this century

something of the sort much before then. A pamphlet on the fishing industry published in 1790 tells us that the trade of the Stornoway merchants began to grow after the Union of the Parliaments in 1707, when Scottish herring were first admitted to the English colonial market. 'Some twenty-five or thirty years ago, all the fish they caught were carried for them to their port of destination by hired vessels. Now they can show in their own harbour, in the fishing time, upwards of thirty sail of stout handsome vessels, from 20 to 70 tons burden, all their own property.'

Towards the turn of the nineteenth century, the number of

FLUCTUATING PROSPERITY

rring boats belonging to Lewis was about 165, reaching a peak 197 in 1889; the number of boats used for cod and ling fish- g reached a peak of 704 in 1895. The figures, however, fluctu- e considerably from year to year. The main reason for this was obably that these boats were not personally owned, but largely longed to fish-curers and businessmen, to whom the boat crews ere in debt, having received capital advances from them and om the State for boats and gear. Crews who had bad luck at the hing had their boats impounded and sold to recover the amount the loan. Many boats were also wrecked, for navigation in bad eather is still difficult even in these days of advanced directional ds.

The state loans to fishermen are worthy of note here, because ey foreshadowed a similar scheme in the 1960s. They were ade under the Crofters Holding Act 1886. Section 32 of the ct authorised the Fishery Board for Scotland to make advances, y way of loan, to persons engaged in the prosecution of the fish- g industry, whether crofters or others in crofting parishes. For ew boats, the maximum sum advanced was £312. The loans arried an interest of 3½ per cent; repayments of principal and nterest were over a period of from four to ten years. Loans for he improvement of existing boats were also advanced, varying ccording to the condition of the boat or other circumstances ffecting the necessary security requirements. New boats were nortgaged to the Fishery Board.

Ninety-three Lewis fishermen received loans totalling some £12,000, and a sum of £18,000 was distributed in loans through- out all the crofting counties. In a report issued in 1901, it was ndicated that these ninety-three Lewis fishermen had repaid about 82 per cent of their principal and interests, but in other counties the repayment percentage was under 60 per cent. The Lewis figure would have been higher were it not for the loans made to the Barvas fishers, on which the repayment figure was only 24 per cent. When borrowers failed to observe their part of the contract the Fishery Board seized the boats. Many of these loans were originally made to aid a deserving class of men in adverse circumstances and surroundings. To achieve the high overall percentage of repayment (some indeed managed to pay

SINCE THE SECOND WAR

furnished less than 1 per cent of Scottish landings. The war's aftermath brought too many changes for the island to cope with. Markets had disappeared; food habits had changed; capital was scarce; and many ex-servicemen saw the writing on the wall for fishing as a full-time activity. Also, many sea-going crofters of the pre-war fishing fleet were now dead, memories on fading photographs. Nor had the Western Isles fisheries ever fully caught up with those of the main fishing bases of Britain and the east coast of Scotland. Hence the decline of the herring fishing hit them hardest of all. Today, Stornoway District is handicapped geographically, by distance from the markets; historically, by its late entry into the industry; and economically, in that it failed to participate in the trend towards the centralisation of the industry in share-holding companies within easy reach of London.

In the old days of sail it was easy for men to combine the two occupations of crofting and fishing. When in the early years of this century power replaced sail (the first motor fishing boats went to work in 1907) and the steam drifter took over from the sailboat, the whole nature of the fishing industry changed. Modern boats and gear had to be acquired if the work was to be profitable. But the islesmen, partly because of lack of capital, partly because of the lack of suitable anchorages and harbours, and partly because the combination of crofting and fishing had created a seasonal tradition incompatible with the use of expensive boats (which needed to be kept continually at sea if they were to pay at all), were unable to adjust themselves to meet the new challenges. In the inter-war years they had no option but to carry on as best they could in their old traditional role. The resultant decline meant that when opportunities did arise for fishermen generally in the form of grants and loan schemes (introduced in 1945 by the Fisheries Division of the Scottish Home Department and subsequently by the White Fish Authority and the Herring Industry Board), the bulk of the men living in the isles were unable to take advantage of them: they lacked the necessary qualifying experience in handling modern boats and equipment, as well as confidence in fishing as a full-time occupation. By 1959 there were only twenty-five boats of 40 ft or more in length based on Hebridean ports. Lewis had only six full-time crews; Harris had five.

AGRICULTURE AND FISHING

This lack of a local fleet fishing in the Minch and associated waters on a full-time basis has inevitably brought reluctance on the part of Government bodies to invest capital in, say, harbour improvements, knowing that they would fail to yield an eventual return. Just after the first world war Lord Leverhulme formulated ambitious plans for a full-time fishing fleet based on Stornoway. More than thirty years later, in 1954, the Taylor Commission, set up to investigate the problems of crofting, summed up:

> Gone are the days when the crew of the fishing boat could haul up their craft on the beach and leave it there in safety. The modern seine-netter is much too heavy to be beached in that way and far too costly to be exposed to risk in unsafe anchorages . . . The capital outlay required for their purchase is such that it is not possible to operate them except on a full-time basis. It is still possible for smaller boats to be employed in fishing for lobster or crab, but the general trend of development is against the man who combines fishing with the work of the croft. We do not think it possible to reverse this trend; it should be accepted and an attempt made to establish a full-time fishing industry in Western waters.

The first vital step to do just this was taken in January 1959 when the MacAulay (Rhodesia) Trust announced the introduction of a scheme to 'increase the number of modern boats with efficient crews operating from or based on Lewis'. This Trust was set up under the will of the late Murdo MacAulay of Ness, who left Lewis with little English, less money, but plenty of Gaelic and enterprising spirit, to acquire a considerable fortune in Rhodesia. He bequeathed the bulk of it to be applied for the good of his island home. Anyone applying for assistance under the scheme was required to give an undertaking that he would prosecute fishing on a full-time basis; further, no one would be assisted unless, in the opinion of the trustees, he was likely to make 'an energetic and successful fisherman'. This pioneering venture directly assisted three young men in Kirkibost, Bernera, to acquire one of the best-equipped lobster boats in Scotland; and secondly it acted as a useful prototype for the Government scheme which was to augment and largely replace it a year later. In January 1960 the Government officially instituted the Outer Hebrides Fisheries Training Scheme. Free training was offered to men pre-

[TEXT CONTINUED ON PAGE 109]

clipper bow, figurehead, and bowsprit with ornamental carving at both bow and stern. The *Clansman* left Glasgow every Monday and arrived back on Saturday mornings, a regular pattern maintained from 1870 to 1909. She was 211 ft long, 27 ft broad, with a draw of 13 ft of water, her engines having a nominal horsepower of 171; her gross tonnage was latterly 619.

The SS *Locheil*, two-masted with a straight stem and single funnel, in her early career ran the Stornoway mails from Ullapool, in the late 1870s. In 1884 she was fitted out for a three-months' cruise in the neighbourhood of Skye, a gunboat in attendance with a view to suppressing any riots likely to result from the then recently-initiated legislation introduced by the London Land Reform Association. She was also on the Dunvegan service, via Harris and Lochmaddy. In 1907 she ran aground at Portree and was afterwards broken up.

In 1879, David MacBrayne became sole partner and owner of the fleet of David Hutcheson & Co, and the name of the company was changed to David MacBrayne Limited. The first ship built for the fleet by MacBrayne was launched in July 1881: the iron screw steamer *Claymore*. Her machinery consisted of a heavy two-cylinder compound engine supplied with steam from a pair of single-ended Scotch boilers; she never attained her full speed of 15 knots, at least not in service. She was 227 ft long, 29½ ft broad and drew 14½ ft of water. Her gross tonnage was latterly 776, and the indicated horsepower of her engines 1,400. She was sold in 1931 for breaking up. So high a regard did those on the west coast have for the *Claymore* that many parts of the ship went to places throughout Britain as souvenirs.

The PS *Great Western* was among MacBrayne's bought tonnage. This ship belonged to the GWR and spent most of her time on the Milford/Waterford route, though from 1878-85 she was transferred to Weymouth and ran across the Channel to Cherbourg. She came to northern waters as a straight-stemmed, two-masted, and two-funnelled cross-Channel steamer—both funnels being abaft the paddle boxes. MacBrayne placed her on the Stornoway mail service from Strome Ferry, which she maintained until being withdrawn temporarily in 1893 for a facelift in the MacBrayne standard design, emerging renamed *Lovedale*. She

was returned to the Stornoway route and, on the extension of the Skye line of the old Highland Railway from Strome Ferry to Kyle of Lochalsh in 1897, the latter port became the southern terminus in the mail service to Lewis, as it still is. She was broken up in 1904.

Yet another ship with fond connections with Lewis folk was the SS *Shiela*, the second steamer of the new MacBrayne family. Both hull and machinery were the product of Inglis of Pointhouse, and she had the distinction of being the first steamer in the MacBrayne fleet to be fitted with triple-expansion engines. She was launched in January 1904, a fine-looking craft, named after a character in William Black's novel *A Princess of Thule*.

Though of only 280 tons, she fulfilled an important role for the Stornoway folk and their country cousins. Summer and winter, fair weather or foul for over twenty years *Shiela* carried passengers, cargo and mails between Kyle of Lochalsh and Stornoway. Purely a functional craft, she gave her many thousands of passengers a rough time crossing the Minch; but though she was often late—many times the seas and winds prevented any headway at all, though steaming to the limit—she never failed to make port. This Stornoway/Kyle route is the hardest-worked of all the MacBrayne fleet; a Minch crossing is made twice in every twenty-four hours, with a weekend rest of less than a day in Stornoway. The sturdy *Shiela* met a tragic fate: she deserved a better. Her regular Captain Cameron was away on leave, enjoying a few days' well-earned rest. The ship was in the hands of a temporary officer, who was not as familiar with the devious ways of West Highland waters as he should have been. Though the exact details of the accident are not available to the writer, it seems that the officer of the watch never saw the south Rona light on the inward passage from Stornoway in the early hours of Saturday, 1 January 1927. Thinking he had run his distance, he altered course with a view to making the Applecross call. He did not discover his error until too late and the *Shiela* ran aground in the darkness on the shores of Cuaig Bay, just south of Loch Torridon. No lives were lost, but the ship was a write-off.

From 1927 to 1929 Stornoway was served by a number of ships including the *Clydesdale II*, designed and built for the Glasgow/

registered at the various 'creeks', obviously all cannot have been engaged; moreover, some strangers are invariably present, for which a guess of one-third would probably be conservative. The two sailing-boats were, of course, local.

Now, the average net tonnage of a drifter or a good East Coast motor-boat approached 40 tons, almost double the average tonnage of a local motor herring-boat (20 tons), and the catch was much in this ratio. During such a week and period, the total net tonnage of the 106 stranger drifters was thus about 106 × 40 tons, or say 4000 tons. That of stranger motor-boats may have been, say, 22 × 40 tons, or 800 to 900 tons, but the local tonnage was only 44 × 20 tons, another 800 to 900 tons, or, say, 1000 tons in all. This formed a fifth of the 'stranger' total of close on 5000 tons. As the Stornoway Fishing District includes Harris which provided a third of the herring fleet, there remained only some 600 tons for Lewis, barely an eighth of the stranger tonnage. A fifth, say, of the tonnage probably means less than a fifth of the catch but a still smaller fraction of the sums paid for it, for the cream of the prices is skimmed by the boats first in, generally the bigger and faster of the fleet. If we set against the catches probably due to the Harris boats, the catches of the winter fishing (about 15 per cent of the year's total), we shall still err on the safe side in estimating the annual catch due to boats from Lewis proper as no more than a fifth of the total (worth nearly £100,000), say £20,000.

To complete the estimate we add the curing of all herring brought into the District, almost all of it done in Stornoway. The difference between the value of the total catch (£98,000) and the gross value of cured herring (£162,000) is £64,000; but from this is deducted £26,000 for the imported barrels, salt, etc. This leaves an increment of £38,000 for the District curings, or, say, £35,000 for Lewis alone.

The landings of white fish (£13,600) and shell-fish (£6500) totalled £20,100 (Table 17). Of that, white fish valued at £4700 were brought into Stornoway port by East Coast 'great liners' (Table 13), but the remainder was caught by local

summer, were last used for cattle six to eight years ago by people in Brenish, but none are in use today. These shielings were at the western foot of Mealisval, only about a mile from the township. The Brenish 'distant' shielings, about six miles to the south-east of the township across the mountains, were not used after about 1920, while the adjoining Islivig shielings were last used in 1922. Mangersta may have had its original shielings to the east of Loch Melavat about a mile south of the township, but after obtaining the enlargement from Mealasta farm, until about 1939, shielings were used in that area.

No peats are cut on the crofts; the peat-cutting areas for all three townships are near the road and in no case far from the township. The common pasture near the crofts bears evidence of former cultivation, but it is at least fifty years ago since crops were grown on it. At this time the townships of Islivig and Brenish were over-populated with many cottars living on the crofts and all possible land on the crofts was already under cultivation. Today, less than half this 'old arable' is being cultivated, and in several cases the land is used solely for hay and grazing.

There are now no thatched houses inhabited in the townships and most houses have kitchen and other extensions added. Some crofters have built concrete two-storey byres of modern design. In Brenish, where the hills to the east provide a good catchment area and the Brenish river a good source of supply, all the crofts have their own private piped water supplies, while in Islivig and Mangersta most crofts now have, or are getting, a water supply. All croft houses are supplied with electricity from the grid.

Commercial fishing has long ceased and as there are only three boats there is now very little fishing for domestic use, the principal use of the boats being to ferry sheep to the off-shore islands. Weaving is an important occupation. There are seventeen weavers - nine in Brenish, two in Islivig and six in Mangersta, and during 1959 they were kept busy; in 1958, however, few orders were received. Weaving cannot be said to bring in a steady income here, and some of the weavers, and others, find additional employment outside the township - this includes four men at the hydro-electric scheme at Gisla, three at Mangersta Ministry of Civil Aviation station, three at Aird R.A.F. station and at least one in the Glen Valtos quarries. In addition, one man owns a tractor which he hires out, and one, owning a lorry and van, does haulage work. Altogether, out of a total of twenty-seven men under sixty-five who do work, all but three (one just out of school and one a semi-invalid) have other employment in addition to their crofts.

The total population for the three townships is one hundred and twenty-one residents, and fourteen permanently away from home. Of the residents, twenty-eight (or 23%) are children of, or below, school age, forty-seven (39%) are in the 15 - 45 age group, 15 (12%) are in the 45 - 65 age group, and 31 (26%) are over 65. Of the resident tenants, thirteen are over 65, twelve under 45, and five between 45 and 65.

The relatively young population may help to account, together with the better soils, for this area giving an impression of a fairly prosperous crofting district compared with some of the others in Uig. Amalgamation of crofts into larger units has also gone further. The use of a tractor or horse for ploughing, extensive use of artificial fertilisers, the sowing of grass seeds and the sale of sheep for meat, all seem evidence of a group of people who are determined to make the most of their limited resources.

One enterprise, that of the Aird Bheag sheep farm, deserves special mention. Four crofters (three from Brenish and one from Islivig) have purchased from the Uig shooting estate about 2,000 acres of land on the Aird Bheag and Aird Meire peninsulas, five miles south of Mealasta. Here they are running a flock of about five hundred sheep. There is

the crofts at Kneep are still highly fragmented: the fifteen crofts comprise over one hundred and eighty separate arable plots. The lotted crofts at Reef were cleared in 1842 to provide land for a sheep farm. Plans to clear the remainder of the Valtos peninsula were thwarted by the Fisheries Board because Valtos and Kneep were then good centres for the white fish industry. As late as 1892 Valtos and Kneep had forty boats, providing employment for one hundred and forty-five men. Valtos with thirty-two boats and one hundred and twenty fisher-men was second only to Carloway as a fishing centre in Uig. With the prosperity of the fishing industry, the population of Valtos and Kneep had risen rapidly - from 467 in 1841 to 659 in 1891. Some, at least, of the subdivisions of Kneep date from this period. Reef was scheduled by the Deer Forest Commission (1896) for resettlement by crofters and in 1908 an attempt was made to do this, but agricultural experts advised against it, on the grounds of poor water supply, scarcity of arable land (only ninety-three acres old arable) and the risk that, if cultivated, the machair would suffer wind erosion. Nevertheless, in 1921, Reef was resettled by ex-servicemen from Valtos and Kneep. At the time the sheep farm was only carrying a stock of one hundred and seventy sheep - less than half the crofters' sheep stock in 1959.

Tables 15 - 18 summarise the more significant points of the economy of the Valtos peninsula. Table 16 illustrates the fact that the economy is in decline. Only two-thirds of the total possible units are being worked. Many of the crofters have abandoned their crofts and the younger generations are unwilling to take over. Of those remaining to work the crofts 18% are over sixty-five, and a further 47% are between forty-five and sixty-four.

TABLE 16

Crofts and Crofters

	Valtos	Kneep	Reef	Total
Legal crofts:	40	18	15	73
No. in joint tenancy	2	4	0	6
Total possible units:	42	22	15	79
No. of operative units 8/59:	29 (60%)	15 (68%)	8 (53%)	52 (66%)
Joint tenancy crofts as one unit:	1	3	0	4
Cases of subletting:	8 (+2 part crofts)	4	6	18
Family combination of crofts:	2	1	1	4
Derelict crofts:	2	1	0	3
Crofts worked by: Full time crofter	3	1	1	5
crofter with regular work	8	7	0	15
crofter with periodic work	13	3	4	20
crofter over 65 (or invalid)	5	1	3	9

(b) From New Year to mid-April most sheep are kept on the common grazing. Practices, however, are irregular; some flocks are usually hand fed, others only rarely. In the former case they heft near the upper limit of their home croft and remain fairly close at hand. Most crofters hand-feed their lambs, probably housing them at night, allowing them hay in the morning and turning them on to the common grazing in the evening. All this naturally depends on weather conditions.

(c) From mid-April to May, lambing takes place on home parks.

Most crofters let their ewes-with-lamb out at one date.

(d) At the end of June, gimmers and wedders are clipped.

(e) In mid-July the ewes are clipped.

(f) The lambs are weaned in the first and second weeks of August.

(g) The dipping takes place in October and the rams are brought on the crofts.

There is no general sale time, sheep being sold or slaughtered at all seasons. There is no club stock, but all but one of the Kershader crofters, along with crofters from neighbouring townships, take full advantage of the arrangement, first established in 1941, to graze sheep at 2/- per sheep and 1/- per lamb in Park Deer Forest. Hence irregularities of rhythm are introduced or exaggerated.

Sheep are not particularly profitable: in general, wedder fleeces give 3½ to 4 lb. ewe fleeces about 3 lb. and the wool is sold to the Stornoway mills and to the Wool Marketing Board. Average sheep carcase weight is reckoned to be 41 lb. and the price rarely rises above £3 and almost never above £4. Braxy and fluke are kept under by medicaments but remain potential dangers; 'Black leg' is still a serious problem. Many sheep are drowned in the bogs in Spring and late snows (1955, 1958) are disastrous for lambing.

Under-employment is a serious problem in Kershader. There are nine males classified as full-time crofters, but probably only four of these (two on one croft) are in fact in this category, and of the total of thirty males with their homes in Kershader, only fifteen of the insurable population are permanently resident. There are twenty-eight females with their homes in this township, but on only six crofts do any of twenty permanently resident females help with croft work. Local ancillary employment consists of weaving, fishing (for domestic consumption only) and work on the roads. Boats, one with outboard motor, are owned by three crofts. The only resident professional worker is a nurse. Ancillary employment must be, and is, sought away from the township. As a result, of the 73 persons recorded as having migrated since 1939 or as being resident, periodically away and permanently away in 1958, 19 have left the area for good, 4 are permanently away, 8 periodically away, and only 43 are resident. Only one person has entered the township since 1939. The age structure of the population, too, is far from the optimum. The school in Kershader, which had 20 pupils in 1873, reached a peak of 110 in 1907 and declined to 28 pupils in 1953, now has but 17, although it serves Caversta, Caryward, Kershader and Habost. Maximum population was attained in 1881, but the total remained fairly constant till 1911, after which decline was marked. Since 1950 this decline has markedly increased.

It will thus be seen that the most serious problem facing Kershader is that of stabilizing the population and giving it a stronger economic basis. Apart from the potential development of tourism, fishing, weaving and other home industries, the only possible occupation is in agriculture with perhaps a little forestry. Forestry, though important as shelter provision, cannot be a practical proposition in large blocks or on a large scale, as it would dislocate the

COMMUNICATIONS

harbour facilities. But his efforts to promote the town as an industrial centre were opposed, a dispute arising between him and parties who claimed interest in the quays which already existed; his action to set up the Harbour Commission and to acquire the Crown's interest in the shores of Stornoway Bay *ex adverso* found local opposition. He succeeded in quelling the doubts and the resulting counter-actions, however, and then, with the decks cleared, the Commission lost no time in getting developments under weigh. Authorisation to borrow up to £10,000 was obtained and work put in hand on building a timber wharf, 150 ft long, filling in certain areas for fish-curing and other purposes, and constructing sheds, works buildings and warehouses. By 1881 this work had been completed and, with the expansion of the herring industry, the Commission sought to increase its borrowing by £20,000; in 1892, further powers for borrowing the sum of £55,000 were sought and obtained. By the turn of the century all the works authorised by the 1892 Order were completed: they met the berthing needs of the fishing industry and also the reclaimed areas on South Beach, North Beach and the Cromwell Street quays were used continuously during the season as fish-curing stations, proving essential factors in the development of that industry.

Before the 1914-18 war ended, Lord Leverhulme had become proprietor of the island and, as such, a member of the Harbour Commission. He proposed further development of the existing facilities, to line up with his scheme for establishing Stornoway as a centre for industrial activity based on fishing. Plans were prepared, and a permanent way for a railway (linking the canning factory at Inaclete with the harbour) was formed. But the scheme did not materialise before he abandoned Lewis for Harris. Before he left, however, he conveyed free to the Harbour Commission considerable property round the inner shores of Stornoway Bay. At this stage the Commission promoted a New Harbour Order, passed by Parliament as the Stornoway Harbour Confirmation Act, 1926, in which provision was made for the increase of the Commission's borrowing powers (up to £70,000) and the setting up of a contingency fund of £10,000. Further improvements were put in hand. Another Order (1947) was obtained and

STORNOWAY

the present harbour facilities are the result of this, with a causeway to Goat Island—a small snippet of land off the Newton shore—the King Edward Wharf extension to give a depth of 24 ft at low water, and the construction on Goat Island of a slipway and slipway jetty.

The present facilities are valued at several million pounds; they evoke, however, a blank stare of disbelief. Much of the industry for which the quays were first envisaged has now gone. The days of 300-400 fishing boats and the landing of several thousands of crans each week, with the attendant bustle and activity, belong to the past. The harbour remains reasonably active, with a considerable extent and variety of shipping: general traffic due to the Harris Tweed industry has continued to increase in recent years. The introduction of the ferry service direct from Skye to Tarbert, Harris, has however had perceptible effects.

When Leverhulme parted company with the people of Lewis, his gesture of farewell offered the island to its people. This brought into being an agency for the people of Stornoway and its rural areas, so that they were in effect in control of their own future to a degree unique in Britain. The Stornoway Trust was formed in 1924. Besides property in the burgh and its suburbs, including the Castle and its park or policies, the Trust owns virtually the whole of the landward area of the parish, from Arnish Moor northwards to the township of Tolsta. Freshwater fishings are in its hands, as are the resources of the sea and inshore fishings on the shorelands. During its first five years the Trust was faced with a growing deficit, though this was redressed partly through agricultural derating and partly through the registration of the Trust as a charity, thus exempting it from income-tax demands.

The Town Council, the Harbour Commission, and the Trust have overlapping representation, for harmonious work on behalf of the community. Indeed, by the conditions of the Deed of Trust drawn up by Leverhulme (in 1923-4), the Stornoway Trust must include the Provost of the burgh as its chairman, together with magistrates and councillors. Throughout the years of its existence, the Trust has sought to increase its usefulness, but at the beginning decisions were often taken piecemeal. Portions of the property were

504

504 PORT FACILITIES--boathouses; piers and docks; facilities for mooring, loading, and unloading; storage facilities; supply services (e.g., ship chandlers, fueling stations); facilities for repair and overhaul; use of natural harbors; etc.

but not as often as in the past. In the past boats were in danger of being smashed by the strong seas and winds that gained easy access to the Shawbost harbor; but today, because so many cars are available, the boats can be sheltered in the more protected bays of Carloway, five miles up the coast to the southwest of Shawbost. Despite this protection and the increase in income since World War II which would enable more people to buy boats, the number of boats remains small.

In the past certain people were esteemed for "knowing the wind and the sea." The sound of the turf coming from different directions presaged different kinds of weather; a line of white across the bay meant bad weather in a few days. A fifty-year-old man says, "My father and grandfather could tell when a storm was coming. They needed to know, and they didn't have radio and television to tell them. I would know the signs, too, if I had listened to them."

Not only was there local fishing, but the men used to hire themselves as crew on other fishing boats. Several nicknames reflect this history. One family is known by the nickname "Strachan," the surname of a man who lived on the east coast of Scotland and on whose boat the head of the Shawbost family had once worked as

[Garyvard]

Only a fraction of the total arable land is cultivated by tractor and this is divided among seven crofts. In spite of an emphatic statement by one of these cultivators to the effect that he will never use it again, the use of the tractor will increase as soon as the pioneers are able to prove to their neighbours its capabilities and as soon as the lazy-beds are joined together, an improvement which has already taken place in Habost. The main objection to the use of the tractor by the disappointed user was the inevitable one that the yields were smaller than in former years when he had used the spade. The answer to this was given by one of the other pioneers, who thought that time saved could be devoted to some other profitable occupation, for example, weaving. Six of the crofters practise a five-year crop rotation, sowing potatoes first, followed by oats under-sown with clover which for the following three years is cut for hay.

An interesting experiment has been that of the improvement of two acres of common grazing land by the road on the west side of the township, by nine of the crofters working together during the evenings. The work began early in Spring when 4 tons of lime, 10 cwts. of mineral phosphates and 8 cwts. of compound fertilizer were spread evenly over the land. The grass seed was sown in July, the most favourable time for sowing since there is less danger of a drought than earlier in the year, and more convenient too, in that the sheep had been gathered for shearing and 250 of them were available to be driven back and forth over the land to tramp the seeds in. In theory this land should be ready for grazing next Spring, but in practice it will be ready in November. It is planned to re-seed twelve acres in all.

Most crofters have a cow to provide milk for their own needs. The Black Poll bull at Gravir is preferred to the other township bulls since its progeny command higher prices. Sales are held in the district twice per year, once on the old lake-level on the east side of the township, and once at Balallan. Prices for calves are normally better in Spring than at the Autumn sale, nevertheless prices offered tend to be low. Even so, it is usually to the advantage of the crofter to part with the animal rather than bear the cost of taking it back to the croft and wintering it there. Naturally there is some bitterness that the middlemen who buythese animals will sell them at much higher prices on the mainland at Dingwall. Sheep are normally sold in Stornoway to the butchers but also at the local sales.

Crofting is not in itself a lucrative form of employment and in most households there is at least one other source of income. A majority of the crofters have regular employment, two working in quarries or on the roads for the County Council, another is postman, three are weavers, another both weaver and contractor, while yet another works in Antarctic waters aboard a whaling factory ship for eight months of the year. Weaving is undoubtedly the most lucrative of the ancillary occupations, though the weavers are suffering at the moment from the slump in the Harris Tweed industry which is also affecting the prices for wool. Contracting is also a paying proposition for one or two persons only, since the amount of freight is obviously limited.

Most crofters own a small rowing boat and it is not uncommon to see half a dozen nets set to catch mackerel and other demersal fish. There is not one large fishing boat, however, partly because of the scarcity of fish near the coasts, and partly because of the isolation of the area and the subsequent difficulty in marketing. The Fleetwood trawlers are regarded as pirates in the Minch, and one has to its credit the destruction of two long lines - the sum total of the tackle belonging to a local boat. To have eighteen pounds worth of gear lost in one night is ruin to a crofter-fisherman. Lobster fishing has died out at Garyvard though it could be quite extensively practised.

The main road from South Lochs to Stornoway through the village has obviously had a profound effect on the township. The sites of the old 'black houses' have been abandoned when new houses have been built, in favour of sites conveniently near to the road. The Road Age has greatly limited man's capacity for carrying goods. This is well illustrated by the fact that the majority of crofters in Garyvard use artificial fertilisers, whereas they are scarcely used at all in Caversta where the road ends about 50 yards from the nearest house.

[Caversta]

Each croft is fenced but has a gate giving access to the common grazing, in which each crofter holds an equal share. The township has no specially enclosed area for tasking or other purposes and no fixed date exists on which the crofters open their gates for winter grazing. Breeding ewes are normally brought in for tupping in mid-October and November when crops have been gathered, and lambing takes place in late March or April. After dipping and inoculation with vaccines for black leg, braxy and louping ill, the sheep are put out on the common grazing in the second or third week of May.

The 642 acres of common pasture support a sheep stock equal to the sheep soum, but the overall stocking is only 88 per cent of the total souming. Two crofts only exceed their individual soums, while the others are well below the number required for greatest efficiency. The grazing is, however, poor for summer pasture, owing to the lack of grass, but the heather is valuable for wintering the shaggy, Lewis Blackface sheep are the predominant breed and the wool, clipped in July, is sold to the Stornoway mills and the animals themselves are sent to the slaughter house. The 1958 loss at lambing was exceptionally high owing to a cold, dry spring preventing the growth of grass for the ewes. More than forty lambs and thirty ewes were lost by the township last winter, a number four or five times greater than the average loss.

Six cows, two heifers and four calves are kept in the township and tethered most of the year on the crofts. Calves are born throughout the summer months, but whereas early-born calves may be sold in the Autumn at six months old, those born later must be wintered to eight months until the Spring sales. The cows are served by the Department of Agriculture Highland bull at Habost, but although good prices are obtained for beef cattle, it is felt that for the family milk supply, a dairy bull would produce a better strain.

In addition to keeping stock, oats are cultivated on five holdings and potatoes on six. In most cases the land under each crop is less than half an acre and nowhere does it exceed two acres. The land has been built up into lazybeds about six to ten feet wide, separated by open drainage channels and worked by the spade. There are only two holdings where a tractor (hired from Habost) is used and the acreage cultivated only amounts to three-quarters of an acre. Conditions are not altogether suitable for mechanisation at present, for the terrain is very uneven and broken up by marsh and steep faces of bare rock.

Neither Torista nor Caversta is on a main road. The former is served by a track joining the road near Cromore, while the latter has a secondary road running as far as the township dyke, and an inferior footpath joining the main road at Garyvard. The lack of a good road within the dyke acts as a deterrent to the use of modern equipment and fertilisers. Byre manure is used on all the crofts and seaweed is brought from the shore and spread on the lazybeds. Artificial manures, used on only three crofts, must be carried over rough ground from the dyke. This lack of incentive to improve is perhaps even more marked by the fact that on one holding alone is a rotation practised - potatoes, oats under-sown with clover, then hay for three or four years. Apart from this one instance, potatoes and oats are sown, perhaps alternately, on the same strips for many years. Natural grass yields the bulk of the hay and is often cut from lazybeds that were formerly cultivated. On one croft there is upwards of quarter of an acre where the old ridges can be seen to have a crescentic shape and are thought to date back more than one hundred years. A short distance beyond the township dyke is a similar stretch of land, now colonised by heather.

Peat still forms the principal fuel and, apart from one half acre patch within the dyke, is cut on the common grazing, as near the road as possible in May and June, and later brought home by creel, bicycle or tractor. Three of the six operative units still have gardens and all keep up to twenty chickens; rowing boats for line fishing, solely to supplement the larders,are also maintained.

In 1841 population records show that there were twenty-two persons at Caversta and seven at Torista. After 1881, when maximum figures of fifty-nine and nineteen were noted, there was a secondary peak in 1911 in Caversta, followed by a steady drop to twenty in 1951 and eighteen in 1958.

[Marivig]

There are only fifteen cows, two yearlings and four calves in the township, and the crofters with no cow rely on neighbours, or on tins, for their milk supply. All but two of the crofters keep sheep, there being four hundred and eleven ewes, one hundred and eighty-five sheep and two hundred and thirty-four lambs belonging to the township. The common grazing (including the off-shore islands which are grazed by five different crofters each year) is used for sheep in summer, while a boat belonging to one of the crofters winter their sheep within the township dyke on the croft. Most crofters keep hens, and surplus eggs are sold to the Stornoway vans.

Peats cut on the common are transported by lorry to the crofts, while peats from the north end of the peninsula separating Loch Marivig from the sea must be carried in creels.

Nearly every crofter owns a rowing dinghy which is moored in the loch off the end of his croft, and with this supplements the family food supply. One herring boat, operating nightly from Stornoway and returning to Marivig at weekends, is all that is left of a fairly large fleet which operated before the war. A second boat, unused for two years, lies shored up on the beach, and two others are wrecks. Over fifty years ago there was a curing station at Marivig. One crofter fishes lobsters during the winter and markets them in London.

Of the other crofters, only two supplement their incomes by weaving, one by working on the roads while several men work partly on the crofts but are periodically away whaling in South Georgia, fishing, or on hydro-electric schemes. Several others are in the Merchant Navy. The gradual migration from Marivig, especially of the young people, is reflected in the high average age of the permanent residents, and in the numbers in the school -over one hundred pupils in 1900, thirty-nine (including sixteen from Calbost) in 1946; but only nine (none from Calbost) in 1958. The young people leave the township to train or work on the mainland (generally in Glasgow) or in Stornoway, while their elders accept the view that "there is nothing for the young people here".

The township has a Post Office and telephone kiosk which also serve Calbost, while lack of a shop is partially compensated by a choice of four vans from Stornoway and one from Gravir. There is a daily bus from Gravir via Marivig to Stornoway and back: the return is over 10/-. The road which reached the township from the west in the late 1920's has a tarred surface and is much better than the later road southwards to Gravir which is untarred. There is no church in Marivig and most of the population attend the Free Church in Gravir.

Within the township the two arms of the township road serve all but two of the crofts and the sites of the newer houses, few of them more than thirty years old, tend to be near the road, while the ruined houses found on most crofts are often nearer the sea. Only two thatched houses remain and the other inhabited houses are built of stone roofed with asbestos slate, or of corrugated iron. All the crofts are supplied with electricity from the grid, but very few have a piped water supply; rainwater is collected from the roofs and piped for washing, with a separate piped supply from a well for drinking. All other houses draw water from wells.

The stormy winter weather, rocky terrain and poor soil are all blamed by the residents for the drift of population away from the crofts, but those who remain have little incentive to work the crofts more efficiently owing to the very hard labour involved. It is suggested that with more intensive cropping and more cattle, each croft could make a comfortable profit and surplus milk, potatoes and eggs could be marketed in Stornoway - the milk asbestos slate, or of present brought from the mainland. Such development, perhaps on a co-operative basis, together with a revival of the fishing industry and introduction of a tourist industry, by building a small hotel or guest house and attracting anglers as well as those who simply wanted scenic beauty, might bring prosperity back to a township which otherwise may well be derelict in the next twenty years. But the capital required for the two latter enterprises is not available within the township.

item. No fish without scales is eaten by the Skyeman.

The crofters use small boats, under thirty feet keel, and work in pairs. By contributing creels and sharing the risks as well as the profits, the cost of equipment for each individual is modest. Here, of course, is an additional form of cooperation which has not disappeared. The techniques have remained conservative. The use of small boats restricts operations to sheltered areas, and conservation is not an important consideration.[30] One order, for example, issued by the government prohibited the sale of berried lobsters (females with eggs) without success. The eggs are simply scrubbed off. The law will be useless as long as there are men among them who continue to believe that: "In the old days we took berried lobsters, and the lobsters thrived." Another order has made it illegal to take lobsters under nine inches, the favorite size in the London and Paris markets. This has not only spoiled the market but also is difficult on the crofters because they use small creels. Still, the real trouble is said to be the lack of a closed season. Bretons come over and work the waters during the summer when the Sgiathanach is busy on the land. Crofters from southern Skye are accused of poaching the northern lochs. This leaves few lobsters for the local residents who only go after lobster between November and March.

Although international considerations do not pertain to the question of a closed season, the British government considers

THE CROFTING TOWNSHIP

In Lewis, the public body mentioned is the Stornoway trust, the only one of its kind in the Highlands: when Lewis was sold by Lord Leverhulme in 1923, the parish of Stornoway Landward was given to the townspeople who, in effect, became shareholders in the trust, formed to administer the estate. A resident factor in Stornoway is answerable to a small council of the residents. Commercial companies as owners appeared on the scene in Lewis after the lands were offered for sale when Leverhulme pulled out of his efforts to industrialise the Lewis folk. Considerable tracts of land were sold for as little as £500; some at 1p per acre. The salmon and trout fishings were, of course, a major attraction. Some small-acreage estates were bought in Harris and Lewis by speculators with island connections.

STORNOWAY

In contrast to the straggling and quite casual townships of the rural areas of the island, Stornoway has logic in its layout. The harbour and the grounds of Lews Castle have given the town a magnificent setting and a useful green belt surrounds it. The outlying villages, however, tend to be miracles of chaos, showing both architectural and planning anarchy. These only serve to add point to the more formal layout of Stornoway with its regular streets, some casual variation adding interest.

The town itself grew in recognisable stages. The first was centred on the small peninsula known as the Point Street area. This land finger protected the inner harbour of the Bayhead River and on it grew the nucleus of the town, beside old Stornoway Castle, once perched on a rocky islet and now existing as rubble under the steamer pier. Protection from storm was not really provided until the nineteenth century, when a quay was built with space for marketing and handling herring. About the seventeenth century, houses began to string themselves out along the shores on the side of the inner harbour (Bayhead Street and Cromwell Street) and on that side of the outer harbour called Newton Street. From the nineteenth century until about 1914, two-storey, flatted tenements, hotels and middle-class houses were built on a grid plan that followed on old field layouts and the associated ditches. Some of the present-day roads, such as James Street, follow these

AGRICULTURE AND FISHING

and its neighbourhood becoming the centre of the growing industry. In 1793, the Lewis Parish contributors to the *Old Statistical Account of Scotland* indicated that upwards of 183 boats were fishing off the island. In Uig no less than 275 netmakers were recorded, showing that the fishing industry was prosecuted with some measure of enthusiasm. 'All the people dwell in little farm-villages and they fish in the summer season. The women do not fish; but almost at all times when there is occasion to go to sea, they never decline that service, and row powerfully.' In the parish of Barvas in the eighteenth century some 9,000 Scotch pints of oil were taken each year from dog-fish livers and sold to Stornoway merchants at from 6d to 8d per pint; it is related that the tenants of Ness were able for a long time to pay their rents with the oil proceeds. Cod and ling were the principal fish caught by the men of Lochs, an annual average of 24 tons being cured and sold in Stornoway. Generally, other fish caught were consumed locally.

Loch Roag on the west of Lewis proved to be about the best fishing ground; in 1794 about '90 sail' from all parts of the United Kingdom were at the herring fishing there. At one time Loch Roag-cured herring was exported exclusively to Sweden. The minister of Stornoway, contributing to the *Old Statistical Account*, gives figures showing the quantities of fish shipped from the port from 1791 to 1796. During these six years some 14,000 barrels of herring were exported to the Continent, and 20,000 sent for consumption in Britain; some 350 tons of cod and ling were destined for Continental markets. Herring, cod, and ling were thus pursued during the following years with growing vigour, though the inshore white fish took favour. The herring fishing did not make great strides, mainly because to the middle of the nineteenth century catches were confined to the inland sea lochs; the people for the most part were not familiar with deep-sea fishing, and their boats and nets were not suitable for it.

Indeed, when Sir James Matheson bought Lewis in 1844, he gave scant attention to the potential in the fishings round his island. Though he expended considerable amounts in securing a regular steamer communication between the mainland and the island, and spent over £2,000 in building a quay at Stornoway

vessel with a service speed of 14 knots. She can accommodate 600 persons (400 in winter) and over fifty cars, and has sleeping berths for fifty-one passengers. Powered by two supercharged diesel engines of Crossley make, she has a lateral-thrust propeller unit in the bows to aid berthing at piers, and is fitted with stabilisers. The MacBrayne colours have been used: black hull, red and black funnel, white superstructure and thin white waterline. The metal decking is painted a light green instead of the more usual brown or dark red. After completing her trials on the Clyde, *Hebrides* went into service on the Uig (Skye)/Tarbert (Harris)/Lochmaddy (Uist) route on 15 April 1964. She was really a replacement of the *Lochmor* (of 1930), which had sailed across the Minch for almost thirty-five years, but which had many more ports of call, based at Kyle of Lochalsh and Mallaig instead of plying to and from the north of Skye. The Hebridean ferry berths at Tarbert and Lochmaddy on alternate nights, and spends the weekends at Tarbert. At the end of her first year of operation she carried nearly 11,100 vehicles.

SEA-RESCUE WORK

Closely associated with the sea services to the islands is the work of lighting the seaways and the rescue work which is at times required when the Hebridean seas are showing their teeth. The matter has occupied official attention for a very long time. Beginning at the northern tip of the island, the lighthouse at the Butt of Lewis is one of Britain's major manned stations. An oil-burning light was established there in 1862. In 1905 it was converted to an incandescent light, with a range of twenty-five miles. Three years earlier a fog signal was provided, and in 1930 a wireless beacon was set up at the station. At Tiumpan Head, at the tip of the Eye Peninsula, the light was established in 1900; it was oil-burning, converted to an incandescent six years later. The fog signal was not provided until 1959.

Eilean Glas lighthouse is one of the major manned lights which guide ships up the Minch. On the easternmost tip of Scalpay Island, in Harris, it was one of the four original lighthouses built by the Commissioners of Northern Lights in 1789. A new tower

was built in 1824 with an oil-burning light, converted to incandescent in 1907. A fog signal was established in the same year.

The Arnish light is one of the first sights of Stornoway that welcome the island homecomer—and the last visible link when the island is left—so it has been duly celebrated in poem and song. Sited at the mouth of Stornoway Bay, it was established as an oil light in 1853, and in 1911 was converted to acetylene-gas operation. The keepers were withdrawn in 1963 and the light is now unwatched. Of the minor unmanned lights, Carloway is an acetylene-gas-burning light established in 1892; Greinam, on the shores of east Loch Roag, near Breasclete, was set up as an incandescent light in 1900. The light at Milaid Point, near Kebock Head on the east of Lewis, was established, with acetylene gas, in 1912; and the light at Rudh Uisenis, again on the east coast, a little south of Milaid Point, was an acetylene-gas burner set up in 1938.

But whatever the navigational aids, mishaps at sea still occur. The rescue services can help thwart the sting of death, not only for the islander but for the stranger craft feeling their way along unfamiliar, dark-night shorelines. The RNLI (Royal National Lifeboat Institution) station was first established in Stornoway in 1887, £1,000 being spent on building a lifeboat house and 140 ft launching slipway—launching was done by manual labour. The first lifeboat was the *Isabella*, costing £372 and the gift of a Mrs Duguid of London, a woman obviously true to her surname. The *Isabella* was launched only five times during her four years' service.

From 1901 to 1918, the *Sarah Pilkington* was launched five times and saved twelve lives from shipwreck. Then came the *Janet* (1918-24) which cost £810. She was launched only once, with no rescues. In the next four years the *James Marsh* saw no service; but the subsequent boat spent a busy quarter of a century (1929-54). She was the *William and Harriet*, built at a cost of £10,469; launched seventy-seven times, she rescued 130 lives, indicating the increase in sea traffic on the Minch and near waters. In 1954 her place was taken by the present lifeboat, the *James and Margaret Boyd*, then the largest type of lifeboat in the service until the building of 70 ft craft in 1965.

er is Harris behind in willing men. In December 1962 *Boston Heron* saw herself on off-lying rocks and broken in a full south-westerly gale. here have been many stranger ships and lives lost on the island's shores, local tragedies are not lacking. In 1862 disaster overtook five boats from Port of Ness, g white fish. A fierce gale sprang up and the fishing-d, with thirty-one lives. Twenty-four widows, seventy-s and thirty-one other dependents were left destitute, obtained some subsequent relief from a fund to which

Queen Victoria and the Prince of Wales, later King Edward VII, contributed handsomely. But that was only one item in a long chapter that will never close.

The most shattering disaster on Lewis shores was the loss of the *Iolaire* on the very last day of the year 1918. Before the New Year's Day of 1919 was a few hours old, over 200 sons and fathers were lying in the death-waters of their drowning, little more than a stone's-throw from their native island. Barely a village on the island was not affected by the sinking of the *Iolaire*, which was bringing soldiers and sailors back from the war to their homes. The subsequent findings of the Court of Inquiry are bald statements which convey nothing of the tragic loss of the cream of an island's male population in a matter of minutes. The jury found that the *Iolaire* went ashore and was wrecked on the rocks inside the 'Beasts of Holm' (outside Stornoway) about 1.55 on the morning of 1 January, resulting in the death of 205 men; that the officers in charge did not exercise sufficient prudence in approaching the harbour; that the boat did not slow down, and that the look-out was not on duty at the time of the accident; that the number of lifeboats, boats and rafts was insufficient for the number of people carried, and that no orders were given by the officers with a view to saving life; and, further, that there was a loss of valuable time between the signals of distress and the arrival of life-saving apparatus in the vicinity of the wreck. The sad affair is still remembered in the In Memoriam columns of the *Stornoway Gazette*.

AIR SERVICES

The people of the Outer Hebrides are among the most air-minded in the world. However, aeroplanes came late to the island. The first visit by an aircraft was in 1928, when Seaplane S1058 landed in Stornoway Harbour. The crew of five were treated to a luncheon by the town's civic heads. In 1932 the seaplane *Flying Cloud* arrived in the town, piloted by Lord Malcolm Douglas Hamilton. Owned by British Flying Boats Limited, it was the first commercial aircraft to land and caused some local talk about air services for the island. In June 1933 a large seven-seater air-

herring boats belonging to Lewis was about 165, reaching a peak of 197 in 1889; the number of boats used for cod and ling fishing reached a peak of 704 in 1895. The figures, however, fluctuate considerably from year to year. The main reason for this was probably that these boats were not personally owned, but largely belonged to fish-curers and businessmen, to whom the boat crews were in debt, having received capital advances from them and from the State for boats and gear. Crews who had bad luck at the fishing had their boats impounded and sold to recover the amount of the loan. Many boats were also wrecked, for navigation in bad weather is still difficult even in these days of advanced directional aids.

The state loans to fishermen are worthy of note here, because they foreshadowed a similar scheme in the 1960s. They were made under the Crofters Holding Act 1886. Section 32 of the Act authorised the Fishery Board for Scotland to make advances, by way of loan, to persons engaged in the prosecution of the fishing industry, whether crofters or others in crofting parishes. For new boats, the maximum sum advanced was £312. The loans carried an interest of 3½ per cent; repayments of principal and interest were over a period of from four to ten years. Loans for the improvement of existing boats were also advanced, varying according to the condition of the boat or other circumstances affecting the necessary security requirements. New boats were mortgaged to the Fishery Board.

Ninety-three Lewis fishermen received loans totalling some £12,000, and a sum of £18,000 was distributed in loans throughout all the crofting counties. In a report issued in 1901, it was indicated that these ninety-three Lewis fishermen had repaid about 82 per cent of their principal and interests, but in other counties the repayment percentage was under 60 per cent. The Lewis figure would have been higher were it not for the loans made to the Barvas fishers, on which the repayment figure was only 24 per cent. When borrowers failed to observe their part of the contract the Fishery Board seized the boats. Many of these loans were originally made to aid a deserving class of men in adverse circumstances and surroundings. To achieve the high overall percentage of repayment (some indeed managed to pay

meaning that the men of that village, and its immediate neighbourhood, were the last to put to sea and the first to return. The Barvas folk could retort that they would have been fools to do anything else on a straight exposed coast; and that anyway their pony-drawn ploughs were of more use than the foot ploughs of the rocky south. A form of provender taken indirectly from the sea was the sea-birds and eggs from the sea-cliffs and islets like Rona, north-west of the Butt. This helped to support a few families in St. Kilda and on the rocky Shiant Islands south-east of Harris.

Fishing remained backward and primitive, however, until the nineteenth century. After developing in a promising way, it was checked before the First World War, and fell into decay during and after it. Decay has, of course, been widespread. In 1935 the chief ports of the East Coast, from Leith with Granton northward by Fraserburgh to Wick—a round dozen—had still an average of 250 to 300 vessels, 3000 in all. These were chiefly of steam or motor auxiliary power and valued (with fishing gear) at £2,750,000. Orkney and Zetland, too, had each their 300 boats. The whole West Coast, however, from Stornoway to Ballantrae, had only 2000 boats, valued at less than one-tenth of the fleet of the East, and worth only a fraction of this, to judge from prices in the open market. Nearly 400 boats were still on the register for Lewis and Harris (Stornoway district) and another 300 for the rest of the Outer Isles. But fewer put to sea each year, even from Stornoway itself.

A major drawback to herring fishing in the Stornoway district is the uncertainty in the movements of the herring shoals. On the Clyde, moreover, herring can be sent fresh to the city but further north they must be cured. Whereas

rents, and its end is in sight when these cease to provide for the lord's desires.

(E) STORM AND GALLEY; BATTLEFIELD AND REGIMENT

The peaceful round of daily life formed the most enduring test of the mutual loyalty uniting the commoners of the clan, and linking chief to people. Yet the tensest ordeals came in hours of danger faced together, whether at sea in a small fishing boat or a many-oared galley, or in war in a clan company. The Gaels' own records must speak for them. Many a song of the Isles conveys the team-spirit of the crew though without describing its men. And although Mary MacLeod's song of MacLeod's Galley be irretrievably lost, there survives one epic poem portraying the ship, the storm and, man by man, the crew who warred against the waves and won. Alexander Macdonald's *Birlinn of Clanranald* is unmatched in Gaelic, and probably in English, verse for its portraits of the crew in action, from steersman to 'look-out'. The flowing metrical translation by Pattison with Hugh MacDiarmid's vivid prose helps to give the English reader some vision of a crew of Gaelic freemen at their best.[1]

The poem opens in slow traditional rhythm with "the Blessing of the Ship", the arms and the crew. Then the bard, speaking for the stately skipper, "incites the sixteen oarsmen to row" out of the bay, and they row to a rousing shanty, a *Iorram*. Next, in readiness for the voyage and

[1] Thomas Pattison, *The Gaelic Bards* (2nd ed.), 1890 (pp. 1-28); and Hugh MacDiarmid (Ed.), *The Golden Treasury of Scottish Poetry* (pp. 65-85), 1940. Cf. A. Macleod (Ed.), *Sar Orain: Three Gaelic Poems*, Glasgow, 1933. The different themes of its sections, each in its own metre, have been published separately, in *The Songs of the Hebrides*, and elsewhere.

with words of heartening but well-weighed praise, each post with its duties is apportioned to the man best fitted for it by his temper, strength and skill—or even by some special weakness! First the steersman:

"Let this broad heavy hero sit at the helm, powerful and limber . . .
Light handed on a helm, watchful and wary, cautious yet quick . . ."

Then others "Put this great-fisted and shrewd man to grapple with the rigging. . . . Windwise, he'll work with him that holds the shrouds . . . a thick-set, broad and craggy champion . . . and with him that grips the sheet, a neat and handy fellow. Set at the prow our pilot, keen-eyed for the airts, and with a sure sight for each landmark like a guiding star. And set at the halyard this self-reliant seaman, tried and clear-headed, grimly alert. . . ." They put to sea, and as the sea roughens, the steersman cries, "Quick at my ear a man to watch for the rain-squalls! Choose me a fellow who's half-fearful, yet not a real coward . . . for he must be quick to shout when he sights a big sea bearing down on us. But let no other but himself be by me, lest there be babble and hubbub to bewilder us." Then, as the seas break over the open vessel:

"To bale her let this strong man rise, active and brave,
Who will not blanch or yield or tremble for the shouting wave. . . ."

Next, "Let two stout fellows, these thick-boned, rough and hairy chaps, haul on the ropes behind the sails, to raise or lower them as we're lowered or uplifted by the surging seas. . . ." And last, for fear one fail or be dashed overboard by a wave, six nimble men are picked to stand by,

ready to leap fore or aft: "Quick to move as the mountain hare . . . or the hounds after him; quick to climb as a squirrel in the spring-time". Then comes the stirring evocation of the storm, testing each man's mettle and the discipline of all, until at last, their ship battered and themselves bruised and weary but undaunted, the crew reach Islay and round the sheltering point of Carrickfergus. There, with thanks to the High King, they drop anchor, the *birlinn* rides in peace, and all find meat and drink and rest.

As at sea, so in war, loyalty could rise to heroism in individuals and corps. Young men were attached to their chiefs by chivalrous leadership in warfare, both before 1745 and later. The Highlanders' high character contrasted with that of most Regiments of the Line, too often disciplined with the lash while demoralised by debauchery. From Lewis the Islesmen went out to the Seaforth or the Ross-shire Highlanders. General David Stewart of Garth, historian of the Highland regiments and people, wrote of these two regiments that again and again their courage and coolness in battle were proved.[1]

Not less striking was the record of Gaels among civil populations, whether in Britain, as in the 'Forty-five, or abroad. In Germany in 1761 and 1762 much was said of the Highlanders' kindness, "for the boors were much better treated by those savages than by the polished English and French". Similarly in the Low Countries in 1814 and 1815, they were *enfants de la famille* and "kind as well as brave". The mayor of Brussels declared that they "called forth the attachment and esteem of all", and the inhabitants requested him "to endeavour to detain the 78th (2nd battalion Ross-shire) regiment of Scotchmen in the town, and to prevent their being replaced by other troops".

[1] *Sketches of the Highlanders*, Edin., 1822, 2

exists at Tarbert and another was erected in 'the Bays' district by Leverhulme. Leverhulme also appears to have introduced 'Automatic' hand-looms into Lewis. Today as in the past, the weavers possess a little croft or a feu, a cow, and a few sheep on the outrun, and perhaps a small boat.

Commercial fishing and weaving cannot, however, be satisfactorily combined, for seasonal alternation of occupation entails waste of gear and plant, and interferes with efficiency. Thus in the North Lochs fishing 'creek' (Leurbost neighbourhood, immediately south of Stornoway), weaving became important, but none of the seven large herring fishing boats (still registered in 1930) had been fitted with motors after 1918; they were idle and rotting, and by 1938 only one was still registered. In South Lochs, however, motor-boats were purchased, but there is little weaving. An obvious reason for the difference is the accessibility of the North Lochs area by road to Stornoway. Light passenger cars bring yarn to the village, besides groceries, etc., and take away rolls of tweed. South Lochs, on the other hand, considerably further from Stornoway by road, is still within reach for marketing fish. In North Lochs, merchant seamen at home and young men on their return from three months' work on East Coast fishing boats, turned increasingly to the 'Automatic' looms, manipulation being easily learnt; but such intermittent work alone gives little hope of progress. There is no more fascinating problem than the future of improved weaving.

2. *Unemployment and the Island Budget*

In the past, the storms of the Atlantic washed up on the Island shores the wreckage of world commerce; and

(c) House-building. — From 1920 to 1940 the Department of Agriculture advanced loans for the erection of 760 new houses and the repair of 220 other houses. This, with the erection or repair of 40 steadings, may be taken as the equivalent of 1000 houses in the 20 years of peace, of which three-fourths were new. Rural building was at its height in the early 'thirties, but 1938 was a typical year. Taking the value of each house as £600 and subtracting half for imported materials, we may assume that for 50 houses built that year the labour given produced an output of £15,000. In addition, some house-building and repair was done without State aid, for which a guess of £15,000 may be made. Such sums may not appear large, but they correspond to the enduring fulfilment of a prime need, a 'real wage', of importance when compared to rents and costs elsewhere. Of the expenditure on house-building in Stornoway burgh during 1938, the value may be assessed as £10,000, of which £9000 was for Local Authority housing. Most of the total was produced by local labour.

(iii) *Fishing Industry—Net Output and Earnings*

(a) For 1938 the total catches, prices and quantities of fresh cured fish landed in Stornoway District show a value of nearly £100,000 (£98,000) for the herring catch, and of £162,400 for the cured herring. Our problem is to estimate what fraction of these sums may be included in the net output of the Island industry proper. The Fishery Board's *Statistical Tables* and *Annual Report* extract the produce brought in by local boats from the total, separating it from that due to 'strangers', and so permitting a fairly reliable estimate, checked by local enquiry.

Of the herring taken, nearly 80 per cent were caught in the summer fishing, June to August (*Annual Report*, p. 13). The week of maximum local activity in herring fishing for Stornoway District may be taken to be characteristic of this pre-war period (Table 8). There were then 111 steam-boats engaged; and as only five were locally registered (at Stornoway itself), the remaining 106 were strangers. There were also 66 motor-boats engaged and though 81 motor herring-boats are locally

north-west of Gallan Head. There are seven main islands, all small, high and cliffbound, and a number of rock stacks and islets. All are uninhabited. Eilean Mhor, the largest, of 39 acres, has an automatic light. Dean Monro's description of the islands as 'nouder manurit, nor inhabit, but full of grein high hills and scheipe' still holds, for sheep are taken annually from Lewis to the grazing on the Flannans. Their name is said to be derived from the ninth-century St Flann, whose saintly influence was recognised during the centuries when men from Lewis visited the islands for their harvest of wool, wild fowl and feathers.

The Flannans were the scene of a great sea-mystery: the complete and utter disappearance of three men from the lighthouse at the turn of this century. In December 1900, the lighthouse, with its 140,000-candlepower beam 283 ft above sea level, was a year old. It had taken four years to build instead of the estimated two. All the materials had to be swung up piecemeal from the boats and hauled up the almost sheer 70 ft cliffs to the top. That month a passing ship, the *Archer*, noticed that the Flannans light was out; a message was sent to the Flannans shore station at Breasclete, Lewis, and the *Hesperus*, preparing to pay a Christmas visit to the lighthouse, got under weigh.

Its crew landed and searched the island, but found no trace of the missing keepers. In the lighthouse was an uncanny silence. The fire was dead. The clock had stopped ticking. The beds had been made up in the clean, clinical way of all sailors. And in the galley, the pots, pans and dishes sparkled their welcome to the searchers. In the lamp-room the lamp was cold. The wicks had been trimmed and the lenses polished. The logbook showed a last entry on 0900 hours, Saturday 15 December. In the subsequent investigation some theories were offered in explanation of the disappearance, but none quite fitted. The mystery remains, a haunting, unexorcised cloud hovering over the island.

The Shiant Isles

Turning to the east coast of Lewis, in the parish of Lochs are the Shiant Isles, about 4 miles off-shore, across the Sound of Shiant (Gaelic: charmed, enchanted). There are three islands in the group: Eilean an Tigh (House Island), Garbh Eilean (Rough

of Lord Seaforth's conduct in this matter. They alleged that he 'draiv in hither an number of strangers who daylie resorts to and fra Holland to the Lewes and continent next adjacent (the Ross mainland presumably) and has caused them be answered of all such commodities as these bounds affords, as nameli with fishes and beeves quhilkis with the hyde and tallow, with manie utheris commodities they transport to Holland.'

To satisfy the Royal Burghs, Seaforth had some of his Dutch friends sent away. But several Dutch families remained in Stornoway until the outbreak of hostilities between England and Holland in 1653.

In Harris, similar efforts were promoted by Captain Alexander MacLeod, who in 1779 bought Harris, together with St Kilda, for £15,000 from the commissioners acting on behalf of General Norman MacLeod. The latter had, in 1772, inherited from his grandfather both the chiefship of Harris and a debt on the property amounting to some £50,000. Captain MacLeod, who skippered the East Indiaman *Mansfield*, did much to stimulate better conditions in Harris, and advocated the generation of a fishing industry. In the face of opposition and ridicule he showed by practical example what could be done to make a success of the herring fishings, introducing a number of east-coast fishermen with Orkney trawls to teach the inhabitants, and reaping a good harvest from the fishings off Rodel, despite the dismal auguries uttered by the Harris-folk. He improved the local harbour accommodation and erected a storehouse for salt, casks and the like, he built a factory for spinning woollen and cotton thread, and twine for herring-nets; he advanced money to those fishermen who were interested for the purchase of boats and gear; and he provided them with rent-free cottages with a ground-patch on which they could grow potatoes. He built roads between the village of Tarbert and the two jetties he made there, and he erected a schoolhouse and an inn. But all this hard work to put Harris on some realistic economic basis came to little. The native population were slow to appreciate the potential income lying about them.

The potential of the sea was of course eventually realised, particularly where the fishing grounds were favourable, Stornoway

according to the amount of barilla (its great competitor, a carbonate of soda made from plant ashes) which found its way into the British market. When the American war interfered with the imports the kelp price was as high as £22 per ton. Prices began to decline about 1810, and from 1822 successive reductions in duties on salt and barilla resulted in the decline and demise of the kelp industry. As a consequence great distress appeared in those districts which had founded their whole economy on seaweed.

The weeds of most value to the industry, because they yielded most salts, included *laminaria digitata*, *laminaria bulbosa*, *ascophyllum nodosum* and *fucus serratus*. One ton of kelp yielded an average of 8 lb of iodine, with certain quantities of chloride of sodium, chloride of potassium, and carbonate of soda. When subjected to special treatment and distillation, 2-3 cwts of sulphate of ammonia, and several gallons of naphtha, paraffin oil, and volatile oil were also derived.

The fishing industry, discussed in the previous chapter, took over where the kelp-making industry left off and became another king-pin in the island economy. By the end of the last century it seemed set fair for continuing prosperity. In 1900, harbours were being planned and built with State aid in Uig, at Carloway, Ness and Tarbert. Then 1914 came, and with it sweeping changes in international trade. Island fishermen were left workless with wrecked and rotting fishing boats. In twenty years the number of Scotland's fishermen was halved; the remainder were all but ruined. The islanders' fate mirrored this pattern.

Yet another significant source of income for island families for almost 200 years came from the men in military service, who either sent money home or returned home with their gratuities and pay. In the wars of the last century many enlisted in the Highland regiments, the Navy and the Merchant Marine. Even today, the income from this external activity is not insignificant.

EIGHTEENTH-CENTURY ECONOMY

Information and statistics about the economy of the island in the middle of the eighteenth century are to be found in Walker's *Economical History of the Hebrides or Western Islands of Scotland*; his MS is in the British Museum.

LORD LEVERHULME'S FISHERIES

When he pulled out of Lewis to go south to Harris, he offered—such was the character of the man—as thanks for the '98 per cent support' he got from the people of Lewis, to each Lewis crofter his own croft as a free gift, and the Lews Castle, together with all his property in Stornoway, to the people of the town.

In 1919, Leverhulme became proprietor of Harris, and concentrated his efforts in Obbe, now called Leverburgh, in South Harris. The harbour at Obbe lacked the natural advantage which Stornoway had, so he spent large sums on making it navigable. Rocky obstacles were blasted away; numerous buoys and beacons were set up to guide vessels into harbour; new quays were built; and kippering sheds, and other buildings necessary for packing and curing herring were erected. Among his other undertakings in Harris were the provision of a mill for making tweeds, and he bore half the cost of the 5½ miles of road between Leverburgh and Finsbay. In 1925, after a visit to the Congo, he died in Brussels. His Harris schemes came to an abrupt end. And the remains of industrial history are still to be seen in the quietness of the little township named after one of the most stormy of business petrels that Britain has ever seen.

Tourism

Tourism has always been a perfunctory and casual affair, until the introduction of the fast ferries which now link the mainland (via Skye) with the Outer Isles. Some 10,000 cars cross each year from Skye to the Hebrides. In 1913, the Stornoway Tourist Association had a struggle to increase the number of visitors to the town, to establish it as a tourist resort. It is much the same today with the Western Isles Tourist Association, which is having difficulty in integrating tourist facilities with crofting activities. In Lewis, the Stornoway Trust has assisted in establishing pony-trekking, a venture which has the potential to mirror the success of a similar one in the Isle of Skye.

PRESENT INDUSTRY

Almost an echo of the kelp-burning industry is the alginate industry. It provides employment for only small numbers, but is a

The previous building was only an idea in 1897; it took shape when Dr Andrew Carnegie offered to contribute £1,000 towards the construction of a library, provided the town adopted the Public Libraries Act. This was done, and the Council decided to incorporate the library into a larger structure, erected at a cost of £11,000 and opened in September 1905 by Lord Roseberry. Carnegie increased his contribution to £3,500, with other large donations from public-spirited industrialists of the time (eg Coats of Paisley, who also financed school libraries in the island).

Being a seaport, the sea has been basic to the town's livelihood. In the eighteenth century trade flourished between Stornoway and the Baltic, Scandinavia, Holland, France and the north of Ireland; and in the first half of the nineteenth century, fish was exported as far away as ports on the Mediterranean. The advent of steam killed the Stornoway sailing craft. At one time in its history, the shipyard (at Matheson's Patent Slip, now the site of the textile mill) turned out many fine vessels. The scent of tar and pitch, the crunch of a busy grindstone, the shaping of a ship's timbers, the steaming of her planks, the driving of pins and bolts, the music of mallet and caulking-iron, the buzz from the saw-pits and the riggers aloft, all gave the town a sense of at-one-ness with the waters in the bay. Then there were the schooners, brigs and barques of foreigners who put in for repairs or for merchandise. It was a time of glory that has now gone as surely as the sail has disappeared from the high seas. Ship-masters, ship-owners and sailors all added colour and variety in the streets as they mingled with the local population—which numbered 1,000 in 1801. Stornoway captains were world-known for their skippering: MacLeods, MacIvers, MacKenzies, Ryries, MacLeans, Morisons, Allans. These were the names that were once reeled off to be paired with the famous ships of the day: *Sir Launcelot, D. L. MacKenzie*, and *Assaye*.

While large numbers of its sons were sailing the high seas, many in ships of Stornoway origin, the town began to take on the first look of a port, with piers. On 9 August 1864, Sir James Matheson subscribed the instrument which took the Stornoway Harbour Commission into being. The following year, on 29 June 1865, the Commission was incorporated by Act of Parliament. Matheson had shown a great interest in the development of the existing

harbour facilities. But his efforts to promote the town as an industrial centre were opposed, a dispute arising between him and parties who claimed interest in the quays which already existed; his action to set up the Harbour Commission and to acquire the Crown's interest in the shores of Stornoway Bay *ex adverso* found local opposition. He succeeded in quelling the doubts and the resulting counter-actions, however, and then, with the decks cleared, the Commission lost no time in getting developments under weigh. Authorisation to borrow up to £10,000 was obtained and work put in hand on building a timber wharf, 150 ft long, filling in certain areas for fish-curing and other purposes, and constructing sheds, works buildings and warehouses. By 1881 this work had been completed and, with the expansion of the herring industry, the Commission sought to increase its borrowing by £20,000; in 1892, further powers for borrowing the sum of £55,000 were sought and obtained. By the turn of the century all the works authorised by the 1892 Order were completed: they met the berthing needs of the fishing industry and also the reclaimed areas on South Beach, North Beach and the Cromwell Street quays were used continuously during the season as fish-curing stations, proving essential factors in the development of that industry.

Before the 1914-18 war ended, Lord Leverhulme had become proprietor of the island and, as such, a member of the Harbour Commission. He proposed further development of the existing facilities, to line up with his scheme for establishing Stornoway as a centre for industrial activity based on fishing. Plans were prepared, and a permanent way for a railway (linking the canning factory at Inaclete with the harbour) was formed. But the scheme did not materialise before he abandoned Lewis for Harris. Before he left, however, he conveyed free to the Harbour Commission considerable property round the inner shores of Stornoway Bay. At this stage the Commission promoted a New Harbour Order, passed by Parliament as the Stornoway Harbour Confirmation Act, 1926, in which provision was made for the increase of the Commission's borrowing powers (up to £70,000) and the setting up of a contingency fund of £10,000. Further improvements were put in hand. Another Order (1947) was obtained and

the present harbour facilities are the result of this, with a causeway to Goat Island—a small snippet of land off the Newton shore—the King Edward Wharf extension to give a depth of 24 ft at low water, and the construction on Goat Island of a slipway and slipway jetty.

The present facilities are valued at several million pounds; they evoke, however, a blank stare of disbelief. Much of the industry for which the quays were first envisaged has now gone. The days of 300-400 fishing boats and the landing of several thousands of crans each week, with the attendant bustle and activity, belong to the past. The harbour remains reasonably active, with a considerable extent and variety of shipping: general traffic due to the Harris Tweed industry has continued to increase in recent years. The introduction of the ferry service direct from Skye to Tarbert, Harris, has however had perceptible effects.

When Leverhulme parted company with the people of Lewis, his gesture of farewell offered the island to its people. This brought into being an agency for the people of Stornoway and its rural areas, so that they were in effect in control of their own future to a degree unique in Britain. The Stornoway Trust was formed in 1924. Besides property in the burgh and its suburbs, including the Castle and its park or policies, the Trust owns virtually the whole of the landward area of the parish, from Arnish Moor northwards to the township of Tolsta. Freshwater fishings are in its hands, as are the resources of the sea and inshore fishings on the shorelands. During its first five years the Trust was faced with a growing deficit, though this was redressed partly through agricultural derating and partly through the registration of the Trust as a charity, thus exempting it from income-tax demands.

The Town Council, the Harbour Commission, and the Trust have overlapping representation, for harmonious work on behalf of the community. Indeed, by the conditions of the Deed of Trust drawn up by Leverhulme (in 1923-4), the Stornoway Trust must include the Provost of the burgh as its chairman, together with magistrates and councillors. Throughout the years of its existence, the Trust has sought to increase its usefulness, but at the beginning decisions were often taken piecemeal. Portions of the property were

but not as often as in the past. In the past boats were in danger of being smashed by the strong seas and winds that gained easy access to the Shawbost harbor; but today, because so many cars are available, the boats can be sheltered in the more protected bays of Carloway, five miles up the coast to the southwest of Shawbost. Despite this protection and the increase in income since World War II which would enable more people to buy boats, the number of boats remains small.

In the past certain people were esteemed for "knowing the wind and the sea." The sound of the turf coming from different directions presaged different kinds of weather; a line of white across the bay meant bad weather in a few days. A fifty-year-old man says, "My father and grandfather could tell when a storm was coming. They needed to know, and they didn't have radio and television to tell them. I would know the signs, too, if I had listened to them."

Not only was there local fishing, but the men used to hire themselves as crew on other fishing boats. Several nicknames reflect this history. One family is known by the nickname "Strachan," the surname of a man who lived on the east coast of Scotland and on whose boat the head of the Shawbost family had once worked as

and its neighbourhood becoming the centre of the growing industry. In 1793, the Lewis Parish contributors to the *Old Statistical Account of Scotland* indicated that upwards of 183 boats were fishing off the island. In Uig no less than 275 netmakers were recorded, showing that the fishing industry was prosecuted with some measure of enthusiasm. 'All the people dwell in little farm-villages and they fish in the summer season. The women do not fish; but almost at all times when there is occasion to go to sea, they never decline that service, and row powerfully.' In the parish of Barvas in the eighteenth century some 9,000 Scotch pints of oil were taken each year from dog-fish livers and sold to Stornoway merchants at from 6d to 8d per pint; it is related that the tenants of Ness were able for a long time to pay their rents with the oil proceeds. Cod and ling were the principal fish caught by the men of Lochs, an annual average of 24 tons being cured and sold in Stornoway. Generally, other fish caught were consumed locally.

Loch Roag on the west of Lewis proved to be about the best fishing ground; in 1794 about '90 sail' from all parts of the United Kingdom were at the herring fishing there. At one time Loch Roag-cured herring was exported exclusively to Sweden. The minister of Stornoway, contributing to the *Old Statistical Account*, gives figures showing the quantities of fish shipped from the port from 1791 to 1796. During these six years some 14,000 barrels of herring were exported to the Continent, and 20,000 sent for consumption in Britain; some 350 tons of cod and ling were destined for Continental markets. Herring, cod, and ling were thus pursued during the following years with growing vigour, though the inshore white fish took favour. The herring fishing did not make great strides, mainly because to the middle of the nineteenth century catches were confined to the inland sea lochs; the people for the most part were not familiar with deep-sea fishing, and their boats and nets were not suitable for it.

Indeed, when Sir James Matheson bought Lewis in 1844, he gave scant attention to the potential in the fishings round his island. Though he expended considerable amounts in securing a regular steamer communication between the mainland and the island, and spent over £2,000 in building a quay at Stornoway

for the steamers, he thought that any improvements in connection with the fishing industry should be paid for largely by the fish-curers themselves—though he did spend about £1,000 on constructing fish-curing houses. Why Sir James, with his experience of business, should have taken this attitude is not clear; certainly the fishing industry could have been given just the right impetus with his interest, personal and financial. As it was, the industry was left to develop on its own lines, with odd injections from time to time.

Fluctuating prosperity

That the potential in the fishing grounds of the Minch was enormous was realised before 1850 by fish-curers from the Scottish mainland. But deep-sea-going boats were needed, and so new designs were called for. James Methven of Leith, a pioneer of deep-sea herring fishing, sank capital into the development of a large class of boats known as the 'Anstruther build', or in the islands as 'Eanstrach'. These craft served the islanders well, and Lewis prospered, as did Stornoway. In the five years 1870 to 1875, for example, the average number of barrels of herring cured at Stornoway for export was some 80,000. From 1875 to 1900 the average Stornoway district catch of white fish, much of it caught by local boats and some of it cured at Carloway, was worth over £100,000; it was sent to Ireland and the Clyde. After 1900, fresh-trawled fish replaced the cured and the market fell away. In 1921, the market value of cured fish from Stornoway was about £500, ½ per cent of the 1900 value.

The herring fishing held its own, against the decline of the white fish. Stornoway, as Lochboisdale in the Southern Isles, became for a while one of the world's most important fishing ports. Prosperity was in the air; even when the fishings did eventually fall away, there still remained, decades later, the whiff of past success among the neglected curing sheds, the hangdown boats in the quays, and the silent kippering houses. From 1917 to 1935, the annual landings of herrings (in crans) varied from 25,486 (in 1934) to 221,519 (in 1927). In that year, a record one, it was reported that 'even landsmen could hear the roar of herrings in Loch Erisort. So dense were the shoals that their progress in the

he community generally—in particular for a landing stage in the North Harbour. The lighthouse at Eilean Glas, Scalpay, was in act erected as long ago as 1788; for a long time it was the only ighthouse in the Western Isles. In 1792 it was described as 'one of great utility to the numerous shipping that frequent this channel [between Skye and the Long Island] on their voyages to and from the Baltic'.

The independence of the islanders again appears in their attiude to the education facilities provided for their children. In 949 Scalpay parents staged a school strike in protest against the delay in the construction of a road to the school. At present the sland has a junior secondary school but in 1966 the Invernesshire County Council Education Committee proposed the transfer of the island pupils to the school at Tarbert; this would mean ach child rising early in the morning to face a trip across Scalpay Sound and then a road journey to Tarbert. The inevitable protests against this proposal were rooted in its deeper implicaions. The school roll on Scalpay (70 pupils) has maintained a emarkable level of continuity over the years, reflecting the eneral prosperity of the island. Forced attendance at a central ducational facility, the islanders maintain, will introduce an nsettling urban element into their children's adult views.

he smaller islands

To the west of Scalpay, in East Loch Tarbert, is the onequare-mile island of Scotosay. Its population was 14 in 1861, one in 1881, 18 in 1891, 15 in 1901, and 20 in 1911. In 1921 males and 12 females lived there, but none permanently since.

On the west of the Harris mainland is a high rocky island, four iles by one, called Taransay. In 1549 Dean Monro described it s being 'well inhabit and manurit', a place where people delved ith spades, and with good barley and corn, and fishing. There re two old chapels and a burying ground on the island. The opulation of Taransay has declined to a handful through the ears; its peak was 76 in 1911.

The Sound of Harris is 'a chaos of rocks and islands', so numerus that they cannot easily be counted. Some are mere pinpoints rock; others once supported small populations. Nearest to the

trappings of nineteenth-century civilisation, however, they grew to depend on items brought by sea. Imported food, clothing, wood, metal domestic utensils and the like were slowly assimilated as indispensable everyday articles. But there was relatively little export in return; then as now, any transport operator struggled with the fact that traffic was one-way and the freight charges must pay for the double voyage. Though the fishing industry and later the Harris Tweed industry were, around the turn of the century, to do much to determine and stabilise shipping developments, both passenger and cargo services were always facing loss rather than profit.

On the social side of the picture, the regular call of ships to the island, to Stornoway in particular, was a welcome, quickening sign that the island was significant in some way to the outside world. The ships brought visitors who made the island, and the Hebrides in general, better known to other prospective travellers. The exposure of the island and its folk to the gaze of the mainland led to a wider knowledge and understanding which without doubt brought improvements in social welfare and a basis for economic development. When many islanders found it necessary to go to Glasgow and the south for work, the ships of the Minch served as a firm link with home, to which they returned whenever they could. This feeling for home is still manifest today in the Lewismen in Canada who charter an aircraft to Prestwick each year so that they can holiday on the island. Since 1900 or so, passenger traffic has been two-way : emigrants, migrants, visitors and business travellers. When the fishing industry was in its heyday, the ships carried hundreds of fisherfolk across the Minch to ports as far south as Great Yarmouth to 'follow the herring' round the shores of Britain and back to the Minch again. Traffic today is still considerable, with the air-link with the island being used to its capacity.

[228]

In a community where Sabbath observance is an integral strand of religious belief, ministers have on occasions tried to preserve the Mosaic sanctity of the Sabbath Day by restricting the movement of ships in Stornoway harbour. In deference to local feeling the Stornoway steamer has always docked for twenty-four hours over Sunday, to leave port for Kyle just after midnight.

COMMUNICATIONS

This is only relaxed if emergency sailings are necessary. During the second world war attempts were made by Free Church ministers to stop the movement of ships in Stornoway harbour, but needless to say the war effort took precedence.

THE SHIPS

When Sir James Matheson bought Lewis in 1844, sea communications were still erratic: a mailboat or packet was running thrice weekly between Stornoway and Poolewe on Scotland's west coast. Sir James decided that a craft based on Stornoway would serve more efficiently both for general trade and for island-to-mainland transport, and he provided a regular steamer service. As this craft, the *Mary Jane*, was to carry mails, Sir James thought the Post Office should promote the service, and he struggled with that department for some years, eventually being promised a subsidy of £1,300. Though the scheme was to cost far more and had won no other financial support, the service began in 1846, Sir James being surety for the whole concern. He lost some £17,000. Another of his ships was the PS *Ondine*, which carried mails between Ullapool and Stornoway during the 1870s and '80s.

Quite apart from the Matheson ventures, things had been stirring in the south; the sea communications of the West Highlands and Islands were about to be commercially developed. One of the first ships on a regular run between Stornoway and the south was the *Ben Nevis*, a small wooden paddle vessel later to be wrecked south of Campbeltown in 1831 while homeward bound from Stornoway. G. & J. Burns was one of the main companies operating the early West Highland trade, managing to survive the vagaries of fortune until 1851, when its interests were passed to David Hutcheson, its chief clerk, on the condition that the Burns's nephew, David MacBrayne, became one of the partners. This was the beginning of the company so well known today, Messrs David MacBrayne Ltd. The new company started off with a building programme and gave birth to a long line of ships, many of whose names were to become bywords in the Western Isles.

The PS *Clansman* was the first. Her route was the strenuous one of Glasgow, Oban, Skye and Stornoway. Alexander Smith's

THE SHIPS

Summer in Skye gives a fascinating account, written from first-hand experience, of working conditions aboard. *Clansman*'s speed on her first voyage back from Stornoway was 13 knots; she was wrecked on Sanda Island after only fourteen years' service. The company's PS *Glencoe* was originally the *Mary Jane* built by Sir James Matheson for his Stornoway run, launched in 1846. In that year she plied from Stornoway to Portree, Tobermoray, Oban and Glasgow, with calls at Kyleakin, Balmacara and Armadale. She passed to MacBrayne's in 1857, was lengthened and with other alterations emerged for a long life of sea service, braving the terrors of the Minch waters as the saloon steamer *Glencoe*. Refitted with new engines during her lifetime, her first horizontal boilers were replaced in 1883 by others which, in 1901, were succeeded by a haystack boiler from the *Fusilier*. *Glencoe*'s original length was 150 ft, later extended to 165 ft; she was 20 ft broad and after her lengthening had a gross tonnage of 226. Her original machinery was a steeple, one-cylinder 56-in engine of 177 nhp. The end of the much-loved *Glencoe* came in the summer of 1931, when, despite the display of much sentiment, she was broken up at Ardrossan—after eighty-five years of service. When she died she was one of the two oldest working ships in the world.

The PS *Stork* was first built for Messrs Burns's Liverpool service and was later on the Belfast run. Acquired by Hutcheson's in 1858 she was placed on the Glasgow/Stornoway run with the *Clansman*, but in 1860 was sold to the Italian Government. Another brief encounter was the SS *Fingal*, which knew Stornoway for a few short months before being sold for the American Blockade, after capture becoming a Federal gunboat. Then came the SS *Clydesdale*, built in 1862 for the company by J. & G. Thomson and used on the Glasgow/Stornoway twice-weekly cargo and passenger service. She was 197 ft long, 24 ft broad and drew 13½ ft of water; her gross tonnage was latterly 468. Her original engine (120 nhp) was a two-cylinder steeple (40 in—30 in); this was compounded in 1893, when she had a new double-ended boiler installed.

After the first *Clansman* came to grief on Sanda Island, a second ship of the same name was built for the Glasgow/Stornoway run. She was a most attractive two-masted iron ship, with a

STORNOWAY

175 the present harbour facilities are the result of this, with a cause-
505 way to Goat Island—a small snippet of land off the Newton
632 shore—the King Edward Wharf extension to give a depth of
503 24 ft at low water, and the construction on Goat Island of a slipway and slipway jetty.

The present facilities are valued at several million pounds; they
504 evoke, however, a blank stare of disbelief. Much of the industry
634 for which the quays were first envisaged has now gone. The days of 300-400 fishing boats and the landing of several thousands of crans each week, with the attendant bustle and activity, belong to the past. The harbour remains reasonably active, with a considerable extent and variety of shipping: general traffic due to the
(505) Harris Tweed industry has continued to increase in recent years. The introduction of the ferry service direct from Skye to Tarbert, Harris, has however had perceptible effects.

When Leverhulme parted company with the people of Lewis,
175 his gesture of farewell offered the island to its people. This
423 brought into being an agency for the people of Stornoway and its
632 rural areas, so that they were in effect in control of their own
(425) future to a degree unique in Britain. The Stornoway Trust was formed in 1924. Besides property in the burgh and its suburbs, including the Castle and its park or policies, the Trust owns virtually the whole of the landward area of the parish, from Arnish Moor northwards to the township of Tolsta. Freshwater fishings are in its hands, as are the resources of the sea and inshore fishings on the shorelands. During its first five years the Trust was faced with a growing deficit, though this was reduced partly through agricultural derating and partly through the registration of the Trust as a charity, thus exempting it from income-tax demands.

The Town Council, the Harbour Commission, and the Trust have overlapping representation, for harmonious work on behalf of the community. Indeed, by the conditions of the Deed of Trust drawn up by Leverhulme (in 1923-4), the Stornoway Trust must include the Provost of the burgh as its chairman, together with magistrates and councillors. Throughout the years of its existence, the Trust has sought to increase its usefulness, but at the beginning decisions were often taken piecemeal. Portions of the property were

A HARRIS VIGNETTE

621 has direct or indirect communication with Glasgow, Stornoway
631 and North Uist. In summer a thrice-daily bus runs to Stornoway,
(505) and once a day a bus makes the round trip of East and West
(449) Harris. The township, linear in pattern, east to west, includes six-
361 teen shops which cater for most of the needs of the population
360 within reasonable travelling distance; it also has two cafés, a
363 post office, a licensed hotel, a hall for social functions, a
(473) masonic hall and two churches. The Sir E. Scott School here is the only secondary school in Harris with an academic stream.

Most of the working population is employed in the service in-
• (504) dustries, the professions and the tweed industry. Tarbert was a fishing port of some significance in the past, and is now a refuelling point for ships.

444 The absence of organised industry on a large scale, such as
(167) Lewis has, is a factor which tends to bring nearer to reality any desire on the part of Harris natives to leave their native soil. There are small pockets of industry, but these are only dabs of easing
463 ointment on the excessive unemployment sore of 27 per cent. The
(241) main occupation is of course crofting, the income from it being
(434) augmented from a variety of sources. Some crofters concentrate
(726) on the production of Harris Tweed, perhaps using the wool from
(36) their own sheep; the natural dyes from the lichens which grow on the rocks and from other plants are still used occasionally. Others specialize in knitwear. Recently shell-craft and wood-turning have been added to the traditional crafts, with a view to the tourist market. Fishing, of course, plays a part in the economy in
(522) some communities. The interest of such organisations as the Scottish Country Industries Development Trust has been concentrated on the potential in shell-fish processing, and the production of knitwear on a larger scale than exists at present. Road-
(444) work gives employment to about thirty men, but is of course seasonal.

316 An apparently bright light on the employment horizon showed itself in 1963, with the opening of a quarry at Lingerbay. The mineral quarried was pitchstone, a granite used as an abrasive in cleaning products. A 99-year lease was taken out by a subsidiary company of William Robertson (Shipowners) Limited, Glasgow. But the quarry was closed in 1967 due to lack of orders.

A HARRIS VIGNETTE

Fourteen employees were directly concerned, with another six in 316
the services sector. 464

The potential of the tourist industry is only beginning to be 484
tapped. MacBrayne's drive-on drive-off car ferry, with a capacity (505)
of 50 cars and 500 passengers, makes two or three trips a day
between Uig in Skye and Tarbert, the journey taking less than
two hours. The mainstays of tourist accommodation in Harris are 484
the Tarbert and Rodel Hotels, both well appointed and owning 485
fishing rights for salmon and trout. Sea fishing is another tourist 529
attraction. Crofters participate in the holiday trade by offering (226)
full board or bed and breakfast, caravans, caravan sites or vacant lets.

An interesting tourist venture has been started at Rhenigidale. 484
A rough, stony track, one of the most tortuous and exciting in 487
Britain, takes its leave from the main road over a ridge. It twists 529
and turns in and out of gullies, over cliffsides and across the steep heather-clad slopes of the Toddum, a dramatic little hill of 1,730 ft which protects Rhenigidale village from the Atlantic gales. The (205)
seven-mile track is the only marked route, though crofters take
a shorter way to the north over pathless bogs; the local postman makes a round of about 60 foot miles in the week, walking this track and on to Tarbert three times in all weathers. The village 504
relies on its sheltered harbour with a good natural rock pier: 361
most communication is by water, all food and fuel coming that 565
way. In past times every household owned a boat for lobster and 501
shell fishing to supplement both diet and finances. Today the 226
interest in fishing has declined, as has the population. But in 1946 485
Mr Herbert Gatliff paid his first visit to Harris, discovered what the island had to offer, and started a campaign to convince hostelling interests of the need to make some investment in the Western Isles. A croft house in Rhenigidale was in 1961 equipped as a hostel, and under what is now the Gatliff Trust it is maintained for hardy trekkers, the Scottish Youth Hostels Association making a grant for running costs. Many visitors have found that the place offers a degree of happiness corresponding with its remoteness from civilisation.

CH. I ENVIRONMENT AND LANDSCAPE

3. The Significance of Lewis-and-Harris

181 The Highlands and Western Isles today, "The Land
184 of the Gael", may thus be grouped as two regions. The
361 North-west is mainly of 'township crofting' and distant
101 from the Lowlands—the other mainly of farming, living
(197) nearer to the Lowlands and in touch with them. Throughout the North-west, Gaelic is still the common speech,
(108) even of the children. The old community feeling is strong; it is that, indeed, which keeps the people attached to the villages.

101 From the plains and cities of the South it is a far cry
to *Ultima Thule*, as Lewis, like Zetland, is sometimes called
131 even by its own people. Lying some twenty-five to thirty miles across the Minch from the mainland, its nearest links with the South lie even farther away. From Stornoway
(464) it is some seventy-five miles to Kyle of Lochalsh, the railhead for Inverness and North-east Scotland, and 100 miles to Mallaig, the railhead for Fort William and Glasgow. To reach Stornoway over the moors from the west coast
• (504) townships is itself a journey. Stornoway is the Island's only port, though passengers are put off at Tarbert, at
(77) Stockinish and at Rodel in Harris. Isolation has always
(108) been a dominant factor in the Island's life. From prehistory through the Middle Ages to modern times, that factor played its changing part.

108 In Lewis, conditions had changed less than elsewhere
during the last century; for example, the *New Statistical*
131 *Account* of South-west Argyll in 1830-35 reads like a
131 description of conditions in Lewis as they were until after 1914! Hence, as already said, the contrasts are very great indeed in the aspect of the country, its fields and houses, and in the number, character and ways of the people. It

ISLAND, WORK AND PEOPLE PT. I

131 summits of up to 2622 feet. South of this chain of hills
133 the ground drops again on a peninsula some twelve miles long and only seven miles wide. This forms the more populous part of Harris with its 'sandy shore', the Machar, facing the Atlantic, and its rocky bays and fishing hamlets
(134) on the Minch.[1] Lewis has its 'machars' too, areas of white shell sand, which is so light that it blows up the
• (504) hillsides, thus improving the pasture-land; but there is little 'machar' on the eastern coast, save for the south-western shores of the great sandy North or Broad Bay, enclosed by the peninsula of I, or Eye, which also acts as the outer breakwater for the harbour of Stornoway.

131 Landing at Stornoway and leaving behind us the pines,
133 and the wind-pruned sycamore woods around Lewis
361 Castle, we find ourselves among the small fields of the
361 villages which are partly suburban to Stornoway. Inland
(137) stretch the gently rolling, brown and somewhat melancholy moors that cover so much of the Lews. From the Butt of Lewis to the beginning of the Harris hills one could make a bee-line SSW., midway through the Island for over thirty miles, without passing a house or a strip of corn, and seeing only a tiny, ramshackle hut, a shieling (or *airigh*), used for six weeks in the year when the cattle are taken to the summer pasture. All the villages are in sight of the sea, and generally close to it, with only one inland exception, Achmore, south-west of Stornoway, founded after 1850. The hills of Harris are not less lonely than the moors of the Lews.

18 Diversity is one of the fascinations of such an island
131 as this. Although, like the founders of Stornoway, all

[1] *An machair* ('ch' as in 'loch'), also anglicised as 'machar'), n.f. the grassy, smooth beach-land or links. A sandy beach or ebb-strand, *traigh*, n.f., backed by *machair*, contrasts with a pebbly beach, *cladach*, n.m., backed by rougher beach-land, as in the Cladach district of W. Lewis.

CH. II THE SEASONS

182 meaning that the men of that village, and its immediate
226 neighbourhood, were the last to put to sea and the first to
741 return. The Barvas folk could retort that they would
361 have been fools to do anything else on a straight exposed
(829) coast; and that anyway their pony-drawn ploughs were
(461) of more use than the foot ploughs of the rocky south. A form of provender taken indirectly from the sea was the sea-birds and eggs from the sea-cliffs and islets like Rona, north-west of the Butt. This helped to support a few families in St. Kilda and on the rocky Shiant Islands south-east of Harris.

175 Fishing remained backward and primitive, however,
226 until the nineteenth century. After developing in a
(178) promising way, it was checked before the First World
(346) War, and fell into decay during and after it. Decay has, of course, been widespread. In 1935 the chief ports of
• 504 the East Coast, from Leith with Granton northward by
501 Fraserburgh to Wick—a round dozen—had still an average of 250 to 300 vessels, 3000 in all. These were chiefly of steam or motor auxiliary power and valued (with fishing gear) at £4,750,000. Orkney and Zetland, too, had each their 300 boats. The whole West Coast, however, from Stornoway to Ballantrae, had only 2000 boats, valued at less than one-tenth of the fleet of the East, and worth only a fraction of this, to judge from prices in the open market. Nearly 400 boats were still on the register for Lewis and Harris (Stornoway district) and another 300 for the rest of the Outer Isles. But fewer put to sea each year, even from Stornoway itself.

182 A major drawback to herring fishing in the Stornoway
226 district is the uncertainty in the movements of the herring shoals. On the Clyde, moreover, herring can be sent fresh to the city but further north they must be cured. Whereas

CH. III THE ISLAND HOME

361 in solid black, and the third in hatching (Fig. 11). First,
upon the little peninsula or 'Point' which protects the
194 inner fishing harbour of the river there grew the nucleus
361 of the town, with its Castle upon the rocky islet now con-
226 cealed by the steamer pier. Sheltered from the waves by
• 504 the peninsula and from enemies by the Castle, MacLeod's galleys and the early fishing fleet must have congregated in the inner harbour. Protection from storm was specially needed until, in the nineteenth century, a quay was built, with space for marketing and handling the herring.

194 Inland from the Castle was the little church of the burgh,
361 dedicated to Saint Lennan (L). The little town can be
(346) imagined stretching inland from the church, its dwellings built along the 'Point Street' axis, until it met the track, road or street crossing the neck of the Point. The largest church of Lewis proper, now in ruins, stood apart from the burgh, at the south-west extremity of Eye Peninsula. Until trade developed, the backs of the houses would have been turned to the shore. To north, on the landward side from which cattle would come, the market developed.

175 Secondly, in the seventeenth century, thatched houses
361 were sited on the Point Street and the shore for the
342 Gaelic settlers, the fisher- and craftsman-crofters brought here to found a burgh and commercialise fishing. During

Key to Fig. 11 (opposite)

102 Buildings on John Wood's plan of 1821 are shown in black and radial
361 streets then proposed by pecked lines. Existing buildings are
174 shown hatched. The harbour development plan of 1946 (pecked lines) is shown by courtesy of the Stornoway Pier and Harbour Commission; it is now in commission.
L = site of St. Lennan's. T = former Town House. TH = Town House.
× = site of Castle. + = modern churches.

(Based on a British Admiralty chart with the permission of the Controller o. H.M. Stationery Office and of the Hydrographer of the Navy.)

authority, simply moved their fences and enclosed part of the common grazing. For example the crofter at 37, instead of having only the 6.7 acres of the croft has now almost 12 acres of land, of which the remaining 5 acres have been 'acquired' by enclosing part of the adjacent common pasture. Some of the crofts are in two or three pieces, and in some cases this came about in the late nineteenth century when the proprietor's wife, Lady Matheson objected to the position of some of the croft houses because they were too close to the cattle sheds. Croft houses 23 and 24, for example, were moved to the other side of the cattle sheds. Croft houses 27 and 28 were moved to a quarter of their crofts 1 and 2 were given parts of crofts 25 and 26 as compensation for the loss of their croft houses had lost. Croft 27 also lost part of its croftland close to the house so that an enclosure could be made around the steads. About the same period, before the passing of the Crofters' Act (1886), when the tenants were still regarded as the property of their landlords, and several other changes took place. Croft 27 and 28 used to be where the croft houses are at present and the surrounding adjacent area only, but it is said that the tenants of these two houses, being influential, with the consent, executed part of Callanish Farm. Similarly, croft 29 used to be where croft 30 is now, and croft 30 used to be where croft 29 is now, because it was enclosed. The most recently formed croft is that of croft 31 which came into existence in 1890. Since then three feus have been created, but two of these are holiday houses and the third has only 0.5 acres of land.

There are 36 working croft units with a total of 134.4 acres reputed arable. All but 4 croft units grow oats, and the 32 acres under oats (appendix C 1) of the township represent 23.8% of the total arable acreage. Only 3 crofts have all of the land in cultivation (see table 1). There are 4 crofters who have no land in cultivation and were several horses but now there is only one. Five crofters still cultivate by spade. The crops are sown in April, and the hay is usually harvested in August and the oats a month later according to the weather.

Thirty-one cows, six heifers and 25 calves are kept in the township and tethered most of the year on the crofts. It is usual for the crofters without a cow to graze one of their neighbors's cows for part of the year in the year in exchange for milk. There is a bull-type short-horn bull belonging to the Department of Agriculture, which is kept on Callanish Farm.

The 5,302 acres of common pasture support an individually owned stock of 504 sheep and 161 lambs. Several crofters exceed their township limit in an shortage of grazing. Some of the sheep graze on Garynahine township pasture. Callanish also has the use of the pasture on Great Bernera (Island), each year some of the sheep (one sheep or ram per croft) are taken across by boat for a period. The breeding ewes are brought in for the tupping (mating) in the last week of November and lambing takes place in April. The crofters open their gates for winter grazing from November 1st to May 15th in addition Callanish Farm (which has no sheep) is open for winter grazing. The sheep are sheared in July, and the lambs are marked and castrated in August. At present the sheep are dipped in November and the other sheep in December. Shielings at Fladavat are known to have been in use until 1914.

Communications are quite good; the village is close to a tar sealed road to Borrowday, and there are four buses a day. But within the village itself many of the so-called roads are merely rough tracks, and one croft, number 29, is inaccessible by motor vehicle; it is reached by a narrow path from the road, supported from it by rough peat land. This year a grant from the council was made towards the cost of construction of a road to this croft, but several of the Callanish crofters who cut peat on the intervening land refused to allow a road to be built; and as croft 29 is still almost cut off from the rest of the village. There are two shops in Callanish (one selling general goods, groceries, hardware and fish-and-chips) and one in Garynahine. The village has a post office, a school and a church. There was a ferry for mail and passengers from here across to Uig and Berneray calling at Linshader, which graduated (sic)(meant to conjecture) until the 1920s when it ceased to call at Linshader. The ferry to Berneray finally ceased in 1940 when the ferryman (who lived at Callanish Farm) left for war service. After the war the ferry was still used by small private boats (e.g. Callanish church service Linshader, and many people came to church by boat until recently) but gradually it has fallen into disuse.

[Crofters]

The crofters scend

The clover with their sale in 1957; the quality and of the natural grass could be improved considerably by extending this practice. Several of the crofters have taken advantage of the facilities for obtaining lime and fertilizers, but manures and lime seldom are widely used. Only seven crofts have vegetable plots this year but that of No. 22, (partially cultivated by a dry-stone wall) had produced potatoes, turnips, cabbage and carrots.

The annuring for Cromore is one cow, one heifer and eight sheep per 41 rental, but is not enforced. The crofters keep the stock which they can manage to maintain throughout the winter. No one appeared to be dissatisfied with this arrangement. In fact the annuring is exceeded by all seven crofters and the total stock for the township is only 79 per cent of the annu. Lambing takes place in April and May and calving is much irregular and is taken in hand. The sheep are clipped in July and crofts number single clips ten sheep. No other sells the fleece or has it spun or woven. Ewes are kept for breeding for 6 years, but the ewes during the second year are sold or kept and then dipped. November is the tupping period and almost every crofter had his own ram. Ewes are kept in large proportion of the stock. Although twenty to thirty years ago it was not so. Heather dominates the common pasture and rushes are widespread in the low-lying wet areas. There are a few willows and rowans and the pine and birch are old holdings, probably planted as wind-breaks.

Cromore was originally a single farm but the township was formed about 1820. The pattern of the crofts differs from the usual shore-to-dyke alignment. ss six crofts were allotted extra land on the valley which enters from the north, where a part of the valley floor was brought within the township dyke. There are now fourteen crofts of which four are worked by resident crofters and one is occupied by a non-resident crofter. Four crofts are used only for hay and grazing and are sub-let to crofters in Lochboisdale.

Cultivation is entirely by spade and of the 5.5 acres sine in cultivation, potatoes account for 2.1 acres. The remainder of the land is used for cereals and reflects the current crofting practice of one cow and two calves. Approximately twelve acres of hay are cut in each year for the 225 sheep which graze in the winter.

The lazy-bede in natural hay and the outcrop are being rapidly encroached on by bracken. The prevalence of bracken, and the amount of work needed to clear it, is likely to deter any attempt at renewed cultivation.

Cultivation was originally a fishing township in spite of its harbour being so exposed: boats have to be taken up on the shore instead of being moored in the bay. The decline of the fishing industry which has prevailed in Lewis has contributed towards the almost complete desertion of Cultivat, leaving only a few boats now used only for inshore purposes. Croft income is supplemented by only two of the men in the township, one a weaver and the other in the Merchant Navy. Although there are a few productive gardens, no attempt is made to market any produce.

The township dyke is very close to the settlement and in the past shielings were not widely use in Cultivat as elsewhere. The cattle were indeed brought near to the dyke for milking and allowed to graze on the common unattended. There are ruins of shielings to be found on the hills around Cultivat but a more interesting feature is the second dyke; enclosures were made adjoining the main dyke and in the late summer the cattle were brought to fresh pasture within these dykes before the opening of the township gates. Following the opening of the gates the stock are free to wander over all crofts but there seems today to be a move towards the complete enclosure of the crofts.

[Bertrish] [Calbost]

In conclusion, it may be said that the problem of shielings is here, and that of other crofting townships, is not only one of adverse aspect, soil and weather conditions, and of distance from markets, but a problem of the population finding a stable and viable level where agricultural units are large enough to encourage the active and enterprising section of the population to remain, and a problem of finding capital to equip a modern fishing fleet.

CALBOST

Anne Cooper

Calbost is situated five miles to the north-east of Gravir on the Minch coast of Park. It occupies a basin-like hollow in the centre of which is Loch Dubh, and is open to the sea on the east. The croft houses are scattered over a shelf 50 feet above sea-level round the sides of the hollow and the cultivated land is on the slopes and is hedged in and lambs in just. The sheep are clipped in July and crofts number single clips ten sheep. No other sells the fleece or has it spun or woven. Ewes are kept for breeding for 6 years, but the ewes during the second year are sold or kept and then dipped. November is the tupping period and almost every crofter had his own ram. Ewes are kept in large proportion of the stock. Although twenty to thirty years ago it was not so. Heather dominates the common pasture and rushes are widespread in the low-lying wet areas. There are a few willows and rowans and the pine and birch are old holdings, probably planted as wind-breaks.

The township is very close to the settlement and in the past shielings were not widely use in Calbost as elsewhere. The cattle were indeed brought near to the dyke for milking and allowed to graze on the common unattended. There are ruins of shielings to be found on the hills around Calbost but a more interesting feature is the second dyke; enclosures were made adjoining the main dyke and in the late summer the cattle were brought to fresh pasture within these dykes before the opening of the township gates. Following the opening of the gates the stock are free to wander over all crofts but there seems today to be a move towards the complete enclosure of the crofts.

The factors which brought about centralisation of the industry [22] in Scotland, including commercialisation, availability of credit, access to markets, and local populations ready to specialize,[25] have also operated locally. The number of Test Highland fishermen has actually increased, but the increase occurred in a few centers. Skye, like most of the region,[26] [504] has numerous isolated coves but no harbor adapted for commercial fishing. Further, the changes in the economic pattern have severed the former relatedness and consistency of fishing with pastoral-agriculture. Moreover, fishing today, to be remunerative, has to be diligently followed. It must be a specialized occupation. The Brialchangh has not been able to make the adjustment necessary to become a full-time fisherman.

Of the 182 townships on Skye, fishing is important in 98.[27] In a few of these townships fish are an export item. [437] There is no longer any fishing done in eighty-four townships. Further, with its sheltered bay, is the base for a few full-time fishermen who sell locally. Uig Bay, Loch Pooltiel, and [504] Loch Bracadale, all once considered excellent harbors, are neglected. The lack of fishing in Loch Bracadale is striking. It is there that sixty families of Harris crofter-fishermen were settled and purposefully given small crofts with the expectation that they would continue to fish as they had on their native isle. They never tried exploiting the inshore

505

175 a crew member. Another family is called "cook," the
[224] first job which a novice had to assume when he joined
[241] the crew of a fishing boat. One of the last men to go
[551] to the east-coast fishing is about 60 now. The men
[224] came back from the fishing in time to bring in the oats,
[241] barley and potatoes, and the money was used for rent
[553] and the purchase of various foodstuffs and other goods.
They usually brought enough rolls of wallpaper to cover
[434] the stone-walled or wood-lined tigh dubh (black house)
for another year. Twenty pounds were good wages for a
[462] season. While the men were away at the fishing, the
[571] remaining members of the family lived on credit from
the local shops, and depended on the good will of
their neighbors.

Many men joined the armed services, and were
especially sought after by the Navy and the Merchant
Service. In 1900, there were 2,500 Lewismen in the
Naval Reserve.

Around the turn of the century, until the first
175 world war and the growth of the weaving industry, the
[224] girls used to "follow the fishing." "Everyone came to
[241] the boat to see you off. You could go all the way to
[571] Aberdeen for 12/6 on a special fish-worker ticket."
[435]

The girls went from the south of England to Shetland
in the far north.

ocks about intrusions or dykes of more resistant crinanite. Second, 632
he better nature of the soil derived from the weatherings of the 133
andstones and conglomerates has aided reclamation and cultiva-
ion.

In the long years of its existence the town has been a focal point 175*
f island history, fanning out to many corners of the world, where 632
has been merged with the wider history of Britain, the Com-
nonwealth and elsewhere. Detached as it was from the rest of [181]
cotland by the Minch, Lewis often went its own way. In the 175*
eign of Queen Elizabeth, when England and Sweden plotted 632
gainst the Scottish crown, the emissaries of these countries met 648
n Stornoway. Later, in April 1719, a council of war was held
n a room in Stornoway to plan the overthrow of the Hanoverian
ynasty of Britain; included in the assembly were the Earl of
eaforth, the Marquis of Tulibardine, George Keith, the here-
litary Earl Marshal of Scotland, and his younger brother James,
vho was to become the famous Marshal Keith. Prince Charles
Edward, though not setting foot in the town, looked at its twink-
ng lights from across the Bay, at Arnish, while his pilot tried
o obtain a boat to take the royal fugitive to France.

The harbour has seen many kinds of ships on its waters. In 504
he twenties, the *Metagama*, the *Marloch*, and the *Canada* came 501
o take away almost a generation of young Lewis folk to the new 632
ands across the seas, because their own island could not support [167]
hem. The *Iolaire* sank within sight and sound of the harbour
nouth and dragged about 200 Lewismen with her into an island
nemory. The *Cervona*, of Dundee, dropped her anchor just
y Arnish lighthouse in July 1904, carrying survivors from the
migrant ship *Norge*, sunk at Rockall with appalling loss of life.
The *Victoria and Albert* visited Stornoway in September 1902, [643]
he first visit to the town by a reigning monarch. That was a great 701
lay, the result of a letter from Provost Anderson of Stornoway
n which he pointed out to His Majesty, King Edward, that with
ess than 30,000 inhabitants Lewis had 2,300 men in the Royal
Naval Reserve, trained at the local Battery, the largest in Britain.
There were also 1,100 men in the Seaforth & Cameron Militia,
ll of whom volunteered for foreign service in 1899, and 900 of
vhom did garrison duty in Egypt. Between 300 and 400 Lewis-

STORNOWAY The previous
*175 building was only an idea in 1897; it took
632 shape when Dr Andrew Carnegie offered to contribute £1,000
217 towards the construction of a library, provided the town adopted the Public Libraries Act. This was done, and the Council decided to incorporate the library into a larger structure, erected at a cost of £11,000 and opened in September 1905 by Lord Roseberry. Carnegie increased his contribution to £3,500, with other large donations from public-spirited industrialists of the time (eg Coats of Paisley, who also financed school libraries in the island).

*175 Being a seaport, the sea has been basic to the town's livelihood.
632 In the eighteenth century trade flourished between Stornoway
• 504 and the Baltic, Scandinavia, Holland, France and the north of
439 Ireland; and in the first half of the nineteenth century, fish was exported as far away as ports on the Mediterranean. The advent
*175 of steam killed the Stornoway sailing craft. At one time in its
396 history, the shipyard (at Matheson's Patent Slip, now the site of
632 the textile mill) turned out many fine vessels. The scent of tar and pitch, the crunch of a busy grindstone, the shaping of a ship's timbers, the steaming of her planks, the driving of pins and bolts, the music of mallet and caulking-iron, the buzz from the saw-pits and the riggers aloft, all gave the town a sense of at-one-ness with the waters in the bay. Then there were the schooners, brigs and barques of foreigners who put in for repairs or for merchandise. It was a time of glory that has now gone as surely as the sail has disappeared from the high seas. Ship-masters, ship-owners and
[162] sailors all added colour and variety in the streets as they mingled with the local population—which numbered 1,000 in 1801. Stornoway captains were world-known for their skippering: MacLeods, MacIvers, MacKenzies, Ryries, MacLeans, Morisons, Allans. These were the names that were once reeled off to be paired with the famous ships of the day: *Sir Launcelot, D. L. MacKenzie*, and *Assaye*.

*175 While large numbers of its sons were sailing the high seas, many
504 in ships of Stornoway origin, the town began to take on the first
632 look of a port, with piers. On 9 August 1864, Sir James Matheson subscribed the instrument which took the Stornoway Harbour Commission into being. The following year, on 29 June 1865, the
[503] Commission was incorporated by Act of Parliament. Matheson had shown a great interest in the development of the existing

175*
504
632
503

harbour facilities. But his efforts to promote the town as an industrial centre were opposed, a dispute arising between him and parties who claimed interest in the quays which already existed; his action to set up the Harbour Commission and to acquire the Crown's interest in the shores of Stornoway Bay *ex adverso* found local opposition. He succeeded in quelling the doubts and the resulting counter-actions, however, and then, with the decks cleared, the Commission lost no time in getting developments under weigh. Authorisation to borrow up to £10,000 was obtained and work put in hand on building a timber wharf, 150 ft long, filling in certain areas for fish-curing and other purposes, and constructing sheds, works buildings and warehouses. By 1881 this work had been completed and, with the expansion of the herring industry, the Commission sought to increase its borrowing by £20,000; in 1892, further powers for borrowing the sum of £55,000 were sought and obtained. By the turn of the century all the works authorised by the 1892 Order were completed: they met the berthing needs of the fishing industry and also the reclaimed areas on South Beach, North Beach and the Cromwell Street quays were used continuously during the season as fish-curing stations, proving essential factors in the development of that industry.

Before the 1914-18 war ended, Lord Leverhulme had become proprietor of the island and, as such, a member of the Harbour Commission. He proposed further development of the existing facilities, to line up with his scheme for establishing Stornoway as a centre for industrial activity based on fishing. Plans were prepared, and a permanent way for a railway (linking the canning factory at Inaclete with the harbour) was formed. But the scheme did not materialise before he abandoned Lewis for Harris. Before he left, however, he conveyed free to the Harbour Commission considerable property round the inner shores of Stornoway Bay. At this stage the Commission promoted a New Harbour Order, passed by Parliament as the Stornoway Harbour Confirmation Act, 1926, in which provision was made for the increase of the Commission's borrowing powers (up to £70,000) and the setting up of a contingency fund of £10,000. Further improvements were put in hand. Another Order (1947) was obtained and

STORNOWAY

the present harbour facilities are the result of this, with a causeway to Goat Island—a small nipper of land off the Newton shore—the King Edward Wharf extension to give a depth of 24 ft at low water, and the construction on Goat Island of a slipway and slipway jetty.

The present facilities are valued at several million pounds; they evoke, however, a blank stare of disbelief. Much of the industry for which the quays were first envisaged has now gone. The days of 300-400 fishing boats and the landing of several thousands of crans each week, with the attendant bustle and activity, belong to the past. The harbour remains reasonably active, with a considerable extent and variety of shipping: general traffic due to the Harris Tweed industry has continued to increase in recent years. The introduction of the ferry service direct from Skye to Tarbert, Harris, has however had perceptible effects.

When Leverhulme parted company with the people of Lewis, his gesture of farewell offered the island Stornoway Trust. This brought into being an agency for the people of Stornoway and its rural areas, so that they were in effect in control of their own future to a degree unique in Britain. The Stornoway Trust was formed in 1924. Besides property in the burgh and its suburbs, including the Castle and its park or policies, the Trust owns virtually the whole of the landward area of the parish, from Arnish Moor northwards to the township of Tolsta. Freshwater fishings are in its hands, as are the resources of the sea and inshore fishings on the shorelands. During its first five years the Trust was faced with a growing deficit, though this was redressed partly through agricultural derating and partly through the registration of the Trust as a charity, thus exempting it from income-tax demands.

The Town Council, the Harbour Commission, and the Trust have overlapping representation, for harmonious work on behalf of the community. Indeed, by the conditions of the Deed of Trust drawn up by Leverhulme (in 1923-4), the Stornoway Trust must include the Provost of the burgh as its chairman, together with magistrates and councillors. Throughout the years of its existence, the Trust has sought to increase its usefulness, but at the beginning decisions were often taken piecemeal. Portions of the property were

A HARRIS VIGNETTE

Lands were not allowed to become waste; in 1710, a Roderick Campbell in North Uist was paid to come north and settle in the island of Eensay, Sound of Harris.

It is significant that much of MacLeod's rents was paid in money rather than produce, for it emphasises the great value of the cattle trade in the Highlands, in which Harris played a not insignificant part—that is, compared with neighbouring Lewis. It was sound economy for the Highlands, and far in advance of the theories of the so-called 'improvers' of a later age. The rents of the MacLeod estates were collected by chamberlains, and part of the work of Malcolm Campbell, the chamberlain for Harris at the beginning of the eighteenth century, was the ferrying of Harris cattle to Skye. In Rodel, MacLeod had a 'keeping house', which probably consisted of rooms for the chief while in Harris; there was also a brew-house.

To introduce more efficient communications and to interconnect all the small Hebridean islands of the estate, a boat was purchased for a Lauchlan MacLean in 1705; he was empowered to maintain a regular ferry between Harris and Skye. This also operated between the mainland of Harris and the populated islands in the Sound, such as Berneray, Eensay, Killegray and Pabbay. In religion the estate was Presbyterian, and MacLeod had the burden of providing both suitable residences for the ministers and the communion elements. As mentioned earlier, the Rev Aulay MacAulay, the great-grandfather of Lord MacAulay, the English writer, was once minister in Harris.

The first half of the nineteenth century saw great changes in the ownership of the various islands comprising the Outer Hebrides. MacLeod of Harris retained Harris until the end of the eighteenth century, when it was purchased by a cadet of the family, a son of Sir Norman MacLeod of Berneray, for £115,000. This son, Captain MacLeod, who had made a fortune in the East and ploughed some of it back into his native soil, was the man who introduced fishing as an industry to the Harris people. In 1834 the Harris estate passed to the Earl of Dunmore for £60,000. Dunmore sold north Harris to Sir Edward Scott in 1868 for £155,000. In 1919, Lord Leverhulme bought south Harris and St Kilda for £36,000.

λ. [See map, pp.8-9--Analys%]

A HARRIS VIGNETTE

(2,620 ft); grouped around this are the lesser peaks staring stark and treeless to the skies. At the feet of these hills are the small villages straggled along the shores of West Loch Tarbert. Much of this area is owned by the proprietors of Amhuinnuidh Castle, a magnificent structure built by the Earl of Dunmore in the last century; the hills lying north of it are rich in red deer. The road past the castle trundles on until it peters out at the far-east village of Hushinish, beside a glorious scimitar-like curve of silver sand. Beyond Hushinish is the Island of Scarp.

The road along the shores of East Loch Tarbert ends at the village of Kyles Scalpay which overlooks Scalpay island. The Bays of Harris hold in their creeves the scattered groups of houses here and there, where an inlet of the rocky coast affords some anchorage and where a patch of ground is suitable for cultivation. Tortuous, winding footpaths have been gradually replaced by narrow roads connecting the townships. Lack of sufficient remunerative employment has led to considerable depopulation. Fifty years ago the population of the area was just over 5,400; it is now about 2,900.

The south of Harris is better known for its association with Lord Leverhulme. Obbe, later Leverburgh, became the centre of his schemes. He built a large pier, huge kippering sheds, houses for the workers, roads and lighthouses, and blasted away underwater rocks which hindered free navigation. The bulk of this work was complete in 1924, but when he died (in 1925) his successors, in the cold light of economics, decided to close down the embryo industry and realise its assets. The harbour works had cost £250,000; they were sold for £5,000 to a demolition company. Leverhulme's memorials are still to be seen. The west coast of Harris is now becoming known for the long stretches of shell sand and the green machar-land beside it, a true delight for the tourist seeking isolation.

Tarbert is the central village in Harris, with a population of about 400. It is a thriving community, nestling at the foot of Beinn an Teanga and at the head of the sheltered anchorage of East Loch Tarbert—sheltered from the prevailing south-westerly winds and from the Atlantic storms. The car ferries give direct contact with the Scottish mainland, via Skye, and Tarbert also

A HARRIS VIGNETTE

has direct or indirect communication with Glasgow, Stornoway and North Uist. In summer a thrice-daily bus runs to Stornoway, and once a day a bus makes the round trip of East and West Harris. The township, linear in pattern, east to west, includes sixteen shops which cater for most of the needs of the population within reasonable travelling distance; it also has two cafés, a post office, a licensed hotel, a hall for social functions, a masonic hall and two churches. The Sir E. Scott School here is the only secondary school in Harris with an academic stream.

Most of the working population is employed in the service industries, the professions and the tweed industry. Tarbert was a fishing port of some significance in the past, and is now a re-fuelling point for ships.

The absence of organised industry on a large scale, such as Lewis has, is a factor which tends to bring nearer to reality any desire on the part of Harris natives to leave their native soil. There are small pockets of industry, but these are only dabs of easing ointment on the excessive unemployment sore of 27 per cent. The main occupation is of course crofting, the income from it being augmented from a variety of sources. Some crofters concentrate on the production of Harris Tweed, perhaps using the wool from their own sheep; the natural dyes from the lichens which grow on the rocks and from other plants are still used occasionally. Others specialise in knitwear. Recently shell-craft and wood-turning have been added to the traditional crafts, with a view to the tourist market. Fishing, of course, plays a part in the economy in some communities. The interest of such organisations as the Scottish Country Industries Development Trust has been concentrated on the production of well-fashioned tweed and the production of knitwear on a larger scale than exists at present. Road-work gives employment to about thirty men, but is of course seasonal.

An apparently bright light on the employment horizon showed itself in 1965, with the opening of a quarry at Lingerbay. The mineral quarried was anorthosite, a white granite used as an abrasive in cleaning products. A 99-year lease was taken out by a subsidiary company of William Robertson (Shipowners) Limited, Glasgow. But the quarry was closed in 1967 due to lack of orders.

A HARRIS VIGNETTE

Fourteen employees were directly concerned, with another six in the service sector.

The potential of the tourist industry is only beginning to be tapped. MacBrayne's drive-on drive-off car ferry, with a capacity of 50 cars and 600 passengers, makes two or three trips a day between Uig in Skye and Tarbert, the journey taking less than two hours. The mainstays of tourist accommodation in Harris are the Tarbert and Rodel Hotels, both well appointed and owning fishing rights for salmon and trout. Sea fishing is another tourist attraction. Crofters participate in the holiday trade by offering full board or bed and breakfast, caravans, caravan sites or vacant lets.

An interesting tourist venture has been started at Rhenigidale. A rough, stony track, one of the most tortuous and exciting in Britain, takes its leave from the main road over a ridge. It twists and turns in and out of gullies, over cliffsides and across the steep heather-clad slopes of the Toddum, a dramatic little hill of 1,730 ft which protects Rhenigidale village from the Atlantic gales. The seven-mile track is the only marked route, though crofters take a shorter way to the north over pathless bogs; the local postman makes a round of about 60 foot miles in the week, walking this track and on to Tarbert three times in all weathers. The village relies on its sheltered harbour with a good natural rock pier: at most communication is by water, all food and fuel coming that way. In past times every household owned a boat for lobster and shell fishing to supplement both diet and finances. Today the interest in fishing has declined, as has the population. But in 1946 Mr Herbert Gatliff paid his first visit to Harris, discovered what the island had to offer, and started a campaign to convince hostelling interests of the need to make some investment in the Western Isles. A croft house in Rhenigidale was in 1961 equipped as a hostel, and under what is now the Gatliff Trust it is maintained for hardy trekkers, the Scottish Youth Hostels Association making a grant for running costs. Many visitors have found that the place offers a degree of happiness corresponding with its remoteness from civilisation.

A HARRIS VIGNETTE

vision of adequate educational facilities in remote spots becomes increasingly difficult.

In its time Scarp has contributed more per head of population to the professions than has any other community of similar size. The last of the native Scarp population left the island in November 1971: two families totalling seven people. The island has now attracted the attentions of a hippie community.

Scalpay

Scalpay Island, on the east side of Harris, was formerly occupied by one or three tacksmen in succession before being 'crofted out'. About 1843 the Harris factor settled twenty crofting families who managed to make a fair living there, but five years later another twenty families were added; some had been evicted from the island of Pabbay in the Sound of Harris. This led to some subdivision of the available land. The 1861 population was 388, but the figure rose to a peak of 624 in 1921; in 1951 it had declined to 541. It is now in the region of 450.

Island Scalpay is in fact one of the few places in the Highlands and Islands area in which the normal trends associated with remote regions are operating in reverse. The island despite its smallness—it is a mere 3 miles long and 1½ miles across—supports a thriving and dynamic community and is the envy of its neighbours. Scalpay is retaining its young folk; and it boasts some of the finest homes in the Hebrides. From the agricultural point of view it is not greatly different from other islands in the Hebrides. Its forty crofts produce a good crop of oats; but less than 20 acres of the land are re-seeded.

The land being as poor as it is, the men of Scalpay have turned their faces to the sea—for a living, not for emigration. Scalpay has the largest number of full-time fishermen and a total of thirty-three boats, twelve of which are ringnetters of over 40 ft. Native enterprise is also shown in the ship-owning firm whose vessels carry freight and passengers to many parts of Scotland and on occasion to the Continent. A Harbour Association was formed on the island in 1966 to work for local amenities for fishermen and

SCALPAY

the community generally—in particular for a landing stage in the North Harbour. The lighthouse at Eilean Glas, Scalpay, was in fact erected as long ago as 1788; for a long time it was the only lighthouse in the Western Isles. In 1792 it was described as 'one of great utility to the numerous shipping that frequent this channel [between Skye and the Long Island] on their voyages to and from the Baltic'.

The independence of the islanders again appears in their attitude to the education facilities provided for their children. In 1949 local parents staged a school strike in protest against the delay in the construction of a new school to the school. At present the island has a junior secondary school but in 1966 the Inverness-shire County Council Education Committee proposed the transfer of the island pupils to the school at Tarbert; this would mean each child rising early in the morning to face a trip across Scalpay Sound and then a road journey to Tarbert. The inevitable protests against this proposal were rooted in its deeper implications. The school roll on Scalpay (70 pupils) has maintained a remarkable level of continuity over the years, reflecting the general prosperity of the island. Forced attendance at a central educational facility, the islanders maintain, will introduce an unsettling urban element into their children's adult views.

The smaller islands

To the west of Scalpay, in East Loch Tarbert, is the one-square-mile island of Scotosay. Its population was 14 in 1861, 16 none in 1881, 18 in 1891, 15 in 1901, and 20 in 1911. In 1921 it 7 males and 12 females lived there, but none permanently since.

On the west of the Harris mainland is a high rocky island, four miles by one, called Taransay. In the 18th century Dean Monro described it as being 'well inhabit and manuir', a place where people delved with spades, and with good barley and corn, and fishing. There are two old chapels and a burying ground on the island. The population of Taransay has declined to a handful through the years, its peak was 76 in 1911.

The Sound of Harris is 'a chaos of rocks and islands', so numerous that they cannot easily be counted. Some are mere pinpoints of rock; others once supported small populations. Nearest to the

ISLAND LIFE

198 and practical support, could win through to make marks on the
island scene.

185 A significant event occurred in 1964: the establishment of
the Highlands & Islands Development Board. This was Britain's
651 first regional development authority run by members who are
433 either full- or part-time. The Board is grant-aided and has two
broad functions: to improve the social and economic condition
of the Highland people and assist in making the region more
significant in a national context. The Board's attention in the
Western Isles has been concentrated in the expansion of the
[684] fishing industry and the development of tourism. In both these
• [806] fields there has been a considerable success: upwards of 100,000
visitors per annum visit the islands; and a fleet of over thirty
boats, equipped with the latest gear, operate out of Stornoway.

433 Also in 1964 was produced the Development Plan for the
185 County of Ross & Cromarty. So far as Lewis was concerned, the
Plan was based on an average decrease in population of some
[167] 1,500 persons for every year in the future of the island. This, if
carried to its logical conclusion, will see complete desertion in
fifteen years or so! However, even if nothing further is done to
halt emigration, particularly in the landward areas of the island,
the population will remain around a stable 15,000. The
County Development Plan contains much food for thought, but
as with most county plans, does not indicate actual development
projects. Rather, it lists all the resources of the island for the
attention of those concerned. Potential developments include the
setting up and exploitation of predominantly-fulltime crofts,
shell-fishing, and inshore white fishing, herring and offshore white
fishing, forestry, tourism and holiday accommodation, minerals,
peat utilisation, hill-land improvement, marine reclamation and
seaweed resources. This list is significant and merits the attention
of the Highlands & Islands Development Board.

Harris, on the other hand, presents possibilities on a much
smaller and limited scale. However, there are expansion potentials
in tweed, knitwear, and craft industries, with tourism promising
to be a good base for the island's economy. As the age-structure
of the crofting population changes, there will be a useful re-
organisation and enlargement of existing holdings to make for

ISLAND, WORK AND PEOPLE PT. I

131 Before the making of
174 roads, it was easy of sailing which united island peoples
and their territories. One can wade or drive, at low tide,
[441] over the fords that unite the Isle of Benbecula with the
• [505] two Uists, North and South: in fact, a bridge now connects
Benbecula with South Uist. But only the roughest of
[441] hill tracks led through the hills of North Harris from the
'Tarbert' or Isthmus of Harris to the nearest habitation
at the head of Loch Seaforth or Loch Erisort, in the Lewis.
This is a distance of some twenty miles, or a fair day's
tramp for an unloaded man, and far too much for a return
[823] journey in one day. Hence separation of territory and
name was natural. This separation no longer exists as
131 there is now a good 'bus service from Rodel via Tarbert
178 to Stornoway which links Harris with the daily Kyle to
823 Stornoway steamer. In this book, the Island, or the
484 Islanders, refers to Lewis-and-Harris with its people,
101 as one.

Lewis is included in Ross-shire (of which the county
131 town is Dingwall, north of Inverness) and Harris in
634 Inverness-shire, together with the rest of the 'Long
Island'. The county boundary cuts across the six-mile
isthmus north of the hills of North Harris, from the
in-reaching Loch Seaforth WNW. to Loch Resort
(Fig. 8). All the Outer Hebrides are now included in the
Parliamentary constituency of the Western Isles. Pro-
posals to unite the Island under one District Council, or
the Outer Hebrides under one County Council, are more
favourably viewed in Stornoway than in Harris or the
632 Southern Isles. Harris forms one civil parish, while Lewis
is divided into four: Stornoway, Barvas, Uig and Lochs.
[133] The Lewis parish boundaries traversing the moors are inset
[131] in Fig. 8 so that their trends can be readily grasped, and
the inhabited portions of the parishes quickly located (p. 50).

COMMUNITY FROM PAST TO PRESENT PT. II

175 growth followed the increases in potato-growing and fish-
178 ing, in income and food production, and the introduction
431 of vaccination against smallpox, which had formerly taken
a heavy toll of child life.[1] This increase found an outlet
[433] in emigration to the Colonies, often led by departing tacks-
[761] men though discouraged at first by the Island lairds. For
example, in July 1773, 840 people sailed from Lewis.
175 "Alarmed by this, their master . . . came down from
434 London to treat with the remainder of his tenants. What
167 are the terms asked, think you? 'The land at the old
rents, the augmentation paid for three years back to be
refunded, and his Factor to be immediately dismissed!'"
[214] Although the *Edinburgh Evening Courant*, from which this
quotation is taken, went on to say that it was expected that
the demands would be acceded to, or the Island would
become a desert, the Factor was retained.

175 The pressure of population can be imagined when the
167 appalling conditions of transport overseas are remembered.
A case is known of 700 Gaelic emigrants setting out from
• 505 the Clyde across the Atlantic in a vessel for which the
maximum human cargo of negro slaves permissible was
400. The regulations governing the transport of slaves
did not apply to the transport of 'freemen'. In quoting
this case, D. F. Macdonald suggests that while it was in
the interest of slave-owners that their slaves should arrive
in the Plantations alive, it was rather in the interest of
manufacturers to discourage emigration so as to keep a
supply of labour at home with which to meet their growing
demands and fill the gaps due to a high mortality, par-
ticularly among workers newly arrived from the country.[2]
It would also seem as if it had not been in the interests of
landlords to improve passenger regulations at that time,
[113]

[1] Examples were given of the rise in charges from 1914 to 1924, *e.g.* a web of tweed, Harris to Glasgow, from 1s. to 2s.; a box of lobsters, Harris to London, 4s. 6d. to 11s.; a barrel of herring, Stornoway to Kyle, 1s. to 3s. and so on. Although the rise on larger consignments was less, these were of no benefit to 'small folk'. Typical charges for the export of live-stock were: (Lochmaddy, N. Uist, to Oban, or from Harris) for sheep the rise was from 9d. to 2s.; for lambs, 6d. to 2s.; for horses or cows, 5s. to 18s.; for stirks, 2s. 6d. to 11s. 6d. The Committee's report was privately printed.

Scotland's Shifting Population, 1750–1850 (1941).

COMMUNITY FROM PAST TO PRESENT PT. II

829 Islands Distress Fund was raised in the Lowlands. The
458 Committee organising it distributed relief, and purchased
[735] seed potatoes, etc. They also drew attention to some
431 important features of Island conditions. Among others was
735 that of the scale of charges for transport of goods and
• 505 passengers. These charges had risen by from two to
four times what they had been.[1] The steerage passengers
were poorly provided for; and a later improvement in
cabin comfort was not accompanied by improved steerage
accommodation. One remembers in particular the suffer-
ing of the 'fisher girls'. In good weather the passage
home (by day) was bearable; and though the song that
'lifted' as the boat left Kyle for the last lap to Storno-
way sank pathetically as the steamboat left the shelter of
Skye, voices began to rise again in the shelter of Storno-
way Bay, sounding clear as the boat drew in. In bad
weather the crowded women suffered sorely. Five hundred
might be packed on the deck with little or no shelter, or
covered the benches and floor of the steerage, sick and
[829] distraught. The Committee pointed out that "the Govern-
ment increasingly accepted responsibility for the roads of
the kingdom", and that sea communications were even
more vital than roads to Islanders, for they serve in place
of both road and rail. Some action was taken, but charges
remained high.

167 As a result of all these difficulties, many young men

[1] *Scotland's Shifting Population, 1750–1850* (1941).

[1] authority, simply moved their fences and enclosed part of the common grazing. For
example the crofter at 37, instead of having only the 6.7 acres of the croft has now nine
10 acres of land, of which the remaining 3 acres have been 'acquired' by enclosing part
the adjacent common pasture. Some of the crofts are in two or three pieces, and in so
cases this came about in the late nineteenth century when the proprietor's wife, Lady
Matheson objected to the position of some of the croft houses because they were too clos
[1] to the standing stones. Croft houses 25 and 26, then near the stones, were moved to th
other side of the village and given parts of crofts 1 and 2 for their houses. Croft 1 an
2 were given parts of crofts 25 and 26 as compensation for the parts of their crofts they
had lost. Croft 27 also lost part of its crofland close to the stones so that an enclosure
could be made around the stones. About the same period, before the passing of the
Crofter's Act (1886), when the village was still 'ruled' by the township constable, and
several other changes took place. Croft 27 and 28 used to be where the croft houses ar
at present and the surrounding ancient area only; but it is said that the tenants of these
two houses, being influential with the constable, obtained part of Callanish Farm. Simi-
larly the tenants of crofts 30, 31 and 35 divided part of croft 15; these changes have
become permanent. The most recently formed croft was taken from the common pastu
in 1890. Since then three less have been created, but two of these are holiday houses a
the third has only 0.5 acres of land.

[1] There are 36 working croft units with a total of 134.4 acres reputed arable. All bu
a croft units grow oats, and there are 20 acres under oats (Appendix C). Of the
remaining cultivated land 9 acres are potatoes and 5 acres sown hay. Most of th
land is cultivated by tractor; there are 6 tractors in the township. In the past there
were several horses but now there is only one. Five crofters still cultivate by spade.
The crops are sown in April, and the hay is usually harvested in August and the oats
month later according to the weather.

[1] Thirty-one cows, six heifers and 25 calves are kept in the township and tethered one
the year on the crofts. It is usual for the crofters without a cow to graze one of their
neighbour's cows for part of the year in exchange for milk. There is a beef-type short-
horn bull belonging to the Department of Agriculture, which is kept on Callanish Farm.

233 The 5,302 acres of common pasture support an individually owned stock of 904 sheep
[1] and 561 lambs. Several crofters exceed their sumning, but there is no shortage of
grazing. Some of the sheep graze on Garrabthe township pasture. Callanish also has
the use of the pasture on Orasay island: each year some of the sheep (one sheep or ram
[1] per 2 acres) are taken across by boat for a period. The breeding ewes are brought in for
[1] tupping on November 14th, after the harvest is complete, and lambing takes place in
April. The crofters open their gates for winter grazing from November 14 to May 10th
in addition Callanish Farm (which has no sheep) is open for winter grazing. The sheep
are sheared in July, and the lambs are taken from the ewes a month later. The lambs
are dipped in November and the other sheep in December. Shielings at Fiodavat are
known to have been in use until 1921.

[1] Communications are quite good: the village is close to a main road to Stornoway, a
there are four buses a day. But within the village itself many of the so-called roads are
more or less rough tracks, and one croft, number 29, is inaccessible by motor-car. It is
over a mile from the nearest track, separated from it by rough peat land. This year a
grant from the council was made towards the cost of construction of a road to this croft,
but several of the Callanish crofters who cut peat on the intervening land refused to allow
a road to be built: and so croft 29 is still almost cut off from the rest of the village. [1]
There are two shops in Callanish (one with a petrol pump), grocery, butchers' and fish
[1] vans deliver frequently. Callanish also has a stone jetty which is the port of Uig. [1]
There was a ferry for mail and passengers from here across to Uig and Barvas calling
at Linshader, which probably declined in importance after the 1920 war, and ceased to
call at Linshader. The ferry to Berneray finally ceased in 1940 when the ferryman (who
[1] was also a crofter at Callanish Farm) left his service. After this the jetty was still used by sma
private boats (e.g. Callanish church excursions to Linshader), and many people came to the
[1] by boat until recently, but gradually it has fallen into disuse.

clipper bow, figurehead, and bowsprit with ornamental carving at both bow and stern. The *Clansman* left Glasgow every Monday and arrived back on Saturday mornings, a regular pattern maintained from 1870 to 1909. She was 211 ft long, 27 ft broad, with a draw of 13 ft of water, her engines having a nominal horsepower of 171; her gross tonnage was latterly 619.

The SS *Locheil*, two-masted with a straight stem and single funnel, in her early career ran the Stornoway mails from Ullapool, in the late 1870s. In 1884 she was fitted out for a three-months' cruise in the neighbourhood of Skye, a gunboat in attendance with a view to suppressing any riots likely to result from the then recently-initiated legislation introduced by the London Land Reform Association. She was also on the Dunvegan service, via Harris and Lochmaddy. In 1907 she ran aground at Portree and was afterwards broken up.

In 1879, David MacBrayne became sole partner and owner of the fleet of David Hutcheson & Co, and the name of the company was changed to David MacBrayne Limited. The first ship built for the fleet by MacBrayne was launched in July 1881 : the iron screw steamer *Claymore*. Her machinery consisted of a heavy two-cylinder compound engine supplied with steam from a pair of single-ended Scotch boilers; she never attained her full speed of 15 knots, at least not in service. She was 227 ft long, 29½ ft broad and drew 14½ ft of water. Her gross tonnage was latterly 776, and the indicated horsepower of her engines 1,400. She was sold in 1931 for breaking up. So high a regard did those on the west coast have for the *Claymore* that many parts of the ship went to places throughout Britain as souvenirs.

The PS *Great Western* was among MacBrayne's bought tonnage. This ship belonged to the GWR and spent most of her time on the Milford/Waterford route, though from 1878-85 she was transferred to Weymouth and ran across the Channel to Cherbourg. She came to northern waters as a straight-stemmed, two-masted, and two-funnelled cross-Channel steamer—both funnels being abaft the paddle boxes. MacBrayne placed her on the Stornoway mail service from Strome Ferry, which she maintained until being withdrawn temporarily in 1893 for a facelift in the MacBrayne standard design, emerging renamed *Lovedale*. She

was returned to the Stornoway route and, on the extension of the Skye line of the old Highland Railway from Strome Ferry to Kyle of Lochalsh in 1897, the latter port became the southern terminus in the mail service to Lewis, as it still is. She was broken up in 1904.

Yet another ship with fond connections with Lewis folk was the SS *Shiela*, the second steamer of the new MacBrayne family. Both hull and machinery were the product of Inglis of Pointhouse, and she had the distinction of being the first steamer in the MacBrayne fleet to be fitted with triple-expansion engines. She was launched in January 1904, a fine-looking craft, named after a character in William Black's novel *A Princess of Thule*.

Though of only 280 tons, she fulfilled an important role for the Stornoway folk and their country cousins. Summer and winter, fair weather or foul for over twenty years *Shiela* carried passengers, cargo and mails between Kyle of Lochalsh and Stornoway. Purely a functional craft, she gave her many thousands of passengers a rough time crossing the Minch; but though she was often late—many times the seas and winds prevented any headway at all, though steaming to the limit—she never failed to make port. This Stornoway/Kyle route is the hardest-worked of all the MacBrayne fleet; a Minch crossing is made twice in every twenty-four hours, with a weekend rest of less than a day in Stornoway. The sturdy *Shiela* met a tragic fate: she deserved a better. Her regular Captain Cameron was away on leave, enjoying a few days' well-earned rest. The ship was in the hands of a temporary officer, who was not as familiar with the devious ways of West Highland waters as he should have been. Though the exact details of the accident are not available to the writer, it seems that the officer of the watch never saw the south Rona light on the inward passage from Stornoway in the early hours of Saturday, 1 January 1927. Thinking he had run his distance, he altered course with a view to making the Applecross call. He did not discover his error until too late and the *Shiela* ran aground in the darkness on the shores of Cuaig Bay, just south of Loch Torridon. No lives were lost, but the ship was a write-off.

From 1927 to 1929 Stornoway was served by a number of ships including the *Clydesdale II*, designed and built for the Glasgow/

Inverness cargo and passenger service, and the SS *Chieftain*. This latter was over 1,000 tons gross, with a clipper bow, single funnel, two masts, extensive passenger accommodation, triple-expansion engines, and silent-working electric winches.

In 1929, the TSS *Lochness* was put into commission for the Mallaig/Kyle/Stornoway mail service. Of 777 tons gross, and built of steel, she was 200 ft long, 34 ft broad and drew 10½ ft. Her propelling machinery consisted of two sets of 150 nhp triple-expansion engines supplied by steam from single-ended, oil-fired Scotch boilers. These gave a full speed of about 14 knots. Many questions were raised in Parliament about the alleged inadequacy of the *Lochness* accommodation, particularly for third-class passengers, and the complaints led to the promise of a better ship. But the second world war intervened and it was not until 1945 that the *Loch Seaforth* (TMSV) was ordered. She was on duty in December 1947 and the *Lochness* transferred to the Islands route from Oban.

MacBrayne's mail contract of December 1938 stipulated that the company would provide two vessels, one to be for the Stornoway mail service. This proposed ship was delayed until 1945 when the order for *Loch Seaforth* was placed with Messrs Denny's shipyard. This vessel was the first of the MacBrayne fleet to be fitted with radar and was much larger than any of her predecessors on the Stornoway mail service. She had a gross tonnage of 1,089 and was 229ft in length. In 1972 the *Loch Seaforth* was withdrawn from the Stornoway service. Her place was taken by the *Clansman* ferry for a short period until the *'Iona'* took over to inaugurate a new ferry service between Ullapool and Stornoway rather than the traditional Kyle-Stornoway link. The facilities on the *Iona* for vehicles are good but the passenger accommodation is indifferent.

The first official hint of the coming of drive-on/drive-off car ferries for the Western Isles was made at the commissioning of David MacBrayne's *Loch Arkaig* in 1960. Under the Highlands and Islands Shipping Services Act, 1960, three vessels were built for the Secretary of State for Scotland, and were chartered by him to David MacBrayne Ltd for the new ferry services. One of these ships is the *Hebrides*, a twin-screw passenger and vehicle ferry

[TEXT CONTINUED ON PAGE 73]

vessel with a service speed of 14 knots. She can accommodate 600 persons (400 in winter) and over fifty cars, and has sleeping berths for fifty-one passengers. Powered by two supercharged diesel engines of Crossley make, she has a lateral-thrust propeller unit in the bows to aid berthing at piers, and is fitted with stabilisers. The MacBrayne colours have been used: black hull, red and black funnel, white superstructure and thin white waterline. The metal decking is painted a light green instead of the more usual brown or dark red. After completing her trials on the Clyde, *Hebrides* went into service on the Uig (Skye)/Tarbert (Harris)/Lochmaddy (Uist) route on 15 April 1964. She was really a replacement of the *Lochmor* (of 1930), which had sailed across the Minch for almost thirty-five years, but which had many more ports of call, based at Kyle of Lochalsh and Mallaig instead of plying to and from the north of Skye. The Hebridean ferry berths at Tarbert and Lochmaddy on alternate nights, and spends the weekends at Tarbert. At the end of her first year of operation she carried nearly 11,100 vehicles.

SEA-RESCUE WORK

Closely associated with the sea services to the islands is the work of lighting the seaways and the rescue work which is at times required when the Hebridean seas are showing their teeth. The matter has occupied official attention for a very long time. Beginning at the northern tip of the island, the lighthouse at the Butt of Lewis is one of Britain's major manned stations. An oil-burning light was established there in 1862. In 1905 it was converted to an incandescent light, with a range of twenty-five miles. Three years earlier a fog signal was provided, and in 1930 a wireless beacon was set up at the station. At Tiumpan Head, at the tip of the Eye Peninsula, the light was established in 1900; it was oil-burning, converted to an incandescent six years later. The fog signal was not provided until 1959.

Eilean Glas lighthouse is one of the major manned lights which guide ships up the Minch. On the easternmost tip of Scalpay Island, in Harris, it was one of the four original lighthouses built by the Commissioners of Northern Lights in 1789. A new tower

munication with the mainland. The mail will be dispatched from Edinburgh every Thursday at eight o'clock at night, and should arrive at Edinburgh every Tuesday morning, but the arrival will sometimes be uncertain.' The development of a postal service in the hinterland of Stornoway was slow. In 1833 only one mail packet ran each week to Lewis, sailing from Poolewe to Stornoway, weather permitting (see Chapter 8), and the island still had only the one post office. By 1880, of course, more contact with the outside world was expected and there were eleven post offices in rural Lewis, with Stornoway's promoted to Head Office status. The latter had been for some time equipped with a money order and Savings Bank department. The telegraph had also been introduced, though no connection to any of the country offices existed; telegrams for all parts of the island other than Stornoway were, as a rule, forwarded by the first mail dispatched after the receipt of the message. By 1902 there were twelve telegraph offices in the country districts of Lewis (Harris was incommunicado with Stornoway, coming under the Inverness-shire arrangements). Some of these offices were set up under orders of the Highlands & Islands Work Board, the service being carried on by the Post Office without guarantee against loss. The office at Port of Ness was subsidised by the Fishery Board and Lloyd's, who had a signalling station at the lighthouse there.

Until 1926, when the long-universal red vans appeared, all mail was transported between the rural areas and Stornoway by private contractors, who used horses and latterly Albion coaches. A motor-launch operated between Callernish and Bernera; mails for South Lochs were conveyed across Loch Erisort from Crossbost to Cromore, and from Laxay to Kershader. In the early 1930s this area was served by mail van working between Stornoway and Lemreway. In 1950 full use was made of the existing BEA air service and, in order that mail from the rural areas could be included, additional main vans were outstationed at Lemreway, Callernish, and Port of Ness. These worked in to meet others working out from the town.

The Harris area was taken under the control of the head postmaster at Stornoway in 1937, having before this date been served by the head postmaster at Lochmaddy, North Uist. A mounted

When he pulled out of Lewis to go south to Harris, he offered—such was the character of the man—as thanks for the '98 per cent support' he got from the people of Lewis, to each Lewis crofter his own croft as a free gift, and the Lews Castle, together with all his property in Stornoway, to the people of the town.

In 1919, Leverhulme became proprietor of Harris, and concentrated his efforts in Obbe, now called Leverburgh, in South Harris. The harbour at Obbe lacked the natural advantage which Stornoway had, so he spent large sums on making it navigable. Rocky obstacles were blasted away; numerous buoys and beacons were set up to guide vessels into harbour; new quays were built; and kippering sheds, and other buildings necessary for packing and curing herring were erected. Among his other undertakings in Harris were the provision of a mill for making tweeds, and he bore half the cost of the 5½ miles of road between Leverburgh and Finsbay. In 1925, after a visit to the Congo, he died in Brussels. His Harris schemes came to an abrupt end. And the remains of industrial history are still to be seen in the quietness of the little township named after one of the most stormy of business petrels that Britain has ever seen.

Tourism

Tourism has always been a perfunctory and casual affair, until the introduction of the fast ferries which now link the mainland (via Skye) with the Outer Isles. Some 10,000 cars cross each year from Skye to the Hebrides. In 1913, the Stornoway Tourist Association had a struggle to increase the number of visitors to the town, to establish it as a tourist resort. It is much the same today with the Western Isles Tourist Association, which is having difficulty in integrating tourist facilities with crofting activities. In Lewis, the Stornoway Trust has assisted in establishing pony-trekking, a venture which has the potential to mirror the success of a similar one in the Isle of Skye.

PRESENT INDUSTRY

Almost an echo of the kelp-burning industry is the alginate industry. It provides employment for only small numbers, but is a

701 men served in the various regiments at the front in South Africa, and over 300 in the Royal Navy.

In 1796 there were sixty-seven slated inhabited houses in the burgh, twenty-six of which had been built since 1784. Before this date most of the houses followed the constructional pattern of those found in rural Lewis. In 1838,

> Stornoway was, within the last twenty years, only a small fishing village, but from the spirited and patriotic exertions of Lord Seaforth, the proprietor, and the grant of irredeemable feus for building, it has become a place of considerable importance as a fishing station. It has a post office; and a packet sails regularly once a week with mail and passengers. No place in the North of Scotland, and in an insulated situation also, has made more rapid strides at improvement, both in a domestic and commercial point of view, than Stornoway.

COMMUNICATIONS

Mention of the sailing packet indicates the tedious manner in which mails came to the town for subsequent distribution in the island. Letters went by mailcoach north to Dingwall, thence by mail-gig west to Achnasheen. Because there was no road from Achnasheen to Poolewe, about thirty miles away, they had to be carried on horseback. The weekly sailing packet then picked up the bags, for which cargo the owners were paid £150 per annum. A letter from London to Stornoway cost 1s 5½d; the smallest enclosure made it double that amount. The mail-packet was often held up by bad weather. It was a wind-blown sailing ship that brought Stornoway the result of the Battle of Trafalgar and the death of Nelson, an event in which a number of Lewismen also took part and died; in St Columba's churchyard at Eye there can still be seen a Trafalgar officer's gravestone. A fortnight after this news arrived, the packet from Poolewe brought its stale message.

In 1844 seventy boats, ranging from 15 to 150 tons, were working out from Stornoway. The *Gazetteer* for Scotland for that year says, 'The grand trade of the place consists in the exchange of the produce of the fisheries and the kelp shores, for British manufactured goods and foreign produce.

factured goods and foreign produce. There is a Branch office of the National Bank of Scotland, two friendly societies, four inns, and so many as about a score of dram shops.' The annual burgh revenue was £17 3s and the expenditure £15 17s 6d. The town boasted ten streets, a saw mill, a mill for carding wool, a corn mill, a very large malt barn and mill, and an extensive distillery. These buildings were constructed 'in a style not much inferior to the best buildings of their class in Scotland . . . A stranger on arriving at it by any route, or from any quarter, is surprised to see so large and flourishing a place in so remote and uninviting a corner. Its broad field of houses, its capacious bay, and spacious piers, its occasional crowd of shipping, and stir of trade and gaiety, and the vicinity to it of the aristocratic mansion of Seaforth-lodge, render it a striking and very welcome relief to the prevailing dreariness, sterility and inertion of the rude country in which it is nestled.'

In 1901, when the West Highland line was opened, the return fare from Mallaig to Stornoway by MacBrayne's steamers was 14s 6d. One could go from Glasgow to Stornoway by steamer for 31s 6d return. A *Guide* for that year indicated that Stornoway had three hotels, six churches and a Court House, singled out for specific mention for some reason. A Ross-shire *Directory* of 1914 describes the Nicholson Institute as one of the four Junior Student Centres in the county. Its Leaving Certificate results were the best in the north of Scotland, with a total of 95 higher and 234 lower passes, and no less than 20 passes in Higher Science.

Stornoway is a Burgh of Barony, dating from 18 October 1607. It had, of course, been a town of sorts long before the Charter was granted by James VI; the Charter was executed under the Great Seal conveying equal shares to three of the leaders of the Fife Adventurers. Under the Police Act of 1862 Stornoway became a Police Burgh. A bank agent in the town was appointed first Chief Magistrate on 31 December 1863. Under the 1892 Act, the designation 'Town Council' superseded that of 'Burgh Commission' and the Chief Magistrate assumed the title of Provost, the senior and junior magistrates becoming known as senior and junior bailies. The present Municipal Buildings were opened in 1929. The previous building was only an idea in 1897; it took

Recent trends also point to a decline in the numbers of sheep, although more are kept now than fifteen years ago. From 1942-51 the numbers were more than doubled (263-565). A great deal of this increase must have been a result of the ewe subsidy, but part at least may be connected with the war and post-war boom in Harris tweed. By 1955, when the subsidy was suspended, numbers had already begun to decline and have since fallen steadily. This year the township has only 374 breeding ewes while the rearing of only 236 lambs would suggest a further decrease in the future.

All the crofters keep some sheep although individual stocks vary from 15 to 150. For most of the year these sheep are grazed on the common pasture on the moor or on the eighteen acre island in the bay. In August, however, the lambs are gathered in for weaning and dipping; in November the gates are opened and all the sheep allowed to graze on the cleaner pasture within the croft boundaries. If necessary they are given fodder, but from the beginning of January they are encouraged to return to the moor, although the gates are not 'officially' closed until May.

The total area of the common pasture exceeds 1500 acres, but most of this consists of hummocky, waterlogged peat moorland supporting only poor quality coarse grasses and sedges. Over 700 sheep now graze this area and the apparently large common pasture is in reality drastically overstocked, a process which must inevitably harm the animals as well as the land.

No pigs or horses are to be found in the township and each crofter keeps very few hens, normally just sufficient to provide eggs for home consumption. Any surplus eggs which do remain are sold to the Co-operative van, but prices are so low that the keeping of more than a dozen hens is far from profitable.

It can be appreciated that crofts of this size and quality can neither provide the crofter and his family with sufficient income, nor fully occupy the available labour force. As a result, people in the past have turned to the sea. Indeed the West Highland Survey describes Orinsay as "primarily a fishing township". Today the herring fishing has disappeared entirely and only one crofter still does a little lobster fishing, sending his catch direct to Billingsgate.

There are now 45 people resident in Orinsay but an examination of their ages reveals that less than half of them are between 15 and 64 years. Indeed there are only six resident males between these ages, and three of these spend at least part of their time working away from the township on the Eishken estate.

As there is neither a school, post office, shop nor garage in Orinsay, there is no available occupation in the 'service trades'. Therefore, over half of the males between the ages of 15 and 44 are permanently away in the Merchant Navy, returning home only for holidays, while another third are seasonally away with the whalers. Similarly almost half of the females of similar age work in domestic service in Glasgow. It must be realised that most of these people working away assist their families at home, and that a large part of the croft incomes are made up of money sent home, together with pensions and other allowances. Emigration from Orinsay to other areas has continued steadily, twenty people leaving the township since the war.

On the whole, housing conditions are good, due to relatively recent construction. There is only one traditional black-house, and even this house has electricity: only one house is without it. Water supply is not so certain as wells and springs are the only source. The township lacks a telephone and a shop, but is served by travelling vans. A good road, constructed within the last decade, connects Orinsay with Gravir; entering the township via the valley to the north-east, it serves directly all but three of the crofts. A bus leaves daily for Stornoway, about thirty miles distant.

Like so many other crofting townships Orinsay, above all else, gives an impression of congestion. The self-same hills that provide shelter also restrict cultivation. The crux of the situation is that land, extremely marginal in character, is being worked by too many tenants on holdings too small to be economic. With three residents to every two acres of cultivated land, Orinsay must be seen as an 'overspill' - an unfortunate result of the cottar problem in the 'twenties'.

AIR SERVICES

craft belonging to the Midland and Scottish Air Ferries Limited 509
came down at the golf course near Melbost; three or four attempts 506
were made to land, but each time it touched down a small boy 175*
ran out to meet it and it was forced to rise again. The directors of the company were interested in establishing an air contact with the island. In September of the same year a giant RAF seaplane landed in Stornoway Bay, the S1589, the largest naval flying boat in the world at the time.

In 1933, Highland Airways Limited proposed an air link between Stornoway and Inverness. The following year, in March, 509
saw the first commercial flight, piloted by an air pioneer in the 175*
north of Scotland, Captain E. E. Fresson. The service was intermittent, however. Then in September 1935 there was an agreement between the trustees of the Stornoway Estate and Captain Glyn Roberts of the West of Scotland Air Services Limited to establish an air service between Renfrew and Stornoway as soon as possible. The trustees gave this company the sole right to operate the service from the landing ground of Melbost golf course for a period of five years. Initially the service was to be thrice weekly, at £3 4s single fare. The interesting connection here was that Captain Roberts was the first man to operate an air mail service on behalf of the Canadian Government, along the route of the MacKenzie River, discovered by Stornoway's Sir Alexander MacKenzie; he carried mails to many of the settlements along the river which had previously been served irregularly. At the same time, survey flights over Lewis were being carried out by Captain Fresson of Highland Airways. These led [508] •
to the construction of 600-yard runways at Melbost, with a radio station to be installed when the airport was complete.

In March 1938, the *Lochgarry*, an old cumbersome, single-screw 509
vessel, was on the Stornoway run. When a sixty-mile an hour 205
gale blew up she was unable to leave Kyle of Lochalsh. The Post 175*
Office, with commendable enterprise, chartered a Highland Airways plane to fly the mails from Inverness to Stornoway and return with island mails. But no regular air service for mails on this route was introduced until 1948. No special mark was introduced by the GPO, but first covers were marked 'First Lewis Air Mail, Feb 16th 1948. Stornoway to Inverness'.

507 Queen Victoria and the Prince of Wales, later King Edward VII,
713 contributed handsomely. But that was only one item in a long
* 175 chapter that will never close.
[736] The most shattering disaster on Lewis shores was the loss of the *Iolaire* on the very last day of the year 1918. Before the New Year's Day of 1919 was a few hours old, over 200 sons and fathers were lying in the death-waters of their drowning, little more than a stone's-throw from their native island. Barely a village on the island was not affected by the sinking of the *Iolaire*, which was bringing soldiers and sailors back from the war to their homes. The subsequent findings of the Court of Inquiry are bald statements which convey nothing of the tragic loss of the cream of an island's male population in a matter of minutes. The jury found that the *Iolaire* went ashore and was wrecked on the rocks inside the 'Beasts of Holm' (outside Stornoway) about 1.55 on the morning of 1 January, resulting in the death of 205 men; that the officers in charge did not exercise sufficient prudence in approaching the harbour; that the boat did not slow down, and that the look-out was not on duty at the time of the accident; that the number of lifeboats, boats and rafts was insufficient for the number of people carried, and that no orders were given by the officers with a view to saving life; and, further, that there was a loss of valuable time between the signals of distress and the arrival of life-saving apparatus in the vicinity of the wreck. The sad affair is still remembered in the In Memoriam columns of the *Stornoway Gazette*.

AIR SERVICES

• 509 The people of the Outer Hebrides are among the most air-minded
506 in the world. However, aeroplanes came late to the island. The
* 175 first visit by an aircraft was in 1928, when Seaplane S1058 landed in Stornoway Harbour. The crew of five were treated to a luncheon by the town's civic heads. In 1932 the seaplane *Flying Cloud* arrived in the town, piloted by Lord Malcolm Douglas Hamilton. Owned by British Flying Boats Limited, it was the first commercial aircraft to land and caused some local talk about air services for the island. In June 1933 a large seven-seater air-

AIR SERVICES

craft belonging to the Midland and Scottish Air Ferries Limited 509 •
came down at the golf course near Melbost; three or four attempts 506
were made to land, but each time it touched down a small boy 175*
ran out to meet it and it was forced to rise again. The directors of the company were interested in establishing an air contact with the island. In September of the same year a giant RAF seaplane landed in Stornoway Bay, the S1589, the largest naval flying boat in the world at the time.

In 1933, Highland Airways Limited proposed an air link between Stornoway and Inverness. The following year, in March, 509
saw the first commercial flight, piloted by an air pioneer in the 175*
north of Scotland, Captain E. E. Fresson. The service was intermittent, however. Then in September 1935 there was an agreement between the trustees of the Stornoway Estate and Captain Glyn Roberts of the West of Scotland Air Services Limited to establish an air service between Renfrew and Stornoway as soon as possible. The trustees gave this company the sole right to operate the service from the landing ground of Melbost golf course for a period of five years. Initially the service was to be thrice weekly, at £3 4s single fare. The interesting connection here was that Captain Roberts was the first man to operate an air mail service on behalf of the Canadian Government, along the route of the MacKenzie River, discovered by Stornoway's Sir Alexander MacKenzie; he carried mails to many of the settlements along the river which had previously been served irregularly. At the same time, survey flights over Lewis were being carried out by Captain Fresson of Highland Airways. These led [508]
to the construction of 600-yard runways at Melbost, with a radio station to be installed when the airport was complete.

In March 1938, the *Lochgarry*, an old cumbersome, single-screw 509
vessel, was on the Stornoway run. When a sixty-mile an hour 205
gale blew up she was unable to leave Kyle of Lochalsh. The Post 175*
Office, with commendable enterprise, chartered a Highland Airways plane to fly the mails from Inverness to Stornoway and return with island mails. But no regular air service for mails on this route was introduced until 1948. No special mark was introduced by the GPO, but first covers were marked 'First Lewis Air Mail, Feb 16th 1948. Stornoway to Inverness'.

COMMUNICATIONS

• 509 There were, of course, other types of flights before 1948. In
* 175 1937, Captain Fresson took the first sick person off the island on
[743] charter—the beginning of the air-ambulance service so valuable
[205] to the islanders. During World War II, certain RAF mails were flown between Glasgow and Stornoway, on which there were first covers (December 1943, Glasgow/Stornoway; December 1943, Stornoway/Glasgow; and January 1944, Glasgow/Stornoway). The present air services are supplied by BEA and Loganair Ltd. The BEA plane route is Glasgow/Benbecula/Inverness and return. Loganair offer a service Glasgow/Benbecula/Stornoway and return. In recent years this small firm has built up a most valuable inter-island air link.

OVERLAND ROUTES

484 The history of overland communications in the island is a short
* 175 one, though it does, like American history, have many character-
[487] istic highlights. In early times getting from one place to another was simply a matter of following well-worn tracks across the moorland, skirting lochsides and marshy lands and just taking the shortest distance possible between starting point and destination.
[499] Considering the length and breadth of the island, it is surprising that it was not until Sir James Matheson's appearance in Lewis that road-making was undertaken with any determination. This activity stemmed largely from the desire to get something in return for the outlay involved in keeping literal death from starvation clear of the doors of the island folk.

491 The report of the Rev James Headrick (prepared for Lord Sea-
499 forth in 1800 and published about 1820) indicated that the pro-
* 175 vision of roads would be of great benefit to the island. A footnote in the report (of probable date 1816) urges assistance from Parliament or the Board of Fisheries to complete the road from Stornoway to Loch Roag, which had been begun by Lord Seaforth. There is a bitter complaint that though the Seaforth property
[652] bears a large share in the county assessment, 'not a penny of public money has ever been laid out in Lewis'. Another footnote records that the road from Stornoway to Aignish in the east was made in 1815. No large undertakings followed Mr Headrick's

205 munication with the mainland. The mail will be dispatched from
* 175 Edinburgh every Thursday at eight o'clock at night, and should arrive at Edinburgh every Tuesday morning, but the arrival will sometimes be uncertain.' The development of a postal service in the hinterland of Stornoway was slow. In 1833 only one mail packet ran each week to Lewis, sailing from Poolewe to Stornoway, weather permitting (see Chapter 8), and the island still had only the one post office. By 1880, of course, more contact with the outside world was expected and there were eleven post offices in rural Lewis, with Stornoway's promoted to Head Office status.
[454] The latter had been for some time equipped with a money order
205 and Savings Bank department. The telegraph had also been intro-
209 duced, though no connection to any of the country offices existed;
* 175 telegrams for all parts of the island other than Stornoway were, as a rule, forwarded by the first mail dispatched after the receipt of the message. By 1902 there were twelve telegraph offices in the country districts of Lewis (Harris was incommunicado with Stornoway, coming under the Inverness-shire arrangements). Some of these offices were set up under orders of the Highlands & Islands Work Board, the service being carried on by the Post Office without guarantee against loss. The office at Port of Ness was subsidised by the Fishery Board and Lloyd's, who had a signalling station at the lighthouse there.

205 Until 1926, when the long-universal red vans appeared, all
* 175 mail was transported between the rural areas and Stornoway by
[494] private contractors, who used horses and latterly Albion coaches.
[505] A motor-launch operated between Callernish and Bernera; mails for South Lochs were conveyed across Loch Erisort from Cross-
[494] boat to Cromore, and from Laxay to Keshader. In the early 1930s this area was served by mail van working between Stornoway and Lemreway. In 1950 full use was made of the existing
• [509] BEA air service and, in order that mail from the rural areas could be included, additional main vans were outstationed at Lemreway, Callernish, and Port of Ness. These worked in to meet others working out from the town.

The Harris area was taken under the control of the head postmaster at Stornoway in 1937, having before this date been served by the head postmaster at Lochmaddy, North Uist. A mounted

632 distinctive geographical features, and nearness to the
363 sea: Ceann a Stigh (or Ceann a Stigh Bhaile, or Baile
103 Stigh, the "town" at the "head" of the road "in" by the sea), Busilebhir (an area identified with the keeping of cattle), Gearraidh Mor, Creagan, Pluic, and Mach a Chul ("out the back," by a road built relatively recently). A street which leaves the main road and cuts into the moor, or common grazing land, is called Grinnbhat, from the name of a nearby loch.

● 511 The presence of a large Harris Tweed mill in
[348] Shawbost has contributed to a high standard of living
[288] within the village. It is estimated that only 25% of
[493] the households of rural Lewis have cars; about 50% of the households in Shawbost possess them. In 1970
[342] Shawbost had only one occupied tigh dubh, or "black house" built of dry stone and roofed with thatch, which to many islanders symbolizes a past life of poverty and
[404] adverse times. Modern appliances such as refrigerators,
[251] deep freezers and electric toasters are common in
[207] Shawbost. Most homes also have television sets, and
[206] many have telephones.

288 The mill in Shawbost employs between 60 and 70
463 persons to dye, card and spin yarn, to prepare the yarn in warps which are then delivered to weavers who work in their own homes, and to darn, wash and market the

231 People kept several cattle, some of which were dry most
[234] of the time. But because everyone was keeping cattle,
[244] milk could be gotten from a neighbor. One man was
[246] planting eight or nine hundredweights of potatoes before the war, some of which would be used to feed the livestock.
● 511 "You couldn't buy milk then, so you had to keep a cow.
[234] And even though people were weaving, they weren't getting
231 so much money as they are now. It was the barter system
288 here for a long time. So they didn't have the money to
437 buy feeding stuff. It was better to spend the time planting potatoes. Now of course there's more money in the weaving."

175 After the war, an act was passed which provided free
202 milk for schoolchildren. Milk for the Shawbost school
234 was supplied by a farm near Stornoway, and villagers first
198 started buying the milk from the school milk van. A strike
175 held by weavers during the war had increased the payments
178 for weaving, and the barter system had stopped. More
288 money was available. As the loom was more profitable,
463 more people stopped keeping cows, and relied on their
437 neighbors for milk, or got their milk from the van bringing
231 milk to the school. And as the cattle got fewer, the
[292] market for bottled milk expanded. A dairy was started on
198 the west side of the island in the mid-1960's which carries
231 milk from Uig to Ness.
434
234

121 being determined by conditions of culture, such as
121 political and economic conditions. Under conditions
178 of gradual centralization of economic and political
182 systems, the geographically marginal crofting areas have evolved strategies, some of which puzzle agencies concerned with development or other aspects of governmental process.

178 Before the North of Scotland Hydro-Electric Board
365 began to operate in the crofting counties, not more
● 511 than one croft in every hundred had electricity; but by the end of 1951, one in every six holdings had been supplied (Taylor 1954: 20). "The light" came to
[354] Shawbost in 1951. Before then, the islanders used
[179] Tilley lamps, a Canadian invention; and before then,
[312] double-wick paraffin lamps. Piped water came a few
[464] years later, around 1955; it was brought from a nearby loch, and the construction work gave temporary jobs to
[344] local people. The availability of these services
[342] facilitated the building of county council houses, which many welcomed as providing a relief to the congestion caused in part by rules against building more than one house on a croft. But, paradoxically,
[651] with larger, better homes and all these services came a decrease in the advantages of living in a crofting township: property was assessed and people began paying rates or taxes.

241 Cultivation for subsistence is minimal, and in 190
654 part stems from government-defined privileges and dutie
288 regarding maintenance of a croft. The Harris Tweed
477 industry, which is restricted to the Outer Hebrides and
464 thus is protected from competition, has provided work for a large number of islanders. Many of the younger
166 [434] members of croft families live in cities on the mainlan and send part of their wages home; they return regularl to the island, and many plan to retire there. Thus the
[162] [632] township supplies urban workers who remain very much attached to the rural townships, which are composed of
● 511 aged family members and a rural proletariat. The standa
464 of living is high, and many crofters have accumulated
213 savings, although much of this surplus is used by the me for alcoholic drinks.

121 In Britain, rural communities have been interpreted as lying somewhere along a rural-urban continuum (cf. Southall 1959, Frankenberg 1966). In 1959, Southall presented "an operational theory of role" by which he suggested that heterogeneous societies may be analyzed and compared. He developed the concept "density of role texture" to describe societies which lie along a continuu from rural to urban. Frankenberg (1966) uses Southall's concept along with other concepts to present a more complete model of an urban-rural continuum. The "models" of both Southall and Frankenberg are essentially lists

[Seaforthhead] [Shieldernish] [Habost]

ppression of the original townships opposed to six today. As a result, many lazy-beds, now ven over to natural grass, are being gradually encroached on by heather and juncus. Out the present population of twenty-three, one is permanently away and two have migrated nce 1939. There is a more healthy population structure, with a large number of males tween 15 and 44, due to a large family having returned home and six children, five of school e.

In Seaforthhead and Shieldernish all settlement is below the road and house-sites are on ght elevations. At Seaforthhead is the reputed hunting lodge of the Seaforth's,'Seaforth Castle', w ruined, but still showing signs of abnormal size and arrangement. When first settled, mmunication was by ferry (1820). Now a cart-track, deeply rutted, to Eisken Lodge gives cess to the Tarbert-Stornoway road two-and-a-half miles away.

IELDERNISH

Shieldernish, also consisting of three crofts, is better situated on the Park and South Lochs nd. The three houses are situated on a well-drained northerly slope, half-way between the nd and the shore, but the three crofts are on better land and greater accessibility has led to ter management and new ideas.

Cultivation in isolated patches reaches up to nearly 100 feet and the lazy-beds have been put ether to permit ploughing by horse or tractor. One croft grows neither oats nor potatoes, ferring to enclose two one-acre parks, re-seed them, cut the hay in June, and wean the nbs on the aftermath. By next year, this crofter hopes to have enclosed and re-seeded a ther acre and will then use the three in rotation. The other two crofts grow both oats and atoes and one is also sowing down. The crofts average fourteen acres in size but although tle slopes are extensive, the major part of the crofts is in permanent pasture. The total cking of the Shieldernish crofts is below the souming. Fishing is now only for domestic use ugh there is a small jetty on No. 1. Part-time weaving is performed on two of the six fts.

The future pattern would appear to progress to more grazing and less cultivation. Two out he six crofts - both at Seaforthhead - are worked from outside the township and this lated township, being difficult of access and having little cultivable land, is better suited to zing. Shieldernish appears more suitable for enclosing parks for fattening lambs, as ls are deeper and slopes gentler, making the use of a tractor feasible. More could be got of the crofts especially with fertilising and re-seeding for hay and pasture and growing der crops for wintering. It is hoped to fence the common securely, and then stock will be ewed - a great necessity. Daily communication with Stornoway also means that Shieldernish better placed than Seaforthhead for a flourishing settlement. The crofts are certainly of a rkable size - provided part-time work, such as weaving, is maintained, along with the nts from the Crofter's Commission.

HABOST

Rachel A Hirst

Habost is scattered around a small bay on the south shore of Loch Erisort. Settlement etches for over a mile encroaching on three small hills separated by wide, well-drained eys which soon rise to the dominating Craigeal (225 feet). Slopes are varied but tend to ten out at about 100 feet near the road and on this flat, most of the cultivation takes place. rer the shore, slopes are much steeper and on the hills there are bare rock faces and thin s.

[Lemreway] [Orinsay]

228 The West Highland Survey Township Card[1] describes Lemreway as "predominantly a fishing
196 township". The remains of an old curing station are visible today and until 1947 there were twelve
[434] boats operating from Lemreway. A declining market, increasing cost of gear for obsolescent boats
435 and the lack of a landing stage led to the decline of the industry in this township. Today there is
[504] one fishing boat which lands its catch in Stornoway: working with modern equipment, drift and ring nets, it provides a regular income for a crew of six.

161 An examination of the population statistics proves interesting, especially when compared with
162 those for Orinsay. Lemreway's resident population of just over 70 males and 70 females is large considering that there are six unoccupied crofts. Eleven of the crofts have more than one house and the cottar population forms over a third of the total residents. More than two-thirds of this resident population is in the two important age groups - between 15 and 64. With over forty resident males in the working age group, Lemreway provides a striking contrast to other crofting townships in Park.

[463] Fourteen of these men are full-time croft workers, while nine others find work in ancillary
241 occupations such as weaving and fishing. A further eight supplement their croft work with regular
358 employment - a postmaster and a postman, a bus driver, a lorry driver and several weavers. Just
238 over thirty people work away from the township permanently, fourteen in the Merchant Navy and
205 nine girls in domestic service, while a further nine engage in seasonal work.
494

Emigration from the township has continued steadily with forty people leaving since 1939.
166 Nevertheless, Lemreway has a larger proportionate resident population than most townships.
167
505
[351]

Only four thatched houses are occupied and housing conditions generally are good. Every house
342 has electricity, but, with four exceptions, water has to be carried from springs and wells. Most
399 of the present houses were constructed in the 1930s and they are usually near to the road. Ruins
312 of the old houses remain, some being used as byres, and these were built either along the shore or
361 up the slope in the shelter of the hills, where the house was near the sheep, the peat and the springs.
[491] Today supplies of food, peat and even seaweed are brought by road.

484 Mention must be made of the possibilities of the tourist trade in Lemreway with its most attractive situation and reasonable road connections. An approach has been made to the Scottish Youth Hostels Association and while hostellers could not greatly increase the income of the residents, they would stimulate interest in the area. Accommodation for summer visitors, other than relatives
[485] of the crofters, is difficult to find but it seems that at least three houses could be used.

000 It is possible to be optimistic about the future of Lemreway, as at the moment considerable
407 enterprise is being shown. A Ferguson tractor, bought this year by a man returning from whaling,
311 is an example. It is to be hired out and could be put to good use in some parts, especially on the
242 outend. The attempt to improve the common pasture and the new extensions to neatly painted houses
463 all reflect a combined effort to improve conditions. The old economy of crofter-fisherman is being adapted to modern times and crofter-weaver, crofter-postman and crofter-bus driver are the contemporary employment combinations.

181 The pessimism and apathy noticed in many crofters is to be found in Lemreway but above this
000 is the impression of enterprise. If Lemreway can continue to adapt itself to changing conditions, it may be able to combat the 'drift to Glasgow' and continue as a successful community.

ORINSAY

Beth Blowers, Brenda Turner and John Wearmouth

131 Orinsay is a small crofting township clustered, in the form of a horseshoe, around the head of
361 a sheltered bay on the northern side of Loch Shell. Most of the houses are situated within fifty yards
241 of the shore on a narrow strip of level land, while the crofts extend from the shore on to the moor

1. The Directors of the Crofting Survey are grateful to Dr. F. Fraser Darling for granting access to the individual Township Cards, which are a storehouse of information. For detailed con-
[113] tents of the cards, see West Highland Survey p. 247.

1845 there was a small crescent of houses along the shore, 175* 178* 361 621 but twenty in number, and on the raised terrace there was new inn, a church, a post office, a bank, several shops, and [366] street of homes.[34] The population had grown to all of 510.[35] [368] existence of the village depended on the summer cattle [161] kets and the fishing industry, which was in the hands of comers.

Following the establishment of Portree and accompanying 175* 178* 648 gradual decline in self-sufficiency, the Island was brought o closer contact with Great Britain by an extension of ular means of communication.[36] Regular communications, of rse, are a prerequisite for commercialization. There must access to markets for the local produce and access to sumer goods. Without such access no man can specialize; h it the Sgiathanach has been diinclined to specialize. The [491] drove roads, the beaten paths which had served them well many centuries, were now supplemented by roads in the land sense of the term. By the end of the period most of [505] more accessible townships had been connected with Portree the mainland, and a steamer had entered regular service ween Portree and Glasgow. These factors paved the way for introduction of commercial sheep farming.

een Victoria and the Prince of Wales, later King Edward VII, ntributed handsomely. But that was only one item in a long apter that will never close.

The most shattering disaster on Lewis shores was the loss of *Iolaire* on the very last day of the year 1918. Before the New ar's Day of 1919 was a few hours old, over 200 sons and hers were lying in the death-waters of their drowning, little re than a stone's-throw from their native island. Barely a vil-e on the island was not affected by the sinking of the *Iolaire*, ich was bringing soldiers and sailors back from the war to ir homes. The subsequent findings of the Court of Inquiry are d statements which convey nothing of the tragic loss of the am of an island's male population in a matter of minutes. e jury found that the *Iolaire* went ashore and was wrecked on rocks inside the 'Beasts of Holm' (outside Stornoway) about 5 on the morning of 1 January, resulting in the death of 205 n; that the officers in charge did not exercise sufficient prudence approaching the harbour; that the boat did not slow down, d that the look-out was not on duty at the time of the accident; t the number of lifeboats, boats and rafts was insufficient for number of people carried, and that no orders were given by officers with a view to saving life; and, further, that there was oss of valuable time between the signals of distress and the ival of life-saving apparatus in the vicinity of the wreck. The l affair is still remembered in the In Memoriam columns of *Stornoway Gazette*.

AIR SERVICES

e people of the Outer Hebrides are among the most air-minded the world. However, aeroplanes came late to the island. The t visit by an aircraft was in 1928, when Seaplane S1058 landed Stornoway Harbour. The crew of five were treated to a cheon by the town's civic heads. In 1932 the seaplane *Flying oud* arrived in the town, piloted by Lord Malcolm Douglas milton. Owned by British Flying Boats Limited, it was the t commercial aircraft to land and caused some local talk about services for the island. In June 1933 a large seven-seater air-

craft belonging to the Midland and Scottish Air Ferries Limited came down at the golf course near Melbost; three or four attempts were made to land, but each time it touched down a small boy ran out to meet it and it was forced to rise again. The directors of the company were interested in establishing an air contact with the island. In September of the same year a giant RAF seaplane landed in Stornoway Bay, the S1589, the largest naval flying boat in the world at the time. 509 506 175*

In 1933, Highland Airways Limited proposed an air link between Stornoway and Inverness. The following year, in March, saw the first commercial flight, piloted by an air pioneer in the north of Scotland, Captain E. E. Fresson. The service was intermittent, however. Then, in September 1935 there was an agreement between the trustees of the Stornoway Estate and Captain Glyn Roberts of the West of Scotland Air Services Limited to establish an air service between Renfrew and Stornoway as soon as possible. The trustees gave this company the sole right to operate the service from the landing ground of Melbost golf course for a period of five years. Initially the service was to be thrice weekly, at £3 4s single fare. The interesting connection here was that Captain Roberts was the first man to operate an air mail service on behalf of the Canadian Government, along the route of the MacKenzie River, discovered by Stornoway's Sir Alexander MacKenzie; he carried mails to many of the settlements along the river which had previously been served irregularly. At the same time, survey flights over Lewis were being carried out by Captain Fresson of Highland Airways. These led to the construction of 600-yard runways at Melbost, with a radio station to be installed when the airport was complete. 509 175* [508]

In March 1938, the *Lochgarry*, an old cumbersome, single-screw vessel, was on the Stornoway run. When a sixty-mile an hour gale blew up she was unable to leave Kyle of Lochalsh. The Post Office, with commendable enterprise, chartered a Highland Airways plane to fly the mails from Inverness to Stornoway and return with island mails. But no regular air service for mails on this route was introduced until 1948. No special mark was introduced by the GPO, but first covers were marked 'First Lewis Air Mail, Feb 16th 1948. Stornoway to Inverness'. 509 205 175*

TRADE AND INDUSTRY

286 462 175 433 273 175 433 427 438 175 511 175 824 323 388 433

womenfolk, giving a ratio of only one male weaver to fifty-five families. In Lewis, male weavers were more common: one to every twenty-five families. The making of whisky was introduced about the seventeenth century. This was in addition to the old drink of home-brewed beer or ale *(lionn)*, and much of it was made to pay rents; it must have consumed a considerable quantity of valuable foodstuff. However, the spread of distillation as a legitimate home industry by which the rent could be paid, in kind or by sale, was followed by legislation prohibiting all but very large stills; illegal distilling of course went on in a small way.

It was, then, by a very narrow margin that subsistence was won in the island some two centuries ago. Many times famine showed how close was the wolf to the island doors. The introduction of the potato, and the interest in the fishing industry led to an increase in the population, though as discussed in Chapter 3 this in turn brought more problems. Basically, the island economy had never been organised on a sound foundation, with the result that winds of change blew where they would with little or no control.

A new factor in the island economy was introduced after 1750. This was kelp-making, the cutting and burning of seaweed on the shore for subsequent use in the manufacture of alkali for the glass and soap industries. The first tentative move in the island was made by MacLeod of Harris in 1748, when he allowed some Irish labourers to make kelp on his shores; so little was the product's value realised at the time that he only charged them 2s per ton manufactured. As the burning of kelp came to be understood, and the marketable value of the product ascertained, the native population set to. Between 1772 and 1864, about 50 tons were produced in Lewis each year, compared with some 800 tons per annum in the Uists; the Harris figure was 500-600 tons. The growth of the industry began to snowball, and the Minister of Lochs, writing in the *Old Statistical Account*, states that at the time (1796) some 50 tons were being produced in that parish per annum. In Stornoway parish, though no figure is available, the minister reports that kelp-burning was the principal manufacture, and that everyone able to fill a creel, or carry one, was employed at it for about three months of the year. Little of it seems to have been done in Barvas parish. The price of kelp varied

[221]

CROFTER INDUSTRIES

175* 824 323 388 433

according to the amount of barilla (its great competitor, a carbonate of soda made from plant ashes) which found its way into the British market. When the American war interfered with the imports the kelp price was as high as £22 per ton. Prices began to decline about 1810, and from 1822 successive reductions in duties on salt and barilla resulted in the decline and demise of the kelp industry. As a consequence great distress appeared in those districts which had founded their whole economy on seaweed.

The weeds of most value to the industry, because they yielded most salts, included *laminaria digitata, laminaria bulbosa, ascophyllum nodosum* and *fucus serratus*. One ton of kelp yielded an average of 8 lb of iodine, with certain quantities of chloride of sodium, chloride of potassium, and carbonate of soda. When subjected to special treatment and distillation, 2-3 cwts of sulphate of ammonia, and several gallons of naphtha, paraffin oil, and volatile oil were also derived.

[137]

175* 228

The fishing industry, discussed in the previous chapter, took over where the kelp-making industry left off and became another king-pin in the island economy. By the end of the last century it seemed set fair for continuing prosperity. In 1900, harbours were being planned and built with State aid in Uig, at Carloway, Ness and Tarbert. Then 1914 came, and with it sweeping changes in international trade. Island fishermen were left workless with wrecked and rotting fishing boats. In twenty years the number of Scotland's fishermen was halved; the remainder were all but ruined. The islanders' fate mirrored this pattern.

[503] [653] [511]

175* 701 434

Yet another significant source of income for island families for almost 200 years came from the men in military service, who either sent money home or returned home with their gratuities and pay. In the wars of the last century many enlisted in the Highland regiments, the Navy and the Merchant Marine. Even today, the income from this external activity is not insignificant.

EIGHTEENTH-CENTURY ECONOMY

175* 113

Information and statistics about the economy of the island in the middle of the eighteenth century are to be found in Walker's *Economical History of the Hebrides or Western Islands of Scotland*; his MS is in the British Museum.

Island) and Eilean Mhuire (Mary's Island). The Shiants are the 131
eroded relic of the same age of volcanic activity that formed the
strange-looking columns of Staffa and of the Giant's Causeway [133]
in Antrim. The mass of cooling molten rock slowly crystallised
and changed in composition: the early-formed crystals sank to
the bottom, the later ones being found nearer the top. In 1845 one 361
family lived on Garbh Eilean, the largest, which is joined to 162
Eilean an Tigh by a low storm beach; but the family was lost, 175*
falling over one of the great precipices which are a feature of the
group. In 1821, 2 males and 4 females lived there; in 1891, 3
males and 5 females; and in 1901, 4 males and 4 females. But in
this year the last family upped and went to Tarbert, Harris; for
one of its members, a girl of 21, it was the first visit to the outside
world. Since then there has been no permanent population. Back
between 1811 and 1821 a visitor to the Shiants had some hard [511] •
things to say about the filth and darkness of the shepherd's dwelling in contrast with the 'loveliness of nature, the bright sand, the fair rock, the enamelled green turf, and the sweetness of the summer breeze'.

Records show that at one time in the islands' history some sixteen people lived there, working small crofts. The ruins of their chapel can still be seen. The author Sir Compton MacKenzie had the house on Eilean an Tigh renovated for a stay there, and later the islands were bought by Nigel Nicholson, author and publisher. Today they are used for grazing sheep.

St Kilda

The St Kilda group of islands, some 45 miles off the west coast [131]
of Lewis, belong to the parish of Harris. These islands have an [631]
extensive literature and can only be touched on here. When the
population was evacuated from St Kilda in 1930, the move broke
for all time almost 2,000 years of continuous island living; they
were taken off at their own request, after much careful and
serious deliberation by the St Kilda 'parliament'. Life in Hirta,
the only island in the group with a permanent human settlement,
depended on the seabirds that breed in their tens of thousands on
the cliffs of Hirta and Boreray, and the great stacks of Stac an
Armin and Stac Lee. The flesh of puffins, gannets and fulmars

11 ISLAND LIFE

181 As one might expect with an island that is not obviously surrounded with water, life in Harris and Lewis is lived out by an amalgam of communities somewhat similar to those found in very large cities, with defineable districts and recognisable boundaries. The island is too large for any physical feature to demonstrate that it is unconnected with a larger land mass. One looks to the horizon, down the coasts, at the satellite islands, and concludes that if indeed it is an island, the separate elements which combine to make an islander must be found elesewhere than in the landscape. And so they are: in the people, their way of living, their economic problems, their attitudes, and their own consciousness of the fact that distance over the hills and the moors to the sea is significant, in that one eventually comes to the end of a road or track; or that a river or stream runs itself out for ever into the sea. Harris and Lewis is the biggest of all the 'small'
[161] islands off the shores of Britain, and has been fortunate in its
[167] size: large enough to support a significant number of people who, despite emigration, have managed to maintain their numbers reasonably well and who are now making efforts to reduce emigration and its effects on the island communities to a bearable level.

177 Because it is an island, however, external influences are felt like cold winter winds. The 1966 seamen's strike was an example; Government intervention was needed to supply essential goods. After the strike many questions were asked. All had their roots in the island's dependence on the outside for not a few of the necessities which could be produced on Harris and Lewis itself, with either its own resources or the resourcefulness of the island
• 511 folk. To be short of fish, for instance—and this occurred—while
177 the seas around the island were teeming, was unhappy history repeating itself, a harking back to former times when starvation levels could have been avoided by looking around for the means to harvest the crop lying around. The strike also threw into relief the question of the viability of crofting as a full-time occupation.

233 according to the relief, as explained. Thus the Barvas
182 parish with its smooth topography permits of ploughing,
and there is, or rather was, one horse between two crofts,
231 or one pair between four or five. In rocky Uig or in Lochs,
however, there is only one pony between ten or twelve crofts.
492 Lending or hiring of horses has still to be practised, but
426 within manageable limits, though the increase in 'cars' had lessened the number of horses, even before the war-time introduction of tractors. Hiring is often done for cash, though this conflicts with older communal custom. Yet lending had its difficulties: "The borrowed horse", says the lender bitterly, in the Gaelic proverb, "is never tired!"

233 The number of sheep per holding is noticeably highest
184 in Harris, with one score ewes per holding. The sheep pasture of North Harris was well spoken of by Dean Monro, and the link with the home industry of Harris, its weaving, is evident.

241 Comparisons with the western mainland show, in
311 holdings of similar or rather large size, the diminished amount of cereals now grown there even by crofters. The increased proportion of grass reflects both the greater dependence on bought provisions, and also the fact that the West is not a land to ripen crops, but that it can grow grass for stock.

4. *The Moors as Pasture: Game and Sport*

311 In order to estimate the relative value of the rough
• 511 grazings of Lewis and Harris, it will be well to compare these with the moors lying across the Minch and east of Cape Wrath. There also may be found crofting communities whose economics are similar to those of Lewis, so that the stock carried on their pastures will furnish some

311 indication of their worth. As above, the period is *c.* 1937–
• 511 1938. The Island's increased sheep stock is shown in Appendix II (ii) (a) to 1953.

[233] The Lewis and Harris pastures carry on an average about one ewe to 9 or 10 acres, that is, one ewe or lamb to 4 acres in June (the month of the agricultural returns). A good mainland grazing like Glen Shiel carries one ewe to 6 acres, while poorer grazings like Kintail and Farr carry one ewe to 10 or 14 acres respectively. Nowhere, however, can the rough grazing support the newly weaned ewe lambs (or hoggs) throughout the winter, which have either to be brought to the enclosed 'low ground' (of which there is never enough to supply both grass and winter feed) or sent to the Lowlands in autumn and brought back in spring, at a total cost of about 10s. each before 1939. In Lewis, for lack of grass, there is considerable loss in winter among the crofters' sheep. Constructive measures for the future must be based on an increased supply of winter feed.

137 The game consist of red deer, grouse and hares, while
511 salmon and trout are fished in stream and loch. The deer range over Harris, Park and the Uig hills, but are seldom seen north of Achmore. They are of ordinary quality and size, and before 1939 the average number of heads for the year totalled about 190 stags and 80 hinds. It is not known
[529] when they were introduced. In the south there may be a certain amount of 'deer stealing', as in most deer forests surrounded by crofts, in spite of a score of keepers and deer-stalkers, and other employees at shooting lodges. Grouse are relatively scarce compared with those on drier
[825] mainland moors. Mountain hares have multiplied since their introduction in 1853, when, it is said, the first hare, seen near a village towards evening with its white winter coat, was thought to be supernatural.

• 511 coat, was thought to be supernatural. The fishi
226 of good standard: a typical annual catch includ
511 salmon, 5000 sea-trout and 1800 brown trout; a
for this, as well as for the shootings, that the m
taining to the different shooting or fishing lodges a
137 were bought at Lord Leverhulme's sale. The a
foxes was important to sheep-rearing before the i
233 tion of guns, and is still a favourable factor.

5. *Sea-fishing*

226 Fish have always contributed to the diet of the
178 whether they fished from coracles or boats, or wi
wands' from the shore as they still do, and as th
[262] the days of Dean Monro and, no doubt, right
[433] neolithic times. The relative importance of fis
agriculture, however, has always varied according
[241] and time.

182 Fishing in modern and historic, and also in pre
times—to judge from the kitchen middens of
226 always flourished more where there were deep s
241 and settlement resulted, even though rocky hillsid
ploughing difficult or impossible. Conversely, ag
[178] has offered better opportunity on smooth coast
[172] variety of soils, though fishing was poorer there
the men of Stornoway Bay and Eye, of eastern l
of the Harris bays, like those of Loch Roag on t
have long been partly fishermen. In the extrem
too, men of Ness—with the chance of choosing thei
grounds on the north, west or east of the island a
their little rocky port giving shelter, of a sort, fro
[461] west gales—were good fishermen; they are good
[829] still. "The fishing of the Barvas folk" is an o

175 natural zone, could not be extended. In any case, the re-
433 clamation of clay land tended to slacken as efforts turned
434 to fishing and kelp-making. The introduction or increased
[182] growing of potatoes added to the human, but hardly to the
[311] animal, food supply. Finally, while the beginnings of
[232] medical knowledge and vaccination had aided the growth
[422] of population after 1750, veterinary science had made no progress, nor did it advance in the Island for many years to come. We may conclude that an average stock per Island family about 1720 was rather more than that of 1790, and the acreage relatively larger, while both were greater than the average of today, particularly in the Lews.

175 What, then, could a family have to eat, from such crops
262 and stock? While in winter even now there is almost no
244 milk to be had on a croft, and there would be little then, there was salt meat, dried or salted cod (or herring) and fish oil; oat and barley meal and some rye meal; cabbages; and, increasingly in the eighteenth century, potatoes. Martin included potatoes among the crops grown even on far St. Kilda in 1697. A century later it was written that the people of Uig, for instance, had, though 'unwilling', been induced to grow and eat them 'forty years before'; and the years tend to be under-estimated where changes are slow and memories long! But it was written of Harris that by June the meal and potatoes had mostly been consumed, "and such as cannot afford to purchase imported meal subsist chiefly on the milk of their cows and sheep, with what fish they may chance to catch, till their wants are relieved by the first fruits of their potato crops early in Harvest".

175 We conclude that with even less money but a little
• 511 more grain the population in the Island had fluctuated
162 about a mean for some centuries before, as it had in so
171

175 much of Britain and Europe until about 1700. A modern
• 511 parallel may be found in Asiatic lands with the frequency
162 of famines alternating with periods of recovery or, in others,
171 the long-drawn misery of chronic under-nutrition and endemic disease. In modern Europe, only international
[731] or civil war can now bring such extreme widespread misery. And as peace brings partial healing, so in the Island past, when good seasons returned after famines, the life of the family renewed itself.[1]

175 The narrow margin of survival even in good seasons,
593 the risks of the bread-winner's death and of his family's destitution, and the need of co-operation in so many tasks made the family too small, weak and precarious a unit to stand alone. Even with relatively little division (or specialisation) of labour, and in spite of its apparent self-sufficiency, the family had perforce to link itself with wider circles of community life.

(B) JOINT LABOUR BY SMALL TEAMS: THE EVIDENCE OF TENURE IN 1715–26

175 Romance is hidden among the rent-rolls of the Seaforth
241 estates, all of which were forfeited when the Earl rose for
429 'King James VIII' in 1715. For of the rents withheld from the government until 1720, on the mainland at least
[642] the loyal clansmen paid a considerable portion to their
[613] exiled chief, styled 'Marquis' by 'King James'. But the

[1] The 'ups and downs' of a peasantry living on the margin of subsistence and subject to severe disease can be studied in India, 1871–1941, where the 'net' or mean change has to be correlated with the 'variability'.
[113] This wide problem was reviewed in a series of papers to 1948; "The Social and Psychological Significance of Variability in Regional Changes of Population", with examples taken from Indian villages. (A. Geddes, *Human Relations*, Vol. 1, 2, 1947–48; cf. *Geog. Rev.* 1942 and 1948; and *Geog. Journal*, 3, vol. 98, 1941).

175 On the mainland, both Lowland and Highland, an
693 outlying reclaimable patch of arable, lying near distant, little-
423 used pasture, frequently gave a single family the chance
[241] of a living. Such a site meant solitary toil for the man
[311] and his family; but there might be advantages such as
[184] an occasional deer from the forest, or a post as hunting
[224] 'forester' such as was held by many a Gaelic hunter-
[823] bard. In the Eastern Highlands such a high-lying croft was
175 known as *Ruigh* (anglicised to Ry-). Traditions of poverty
361 with individuality in isolation were handed down, for
• [511] example, from one of my forebears who held such a *ruigh*,
Rycorrach, one of several strung out along the 1250-feet
contour in a small, high valley off Strath Spey; the last
of them was abandoned only recently. Such a *ruigh* may
have originally been a summer shieling, only occupied
when shortage of corn-land below, coupled with new
possibilities of a little profit from sheep-shearing, led to
settlement there.

178 At the fringe of the Island's deer 'forests' of North
361 Harris and Park, stalkers are still found in lonely lodges
224 and dwellings, individuals often of character and worth, as
233 they need to be; and a few isolated shepherds, such as
one finds on mainland sheep farms, dwell on small islets.
But in the Isles, isolated, high-lying spots for single crofts
361 are rare. And the clearest distinction must be drawn
621 between the true solitude of a single, isolated cottage or
184 croft and the sociability of a group of four or five, or even
two or three, crofts, such as those of lobster fishers; for
even a few families form the germ of a community, in work
and in leisure.

175 The potentialities of co-operative practice were over-
178 looked by agricultural reformers, excusably enough. For
654 when new methods were required, run-rig kept back the
476 pace to that of the slowest, virtually arresting reform. Soon
241

175 About the seventeenth century there was introduced
433 the making of *aqua vitae*, *uisge-beatha* or 'whisky', an
273 addition to the ancient drink of home-brewed beer or ale
(*lionn*), a pleasant brew still tolerated by the Excise. In
[427] order to pay the rent, the making of whisky from home-
[651] grown barley must have consumed a precious foodstuff.
The small bulk of whisky facilitated export by tacksman
or Factor, and it also served to tickle the palate, cure the
[651] ills and cheer the spirits of the crofters themselves. But
before 1800 'the Gauger' was in the land, though there
were undoubtedly whisky stills that escaped his eye. In
some of the old houses a hollow space was left at a selected
spot between the inner and the outer walls, to conceal what
was not meant to be seen. A pleasant picture survives of
• [511] the eighteenth century. It is told of a man of exceptional
prosperity, that when he laid his head on a pillow "he
could hear on the one side the clacking of his corn mill and
on the other the babble of his still". What more could
[427] the good man want? Nevertheless, the increase of distilla-
[671] tion as a legitimate home industry by which to pay the rent
(in kind or by sale), followed by legislation prohibiting all
but large stills, first encouraged the Islanders in a taste for
strong drink, then tempted them to smuggling and breaking
the law.[1] Seaforth started two distilleries at Stornoway,
importing barley for the purpose. By 1825 these had ousted
the illicit stills, but they were closed about 1870.[2]

175 From a perilously narrow margin of subsistence, periodi-
178 cally overstepped in famines, the Islanders passed to a
larger measure of production for sale, and in the second
431 half of the eighteenth century population increased. Its
433
[113]

[1] Cf. D. Stewart of Garth, *Sketches of the Highlanders*, 1821, vol. i, pt. ii, sec. v.
[2] Brand Report, 1902.

000 landlords to improve passenger regulations at that time.

175 Wars brought enlistment in the Highland regiments,
162 the Navy and Merchant Marine. Owing to migrations of
all kinds, males came to be outnumbered by females, then
[702] as later (100 males to 114 females, 1931).[1] In Lewis in
[167] 1795 the proportion was 100 to 111, and in Harris 100 to
124. From this period onwards the 'export of men' con-
175 tinued, modified by the reserve for war. Men were trained
162 for the Naval Reserve and Militia; and in 1900 for instance
702 800 men were training at Fort George and 2500 sailors
were in the Reserve. The maintenance of a reserve for the
Navy was one of the strongest pleas for the framing of the
Crofters Act.

175 A new resource, important to the Islanders after 1750,
824 was kelp-making, the cutting and burning of seaweed upon
323 the shore, for use in the manufacture of alkali in the glass
388 and soap industries. From 1770 onwards the price rose,
heightened first by an import duty, then by the Napoleonic
175 Wars. Estimating from the high prices, averaging over
824 £10 per ton from 1800 to 1823, Sir John Sinclair put the
435 value of the annual produce (20,000 tons) at £200,000. "It
may appear surprising", he remarks, "how that sum could
be of such importance to 80,000 people"; but he goes
on to point out that this gave the additional cash needed
to supplement their subsistence. But even when Sinclair
wrote in 1825, the industry was in peril. Failure and loss
occurred almost immediately after, with disastrous effect.

175 It is complained in the *New Statistical Account* that
423 owing to the summer-time work of kelp-making up to
1830, the people could give little attention to the crofts, so
• [511] that their extension must almost have ceased. Nor could

[1] In 1951 the ratio in Lewis was 100 males to 112 females, and in Harris, 100 to 110.

175 small savings, if any, have been put to the purchase of fish-
• 511 ing gear and boats, for fishing, too, was summer work. By
[433] 1833 the poverty of the Outer Islesfolk and the bankruptcy
of the landlords were such that Parliamentary attention
was called to the state of the Hebrides. Poverty continued
to be extreme, but need turned the people to fishing.
[433] The loss of revenue to the lairds led to their making sheep
farms—somewhat unwillingly—with local evictions: in
Lewis chiefly from Park and from north of Stornoway, and
in Harris notably from the western Machars to the eastern
[423] Bays. In spite of this, it also brought about the sale of
[621] Harris by Macleod, and finally of Lewis by Seaforth in
1844.[1]

(B) NEW OWNERSHIP AND CAPITAL IN LEWIS: 1844–78

175 Lewis was bought by Mr. James Matheson, a gentleman
423 of Highland family, whose fortune had been made in China.
Sir James (as he became) put much capital, effort and
goodwill into the management and improvement of the
Island. Of the amounts expended we may distinguish, so
far as possible, what he spent as a rich man for his private
[931] pleasure from what he spent for the people. No sooner
had Matheson bought the Island than the 'potato famine'
of 1845–46 broke out. The terrible loss of life in Ireland,
and the depopulation of that country which followed, would
have been equalled in the Isles but for the action of
landowners like Matheson—who were the descendants of
'kinsmen', not of alien conquerors—and also of subscribers

[1] A sketch map of Harris showing the areas cleared (1816–54) and areas settled as a result, together with those re-settled by government help after 1900, is given by J. B. Caird, *Scot. Geog. Mag.*, vol. 67, 2, 1951, p. 94.

175 rent averaging 31s., in addition to which there were over
423 1000 houses of the cottar class and 300 houses of the
squatter class.[1]

Lastly, Sir James trained no successor to follow up or improve upon his experience. At his death in 1878 Sir James was succeeded by his widow, and, nearly twenty years after, she was followed by a nephew and his son. But the expenses of Stornoway Castle and its burdens, accompanied by lower rents, weighed down the new proprietors.
[228] In 1918 the estate was sold to Lord Leverhulme, who shortly afterwards purchased Harris too, with a view to his great schemes of fishery development.

(C) FISHERIES: 1750–1914

175 For the greatest expanding industry of the northern
411 coastlands, Matheson had done comparatively little even
at Stornoway. In 1883, a former Factor (Mr. Mackenzie
228 of Calgarry) stated that he had constantly asked for aid
to the fisheries, especially by the building of harbours,
pointing out that the landlord would reap benefit in rent.[2]
But Matheson had replied that the fishermen and fish-
curers, the people engaged in the trade, should do this work
[654] for themselves. By the end of the century, harbours were
being planned and built with State aid in the north, west
and south-east of the Island (at Ness, Carloway and Uig,
[439] and Tarbert, Harris). In 1900 the Islanders possessed
150 herring boats, and in that year five boats from the
Stornoway District sailed for the first time to Yarmouth,
• [511] and two to Lerwick. For the next dozen years there were
[113] real hopes that prosperity could be maintained.

[1] *Royal Commission on Housing*, 1917, p. 212. Cf. *Fraser Report on Cottars in Lewis*, 1888, and the recommendations by the Scottish Housing Advisory Committee, *Report on Rural Housing in Scotland*, 1937, pp. 56-63, 75-77.
[2] Brand Report (1902).

COMMUNITY FROM PAST TO PRESENT PT. II

427 croft by subdivision, he would pay little, indirectly and by
656 arrangement; while if he simply built a hut or house on
a vacant spot he paid neither rates nor rent. Either course
was illegal; yet it was too expensive for the landlord,
however 'hard-hearted', to take legal proceedings to turn
off a squatter. As for wholesale expropriation the suffering
caused and the odium incurred would have involved—and
would still involve—both landlord and State in insurmount-
able difficulties by starting fresh agitation, perhaps with
outbreaks of law-breaking, repression and bad blood. Yet
these anomalies still discourage, and the normal illegalities
demoralise, all concerned.

656 Because of the provision by State and local authorities
178 of a growing range of services in other regions, and also
because of the special reasons of Insular poverty, State
• 511 action was increasingly taken in the Isles. To what extent
have the Islanders responded, it may be asked; or how
12 far may they have failed, in return for aid offered and
[476] benefits received? Let us begin with mutual aid practised
among the people up to 1900, and then consider the repay-
ment of loans and grants under different conditions. Ob-
servations by those in touch with the Island for many
years, officially or privately, allow one to read between the
lines and attempt an impartial judgment.

175 As to the strength of independent mutual aid there
476 could be no doubt. Up to the beginning of this century,
the amounts expended on parish relief were 'almost
(657) nothing', and had shown no increase in preceding years.
General poverty, anomalies in the rating system, and the
mistakes such as the erection of poorhouses by the central
administration, diminished resources; but the people
generously gave help to their poorer neighbours in work
and gifts. Except for a year of overwhelming crisis,

175 CH. IX ECONOMIC CHANGES: 1750–1919
178 and savings were sent by emigrants who remained faithful
433 to parents and home.

If it be asked why most of the people kept to their
167 Island home in spite of its poverty and earned so little
175 away from it, one answer must be that their native tongue
178 formed a barrier encircling them as a community at home
197 and cutting them off from the rest of the nation. Seventy-
five years ago the new Education Acts were not yet in
(671) full operation. Comparing the relative well-being in the
Shetlands with the extreme poverty in the Hebrides at that
(871) time, a northern agriculturist wrote that in Scotland, only
• 511 in the Hebrides "is the food obtained by the peasant
occasionally so scanty" as to be unable "to maintain a
[184] labouring man in vigorous health". Inquiring why there
should be so great a difference between the Shetlanders
175 and the Hebrideans, living in similar, distant isles, he
178 wrote, "We think the answer may be given in one word—
197 *language*. . . . The population of the Hebrides cling to
their ancient Gaelic with consequences most disastrous to
182 themselves. . . . It handicaps them in the race for life . . .
is a hindrance in the cities and a check to the emigration
of both sexes to those world-wide regions where all who
speak the English tongue find themselves at home."[1] He
concurred with the Census Report of 1871, which stated:
"The Gaelic language may be what it likes, both as to
antiquity and beauty, but it decidedly stands in the way
of the civilisation of the natives making use of it, and shuts
them out from the paths open to their fellow-countrymen
who speak the English tongue". The Report concludes:
"It ought therefore to cease being taught in all our national
schools. We are one people and we ought to have but one

[1] James Mollison, in the Highland and Agricultural Society's *Report on the Present State of the Agriculture of Scotland* (Edinburgh, 1878), pp. 136-38.

COMMUNITY FROM PAST TO PRESENT PT. II

175 language." Many Islanders would agree with the state-
178 ment that Gaelic was a barrier to economic progress.
197 It was not only Lowland schoolmasters, ignorant of Gaelic
182 but an educated, sensible class of men in their day, who
used the strap on the palms of the little children "for
their good" because they could not understand English.
• [510] An active Lewis country schoolmaster, who had considerable
175 rural knowledge and experience, said to me: "I know what
197 I have suffered through life from being brought up on
Gaelic. If I had my way, I would *punish* [with the strap]
871 every child I heard speaking Gaelic in the playground!"
Had the Island School Boards wished Gaelic to be con-
sistently taught with English, they could have prevailed.

114 One may not only disagree strongly with the means—
197 the strap—but hold that enlightened bilingual teaching is
871 both worth while culturally and also of assistance to
intelligence without interfering with use in English of the
three Rs, and of secondary and higher education. Yet in
153 Lewis recent non-verbal tests in English and Gaelic show
a mean intelligence quotient depressed by about 15 points.[1]
153 The conclusion seems to be that under the present system
197 the Gaelic school child is still at a disadvantage compared
182 to other school children. But even more important to the
child's development would seem to be the expression of
121 his response to his rural environment in his own tongue.
For this the school tests and the educational code do not
fully provide; nor do the tests of life when the adolescent
Islander suddenly finds himself at work in a Glasgow
175 factory or abroad in city streets. What concerns us here
197 is the economic drawback of a lack of ready English among
182
(113) [1] Christina A. Smith, M.A., B.Ed., *Mental Testing of Hebridean Children in Gaelic and English*. (Scot. Council on Research in Education, vol. xxvii (London, 1948); J. L. Campbell, *Gaelic in Scotland* (and ed.) (Edinburgh, 1948).

427 Nevertheless, the attachment to the holdings is very real and must be given careful con-
• 511 sideration when assessing their present utilisation and potential value. It is particularly
significant because it leads to large numbers of tenants retaining holdings which are far
[447] too small to yield a living. Inevitably they seek other sources of income either at home
(as by weaving or casual road labour) or away (as in the Merchant Navy, armed forces,
[29] police or other skilled or unskilled work). As a consequence the croft is neglected and
its potential resources, small as they are, are not realised. The decline in cattle
numbers since the late nineteenth century gives some indication of the scale of this lost
productivity over the parish as a whole. This is the crofter's own loss. Individually
one can appreciate the problem - "four cows will not give me a living - better to get
[445] work on the hydro-scheme and sell the cows". And when one hydro-scheme finishes
another will take its place, or there will be casual road work or other labour and, between
times, the unemployment benefit which the self-employed crofter does not get.

Certainly the land is of poor quality, the climate in some respects severe, and the
cost of transport, from Uig even to Stornoway let alone to the mainland, a perpetual prob-
[421] lem. But the root of the problem is the small size of most of the crofter-holdings, on
[187] the one hand, and, on the other, the importance which most crofters attach to the possess-
ion of a holding, no matter how small and how neglected it may be. How has this come
to be?

TABLE 5

The multiplication of crofter-tenants, and their increasing rents. 1850-1890.

	Tenants:		Rental:	
	1850	1890	1850	1890
Garenin	15	27	£70	£78
Tolsta Chaolis	29	40	£86	£96
Knock Carloway	16	33	£52	£66
Upper Carloway	25	53	£81	?
Breasclete	38	61	£111	£121
Breasclete Park	4	9	£9	£14
Callanish	38	52	£82	£104
Breanish	25	28	£94	£94
Islivick	13	10	£23	£28
Aird	9	10	£30	£29
Valtos	29	40	£149	?
Kneep	18	23	£89	£80

175 It is worth noting that the rental charged for the newly cleared farm of Carnish was
427 £55 - being £20 less than had been paid by the crofters. Thus it cannot be said that the
latter were evicted purely in order to obtain more rent. The proprietor must have been
taking a long term view, looking for land improvement rather than immediate gain. By
the 1870's the farm rentals had increased by 55%, those of the crofting townships by only
15%. And the latter often remained unpaid.

Thus, whilst the farmers prospered, the tenants became crowded in their townships
175 which were correspondingly less and less able to support their increasing numbers.
427 The crofts became so reduced that in an average year the produce of the land might keep
• 511 a crofter and his family for only six months; for the remainder of the year they had to find other means of
175 support. Fortunately, after the hungry years of the 'Forties', fishing provided just this.
226 Starting in 1851, an annual migration began, first to Caithness and later to the whole eas
44 coast of Scotland and England. By the 1880's not only were most of the able-bodied you
men following the herring as hired men on east coast boats, but many of the women-folk
[148] who had learned gutting, packing and kippering from English girls brought to Stornoway
[22] for the purposes, were also earning. This was summer work, and fitted well between
seed-time and harvest. In the winter, small local open boats worked long lines for
white fish which were dried and salted for local curers as they still are today on the
[517] Norwegian coast. Between the 1850's and 1880's there was a "condition of plenty" in
Lewis "which would not have been credited by those who judged of the condition of the
people by the external aspect or sanitary arrangement of their dwellings".* It was this
"condition of plenty" which encouraged the people to stay at home, to sub-divide their
crofts, and to live on the proceeds of paid labour rather than on the produce of the croft.

Re-settlement, 1878-1935.

175 The process of sub-division ceased only when economic conditions became less
427 favourable and emigration began to exceed natural increase. In the 1880's fishing and
445 farming suddenly became less profitable. Simultaneously, and given extra point by the
871 particular distress of the time, agitation for land reform, and in particular for the
relief of the most congested districts, became a political issue. This began in Uig in
175 1874 when an attempt was made to evict 56 crofters from Bernera; hundreds of crofters
448 resisted by force and subsequently marched on Stornoway. They were well received by
the proprietors - who appear to have been unaware of the inhumane be-
haviour of their chamberlain - and to the credit of all concerned the matter ended peace
fully. But land agitation continued.

175 The position in Bernera was eased in 1878 when Linshader farm was deprived of th
92 old township of Kirkibost which was resettled by crofters from Bosta, the latter being
let to the Tobson crofters as an enlargement to their pasture. In 1880 new holdings
were formed in Hacklete, which had been the grounds-officer's farm (but which, judging
from its population, had always contained a number of cottars or sub-tenants). The
grazing of Laimshader was probably returned to the Borreston crofters about 1886, hav
been part of Linshader farm and, in 1891, six new holdings were formed at Lonsle,
also part of the same farm. At the same period, under the new Act, the crofters of
Crowlista, Valtos, and Kneep applied unsuccessfully for enlargements from the farms,
but during the nineties the islands of Little Bernera and Eilean Kearstay were taken
Linshader farm and added to the township of Bernera, and Valtos obtained Pabay Mor.

*Report ... on the Condition of the Cottar population in the Lews. (C. 3265), 1888, p. 4

agrarian order. Crofting townships were created which contained holdings of a uniform size, often fit to provide only a bare subsistence living. This is still so today. There were and are no means of achieving ambition through some kind of agricultural promotion, no ladder to climb to prove one's ability to win the land over to one's side to increase its yield. And as each family increased, the progeny demanded land. The family acres were divided, subdivided and fragmented to a vicious mathematical system : more people, less land.

In the nineteenth century, many estates were sold. The newcomers, with no kinship ties with the small tenantry, saw that the only way to make their estates economic was to establish large farms, which meant the eviction, by force if necessary, of the small tenants. This is what happened. For those who did not emigrate, it was a life of huddling around a weak fire, whose flame itself could hardly stand, and thinking of the prospect of starvation and the 'old days'. Thoughts nourished on these old days became the root of action; and a fierce agitation for land reform started. The Minutes of Evidence of the Napier Commission (1882-4), of the Deer Forest Commission (1894-6) and the several official reports on the conditions of the crofters and cottars, give ample evidence of bitterness and despair as the result of poverty and lack of opportunity. About 1870, unrest in the congested areas of crofting townships became a political issue. The flames of ideals were burning high and bright. Ideals were transformed into action : take the land !

By 1880, the ripples from the stone flung into the agrarian pond were reaching the general public. Sides were taken : one stood either on the economic touchline, or on that dangerous thin red line of sentiment based on high feelings and a deep sense of wrongs being perpetrated on fellow humans. The landowners naturally insisted on the right to move into an era of land use in which management was not hampered by affairs of sentiment or philanthropy. Governed by the cold principles of business, they hardened themselves in the face of their attackers. And though they pointed to arrears in rent, and their inability to improve their land agriculturally while they had tenants not of their own choosing, they faced mounting antagonism.

6 TRADE AND INDUSTRY

IN the earliest times, the folk of the island of Harris and Lewis were self-supporting; all that they needed for life as it was lived in those days was available at near hand; their existence was self-contained, the economy virtually self-sufficient. By and large, the only commodities often imported were salt, iron, and, to a certain extent, wood. Rents were paid largely in kind: the produce of agriculture, fishing and labour. Surplus produce was directed to southern markets to bring in the odd shilling or two for which there was really very little need in the island. But once money became important in the national economy, it was not long before it was required in the island economy too. By 1790, if not well before, two or three open boats set out each year from Uig to Glasgow, laden with salt beef and dried salt fish. At about this time, too, changes were making their slow appearance in the island way of life and living. Specialists were being required: smiths, tinkers, shipwrights, netmakers, boatbuilders, weavers, tailors and millers. Each of these craftsmen generally held some cornland, either individually or in shares, and also had some rights in the common ground of the township in which he lived.

CROFTER INDUSTRIES

From the pure crofter class there emerged the crofter-craftsmen. In Lochs, for instance, by the turn of the seventeenth century 80 per cent were registered as fishers and netmakers. In the west, in the parish of Barvas, some 70 per cent were also fishers, with kelp-making as a seasonal occupation. In Stornoway parish, where sub-tenants paid 30s to 60s in rent, with twelve days' service, they sold ling to their tacksmen at 5d each, earned 20s a month on herring boats, made kelp at 30s a ton, and worked on roads for 8d per day.

In Harris in 1895, the eight trained male weavers worked for the gentry only. Weaving for the populace was done by the

It is obvious that crofting no longer affords a livelihood in Ulva. The only two families without other income are those where all the members are elderly. Of the about 60 such members in the working age-groups, five have one or more members employed in a secondary capacity on the Isle, and a further five have one member employed in a primary capacity.

Aird used to be a self-contained community: the land was fully cultivated and a certain amount of fishing was carried on despite the difficulty of drawing up the boats over the rocky beach. Now it is prosperous, but very much dependent on the D.A.P. scheme, and if this should ever close down, most of the younger people would have to leave in search of other employment.

CHAPTER SEVEN

VALTOS, KNOCK AND REEF

by David O. Symon.

On the eastern side of the Aird peninsula, facing east to Loch Bragg is a secondary peninsula of more moderate, but some-like-it-hot-like-it-not, relief. This, together with an adjacent island, forms the parishes of Valtos and Knock, and Reef. The island, or more correctly tidal island, comprises the territorial limits of the townships of Valtos, Knock and Reef.

This secondary peninsula is actually a tidal island, the only means of access being a causeway which is flooded at high tide. The area is about 1 mile (Ordnance Survey 1959) long by 1 mile wide (Ibid.). Arable land is to be found only on the machair of Reef and Knock (Valtos has no machair) but is very poorly developed and on the glebe at Uigean. The Reef machair, which is part of a succession similar of tidal ranks, a belt of sand dunes (Dr. Ritchie, 1960) and a sandy plain sloping gently inland towards a dead flood lagoon, is composed of shell sand, which is very fertile, and is well drained by the sand dunes and, in addition, the sand has been found to contain 18% K. O. Except where the machair sand has drifted upstage to produce a "brown machair" of mixed sand and peat, the thin soils of the Valtos peninsula are probably mostly poor. Although the length of the peninsula faces with the extensive of Atlantic weather was moderated by the protection afforded by the Aird peninsula and the islands of Pabay and Valtos.

In the period before the letting of crofts the whole peninsula was occupied by some five, perhaps - Valtos, Cliff, Knock, Uigean and Reef - sides of which should contain 12-20 families, in the manner of the Lewis "Ceallachs" (Symon, 1959). Valtos was cleared in 1841 (Valtos Uigean, Uigean and the island of Lewis, crofts were allotted in each of the clearing areas. Valtos and Cliff shared a common pasture and so became one township: similarly Knock and Uigean were combined.

In 1886 the crofts in the croft boundaries were not occupied by the crofters. Certain basic divisions between groups of crofts (usually three in number) are discernable today, and within these basic divisions a certain regularity of distribution of strips persists, but

An attempt has been made in Figs 19 and 20 to relate the size of the stock carried on the individual croft to the size of holding and to the distance from the inner force. The scatter diagram there is a significant division between the subsistence holding (0-7 units) and the commercial holdings (7 units and over). There is no definite relationship between stock and size of holding in the subsistence group. The 7 units of the profit of equilibrium for certain lines in Figure. 20 reveals a somewhat unexpected result. The line for 1959 is the steepest, showing that the stock and the size of holding have moved in the same way, the line for 1960 is a larger stock from those under forty-five. It is frequently argued that the solution to the problem of crofting lies in spite of the difficulty of drawing up the boats over the rocky beach. Now it is prosperous, but very much dependent on the D.A.P. scheme, and if this should ever close down, most of the younger people would have to leave in search of other employment.

In their present state the crofts in the Valtos area are unable to provide a livelihood for the crofter and his family. Of the crofters under study five obtain 50% employment the croft income by other employment. Of those casual labour (at present unemployed) is the most significant, the remaining three are retired

normally determine the "acreage," the number of stock which each tenant is entitled to carry on the pasture.

The small croft has been less than two acres of arable and improved grass land. The average "acreage" in two cows and followers (heifer or bullock either) and usually ten to twenty sheep. Approximately 2000 of the crofts fall into this classification. The medium croft, representing about 270 landholding subjects, has between ten and twenty acres of land fit for crop cultivation and improved grass. The typical "acreage" is two to seven cows and followers, forty or fifty sheep, and occasionally, a horse. We might recall that the sheep may be either a club stock or a private flock. The large croft consists of almost 100 arable acres and, even more important in the predominately pastoral economy, an independent, self-contained grazing of 200 to well over 1000 acres. These claimsitre reasons easily carry ten or more cows and followers and several hundred sheep.

For those who prefer to think in terms of area rather than stock, the relative magnitude of these self-contained holdings may be stressed by adding the fact that only thirty townships on Skye have more than 200 acres of common grazing. There are, for example, Linicro with 729 acres of grazing in 19 shares, Tokavaig with 500 acres in 12 shares, and Borreraig with 375 acres in 42 shares. Over half the townships have less than 100 acres of grazing land.[5]

[5]Ibid., Table 3.

[6]Time to go home to Skye to die." I might add, "and to win a pension."

It is not only the tenant crofters who are non-resident. About 20 percent of the owner-occupiers in Glendale are non-resident. Only two townships have no derelict crofts. Those who have added these homes and land have no additional problem. Apparently unaware of the full implications of the Small Landholders legislation, they have received a rude awakening. The people whom they thought were their subtenants are, in the eyes of the Land Court, crofters entitled to security of tenure.

[7] One reason for absenteeism, as for emigration, is a [illegible] need for a higher standard of living than the croft can provide. This desire, common to almost all European peasants, as well as American farmers, has assumed increasing importance with the extension of communication and education. The outstanding exception to Europe is Italy. There the majority population has increased markedly since World War I. Today 92 percent in the majority category have a substandard livelihood, judged in terms of sheep necessity.[8] Only 800,000 families out of 5,000,000 have enough land to meet subsistence needs. The difference between the European peasant and the American farmer is that the American lacks any traditional

[8]Information from the files of the Italian Statistical Institute, as reported in the Glasgow Herald, Feb. 22, 1954.

[9]Attachment to the land, or his attachment is not strong enough to offset his desire for material rewards.[10] Beginning, a possible exception in the United Kingdom is to be found in the Southern Hebrides, where the people have a per annual income of less than $500.00.[11] These mountaineers, significantly, are largely of Irish and Scottish derivation. The Hyrenan who leaves in his youth returns in his old age, if he can. We may logically ask what opportunities exist on the Isle for employment which might enable the Gaidhaltachd to raise his standard of living without forsaking the land.

Fishing

Fishing, it will be remembered, was once a traditional and functional activity in the economic cycle of the Gaidhaltachd. But as far as the Hyrenan was concerned, it was no more than a supplement to crofting. It was fine to be able to bring home some fish to be smoked or salted for the winter. The wages earned as a hand on an east coast vessel during the summer months were also welcome. Beyond this, he did not care to become involved with the sea as an occupation. His attachment to the land was too strong.

[11]Campbell, The Southern Hebrides and His Homeland.

as we shall see in the next chapter,

[12]Hostility between the Native dwellers and the crofters. One reason for this is the fact that the village pays more in property tax than the rest of the island put together while they receive relatively little in return. The feeling that the crofter is "eye wasteful", but never pays a cooper' (a penny in taxes) is not at all unusual.

Summary

If the economic aspect of the culture is judged in terms of the standard of living it affords, it cannot be considered an satisfactory. There are persistent environmental obstacles, among them geographical isolation and an unfavorable climate for pastoral-agriculture. We have seen that few can hope for anything which would approach a desirable income in the surrounding commercial society. The crofters have been caught between two cultural patterns. The old system of land use has persisted. A new system has been superimposed. From this new system, however, the Gaidhaltachd has accepted few innovations of more recent origin than the eighteenth century, except those of a material or technological nature. Still, he has ceased to be self-sufficient, and, in doing so, he has become dependent on the commercial world for the very essentials of physical exist ence. For many of the crofters this means seasonal migration in the quest of employment. For some it means part-time or full-time work locally. For a relatively large proportion of the population it means dependence on contributions of their children and government agencies. This dependence has not led to a full

acceptance of the potato, a staple food in Europe, made it possible for Irish people to live on less land. The introduction of a new industry, the kelp industry, provided employment and from time to time paid dependence on a subsistence economy. Vaccination reduced the mortality rate, and emigration and other factors wrought changes of reasoning maturity and procreativity were thus enhanced. Another important factor was the Expropriation of the Clan Property of British agriculturalists during the early years of the Industrial Revolution and during the Napoleonic Wars. A especially important factor was the creation of subsistence the land which made early marriage possible, in particular after the installation of the crofting system. Finally, but by no means least significant, there was the persistence of deep typical features of the culture in the days of the clan. The sentimental ties of kinship and attachment to the soil had remained.

The population decreased, partially a result of the Gaidhaltachd involvement in the process of commercialism lies, was primarily a result of a failure to fully adjust to the higher, more interdependence socio-economic level. By the end of the second period of the 20 years period, 1945, the people had become hostile to the potato and their own fertility. When the potato failed them, they had nothing to fall back upon, except the generosity of their landlords. The caste and kinship structure had collapsed in the wake of the Wars, and the subsidized land could not produce sufficient grain. Its relief if any that the population had ever-run the limits of total resources was conditioned.

usually an old woman, as the women were responsible for the milking, and the old men were usually fishing around the village.

We left for the shelling early in the morning, taking bed clothes and food. I walked out with my mother, who went back home in the morning. My mother came out with the provisions in the evening. If no Hyrenan came out that day, I went to sleep with someone else. You never slept alone. During the day we fished for trout or gathered small blackberries; or we looked for the nests of grouse and other birds. You would hair or read, and walk for miles to visit friends. The boys swam in the lochs, and sometimes the girls pinched their clothes. From the top of the hills you could see Stornoway, the Hills of Lochs, Tiglabhigh the lighthouse in Reay; on some days you could see the distant hills of Caithness on the mainland. It's on the shelling that I learned about other parts of the island.

I remember watching the sun and trying to will it to stay high in the sky, before our mothers came out from the village to milk in the evening. They called the cattle--"Boill, boill, boill"--and they carried the milk every day from the shelling to the village, all those miles. The cattle knew their own shellings; sometimes

The Role of Religion on the Croft

As the prestige of the old people and the control of the family-based elders over the social activities of the people was operated with religious sanction, the status of the father within the nuclear family has been reinforced by the religious expression of his role. As we know, the older inter-family patterns of economic cooperation have been disturbed by the changes stemming from the process of commercialism. This has not disturbed the position of the father as the source of authority and discipline. He continues to play a basic role in establishing the tempo of interaction within the home, the community, neighborhood, and community. He decides who will do the work and when. He determines to what social activities his wife and children will participate, always, of course, willingly guided by her ringmaster old man. His status is conditioned by age, sex, and, to a lesser degree, by economic proficiency. Every man is the king in his own home. For the majority of crofters, though by no means all of any sect, the day begins with the saying of grace before breakfast and the reciting of thanks after breakfast. The same pattern is repeated at the table of any food, including a cup of tea. The form of grace may be used to cast light on the religious outlook of the Gaidhaltachd. "Gracious God, we have sinned against Thee, and are unworthy of Thy mercy, pardon our sins, and bless these mercies for our use, and help us to eat and drink to Thy glory, for Christ's sake. Amen."

no road and access by foot is difficult. To reach the grazings the crofters travel by boat from Mealasta several times a year and stay in one of the two houses at Aird Bheag which, although vacant, is still in repair. These houses were formerly occupied by estate employees who had crofter status.

From the above account, it is evident that in this district as in others, a single croft is not sufficient to support a crofter and his family. On an average, each resident crofter has acquired the equivalent of two crofts, and in addition each crofter supplements the meagre income obtained from his croft by some other occupation, e.g. weaving, labouring, or driving.

CHAPTER FIVE

THE UIG BAY DISTRICT

(Carnish, Ardroil, Timsgarry and Crowlista)

by

Elizabeth Blowers.

Uig bay, in which low tide reveals several hundred acres of pure white sand, is surrounded by crofting townships. There are no extensive machair plains but the shell-sand forms a fringe of easily cultivated, lime-rich soils on all sides except Crowlista, and, blown inland by the Atlantic winds, it modifies and improves the texture and acidity of the peaty soil as much as 2,000 yards from the shore. It is not to be wondered at then, that this bay at one time formed one of the most important centres of population in Lewis. Signs of ancient cultivation, and the ruins of old clachans, are widespread, but most of the present settlements are less than forty years old: almost the whole area was cleared to make farms in the early nineteenth century. Only in Crowlista, with its thin, rocky, arable land and almost complete absence of machair, were the small tenants left undisturbed. Consequently the district provides an opportunity to compare "old" and "new" townships, both as to lay-out and operation.

Carnish, in the south-west, is dominated by a huge gravel ridge - probably an esker, - over a mile long and sloping steeply to the estuary of Amhuinn Chaslabhat with the rocky headland of Machair Carnish to the north. The arable land and houses of Ardroil are situated to the landward side of the hummocky machair land between the esturies of Amhuinn Chaslabhat and the Forsa river which drains Loche Suainavat and Stacsavat. To the north of the bay the old settlement of Crowlista is situated on the rocky headland to the west of the Rethall embayment; there is a good deal of level land in the centre of the township but the slope to the estuary in the north is steep and rocky outcrops occur on the headland. Timsgarry, to the east of Rethall, stretches inland between the headlands of Tolanish and Borranish along the valley of the Erista river.

There is a mantle of gravelly drift over this area; the Carnish esker has been mentioned and exposures of up to 120' were also seen in gravel pits in Ardroil and Timsgarry. Along the coast blown shell sand rests on this drift and reaches inland for up to half a mile.

484 As yet the tourist trade is almost entirely restricted to visiting relations but many
485 houses offer suitable accommodation for people who would appreciate quiet holidays in
these very beautiful surroundings. The distance from Stornoway, the difficulty of obtain-
[497] ing varied food supplies - and the weather - were cited as disadvantages! Passengers on
a weekly coach tour from Stornoway are supplied with meals at an Ardroil house which has
good access to the beach but otherwise the crofters show little interest in the possibilities
of tourism.

162 In common with other crofting townships, the greatest problem here is that of an ageing
population because the younger people seek employment outside their township. The
166 diagrams[1] illustrate the age-heavy structure of the permanent resident group and also the
464 numbers of the insurable population periodically or permanently away. The lack of suit-
able work, for young women particularly, is also shown. The ages of the tenants also
illustrate this problem. Of the thirty-seven tenants here, twenty or 34% are over sixty-
five. Serious, too, is the loss by emigration of people between fifteen and sixty-five. Of
the total 'working population', 35% have left this region since 1939. The corresponding
figure for Crowlista alone, the older settlement with smaller crofts, is as high as 42%.

241 We found in this part of Uig some crofts efficiently and energetically worked by young
231 tenants, and if reasonable stock prices are obtained the larger crofts can be worked
427 profitably. However no croft will fully support a family; ancillary employment is always
[511] sought by crofters with growing families yet many crofts are carrying less stock than they
[867] might because some tenants are not interested in, or able for, agriculture. The croft is
increasingly thought of as a home, as part-time employment - often for older members of
the family - and as a place for retirement.

000 It is easy to list schemes for improvement and change:- dairying to supply Stornoway
with milk, poultry and pig keeping on a commercial scale, cultivation under glass, the
tourist industry, forestry on a small scale, lobster and crab fishing, etc. Such schemes
would require capital not available in the townships, careful planning, and tactful adminis-
tration by people with real knowledge of this area and its people. Meanwhile even the
potential production of the crofts is by no means realised.

CHAPTER SIX

AIRD

by

Madge Phillips.

131 The little township of Aird is an isolated and old-established crofting settlement along
the western side of the steep and narrow valley of the Amhuinn Gil na h-Airde three miles
133 north of Crowlista. After leaving Loch Meacheit, the river flows northward through a
gorge (at the mouth of which are the ruins of the old corn-mill), then across a narrow
flood-plain into the rocky bay of Camus na h-Airde. The crofts, roughly fan-shaped in
427 arrangement and varying in size from 3¼ to 7 acres, each originally included a narrow
133 strip of the flood-plain, stretching across from just beyond the right bank of the river, up
the steep, rocky slope above the left bank and widening out over the more gently slopes
between the 100 ft. and 200 ft. contours. A number of the crofts were subsequently en-
larged, gaining extra land on the right bank of the stream, whilst others received additional
ground to the north or south.

1. [See figures 12 (facing p.34) and 17 (facing p.39)--Analyst]

330

In many homes breakfast is followed by family worship. 593
ather begins with a blessing; a prayer on behalf of his 787
y, and then leads the family in the singing of a few 787
s of psalm. Next he reads from Scripture, sometimes 787
e visitor because his Bible is not an English version, 512
ments on the meaning of the passage. He concludes with
yer. If the morning worship has been omitted, he holds 592
ening service. Some crofters have family worship both
ng and night. When the father is away, his wife or his
t son conducts the worship. Religious devotion on Skye 771
is more than Sabbath church attendance and attendance
eekly prayer meetings.

The Role of Religion in Township, Neighborhood, and Village

I did not attempt to devise a socio-metric scale to 795
mine the affiliation of members and adherents of the
al churches in either Glendale, Kilmuir or Portree. The
r disunity and conflicts which divided families, both
ar and consanguineal, township, neighborhoods, and the
ar estimate from abstinence of traditional religious
iation rather than from attachment to an established sect
happened to differ from the denomination of one's kinsman
ighbor. Today sectarian hostility is no longer prevalent
the people. The Gaidhanach only chafs his neighbor
ewhat easily and repartee, about his only slightly different
rian views. They refer to each other's sect by nicknames.
hurch of Scotland is the "Established Church." The

513

51

233 usually an old woman, as the women were responsible for
887 the milking, and the old men were usually fishing around
762 the ships.

233 "We left for the shelling early in the morning,
512 taking bed clothes and food. I walked out with my aunt,
who went back home in the morning. My mother came out
with the provisions in the evening. If no one came out
513 that day, I went to sleep with someone else. You never
slept alone. During the day we fished for trout or
gathered small blackberries; or we looked for the nests
of grouse and other birds. You would knit or read, and
walk for miles to visit friends. The boys swam in the
loch, and sometimes the girls pinched their clothes.
From the top of the hills you could see Stornoway, the
hills of Lochs, Uig and the lighthouse in Ness; on some
days you could see the distant hills of Caithness on the
mainland. It's on the shelling that I learned about
other parts of the island.

"I remember watching the sun and trying to will it
512 to stay high in the sky, before our mothers came out from
233 the village to milk in the evening. They called the
234 cattle--'Troit, troit, troit'--and they carried the milk
every day from the shelling to the village, all those
miles. The cattle knew their own shellings; sometimes

513 SLEEPING--hours of sleeping; postures in sleeping; segregation in sleeping (e.g., by age, by sex); bedding; ideas about sleep and sleepiness; naps and siestas, etc. See also:
Baths . . . . . 506 Social intercourse 820
Dream interpretation . . . . . 525 Sleeping habits of children 867
Conception of beings and souls 820

512 the cattle
233 knew their own shellings; sometimes
812 they came back before milking time and stuck their heads
234 inside. They stood outside the shelling at night, and
that's how you can tell where a shelling once was, even
though the walls have fallen, by the rich green grass.
Calves were born during the summer. A hollow was scooped
233 out in the peat, and lined with turf and moss. People
234 had as many as four or five cows. It was like Switzerland,
only we didn't have the bells on the cows. There was lots
809 of milk, fresh thick cream and crowdie (clotted sour
826 (234) milk); the old people knew how to make cheese.

233 "The moor was very eerie at night, with the sound of
231 the birds. There were only a few hours of darkness
234 513 anyway, and I'm sure we didn't get much sleep, but somehow
we were always fresh. It was the air, the moor air is
more health-giving. The air is different there. Ill
people benefited from the change. Sometimes a person
with TB would stay out there all summer. The air is heavy
by the sea.

805 "There was no sense of time the way there is today.
233 If you got lost in the snow or fog, you followed the cows
221 home. You had all summer to take home the peats, to work
824 the croft, to harvest the corn. There wasn't a world,
178 there was only ourselves. That has changed since the war.

106

621 The first thing that is said when for some reason
513 a woman is left alone in the house is, "Who's going to
858 go and sleep with her?" Often a child will be sent from
a neighboring family, not always relatives, to stay with
591 her at night. As in the past, it is not uncommon for
592 a childless elderly couple or single person alone on a
888 croft to take in a young, homeless couple, to whom they
may or may not be related. The young couple cares for
the old person or persons, and inherits the croft when
they die.

"Keeping up the relation" is the process by which
602 relatives sustain interaction and expectations of mutual
476 aid even though their relatedness becomes more distant
with succeeding generations. "I've got cousins in Ness
that I stay with at the Communions. They're getting on
into the third generation now." A cousin is a cousin
even to the 42nd degree (Williams 1963: 142), as long
as there is reason to sustain the relationship. "I know
we're related, but I can't quite place it." "We're a
bit related. I think she was a MacPhail before she
605 married." "I don't quite know how we're related, but
my mother and his mother considered it a close relation-
ship, and he has kept it up."

591 Every villager has a vast amount of information
592 about other villagers and their families, which may be
582

147

529 Whereas at other times of the year there are specific
273 times which are considered appropriate for visiting,
594 especially if the visit includes a bottle, at New Year's
visitors may appear in the middle of the night or at
any time during the day. Some men may stay up for four
513 nights in a row, going back home for a few hours of sleep
592 or a bite to eat before setting off again. Various pranks
527 are played. Men climb through the windows of darkened
594 houses, or wake up sleepers by making animal sounds. One
man went around the village showing a pig's foot to women
as though it were a penis.

527 But whether lasting for one night or for five,
festivities end with the arrival of Sunday; and the usual
comment is, "Thank God it's Sunday."

166 The "exiles" prefer to return at such times as New
221 Year's, or during the summer months when the beaches are
484 inviting and the gales absent. They remember the
(520) "characters" and other features of village life which
give it color, often forgetting the drab background out
of which the color was fashioned. Some villagers whose
siblings have married and left the island continue to live
alone in the house mainly to keep the house in order for
their return. "I wouldn't close the house on them. They
come back every summer." A man thinking of emigrating

514

595 beginning of the resettlement movement which has given the modern crofters of the district almost all the lands formerly occupied by small tenants. This process was completed in the Bernera region soon after 1918, and the problem now, one which is obviously going to become increasingly important - is not to give the crofters more lands, but to find active crofters for the existing holdings (see Chapter III for more detailed information on clearance and resettlement).

The ground plans of the existing settlements vary considerably, depending merely on the terrain. Where a township is spread along a fairly straight coastal (or inland) 787 roadway in the form of the road boundaries run at right angles to the coast and for each house 427 a long narrow croft (see Fig. 2). This type of settlement was established in Bernera in the early nineteenth century (i.e. pre-clearance) lotting was conducted when the township was re-settled in 1878. Lochsaddle, Lonbain, Croistay and Earshader also follow the same type of layout as nearly as possible. Ion Tobson, with the exception of Valasay, is 787 a fairly compact township, with the crofts and houses in the centre and on a small area of land not in 1921 but the disposition of the potential arable lands is very uneven. It was laid out in 1921 but the disposition of the potential arable lands is very uneven. consequently an essentially regular layout based along a main Loch Breacleit - Loch Eng Brasaclete main, appears somewhat complicated. The accompanying diagrams - physical conditions are brought by physical conditions. (Figure 28). Ion Tobson is a unique lotting plan at Bantaiv. (Figure 29).

Within the township, with the exception of Kirkibost, the bulk of the settlement 341 is concentrated on the coastal fringe of the township, the croft houses lie on the edge of the 342 old and present cultivation (see Photographs). Kirkibost is an exception to this and presents problems. It would appear generally that black houses were universal in the nineteenth 343 century except for the farmhouse at Crago (the oldest 'white' house in Bernera). There 344 houses, (18 Tobson), possibly the tacksman's house at 1 Backlate, the former farmhouse 345 at Croistay and 1 Earshader. Since the 1921 resettlement and subsequent grants from the District Board and of Board of Agriculture grants, housing was improved, only examples being 5 Backlate and 10 Breacleit. The resettled townships generally had improved accommodation from the start. Improvement has rapidly accelerated since 1951. In most cases at the present time housing is of very high standard, only one blackhouse and one near blackhouse are still occupied.

Water supplies and sanitation are less satisfactory. Most crofts by now have their own private water supply, though it is hoped that mains schemes may be conducted within the next few years. Sanitation is very primitive and standard. It consists in most cases of a 312 pit in the rear of the house (where there is room) or in a shed in the back yard. In the case of houses that have extensive lands attached, Elsewhere has been evaluated since 1951 in all crofts and most are connected, though not necessarily in every room. Cooking is 335 sometimes by electricity but more commonly by Calor gas and a pot-belly stove. Hot water is provided by a boiler in the kitchen range. Washing is done in the kitchen and outside help is needed to carry the cut and dried peats to the nearest road. Difficulties may arise. The cost of transport to the nearest road may be such that it is uneconomic.

Access to Bernera by road is now comparatively easy. Where formerly Loch Roag provided the highway of communication, the road built to Earnadale across Great Bay 787 and the £27,000 bridge to Bernera Island, built in 1953, have caused a revolution of 787 values. Lochsaddle is approached by a carried branch road and the other Bernera share townships lie upon the narrow and jutting main road, though four of the six Lochsaddle 787 crofts are now joined by a branch road. The road to Croistay is a cul-de-sac and is somewhat isolated. In Bernera Island the old cart track from the pier at Barraglom across to Tobson and Croistay has been somewhat re-aligned since the construction of the bridge. This is a good tarred road, as is part of the branch to crofts 1 - 8 Croistay. The old road to Kirkibost was tarred in 1955, though three outlying crofts near Barraglom 787 are still reached by a cart track. Kirkibost is the only Bernera township which is not 787 connected. There is a new road to Shulaiste from Breacleit which provides relatable, though circuitous, communication. Valasay is one of the most isolated settlements in Bernera, linked with Breacleit rather than with Tobson by the footbridge and causeway 787 paid for by Congested Districts Board grant about 1910.

515

515 PERSONAL HYGIENE--frequency and methods of bathing and laving; use of washing and bathing facilities; use of soap and other cleansers; use of towels; conception and idealisation of cleanliness, miscellaneous hygienic practices (e.g., brushing of teeth, washing of hair, removal of body hair, etc. See also:

THE PEOPLE

in the exercises of swimming, archery, vaulting, or leaping'. He [175] also says that they were great lovers of music, and that when he [181] was in the island he heard of eighteen men who could play the [533] violin well without having been taught. [534]

The Rev William MacRae, minister of Barvas, writing in the *New Statistical Account*, gives a description of his parishioners (in 1836) which can be applied to all the country districts in the island at that time. After stating that in their habits much clean- [515] liness can scarcely be expected, considering their poverty and the wretchedness of their habitations, he says:

> Their mode of living most closely approaches the pastoral: without arts, trade, manufacture, navigation, or literature, their whole round of duty consists in securing fuel, in sowing and reaping their scanty crops, and in rearing their flocks, and tending them at pasture. Yet in these limited circumstances, while supplied with food and clothing of the plainest description, and able to pay their rents, their simple cottages are abodes of happiness and contentment. Blue kelt [a thick cloth] is almost the only dress [241] worn by the men, and stuffs, variously striped, by the women, with under dresses of plaiding, all home-made. In many instances, however, cotton shirts and print gowns are beginning to supersede the use of some of these articles. . . . Their ordinary food consists of oat and barley meal, potatoes and milk variously pre- [262] pared. Their domestic economy is frugal and moderate beyond conception. The produce of a foreign soil such as tea, coffee, and sugar, and the common conveniences of art, such as knives, forks, and etc., are to them altogether alien.

It is of interest that the change in dress-types (from woollen [647] homespun to cotton fabrics) was followed by an increase in the incidence of rheumatism.

Today, the island folk are reputed to be gloomy with a black, [181] depressive attitude towards life. The editor of the *Stornoway Gazette* has pointed out: 'We cannot understand a people and why they act as they do unless we know the content of their memories. We cannot understand the paradox of the naturally gay in heart seeking religious consolation in a grim and gritty Calvinism. We cannot understand why Lewis, which clothes the world in colourful tweeds, clothes most of the women in noth-

517

050 relevant to village life, and thus is not attended to.

517 Comedies, soap operas and westerns constitute the
[207] favorite television programs. Many of the men read
[538] adventure stories--war, western and detective--on the
[204] quiet Sunday afternoons. Magazines and newspapers most often received include The Daily Express, The Sunday Mirror, The People's Journal, The Stornoway Gazette, The Oban Times, and True Romance, documents dealing with local events or with scandal and dramatic personal
52 accounts. In general, the news of the mass media to
181 which this audience attends is gossip writ large. Such news, like local gossip, is discussed endlessly, in elaborate detail, until sapped of all potential to excite or until new events capture the attention of the village audience.

Events which occur in the open, treeless countryside
517 are vivid and dramatic. The generally low level of
18 stimulation enhances their dramatic effect. A man appears on the hillside or a car along the horizon, and all ears and eyes attend. The British system of perennial number plates on cars makes it easy to identify the shifting cast of characters even at night. Even children memorize long lists of number plates. There is a perpetual audience looking for a play.

517 LEISURE TIME ACTIVITIES--standards of amusement, recreation, and artistic appreciation; distribution of leisure time between active and passive, between social and individualistic, and between culturally preferred and less preferred pursuits; esthetic ideals and principles; canons of taste; levels of appreciation and "culture"; etc. See also:

Amusements	155	Distribution of labor and leisure	461

Entertainment	80	Visiting	574
Education	271	Religious activities	78, 158

142

154 sympathetic with each others' idiosyncrasies. A constant
572 joking keeps people at arm's length and discourages the
[522] development of empathy.

Accompanying this style of indirect, inhibited
154 expressiveness and the low level of stimulation are
154 culturally prescribed opportunities for relatively uninhibited expressiveness. Such opportunities include the ceilidh ("visit"), the drinking situation (mainly for men), the role of clown or "character," and holidays
146 such as New Year's. Although young villagers and
[198] emigrants often describe the village as "dull" and "dead,"
[181] the emigrants are happy enough to return to the island for short periods of time, during which they participate in those situations in which expressiveness and limited license are accepted.

154 3. Ceilidh, Clown, and New Year's Festivities: Only
154 on certain occasions is relatively spontaneous and uninhibited expressiveness condoned or encouraged within the
574 township, and even then the form which this expressiveness takes is fairly narrowly circumscribed. The traditional
[178] ceilidh was such an occasion. In the past, people gathered
[517] regularly at night in the high ceilidh (the ceilidh house,
[538] or home of someone in which a genial atmosphere existed;
[533] the high ceilidh was often the home of someone who lived alone), where stories were endlessly repeated and elaborated,

143

154 genealogies told, and old songs were sung or new ones
572 composed. The concentration of expressiveness in these
[522] forms resulted in a well-developed, oral repertoire of
[533] literature and music.

The ceilidh still exists today in the form of less
[538] regular gatherings. Stories and genealogies are seldom
[533] recited, but songs are still sung. A few new songs are being composed. The word ceilidh is used as both a noun and a verb to mean "a visit" or "to visit," but implies a casual, relaxed atmosphere rather than a formal visit. A formal visit is made by relatives living in Stornoway, government officials or businessmen, and is characterized by more constrained behavior.

154 The ceilidh of today is often accompanied by the
572 drinking of beer or whiskey, but a distinction may be
203 made between a gathering which includes both males and
198 females, and a drinking situation at which only males are present. In the past, men often gathered in barns or weaving sheds to share bear made locally from barley or
273 brought from town in a large keg. The drinking of whiskey
[178] was reserved for special occasions, such as births, weddings,
[534] funerals, and the festivities surrounding the New Year, but increased income has resulted in the consumption of whiskey on many other occasions. Heavy drinking is still an
[205] activity engaged in largely by males, and occurs in extra-village locations such as hotels and bothans (see Chapter 6).

5

2

that the people of Skye, including many of the newcomers, 785
have not been favorably impressed by Skye Week. The consensus 795
is that it is not representative of Skye. For the Sgiathanach 541
the Highland Games are alright, but the concerts, dances and similar festivities only cause ill feelings.

As might be expected social life is more vivid in Portree. 369
Here the members and the adherents of the Church of Scotland 795
partake of a number of recreational activities. In the winter 52 ● [526]
there is badminton twice a week. In the spring and summer [526]
there is a little golf and tennis. The limitations are not religious; they are climatic. Then, too, there is shinty.
We have already noted the existence of many clubs. There are [535]
regular dances. Moving pictures take place twice a week. [546]
All of these activities are run by newcomers; the Skyemen have [167]
a more or less passive role. The "elect" of the two smaller 795
sects are, to say the least, very much disturbed by these 794
frivolities. What is worse, the children attend the dances 626
and the concerts and the boys play shinty. They can find 883 52
enough solidarity among those of their own age grade to outweigh the threats of their elders. Apparently they find enough security to be unaffected by the stern denunciations of the minister from the pulpit. When they marry, however, they 794
have to recast the pattern of their behavior, for now the 884 626
elders are in a position to exercise control by withholding baptism from their children. Some may turn to the Church of Scotland.

Standing in marked contrast to Portree, in Glendale the 888
control by the aged is complete. There is not a single activity 883 626 [369]

at which the youth can join together as a sodality; hence, they 888
hardly ever have a chance to question the control of the "elect." 883 626
Only once in recent years has the control of the old people 578
been criticized. After World War II, the men who returned to 888
the neighborhood wanted to erect a village hall. This threatened 883 626
both family unity and the solidarity of the neighborhood. The young people were divided between the time honored obligation to honor their parents and their own desires for a fuller life. The parents were torn between religious beliefs and their affection for their children. The minister and his elders were faced with a situation which threatened the fundamental tenets of the faith and the continued ability of the religious expression to sanction the existing order. How strong are age controls? The youth did not get their village hall. Many of [167]
them left Skye for the Lowlands where social life is less restricted.

The difficulty is that until, say, forty years ago the 178
traditional outlets were sufficient. Middle-aged people 883
remember how the youth used to drop in on the old widow for 177 52 ●
a visit on an evening and then make their way off in couples for a bit of courting. Two World Wars and the continuing program of National Service, not to speak of the influence of the schools, have given the youth a new perspective. They have spent one or two years in an environment where recreational activities are considered not only innocent but also wholesome. The radio and magazines have contributed to the demands of the youth for amusements. As if this were not enough, there are

veral agencies who have taken the task of bringing movies 178
the remote crofters in the belief that the Highlander is 883
e likely to stay if he has a share in the life of the 177
lander and the Englishman. These agencies want to "create" 52 ●
ore adequate social organization."

Out of boredom, some young men try to add some spirit 273
their lives by turning to "the drink." Although the 779
igion of the Skyeman is strikingly similar to that of
rural dweller in Wales, I found the Welshman and the
athanach have quite different views on the subject of
perance.[26] All churches support temperance, from the
pit and from the kirk collections, but abstinence or
hibition has never been accepted. Perhaps, their main
son for consistently rejecting the idea is their wont
base many of their decisions on Biblical directions.
re can be nothing inherently wrong in the infallible Word
God. Then, too, to the Sgiathanach, whiskey is not Scotch; 273
is the "water of life." The importance attached to the
n can be judged from its functions at birth, marriage,
death. It is also the means of thanking a man for doing
avor which cannot be repaid. Thus, while abstinence is
ajor religious tenet for the Welsh, temperance is the
of the Skyeman.

The temperance movement has had an effect, all over 275
tland. The "pubs" are no more than a long bar set in a 185
room. Young men who have spent time in England, where
local "pub" is a closely knit club for the villagers, frequently

[26]Rees, op. cit., p. 127

man is no longer concerned with the necessity of having his 771
children baptized, the venerable old men, the family-head 554
elders, prolong their social control by sitting in judgment 183
on those who seek salvation. The strength of age controls 626
is indicated by the continued ability of the elders to resist [178]
all attempts to introduce secular innovations to the crofting
neighborhoods. Even in Portree the majority of the people
are under the watchful eyes of the old men.

Many of the meaningful patterns of interaction are 771
religious. The rites of passage function to augment social 182
control, restore disturbed equilibriums, and establish new 626
ascribed statuses. The rites of intensification, including
those associated with death, function to restore disturbed
patterns of interaction in the family, nuclear and extended,
and the larger social groups and to establish meaningful
relationships when large congregations gather for the
celebration of communion. Religion for the majority is not 771
merely dependent on attending church on the Sabbath and [782]
attending Wednesday night prayer meetings. Every day of
the week begins with a prayer and ends with family worship.
All social activity outside the home is ideally limited to [52] ●
the church, and the church is never used for mundane activity.
Only in Portree are there a number of social activities to [369]
tempt the people. Kilmuir has no more than a Crofters' [575]
Club for men, and Glendale has no social activities, unless
one would include the annual meeting of the share holders
in the farm.

521

521 CONVERSATION--loquacity and reserve; boasting and shyness; conversat
patterns (e.g., idle chatter, rambling discourse, discussion, argument);

000 relevant to village life, and thus is not attended to.
517 Comedies, soap operas and westerns constitute the
[207] favorite television programs. Many of the men read
[538] adventure stories--war, western and detective--on the
[204] quiet Sunday afternoons. Magazines and newspapers
most often received include The Daily Express, The Sunday Mirror, The People's Journal, The Stornoway Gazette, The Oban Times, and True Romance, documents dealing with local events or with scandal and dramatic personal
• 521 accounts. In general, the news of the mass media to
181 which this audience attends is gossip writ large. Such news, like local gossip, is discussed endlessly, in elaborate detail, until sapped of all potential to excite or until new events capture the attention of the village audience.

517 Events which occur in the open, treeless countryside
181 are vivid and dramatic. The generally low level of stimulation enhances their dramatic effect. A man appears on the hillside or a car along the horizon, and all ears and eyes attend. The British system of perennial number plates on cars makes it easy to identify the shifting cast of characters even at night. Even children memorize long lists of number plates. There is a perpetual audience looking for a play.

183 The generally low level of stimulation derives in
181 part from values which restrict opportunities for self-
• [521] expression. People are ready to gossip, i.e., to partici-
pate vicariously in the escapades of others, but are less
[626] eager to act. Stories concerning mad-cap adventures of
some villagers do not belie the existence of constraints
[166] imposed on expressiveness. One of the major reasons given by young villagers for wanting to leave the island, and by emigrants for why they left, is that, "There is nothing to do. The place is dead."

156 In the everyday life of the village, a style of
181 indirectness and restricted communication is encouraged.
183 A man might be praised in an obituary by the phrase, "His
621 voice was never heard in the community." The encouragement of a "low profile" of behavior is characteristic of communities in which people meet each other frequently and know they will continue to meet and ask things of each other for a long time to come. Indirectness avoids conflict arising from divergent expectations, and embarrassment from changes in plans.

155 A major feature of practices of child-rearing on
861 the island is inconsistency, which develops a style of guarded watchfulness and hesitance to act or express oneself. Children are teased by being offered things which are then snatched away. Punishment is inconsistent.

166 says, "I'll have to ask my brothers and sisters if they
22 mind, since they come back here every year." Some houses
484 which are almost empty for most of the year are overflowing during the summer months. Often the visitors must come in stages.

166 The "exiles" sing the old songs with vigor, drink
484 heavily during their visit, and praise the island for
528 that "special quality" which is unmatched by life in the
181 dirty, crowded, unfriendly city. Some plan to retire in the village. The villagers take up the tune that their society is eminently worthwhile. When talking to strangers, they ask questions pertaining to this image of themselves, such as, "Don't you think this place has something which you will never find in a city?" "People come here during the summer and they love it; they can't keep away. So they must find something here. What would you do in a city anyway? Out here you're freer."

166 The visitors not only bolster the self-esteem of the
484 islanders, but provide them with a fund of gossip. "You
528 summer visitors always turn things topsy turvy when you
• 521 come." Talk of the adventures of the summer visitors helps to occupy the long winter nights of the islanders.

166 A comment frequently heard is, "He was awfully home-
484 sick leaving." That is, he was already longing to be back
528 on the island, his spiritual home. The image of the island

621 character traits just by virtue of his belonging to a
156 particular family; he is protected from the "out" world even though he may have broken its rules. The
[521] village provides a colorful arena of recreation in the
[574] form of ceilidh, the character, and holidays such as New Year's.

781 A major system of order and meaning is provided by
794 religion, and by the opportunity to belong to a tightly-
[181] knit religious clique. Lewis is sometimes called Tir an t-soisgeul, Land of the Scriptures, in contrast with
571 the decadent outer world. The male drinking fraternity
273 constitutes a second important group. And for everyone
• [521] there is the cinema of their neighbors' activities, which are placed in a vast human calendar that includes the behavior of many generations.

796 miscarriage occurring before marriage also requires
851 standing even when the child to be baptised was conceived
626 by the couple after marriage. A married man who has
848 impregnated a woman who is not his wife must undergo
[837] this ordeal before he can have his own children baptised.

It is the responsibility of the entire community to ensure that this punishment is carried out. On one occasi the minister forgot to lecture a couple, and afterwards sent them a note that they would not have to stand; but they insisted, afraid that people would say that they were getting special treatment.

[203] According to one minister, the manse is a kind of
• [521] "research center" to which all gossip is reported. Some
[793] ministers use this information in the pulpit, chiding
[794] people and calling attention to wrong-doings in front of the congregation. In contrast, a different attitude exist
[184] in parts of Stornoway, where villagers have approached
[759] doctors in the maternity ward for information regarding miscarriages and premarital births only to be told that this information is confidential. The ordeal of standing
[178] in church does not exist in Stornoway. In 1971 a person in Shawbost was accidentally exempted from this ordeal and his exemption was seen by some as providing an opportunity to stop what is considered by many to be an archaic custom.

522

Chapter 2

HISTORY OF THE CROFTING TOWNSHIP

A. "Crofting"

241 427 175 192 The word "croft," meaning an enclosed field, comes from Old English. In 1563, a rental of the bishopric of Moray mentions the lease of two crofts (Grant 1930: 272). Walker (1812: 51) refers to "cottars or crofters" as subtenants of Highland farms. The word croft appears in Gibbon's historical novel, A Scots Quair, and is still in common use around Aberdeenshire. In the Hebrides, a number of Gaelic words are used to refer to units of land (e.g., faich, fearann, fiadhaire, and fiannag), but the word for "croft" remains in Gaelic vocabulary as a foreign word, slightly Gaelicized as croit or lot (from "allotment").

• [522] A cynical definition of a croft, given by some academicians and administrators concerned with crofting, and supposedly first proposed by the son of a crofter, is "a piece of land entirely surrounded by legislation." 241 427 175 671 Crofting, as a particular method of land use, was introduced by "progressive" landlords in the mid-18th

175 484 166 [357] domestic servants among the well-to-do families in Glasgow and other cities on the mainland (see Appendix A).

175 484 166 462 [288] When the weaving started, some men settled at home permanently, but many continued to come and go between the sea and the loom. In 1931, the ratio of men to women in Lewis and Harris was 100:114. The men came home for temporary jobs, such as the construction of roads

• [522] or houses. Jokes are told of the common practice of sending for an extension of leave. The men found it easy

[906] to join the Naval Reserve because of their fishing experience; and it brought them a retainer's fee and expense-paid trips to places off the island for several weeks of training during the year. But when the wars came,

[901] the loss of men to the Navy and to the Merchant Service was heavy.

B. The Land

175 427 The number of arrears in rent in the Barvas rent ledger at the turn of the century indicates the small amount of money in circulation at the time. Between 1899 and 1914, several crofters paid part of their rent "by work," and six had some of their stock "uplifted by decree." For example, a Widow Catherine lost "one red

• 522 181 In nation-wide comic strips and jokes, the Highlan plays the role of the clown, the rustic country cousin. The comic strip "Angus Og" portrays a kilted Highlande sly and canny behind his apparent simplicity, tricking the landlord and searching for the Loch Ness monster. Stories of the lazy, dour crofter abound.[1]

166 181 When young men go away to the Army or Navy or to work on the mainland, they say that they feel like "foreigners." "Thirty years ago the island was very

175 166 182 871 isolated. It was difficult to get away. There were so few education grants available. I got my teaching certificate and wanted to get a post back on the islan but was told there wouldn't be a vacancy for another fifteen years. So I went down to England, and found I had to be at least as good as an Englishman if not better in my job to get ahead."

177 365 354 "When I went into the RAF, I had never seen light switches because we used paraffin lamps. An English chap told me to turn the light on, and I didn't know which way meant on or off. That memory still sticks i

[1] Even a high official in the Highlands and Island Development Board tells a joke, that is "presently goi round Westminster," of the Spaniard who approached the Highlander and told him of the word mañana which he tr lated as "Don't do today what you can put off till tomorrow," asking if there was a corresponding word i Gaelic. "In Gaelic," replied the Highlander, "we have no word that conveys such a sense of urgency."

288 Questions about the state of
"the tweed" permeate all discussions, and often
57 constitute an initial greeting. "Have you got a
458 tweed in the loom? How many do you have? Did you
521 see Stickey's tweed van going into Pairc? Did you
576 hear that Newalls has an order for about 800 pieces...?"

"The mills brought me two tweeds, and I got two in town myself. I stuck those two in the attic so that anyone who came in would be none the wiser," says one person in a whisper. Neighbors are in and out of each others' houses and loomsheds, observant and questioning, on the lookout for any indication that they have missed out on some transaction in the competition for scarce goods.

D. Weaving as Strategy

286 When weaving was done on a wooden hand loom, the
178 weaver required a longer period of apprenticeship.
402 Weaving was "more of an art," as some of the older weavers remember it today. Not only was the shuttle thrown back and forth by hand, but the lifting of different threads in the warp was done by manipulating
288 four foot pedals in the correct order. Today, the
178 process of weaving is very much simplified: the weaver
402 pushes only two foot pedals, and simply keeps an eye on

463 One of his
326 apprentices was his sister's son, who built another
[874] smithy not far away. "This was the center of gossip.
[204]
[521] People gathered there while he shoed horses that came
from Barvas to Carloway."

444 A number of shops were established in Shawbost
178 that sold clothing, cooking ware and groceries. At
[494] one time they numbered six altogether. These shops
also ran the first buses between the village and
[477] Stornoway. Gradually these businesses disappeared
[443] because of competition with larger companies. Mobile
grocery vans and butcher shops and bakers began coming
in the late 50's, and gradually took over the trade in
large parts of the island, undercutting the local busi-
178 nesses. Income from weaving had already weakened self
434 sufficiency derived from the intensive use of land and
571 sea and also weakened the formerly heavy reliance on
621 local ties and mutual aid. Today an army of town-
44 dwelling entrepreneurs and employees constitute a major
463 proportion of the traffic on the island roads. Grocer
178 fish dealers, bakers, sellers of soft drinks, garbage
[472] collectors, insurance salesmen, mobile banks, coal
[484] dealers and others extend goods and services from
centralized sources to a market which has money to pay
for them. The island's participation in this extensive
market system is affected by its marginality to the

181
621 People prefer to give money
178 in exchange for car rides or other help, including peat-
437 cutting, because "than you're independent." Friendships
829 are still weak, relative to friendships in urban
572 settings. Most information which is shared between
621 individuals rapidly enters the pool of communal gossip.
[369]
• [521] Although many persons emphasize the importance of mutual
[476] aid in defining a friend, some emphasize the ability to
confide and keep secrets.

621 Today many of the younger villagers do not know
178 their relatives to the extent that their elders did.
602 In one family, a girl who was abou' to get married had
[585] to ask her brother, who was the only one of the siblings
[576] interested in kinship connections, whom to invite to the
wedding. It is still useful to retain an inventory of
602 one's relatives. "I have cousins in Glasgow and
484 Australia that I've never seen, but if I ever go there
[178] I'll have a place to stay." With the increase in
transportation and income, more islanders are taking
brief trips away from the island. During these trips,
they almost always stay with relatives.

857 It is frequently said that children are now "cheekier,"
577 less inclined to run errands and obey orders meekly, and
829 that they prefer to watch television or read books by
178 themselves to playing with each other.

166 2. The Exiles: An important source which supplies this sense of contrast is the large number of persons settled away from the island, often in "ghettoes" or neighborhoods in cities in which village ties are main-
[521] tained. It is said that gossip about Shawbost travels more quickly in the district called Partick Hill in
166 Glasgow than it does within Shawbost itself. It may be
621 argued that the "exiles," with their Lewis and Harris Societies and pilgrimages back to the village during the holidays, do a great deal to sustain the strong boundedness of the village as a sociocultural system. They and non-Gaelic-speaking outsiders (the Eminent Person writing his inevitable book in the romantic solitude of an isolated manse) help to maintain a feeling of worthwhileness in a place rife with feelings of ambivalence and negative comparison with the larger society.

181 Within the village, especially during the long, dark
621 winter, complaints are often heard of the "sameness" of
[195] things. A common phrase, almost a greeting, is, "Anything fresh?"—implying that the usual mode of existence is stale, sour, exhausted, and mucky with
621 overuse. Although the villagers have access to the
20 range of information available to all Britishers through
829 forms of mass media such as newspapers, radios and television sets, very little of this information is considered relevant to village life, and thus is not attended to.

525 (a Gaelic group), the Masonic Order, the Eastern Star, and
a post of the British Legion, which have representatives
524 from all walks of life. But far the most interesting
525 group is the village bridge club. If bridge clubs in America
are status conscious, those in Britain are especially aware
of "social" and "cultural" distinctions. In Portree such
524 differences matter very little. Like all of the above
525 167 mentioned organizations, the membership of the bridge club
is predominantly newcomers. It includes members of the gentry,
teachers, shop keepers and shop assistants, office workers,
and a mechanic. Once a week they come together for an
evening of cards and a few drinks. In all formal organizations,
the roles of leadership are left to newcomers or the gentry.
One young man, to give an extreme example, wondered one day
why he spent so much time attending committee meetings. On
reflection, he found that he was an officer in no less than
eleven clubs. It is to the gentry, however, that we must
turn to see the real expression of leadership.

The County Families

565 The landed gentry have been considered separately be-
184 cause they belong to the neighborhood in which they reside;
to the trade-center village, where they spend much of their
time either visiting each other or performing some social
service; and to the community as a whole. Even more than
belonging to Skye, they form a part of the national class
system of Britain. They are the "county families." Next

Conception and manipulation of luck and chance 777

178 or after it. After 1914–18, the Rector of the Nicolson
771 Institute, Stornoway, proposed village halls for village
527 education and recreation.[1] The scheme was never fully
[346] realised except in one township, Sandwick, near Storno-
345 way, owing to the strength of puritanical opposition. In
1811 particular, dancing by young folk was condemned as
[535] "dancing upon the graves of their brothers". This atti-
tude is breaking down; social standards, in becoming less
repressive, may encourage young people to stay.

Broadcasting—a factor of change everywhere—came to
178 the townships as a revolution. Newspapers had already
207 filtered in; but for the first time the Gaelic-speaking
[204] home was entered and dominated by an English-speaking
voice. It has made itself heard there almost ceaselessly
ever since—in broadcast talks, discussions, announcements
178 of news, entertainment, singing and prayers. Only the
207 Sabbath imposes general silence. In the Scottish Home
795 Service great trouble has been taken to meet all tastes at
the highest level for each, from 'low-brow' to 'high-
brow' and from Clydeside to the Isles. To a thoughtful,
selective Island listener the new opportunity for imaginative
human contacts and for initiation of all kinds is immense.
And the purely Gaelic listener is not forgotten. He wel-
comes Gaelic song or story; and worship in Gaelic has
reached many an elderly person's bedside.

178 Yet few listeners select: much broadcasting is designed
207 for those whose only picture-galleries are advertisement
hoardings and whose only drama and music are to be found
[525] at "the Pictures". And through no fault of the B.B.C.,
the Sports News offers temptations for those in poverty to
acquire wealth innocently through luck in a football pool,

[1] W. J. Gibson, "Social Amenities in the Western Isles", *Sociological Rev.* (Jan. 1932).

178 so creating a small leak in the purse and in the mind,
207 leaving both a little emptier, week by week. Surveys made
[525] by teacher-members of the Educational Institute of Scot-
land describe the effects on listeners in Highland parishes
[829] as pernicious, in the main. The reports of the B.B.C., on
the other hand, emphasise their cultural endeavours, and
the lightening of house-work and of rural monotony or
solitude. Every effort is needed to aid a happy selection
in home and neighbourhood.

72 Experiences undergone in war were of very differing
201 types. Many men spent the war years in the Navy, without
contact with decent town life, or others in the Merchant
Marine. Of combatants in the land forces, the Territorials
of the original 51st Highland Division experienced a few
months of relative inactivity in France, then of a brief but
bitter campaign, followed by long years in prison camps,
while other soldiers underwent prolonged training in Britain,
followed by severe fighting for long periods, far afield.
Lastly, a limited number of men served in engineering or
other works of war-time industry, though labouring work,
at high wages, kept many of the older men employed at
[462] home. Of the women called up for service, some were
posted to the Forces, some to the Land Army, and some were
[162] sent to factories. The greater opportunities for women to
earn a living wage away from the Island tend to equalise
the ratio of the sexes.

177 An experience new to the Western Isles came with the
[464] establishment of Air Bases. Not only did their construc-
tion provide high wages for labouring for the older resident
crofters, brought daily to the Bases by bus from their
townships, but for the first time a heterogeneous mass of
men from every part of urban Britain was put down at
the doors of these quiet communities—at a time when

contrast the friendly and homely atmosphere of the English 275
"pub" with the austerity of the public bar on Skye. The same 185
man who went into the "Coach and Four" to play a game of
darts and sing a few songs over his pint of beer goes down
to the local hotel bar on Skye to toss off his dram, follow
it with a pint of beer, and chaff his neighbors. "There is
nothing else to do." Skye exiles in Glasgow, and not only 275
the youngest of them, often complain about the lack of 167
opportunity for social intercourse at home. What they really 571
mean is that "there is nothing else to do" unless they do
not care about the reaction of their "people and friends."
Moreover, they may want to return some day to stay, and,
then, they will have to face the judgment of the old men in
their neighborhood.

Another contrast of the Welsh and the Sgiathanach can 525
be found in their respective attitudes towards gambling.
Traditionally, both enjoyed forms of recreation in which
competition plays a major part, but the Welshman today does
little gambling, implicitly because of his religious outlook.[27]
The Sgiathanach, too, is not an open gambler, but the football
pools find many interested individuals on the Misty Isle.
There was, for example, the deacon in one church who forgot he 525
had a meeting to attend. Much to his dismay, when another 714
member of the kirk stopped by to see why he was late, he was
busy filling out his football coupon. Dissimilarities, of 785
course, are not particularly significant. In both regions

the Outer Isles, an area of recent depopulation, there are 888
enough youth to resist the dictates of their elders.[25] If 541
they cannot have a dance in a hall, they hold their dance 626
on a plank bridge. In Kilmuir the crofters are looking forward to "Effectual Calling." To defy the elders, or allow their children to run counter to the wishes of the elders, would mean a loss of all hope for salvation.

For the majority of crofters, any form of amusement 785
is objectionable, but there are slight differences among 795
the affiliates of the several sects. The Church of Scotland is the most lenient. For adherents, concerts, film shows and similar organized forms of entertainment may be admissible, especially if they are held outside the neighborhood. There [547]
is a "picture bus" from Kilmuir to Portree on Wednesday and [349]
Saturday night. Sports activities are often considered [526]
as wholesome outlets for the youth. Some of the ministers, feel the lack of social contact with their people and believe they might do some good by taking part in life outside the pulpit. The Church of Scotland minister in Kilmuir occasionally attends the Crofters' Club, the only secular activity admitted in the neighborhood. Significantly, Free Church opinion, although the voice of a minority, has prohibited the playing of pipes and recitals of the Gaelic Choir at the annual agricultural show. The Church of Scotland minister in Sleat has taken a hand in the village hall. Unorganized dances are condemned. This is not because dancing [535]

[25] Darling and Morley, <u>op. cit.</u>, pp. 21-24.

at Skeabost. A minister drove by one day and said to the 785
workmen, "Don't you know you're building a house for the Devil?" 795
One of the laborers, a Lowlander, replied, "It's a good thing 575
we have a place to keep him." The Order of the Eastern Star and the Masons are condemned because, while they are religious, they are secret orders. Even if the person's religion did not stand in the way of his becoming a Mason, his distrust of mystery probably would. As one young fellow said one night in the bar when being chaffed about the Masons, "I'm not going to join any secret organization until I know what the secret is."

Included among the objectionable activities by these two 785
churches are the traditional Highland Games, held each year 795
at Portree in August, probably about the time of the old Saint's 541
Fair. The day is a school holiday. Aside from New Years, it is the big occasion of the year. People come in from all over the Island. Few of the Skyemen actively take part in [526]
the contests of tossing the caber and throwing the stone, or in the piping and dancing competitions, but they look forward to the event. It gives them an opportunity to see their [571]
"friends" and join them in the pub for a dram. Although the [793]
ministers disapprove, they lack the backing of the "elect," so the games go on each year. I hasten to add that they have lost much of their appeal in recent years, but I am told that this is due to the fact that the clique who runs the Skye Council of Social Service has, in an effort to attract tourists early in the season, set up Skye Week in May. Included in the Skye Week program are Highland Games. I might also add

that the people of Skye, including many of the newcomers, have not been favorably impressed by Skye Week. The consensus is that it is not representative of Skye. For the Sgiathanach the Highland Games are alright, but the concerts, dances and similar festivities only cause ill feelings.

As might be expected social life is more vivid in Portree. Here the members and the adherents of the Church of Scotland partake of a number of recreational activities. In the winter there is badminton twice a week. In the spring and summer [5
there is a little golf and tennis. The limitations are not religious; they are climatic. Then, too, there is shinty. We have already noted the existence of many clubs. There are [
regular dances. Moving pictures take place twice a week. [5
All of these activities are run by newcomers; the Skyemen have a more or less passive role. The "elect" of the two smaller sects are, to say the least, very much disturbed by these frivolities. What is worse, the children attend the dances and the concerts and the boys play shinty. They can find enough solidarity among those of their own age grade to outweigh the threats of their elders. Apparently they find enough security to be unaffected by the stern denunciations of the minister from the pulpit. When they marry, however, they have to recast the pattern of their behavior, for now the elders are in a position to exercise control by withholding baptism from their children. Some may turn to the Church of Scotland.

Standing in marked contrast to Portree, in Glendale the control by the aged is complete. There is not a single activit

233 One crofter who gets subsidies says that he keeps
241 sheep and ploughs the land to feed them only as a "hobby."
654 He uses the word "hobby" because, in comparison with the
523 income he gets from working regularly in the mill, he
434 does not get a good return for his investment.

233 A crofter who has been weaving all his life says
288 that the income he receives from his cattle and sheep
434 does not compare with the income he receives from weaving.
654 Subsidies are counted as an important part of the income he receives for the livestock. "Last year I got L28 for a heifer—not a very good price, but then I got an L11 subsidy as well." He does not believe that anyone could
829 make a living from crofting alone. "You say some of the
434 people in Uist are able to make a living at it? They
241 might be getting social security as well, they're that sly. Anyway, members of the family are probably sending money home from sea or from the mainland. You need a weekly wage. If the tweeds disappear, the only thing a man could do would be to go to sea." (See Appendix C for an example of the balance sheet of a croft.)

233 A few families work seriously at rearing cattle for
463 sale in local or town markets. These are usually composed of several male adults, of which one or more work in the mill or do weaving and someone is largely responsible for croft work. Most of these people look

EIGHTEENTH-CENTURY ECONOMY

but their negligence even in ye article appears from their sending 439
out annual above 2000 of wool out of the country unmanufacture.' 175*

Harris was rented at £600. Exports were some 100 tons of [427]
kelp (£325), and the value of 250 black cattle exported alive, with [435]
100 salted, was £445. Small quantities of cheese, wool, and the skins of sheep, otters and seals were exported. Grain was neither imported nor exported.

The plough, which is used here, and in most places of the long 407
island, is of a very peculiar construction. Its length is but 4 feet 175*
7 inches, and is drawn by four horses abreast. It has but one [492]
handle by which it is directed; the mold board is fastened with two leather thongs, and the soke and coulter are bound together at the point by a rim of iron. Beside kelp, there is little else manu- 175*
factured, except a little coarse woolen yarn, and some blanket- 439
ing, which they send yearly to Glasgow. They raise a little flax [286]
of which they make some coarse linen for their own use, but im- [248]
port all the fine linen which they consume. In the year 1756, an [177]
American vessel in distress was obliged to put out three hogsheads of lintseed in Harris, which was sown and afforded crops of lint which were above double the value of the usual crops. The east 228
and west of Loch Tarbert in the Harris are every year revisited 175*
by the herring shoals. During the five years from 1743 to 1747, the west loch was the principal seat of the herring fishery. About thirty vessels from 18 to 40 tons, belonging to Campbelltown, Greenock, and Irvine, were completely loaded each of these years at this place.

With even a modest amount of business taking place, it was a 443
natural step to establish commercial facilities. Stornoway men who 175*
once acted as agents became shopkeepers. The increase in the use [453]
of money attracted banks. During the Seaforth ownership of 436
Lewis, the island had its own currency or notes, designed and 175*
printed from plates in the same style as the modern banknote. The wording ran: 'I promise to pay on demand to the Chamberlain of the Lewis or Bearer ONE POUND Sterling at the Counting Room here.' The notes carried a date and were signed by the proprietor, J. A. Stewart MacKenzie. It is not known for certain how long the notes remained in currency, when they ceased to be used, or even whether they were officially acceptable. At one time, as rare [523]
items, they fetched high prices from collectors. A number were

. 857

197 Within the village there are no branches of An Comunn
178 Gaidhealach and few books written in Gaelic. Once a rural
166 family moves to Stornoway, children often refuse to speak
191 Gaelic, even though they understand it, and parents tend
to speak only English to their children, believing this
will help them "get on." In the next generation, the
[871] language is lost. Village children attending school in
Stornoway often prefer talking to their Gaelic-speaking
[867] roommates in English. A young island woman, married and
living in Edinburgh, says she would like her baby son
to learn Gaelic but feels that if he had a mixture of the
two languages the other children would laugh at him.

197 English is the language of the larger society, the
191 language spoken in school and the language required in
most jobs and in dealing with most officials. In Gaelic-
197 speaking areas, the speaking of English connotes high
191 554 status. If an English speaker mispronounces Gaelic words,
626 he is quickly forgiven, praised for trying to learn such
578 a difficult language, and asked why he bothers with a
language that "isn't any use anyway." But if a Gaelic
speaker makes mistakes in English, he is teased mercilessly.
[551] Many nicknames derive from such mistakes; for example,
"Peter Squeak" got his name by mispronouncing the word
"picturesque." People "win points" by competing with
• [524] each other in speaking English. "See how good you are in

197 English, no Gaelic allowed. I can beat you any time...."
191 One person observed, "People here make fun of each other
554 all the time. They're always trying to be superior, to
626 get one over the other person. Speaking English gives
578 you a feeling of superiority."
• [524]

If a Gaelic speaker chooses to speak English in a village situation where there are no officials present or other cues which make English-speaking appropriate, this indicates that he considers himself a cut above everyone else. "I went to help Calum pull his tractor out of the mud, and Malina was there with her husband. She was speaking <u>English</u>. Oh, I says to myself, lady, you're not for this place. You don't belong to <u>this</u> village."

In evaluating whether or not a particular woman is "snobbish," villagers may decide, "She must be; whenever I've seen her in the post office, she never speaks any Gaelic."

197 The sanctions against speaking English when all
191 persons present speak Gaelic indicate the effect of inter-
554 action between a socially marginal group and the dominant
571 group. The effect is to increase the emphasis on uniform
184 behavior within the marginal group. The existence of a
578 higher social stratum has diminished social differentiation
within the village setting. Individuals may move out of
that setting and adopt the language and other forms of

village locations such as hotels and bothans (see Chapter 6). Drinking situations provide an important opportunity for relatively uninhibited expression by males, and will be discussed further in Chapter 6.

The role of clown or "character" is well developed in Hebridean townships. In an environment which encourages quietly watchful and somewhat anxious, conformist behavior, the character is rude, raucous and outrageous, a bite of fire in cold waters. He represents a reversal of normal behavior. The villagers shake their heads, agree that he is impossible, but encourage him to continue, urge him on when he flags, and bring up his escapades for discussion during moments of boredom. There are usually several such characters in a village.

Reversal of low-profile and other "normal" behavior is also allowed on particular occasions such as New Year's, this time among all villagers. In the days of horses and carts, boys went around the village on New Year's night stealing carts and hiding them on the moor or down by the shore; today they steal gates. Between Christmas and New Year's, groups of boys visit houses in their neighborhood, collecting tea, sugar, biscuits, or money to be used for a party in one of the houses. Such boys are called <u>balaich na bannagan</u>, or boys of the <u>bannag</u>. In some Gaelic-speaking areas, <u>bannag</u> refers to a gift that is

Whereas at other times of the year there are specific times which are considered appropriate for visiting, especially if the visit includes a bottle, at New Year's visitors may appear in the middle of the night or at any time during the day. Some men may stay up for four nights in a row, going back home for a few hours of sleep or a bite to eat before setting off again. Various pranks are played. Men climb through the windows of darkened houses, or wake up sleepers by making animal sounds. One man went around the village showing a pig's foot to women as though it were a penis.

But whether lasting for one night or for five, festivities end with the arrival of Sunday; and the usual comment is, "Thank God it's Sunday."

The "exiles" prefer to return at such times as New Year's, or during the summer months when the beaches are inviting and the gales absent. They remember the "characters" and other features of village life which give it color, often forgetting the drab background out of which the color was forged. Some villagers whose siblings have married and left the island continue to live alone in the house mainly to keep the house in order for their return. "I wouldn't close the house on them. They come back every summer." A man thinking of emigrating

his neighbors, and he done them in and took all their money." 554 626

The villagers and, in particular, the county people 369 enjoy amusing stories about the crofters. One tale concerns a crofter who received electricity from the Hydro-Electric Board. After the cottage had been wired, his wife bought him an electric razor. This created a problem. If he plugged the razor into the single light socket, he could not see to shave on a winter morning, but if he had the light on he could not plug in the razor. There are many stories about crofters who refused electricity because they were afraid the house might blow up if hit by lightning, and there is the favorite story of the old woman, on the Isle of Lewis, who thought electricity was fine to see to light her candle.

To see how gossip, bordering on tradition, is indicative 522 of high prestige status, we may take the story of the doctor of Kilmuir. One day just after a cattle sale the doctor took the boat from Portree to Kyle. In addition to several local people and many cattle, there were two Sassanachs on board. The Englishmen asked the doctor how many cattle there were. He thought there were quite a few. A hundred, the Englishmen asked. "Sure," said the doctor. Two hundred, they asked. The doctor again said, "Sure." They then inquired whether or not the doctor could count. When he answered in the affirmative, they asked how many they and the doctor were. He replied, "One hundred, I am one and you two are nothings." The core of these stories always involves the doctor's getting the better of someone, especially an Englishman. It may be

added that the stories are frequently heard elsewhere in 522 the Highlands. This particular tale is also told in the Outer Isles, where the central figure is a famous drover, drovers still being important in the Outer Island cattle trade.

Stories about well-liked doctors getting the best of ministers are also told by members of the Church of Scotland. There is, for example, the tale about the doctor who went to the service of one of the seceder ministers. The sermon was on the immoral dress of women. After church the minister asked the doctor how he liked the service. Holding up his Bible, the doctor replied, "I enjoyed it fine, but I brought the wrong book. I should have had one of those mail order catalogues."

We should not, of course, overlook the fact that gossip 203 is the main form of communication on Skye. There are few aspects of life which do not interest the people enough to become matters of gossip. How, then, does gossip travel? All are carriers of gossip, but several occupational groups are primary carriers, especially the food van drivers, bus drivers and tradesmen. Perhaps, it is a widespread phenonenon that the gossip spreader does not know his role. One day a tradesman returned from the far end of the island. Following the pattern, he was asked "what's fresh?" and replied "nothing" and then proceeded to give the news he had picked up. After he had finished, he paused and said, "you'd wonder where these people get all the news."

In its less emotional aspect, gossip has been formalized 204 by one agency, the Skye Clarion, a local monthly newspaper.

behavior characteristic of the dominant group; but for those that remain in the village, the language serves a unifying function, although its form is limited in diversity of elements.

Jokes are most humorous when told in Gaelic; and conversation is punctuated with Gaelic proverbs and old stories. There is a vast oral lore, expressed in Gaelic, of the village and generations of its members and their characteristics and escapades, a dense map of human events. All of these tales, proverbs and jokes have been told a thousand times, but retain their unifying function. When speaking of today's children who do not go to the sheiling, a man says sadly, "They won't have our memories; this place will mean less to them than it does to us." The moor is not an empty wasteland, but a map of memories. Thousands of place names are known, and behind every place name is a story. The major landmarks such as mountains, lochs and headlands tend to have Norse names, from the days when the Norsemen raided and settled along the island coasts; but the smaller hillocks and fields and bends in the stream have Gaelic names, for example, Sheiling of the One Night, Field of the Slaves, Slope of the Stone Boys, Hillock of William's Sheiling. To know these place names and their histories is to participate in a distinct community, which has been made even more distinct by contrast with the dominant society.

156 sympathetic with each others' idiosyncrasies. A constant
572 joking keeps people at arm's length and discourages the
[522] development of empathy.

156 Accompanying this style of indirect, inhibited
154 expressiveness and the low level of stimulation are culturally prescribed opportunities for relatively uninhibited expressiveness. Such opportunities include the ceilidh ("visit"), the drinking situation (mainly for men), the role of clown or "character," and holidays
[166] such as New Year's. Although young villagers and
[484] emigrants often describe the village as "dull" and "dead,"
[181] the emigrants are happy enough to return to the island for short periods of time, during which they participate in those situations in which expressiveness and limited license are accepted.

156 3. Ceilidh, Clown, and New Year's Festivities: Only
154 on certain occasions is relatively spontaneous and unin-
574 hibited expressiveness condoned or encouraged within the township, and even then the form which this expressiveness takes is fairly narrowly circumscribed. The traditional
[178] ceilidh was such an occasion. In the past, people gathered
[517] regularly at night in the tigh ceilidh (the ceilidh house,
[538] or home of someone in which a genial atmosphere existed;
[533] the tigh ceilidh was often the home of someone who lived alone), where stories were endlessly repeated and elaborated,

273 village locations such as hotels and bothans (see Chapter
[154] 6). Drinking situations provide an important opportunity for relatively uninhibited expression by males, and will be discussed further in Chapter 6.

522 The role of clown or "character" is well developed
156 in Hebridean townships. In an environment which encourages
154 quietly watchful and somewhat anxious, conformist behavior, the character is rude, raucous and outrageous, a bite of fire in cold waters. He represents a reversal of normal behavior. The villagers shake their heads, agree that he is impossible, but encourage him to continue, urge him on when he flags, and bring up his escapades for discussion during moments of boredom. There are usually several such characters in a village.

156 Reversal of low-profile and other "normal" behavior
154 is also allowed on particular occasions such as New Year's,
• 527 this time among all villagers. In the days of horses and
[522] carts, boys went around the village on New Year's night
[883] stealing carts and hiding them on the moor or down by the
[574] shore; today they steal gates. Between Christmas and
[431] New Year's, groups of boys visit houses in their neighborhood, collecting tea, sugar, biscuits, or money to be used for a party in one of the houses. Such boys are called
796 balaich na bannagan, or boys of the bannag. In some
431 Gaelic-speaking areas, bannag refers to a gift that is
184

796 given at Christmas; in Lewis, Christmas is identified
431 with Catholicism, and is an insignificant event in
184 comparison with New Year. To give two examples, a New
• 527 Year's dance is given, but not a Christmas dance; and
796 the mills continue working on Christmas if it occurs
184 on a week day, but close for at least two days at New Year's. In Shawbost, bannag is defined as a party associated with Hogmanay (New Year's eve).

527 In the recent past, until about ten years ago,
292 the boys dressed in women's clothes or wore masks. They
178 took turns wearing a cow's skin as they went from house to house. In each house, the boy wearing the skin was
[539] hit by the others as he chanted the rann na bannag (rhyme of the bannag):

Here I come again renewing Christmas.
(Or, in another version: This is the New Year's nigh
I'll take the bread without the butter,
And the butter without the bread,
And the cheese by itself.
Then we won't be empty-handed.
One thing I refuse is a mangy potato.
It gives a heavy feeling.
It's not healthy.
If you don't give me my bit of butter and my lump of cheese,
Everything you possess will be gotten by the crows on St. Patrick's Day.

527 As the balaich na bannagan left the house in which
431 they had received gifts, they blessed it. All food and
178 money was given to the woman who prepared the bannag.
[788] Today children tend to receive money more often than food, and use some of the money to buy sweets at the post

527 office or general store, preferring to divide the rest
178 between themselves for use at a later time. A 50-year-
431 old woman observed, "They don't appreciate the bannag like we used to. They get this kind of rich food all
527 the time." The practices of wearing costumes and speaking
178 the rhyme are disappearing. Children used to have the bannag until they left school at age 14 or 15; now only the younger children go. "Children grow up more quickly today."

527 New Year's is celebrated perhaps most intensively
562 by the men, who after seeing the New Year in by watching
273 a special New Year's program on television go visiting
574 neighbors and relatives with bottles of whiskey. The
[184] custom of "first-footing" on New Year's eve is found throughout Scotland; but in the Hebrides such visiting and heavy drinking may last from New Year's eve until the following Sunday. During this time, the woman of the house, who usually refrains from drinking and to some extent controls the drinking done by the males in her house, relaxes her attitude, and may even participate. The comment, "It's only once a year," is often heard.
[589] During this time, the shyest and most retiring bachelor becomes a Romeo; this is the only time of year he may be heard to mention the word marriage. For example, one bachelor in his 60's chooses a "bride" each New Year, and takes her with him on his all-night visiting.

527 Whereas at other times of the year there are specific
273 times which are considered appropriate for visiting,
574 especially if the visit includes a bottle, at New Year's visitors may appear in the middle of the night or at
[513] any time during the day. Some men may stay up for four nights in a row, going back home for a few hours of sleep
522 or a bite to eat before setting off again. Various pranks
527 are played. Men climb through the windows of darkened
574 houses, or wake up sleepers by making animal sounds. One man went around the village showing a pig's foot to women as though it were a penis.

527 But whether lasting for one night or for five, festivities end with the arrival of Sunday; and the usual comment is, "Thank God it's Sunday."

166 The "exiles" prefer to return at such times as New
221 Year's, or during the summer months when the beaches are
484 inviting and the gales absent. They remember the
[527] "characters" and other features of village life which give it color, often forgetting the drab background out of which the color was forged. Some villagers whose siblings have married and left the island continue to live alone in the house mainly to keep the house in order for their return. "I wouldn't close the house on them. an enterprising radio firm in Stornoway; its customers receive both BBC and Grampian Television programmes. 207

Some youth organisations are represented on the island. The first troop of Boy Scouts was connected with the Stornoway YMCA and was founded by forty boys in 1921. Founded (in 1912) on the island's close association with the sea was the Boys' Brigade (Naval), later to become the Stornoway Naval Corps and the Stornoway Boys' Naval Brigade. Its objects were to provide instruction in drilling, signalling, seamanship and first aid; and to foster a spirit of manliness and comradeship among its members. The founder was Canon H. Anderson Meaden, of the Episcopal Church in Stornoway (St Peter's). During the first war the boys acted as signallers at the Stornoway Battery. 883 575 883 708 575

But the provision of some organised recreational facilities for young people on the island has long been a thorny question. After the first world war, the Rector of the Nicolson Institute, Stornoway, proposed that village halls be built for village education and recreation. This scheme was never fully realised—except at Sandwick, just outside Stornoway—mainly because of the strength of puritanical opposition. This attitude has been breaking down, however, and it is now generally realised that the wealth of any community is based on its youth. Most of the efforts to set afoot activities for young people began after the second war; the work was hard and challenging with not a few failures on the way; perseverance has won to the extent that there is now a full-time youth leader. Most of the cultural and recreational activities are to be found in Stornoway, with a full range of interests. Evening non-vocational classes during the winter are also widely attended for a variety of subjects. 529 [178]

In 1965, an excellent Youth Hostel was established at Stockinish, Harris, with the help of the Inverness-shire Education Department. In its first season it recorded between 600 and 700 visitors (1,070 bed-nights). Also involved in the establishment of the hostel was the Harris Society of Social Service; practical help was given by the 2nd Stornoway Boy Scouts, who made a wall map, cleared up grounds and shifted furniture. A group of English enthusiasts have in previous years arranged a hotel at Rhenigidale, Harris (see Chapter 9), which provides for some fifty to 485 [575]

2: Thompson H-4, 5 (no date) 1973 ES10 Highland Scots ES10
Lewis and Harris

Fourteen employees were directly concerned, with another six in the services sector.

The potential of the tourist industry is only beginning to be tapped. MacBrayne's drive-on drive-off car ferry, with a capacity of 50 cars and 600 passengers, makes two or three trips a day between Uig in Skye and Tarbert, the journey taking less than two hours. The mainstays of tourist accommodation in Harris are the Tarbert and Rodel Hotels, both well appointed and owning fishing rights for salmon and trout. Sea fishing is another tourist attraction. Crofters participate in the holiday trade by offering full board or bed and breakfast, caravans, caravan sites or vacant lets.

An interesting tourist venture has been started at Rhenigidale. A rough, stony track, one of the most tortuous and exciting in Britain, takes its leave from the main road over a ridge. It twists and turns in and out of gullies, over cliffsides and across the steep heather-clad slopes of the Toddum, a dramatic little hill of 1,730 ft which protects Rhenigidale village from the Atlantic gales. The seven-mile track is the only marked route, though crofters take a shorter way to the north over pathless bogs; the local postman makes a round of about 60 foot miles in the week, walking this track and on to Tarbert three times in all weathers. The village relies on its sheltered harbour with a good natural rock pier: most communication is by water, all food and fuel coming that way. In past times every household owned a boat for lobster and shell fishing to supplement both diet and finances. Today the interest in fishing has declined, as has the population. But in 1946 Mr Herbert Gatliff paid his first visit to Harris, discovered what the island had to offer, and started a campaign to convince hostelling interests of the need to make some investment in the Western Isles. A croft house in Rhenigidale was in 1961 equipped as a hostel, and under what is now the Gatliff Trust it is maintained for hardy trekkers, the Scottish Youth Hostels Association making a grant for running costs. Many visitors have found that the place offers a degree of happiness corresponding with its remoteness from civilisation.

527

REST DAYS AND HOLIDAYS--days reserved for rest from labor; conceptualization (e.g., as harvest celebrations, as patriotic or commemorative occasions, as reserved by religious taboos); secular festivals (e.g., harvest, housewarming, patriotic); birthdays and anniversaries; holiday activities (e.g., feasting, drinking, visiting, games, pageants); etc, For ceremonies associated with specific economic activities see elsewhere under specialized categories (e.g., agricultural ceremonies, see 24). 311 There are 144 crofts in the village (nine of
241 which, in South Shawbost, were added after the turn of
[175] the century by non-crofters encamped on common grazing
[427] land who applied to the landlord for crofter status).
Thirty-four (almost a quarter) of these crofts are
vacant; that is, the holders of the crofts live else-
[527] where. One of the vacant crofts is used by its absentee
[493] tenant for holidays, and one sports a trailer (called
[485] a "caravan" in Britain) which may be rented to tourists
during the summer. The rest are cultivated or used for
[428] grazing by crofters or non-crofters in the village who
[427] by inheritance or by formal or informal subletting have
gained use of the land.

241 A little over half of the crofts are worked as
individual units; 44% of the crofts are worked as
combined units of two and three. Twenty-four men have
the use of two crofts each, and five men the use of three
crofts each.

16 A feature of crofting townships usually emphasized
is their disproportionately large number of aged people
and small number of young people, who tend to migrate
to the cities. An age-sex "population pyramid" of the
Highlands is not a pyramid but a top-heavy hourglass
(see Table I).[1] Most persons of child-bearing age have
migrated from the area and the number of children is

1. [See p.vii--Analyst]

273 Excise taxes were first levied on whiskey in 1814,
175 and stills of less than 500-gallon capacity were prohibited.
65 Local, illegal distillation continued for a long time
[656] after 1814, and throughout the Highlands and Islands
tales are told of "the excise man" and how he was outwitted.
273 The Island of Pabbay in the Sound of Harris was evacuated
175 in 1843, supposedly because of illegal distillation that
[166] was being carried on there. The ruins of old distilling
houses are found throughout Shawbost. Villagers say
that these were used in the time of their grandfather
or great-grandfather to distill whiskey for occasions
such as weddings.

• [527] In Shawbost, until recent times whiskey was associated
mainly with special ceremonial occasions: the birth of
[846] a child, weddings, and wakes. When a baby was born, the
father went into town for whiskey to be given to visitors
764 coming to see the baby. Having whiskey at a funeral was
273 so important that many a widow sold her cow to provide
it, so that people would not say it was a bad funeral.
A custom of sitting up all night in the house of the
deceased has stopped, probably in part because a prayer
meeting lasting from midnight until 2 a.m. was introduced
with the intention, according to one minister, of preventing
273 the wake from becoming too joyful an occasion. Whiskey
175 was abundant at New Year's, and at weddings. "The dance

571 myself."
156
154

"Now that Ruaridh has stopped drinking, he's not very interesting to talk to. He's very dull these days. He doesn't say a thing."

273 During the Communions, a sense of excitement and
571 holiday permeates the village. Among the converted
• 527 members of the Free Church, this feeling is expressed in
794 vigorous participation in long church services and meetings
796 in the homes of the converted. In the rest of the village, the unconverted men don their best suits and head for the hotel, or the bothan opens earlier in the week than usual. All special occasions such as fank days or the arrival of relatives generate excitement, which is most often expressed, among the unconverted men, by drinking.

273 A man may propose to a woman, and the next day "forget"
571 this rash action with impunity. When a man has been
[584] drinking, he is more likely than on other occasions to be openly affectionate to a woman, or to express strong feelings of friendship to his fellows. "It's the only time when you're really happy. You can sing, tell your life story. It's the only time when people are really friendly. But it's a false friendship, because when you meet someone the next day, he's not the same person. He's distant, cold. You feel depressed. You want to recreate the situation, so you start drinking again."

105 794 621 632 184 [494] of the converted, who occasionally neglect township and neighborly duties in favor of religious activities. The increase in private transportation during the past 25 years has facilitated the maintenance of closer ties within the clique. The existence of such a strongly bounded subsystem is an example of a trend toward the weakening of the township as a social boundary system, but this trend is countered by other factors that strengthen or help preserve the township as a bounded system.

105 632 621 166 184 People come and go from the township, but this appears to maintain rather than weaken township boundaries because behavior different from that prescribed within the township can be performed outside it, and conformist behavior reassumed upon reentry. Those unable to conform with standards of behavior prescribed within the township are not likely to return.

[528] Township members who have settled away from the island come back periodically for recreation and a sense of [829] belonging. They increase the value of the township and its way of life in the eyes of the inhabitants, and provide them with subject matter for conversation until the next holiday season, when the exiles again return.

105 632 621 184 [178] The boundedness of the township is thus a qualified boundedness that, over the past 100 years and especially since the second world war, has decreased in strength but is nevertheless strong today.

Hundreds
103 of place names are known to the villagers which are not marked on any map. These place names [193] constitute part of the oral tradition of a population which has lived in a confined geographical area for generations.

632 621 311 423 [363] In most of Lewis, village and township coincide. The village of Shawbost is composed of two townships, South Shawbost in which the crofts splay outward like a fan from roads which curve over an uneven landscape, and North Shawbost which is composed of linear streets (see Map C), to which the crofts are perpendicular. Each township has its own common grazing land, and its own grazing committee. All of South Shawbost and part of North Shawbost belong to one private estate (which includes other townships to the southwest), and most of North Shawbost belongs to an estate which extends to Barvas. Beyond the fact that non-crofters in South Shawbost have found it easier to acquire crofting status, little difference between the two townships appears to be due to their belonging to different estates. As [427] elsewhere in crofting regions, the landlords of the [529] two estates are concerned mainly with the sporting potential of their land.

632 The two townships are themselves divided into named neighborhoods (cf. Vallee 1955 for a discussion of "natural neighborhoods" in crofting areas).

311 indication of their worth. As above, the period is *c.* 1937–
511 1938. The Island's increased sheep stock is shown in Appendix II (ii) (a) to 1953.

33] The Lewis and Harris pastures carry on an average about one ewe to 9 or 10 acres, that is, one ewe or lamb to 4 acres in June (the month of the agricultural returns). A good mainland grazing like Glen Shiel carries one ewe to 6 acres, while poorer grazings like Kintail and Farr carry one ewe to 10 or 14 acres respectively. Nowhere, however, can the rough grazing support the newly weaned ewe lambs (or hoggs) throughout the winter, which have either to be brought to the enclosed 'low ground' (of which there is never enough to supply both grass and winter feed) or sent to the Lowlands in autumn and brought back in spring, at a total cost of about 10s. each before 1939. In Lewis, for lack of grass, there is considerable loss in winter among the crofters' sheep. Constructive measures for the future must be based on an increased supply of winter feed.

137 The game consist of red deer, grouse and hares, while
511 salmon and trout are fished in stream and loch. The deer range over Harris, Park and the Uig hills, but are seldom seen north of Achmore. They are of ordinary quality and size, and before 1939 the average number of heads for the year totalled about 190 stags and 80 hinds. It is not known
529] when they were introduced. In the south there may be a certain amount of 'deer stealing', as in most deer forests surrounded by crofts, in spite of a score of keepers and deer-stalkers, and other employees at shooting lodges. Grouse are relatively scarce compared with those on drier
525] mainland moors. Mountain hares have multiplied since their introduction in 1853, when, it is said, the first hare, seen near a village towards evening with its white winter cost, was thought to be supernatural.

A HARRIS VIGNETTE

Linking the present day firmly with an ancient past is the probably fourteenth-century church of St Clement's, at Rodel. It is an outstanding building, and the only considerable architectural monument in the Western Isles. Built of rubble, dressed with schist, and freestone which must have been imported for the purpose, it is cruciform, with nave, choir and two transeptal aisles, the fabric being covered with carvings and sculptured panels. The first mention of the building is made by Dean Monro, in his account of his tour of the Western Isles, *c* 1549. In the first half

St Clement's Church, at Rodel, Harris

of the sixteenth century it was extensively repaired by Alexander MacLeod of Harris, who died in 1547 and whose remarkable tomb it houses. He prepared it nineteen years before he died; reckoned to be among the finest in Scotland, elaborately wrought, and with Latin inscription, nine sculptured panels cover the rear wall of the alcove, with the recumbent effigy of an armoured warrior with ornamented bascinet and camail lying below. Round-toed sabbatons cover the warrior's feet, which rest on a lizard-like beast, a lion standing guard at head and feet.

Make smooth and even the warp of my loom
And grant thy blessing, God, on me,
On all who here find shelter and room
And dwelling . . .

Thine arm be round each woman here
Who waulks this web of mine,
O aid her in her hour of need . . .

Keep the flock that we may win
Sweet and nourishing milk to drink
And wool to give, to weans and kin,
For wear!

Even now in Harris or the Lews, a brief good wish may be uttered—a "Health and strength to the wearers!" as the perspiring women end the waulking; but in the past the web was finally consecrated. Each of the family who was to wear a portion of it was named by the weaver herself, who led the consecration (*Carmina*, No. 113).

May the well-loved wearer of my web
Never be wounded . . .
May the sanctuary shield of the Lord be his. . . .

The significance of this gift of hard-won cloth can now be seen, first for the family but next for the neighbourly team. We can understand how each 'set' or pattern of tartan stood for the spirit of the family and the group of kin and homeland, the clan. We conceive what it meant to the Gael when the tartan, with "the Highland dress . . . or any part of it whatsoever", was forbidden "to any man or boy" in the Highlands. Women were still allowed to wear it, it was true, but the dress ceased to be a symbol of community when its wear was confined to one sex. As a single exception, the Highland dress was retained for soldiers, but the militarisation of the tartan—though it seized upon one strand of clanship, that of

4 COMMUNICATIONS

FROM the earliest times, the provision of communications in one form or another has been a matter full of incident and high colour. Gaelic folk-song contains many references to the hazards of crossing the impatient waters of the Minch. One such, a waulking song still known today, commemorates the death of Iain Garbh Mac Gille Chaluim, of Raasay in Skye, who was drowned in April 1617 on his way home from visiting the Earl of Seaforth in Lewis; it is said that he was drowned through the workings of his own 'muime', or foster-mother, who employed several famous witches to raise the tempest in which his ship foundered.

For well over a century the subject of adequate communications has aroused continuous argument. The strength of any island community lies in its ability to live within itself, while accepting the periodic injection of certain external items necessary for living or for work. A Londoner once expressed amazement at the isolation of Scarp, in West Harris, commenting that in Scarp they would not know what was happening in London. The indisputable rejoinder was 'Nor do they know in London what we would be doing in Scarp.' However, to a large island community, with a certain degree of economic significance, communications are the basic lifeline.

SEA ROUTES

When in the early 1800s formal sea communications were being established between the island and ports on the west coast of Scotland, down as far as the Clyde, most of the islanders were of course little affected. Except for the professional classes (merchants, ministers and the like), they had little use for the sea links provided for them. Their economy was not yet a cash economy, and travel was thus a luxury they could not afford. As the nature of local life began to change with the infiltration of some of the

in the exercises of swimming, archery, vaulting, or leaping'. He also says that they were great lovers of music, and that when he was in the island he heard of eighteen men who could play the violin well without having been taught.

The Rev William MacRae, minister of Barvas, writing in the *New Statistical Account*, gives a description of his parishioners (in 1836) which can be applied to all the country districts in the island at that time. After stating that in their habits much cleanliness can scarcely be expected, considering their poverty and the wretchedness of their habitations, he says:

> Their mode of living most closely approaches the pastoral: without arts, trade, manufacture, navigation, or literature, their whole round of duty consists in securing fuel, in sowing and reaping their scanty crops, and in rearing their flocks, and tending them at pasture. Yet in these limited circumstances, while supplied with food and clothing of the plainest description, and able to pay their rents, their simple cottages are abodes of happiness and contentment. Blue kelt [a thick cloth] is almost the only dress worn by the men, and stuffs, variously striped, by the women, with under dresses of plaiding, all home-made. In many instances, however, cotton shirts and print gowns are beginning to supersede the use of some of these articles . . . Their ordinary food consists of oat and barley meal, potatoes and milk variously prepared. Their domestic economy is frugal and moderate beyond conception. The produce of a foreign soil such as tea, coffee, and sugar, and the common conveniences of art, such as knives, forks, and etc., are to them altogether alien.

It is of interest that the change in dress-types (from woollen homespuns to cotton fabrics) was followed by an increase in the incidence of rheumatism.

Today, the island folk are reputed to be gloomy with a black, depressive attitude towards life. The editor of the *Stornoway Gazette* has pointed out: 'We cannot understand a people and why they act as they do unless we know the content of their memories. We cannot understand the paradox of the naturally gay in heart seeking religious consolation in a grim and gritty Calvinism. We cannot understand why Lewis, which clothes the world in colourful tweeds, clothes most of the women in noth-

A HARRIS VIGNETTE

Other tombs inside the church include that of Mary MacLeod, a bardess of the seventeenth century who was also governess to the young MacLeods at Dunvegan. She was probably the first to compose what may be called the 'court' song, in simple words and in the 'strophic' verse-form of rhythm and assonance enjoyed by all Gaels since her time. Her last elegy was composed to Sir Norman MacLeod of Berneray in 1705.

So far as personal characteristics are concerned, there is a marked difference between the Herrach (Harrisman) and the Leodhasach (Lewisman). Their Gaelic dialects are different, the Harris pronunciation being much softer, with an attractive singing lilt. And Harris Gaelic has fewer words of Norse origin. The main reason for this difference has been a topographical one: before a road was cut, the mountain barrier of north Harris divided the inhabitants of the two parts of the same island, who developed in their own distinctive ways.

The character of the land of Harris has also had much to do with the difference. Harris for the most part is infertile, with great expanses of rock outcrops. The east side of the island is torn in shreds by fiord-like sea-mouths; the west coast is slow-moving, with large expanses of sand and machar-land which look out over the Atlantic breakers rolling in from a sea that is oceanic in appearance and in fact. From early times the Harris folk have had to work hard to scarify their snippets of land to make it fertile. Regular increases in population forced them to cultivate land extending up to 500 feet above sea level in some places, in the form of hard-won lazy-beds. After the clearances early last century, when the more fertile lands on the west coast were taken over for the formation of sheep farms, the people concentrated on the eastern side of the island, and on some of the higher ground in the west.

On Lord Leverhulme's death in 1925 the ownership of large tracts of Harris passed to absentee landlords. After this, some of the lands which had been cleared a century earlier were purchased by the Government and broken up into crofts again, enabling some of the indigenous population to come back to make use of the more fertile lands of the west. There are some 550 crofts in Harris, with 29 regulated common grazings; the total

3: Geddes K-4,5 (1919-1952) 1955 ES10 Highland Scots

181 "the lone shieling of the misty island". Traditional
[538] Gaelic songs tell rather of shielings grouped within hail,
[533] with their sweethearting and good cheer!

3. *Crops and Stock*, circa *1938*

178 As the thirties mark a transition between early condi-
241 tions prevailing until 1919 and those of 1947–53 (Appendix I), the present tense is used.

311 Of the Island's 528,000 acres, including deer forests
632 on the Harris border partly grazed, there are 24,000 acres of arable and grass land. Barvas parish leads with 6500 acres, then come Stornoway, Uig and Lochs, Harris being last with 3300 acres. Roughly one-third of the Island's arable and grass land, or 32 per cent, is permanent grass, chiefly machar, with a maximum of 39 per cent in Uig, but a minimum of 9 per cent in rocky
311 Lochs, most of this on one small farm. About 10 per
242 cent of the arable and grass land area is given to hay production; of this, rather less than one-third is rotation hay grown on the plough rigs or parks, and rather more than two-thirds is hay from permanent grass. Lochs, lacking machar, has 20 per cent hay, while Barvas, better
[632] off for machar, has only 4 per cent. Even this proportion of rotation hay shows an increase on the crofts since 1919. Stornoway parish, it will be noted, occupies an intermediate place, but if the facts for Point (Eye) district were contrasted with those for the villages along the machar, the differences between them would emerge clearly. As it is, they can be guessed from the vegetation map showing
311 the machar. Oats is the chief crop, and occupies 33 per
243 cent or just one-third of the arable and grass of the Island; excluding the permanent grass, it constitutes half the crop.

CHAPTER VI

CLANSHIP: PEOPLE, CHIEF AND TACKSMEN

(A) COMMUNAL EQUALITY AND LORDLY PRIVILEGE

175 THE equalitarian customs of hamlet and township
632 astonish many to whom the crofting villages are unknown and whose picture of the Gaelic past is
642 derived from tales of the 'Forty-five. The widespread
631 historic fact of lordship over a subject peasantry has obscured that of peasant-neighbourhood, more ancient, it would seem, and, in the Isles, still more enduring. The very existence of 'rural democracies' such as those just described has been doubted by certain scholars on the theoretic ground that they would be humanly unwork-
[614] able! Yet it is none the less true that the peasants as clansfolk gave loyalty to their chief. The fervent loyalty given to the exiled kinsmen-kings, the Stewarts, was a scarlet thread interwoven—or entangled—in the homespun
[533] web of community, of clanship. Wherever the Gaelic is spoken, the Jacobite songs are sung with passion, and their echo has gone round the world.

[171] So in the life of the Gael, without doubt—and in varying degree throughout Britain and the rest of Europe—we have to envisage a composite, perhaps a contradictory, state of things, in which communal equality is overlaid by

175 womanhood a prey to prostitution. The licence of a chief
585 among young women was preferable to this; but evils were inherent in the fact of lordship.

(C) TWO ISLAND BARDS: MARY MACLEOD AND THE BLIND HARPER

175 While in Lewis the continuity of clanship was sorely
613 shaken by the fall of the chiefs, the Torquil-MacLeods, in Harris it was maintained in the family of the Norman-
621 MacLeods of Dunvegan in Skye. The family of Dunvegan is famed for chivalry and gentleness, not only in the songs of the past but in the speech of Skyemen to the present day. Harris did not suffer the bloodshed endured in Lewis from the death of Torquil until after the accession of MacKenzie in 1611; and Harris was not involved, like Lewis, in the troubles of 1715. MacLeod of Dunvegan retained Harris until the end of the eighteenth century, when it was purchased by a cadet of the family who had made his fortune in the East; and it only passed out of MacLeod hands half a century later. Hence it is that while in Lewis there is still talk of the 'give and take' between later laird and people,
[533] in Harris there is more. In "the hereditary Hall of MacLeod" of Dunvegan, two Island bards gave birth to immortal song. Together, the tales of Lewis and the songs of Harris and Skye give us an authentic record of clanship in fact and feeling, linked with community today.

[628] In spite of the break in continuity, ease and warmth of feeling could spring up between a MacKenzie of Seaforth and the Lewismen, though Seaforth was a peer of the realm, and of a mainland name, not a MacLeod by direct descent. Playful rhyming, chaffing contests between titled laird and small tenant, are recorded by A. Carmichael and W. C.

175 Mackenzie. For all that, in 1900 a crofter said: "We called
613 the old proprietor Seaforth, but I believe his right name
621 was the Prince of Welsh". To him the Earls were royal!
[829] Freedom of intercourse is embodied in the language
to this day. With 'a stranger', a little spoken Gaelic
197 lessens 'strangeness' and quickens intimacy, because
565 Gaelic conveys essential human relationships as English
576 rarely can—even the English of the 'democratic' Low-
lands. For instance, a well-dressed stranger, though
young, is usually addressed in English as 'sir' by a senior
crofter, and, just as in the South, without the expectation
of 'sir' or 'ma'am' in return. In English, that is, respect
is given to class. In Gaelic, age receives respect: it is the
stranger, if the younger, who adopts the respectful 'you'
(the second person plural, *sibh*), while the crofter, if the
older, uses the friendly singular, 'thou' (*thu*). If they
are of equal age, and neither is elderly, 'thou' would be
[562] used by both. Similarly, respect is given to womanhood;
and an older woman who would say 'Sir' in English will
say 'My dear' in Gaelic.[1]

614 It is not only by daily contacts that we may understand
the relationship of people to chief, but by the height of
feeling it may attain, and by the beauty of its expression.
[175] Among the finest of the later songs of praise to Gaelic
[533] clanship and its chiefs are those composed by two Island
bards, a woman of Harris and a man of the Lews. Mary
MacLeod, *Mairi Nighean Alasdair Ruaidh*, was a kinswoman
of the MacLeods of Dunvegan and Harris, and a beloved

[123] [1] Calling on the sub-postmistress in a Highland place where I was known to be a friend of the laird, I was addressed as "Sir". But hardly had we passed to Gaelic when this woman, my elder and a person of culture, laughingly used an expression then strange to me. Halted, and suddenly shy at being forced to translate, she said at last, "When thou wast *a lump* [just a boy!] '*muair bha thu cnap*!" But rightly, she would have been slightly shocked had I said 'thou' to her.

175 nurse in the family. Born about 1615 in Rodel (south-east
533 Harris), she composed her last elegy (to Sir Norman
[614] MacLeod of Island Berneray, Harris) in 1705; she may
even have composed her last great song (on the birth of
the nineteenth chief) a year later.[1] Towards the end of
the century (between 1664 and 1693), Mary's younger
contemporary, Rory Morison was bard at Dunvegan, being
known as the Blind Harper, *An Clarsair Dall*. A Lewis-
man, Rory could not have found adequate patronage as a
bard in that Island, the chiefs of Lewis having passed
away. Morison is stated to have been a descendant of
the Gaelic judges or *brieves* of Ness and the son of a
minister, and he was to have entered the Church along
with two brothers, later ministers. But smallpox blinded
him, and he turned to oral, not to written 'literature',
perhaps to our ultimate gain.[2]

Here then were two bards, man and woman, whose
fame is growing, rather than waning, in our own day.
While Mary was illiterate, however rich in lore, Rory, with
his clerical home and family tradition of Gaelic jurisprud-
ence, must have begun to read Latin and English, perhaps
Greek, and also Gaelic, though not reaching Hebrew (as
his brothers would) before he was struck blind. Mary, so
far as is known, was the first to compose what may be called
'court' song in simple words and in the 'strophic' verse-
form of rhythm and assonance enjoyed by all Gaels, Scots
and Irish, since her time. Lacking the learning of the
dying school of classical bards, Mary is more personal
than they, "a lyrist not less than panegyrist"; and she is
[614] more spontaneous. The same seems true of Rory. Yet
[622] the themes of the classical bards were renewed by these

[113] [1] James Carmichael Watson, *Gaelic Songs of Mary MacLeod*, 1934.
[2] John Mackenzie, *Sar Obair: Beauties of Gaelic Poetry*, 1877.

two singers, as in the portrayal of a chief, "blue-eyed and with clustering, golden locks . . . and brown, ruddy cheeked"; in descriptions of "his wisdom, prowess and justice" or of his traits—his "joyous, fresh, and shamefast cheek", and as a friend to the poor seeking justice, and to men of learning, musicians and bards. In the halls of chiefs where ancient joys and traditions were maintained, the ideal of chiefship was essentially that of manhood. Nor is the chief's lady forgotten either by Mary or by older bards, though womanhood is a theme rather for lyrics and for sacred song.

Even at Dunvegan the stream of clan life was once interrupted in the lifetime of these two bards, as the *Clarsair* told in his satire on the anglicised seventeenth chief (1693–99), and as Mary hinted in her haunting 'Croon' or *Cronan*. Happily, the stream was renewed by this chief's successor. Tradition and song show that such renewal was primarily due to the strength of communal life among the 'people' which called out leadership from the chiefs, in justice, in war, and in the encouragement of the oral arts. High conduct from the chiefs was invoked by the expectations of their people. More important still, it was the warmth of feeling among the people as a group, and their ties to one another, which lit their personal loyalty to a chief and called forth his loyal leadership in return.[1]

[1] Gaelic loyalty was burned away in the Jacobite Risings, but as the last Rising left the Island relatively unscathed, one may simply refer to two works: Audrey Cunningham's *The Loyal Clans*, 1932; and J. L. Campbell's *Highland Songs of the 'Forty-five*, 1933 (Gaelic and translation). The first work analyses the need for a personal relationship to Scottish kingship, felt so keenly by the clansmen. The second gives authentic evidence of the spirit of loyalty. (Both the sense and a hint of the rhythm, with several of the airs, are available for the English reader.)

I know of no explicit statement of the conclusion given above, for lack of the sociological approach attempted here; but it is surely implicit in the thought of many a Gael.

The families of the young men might be willing to encourage enlistment. But they pled or bargained for an assurance that after service was over their sons should be returned to their homes and have land on which to settle down. The receipt of the bounty and their savings would help the men to pay rent later.

Passive resistance was offered at times, however, as when the Macleod Highlanders were raised in 1757, only a decade after the 'Forty-five. An Island friend has told me of a family tradition, that, as a young man at that time, his own great-grandfather was concealed to escape conscription. And the press gang was busy in Stornoway when the *Old Statistical Account* was written. Protest had usually to be made in secrecy or silence; but a revolt was organised by Stornoway men in 1793.[1] And the voice of one unwilling conscript has come down to us in a song, well known in the Isles (though little known in English), with the refrain—*Och ho ro*, brown lad, so bonnie (*'ille dhuinn*). Although it bears no sign of Jacobitism, it begins, "My grief to be wearing King George's red clothing!" It continues, "The short-coated sailors bore us to Holland. It was a Saturday evening when we fought; and many a wife was widowed ere dawn broke on the Lord's Day, their husbands ta'en, whom gold can never restore, stretched out among the rushes, blood pouring over their shoulders. . . .

'O'er the hills bear my greeting to Mull of the mountains;
Where cuckoos are cooing, on the braes before Beltane.'

'Bear my greeting to my mother, who nurtured me, to my sister who weeps for me, and to my sweetheart; I'll be home if death spares me."[2]

[1] Public Record Office, H.O. 50/2. Letters of Francis Humberstone Mackenzie (16th and 19th May 1793), communicated by Mr. J. R. Western.
[2] Charles Stewart, *The Killin Collection*.

776 fellowship. "The Irish Church", a Roman is said to
171 have exclaimed to a Gaelic Catholic in scorn, "has won
no martyr's crown!" "Ireland was named the Isle of
174 Saints not by persecuting but by cherishing God's elect",
was the reply. The Celtic Church linked the lands across
St. Patrick's Channel; and what was true of Patrick's
missionary field seems to have been as true of Celtic
Britain, the land of his birth. Kilpatrick on the Roman
Wall of Clyde has been claimed as the birthplace of one
who was certainly a Cymric Celt by birth and baptism, a
Gaul by training, and an Irishman by mission.[1]

771 This closeness of fellowship ranged from personal to
divine relationships in waking or rest, with an intimacy of
[782] expression all its own. A prayer for rest begins, "I shall
lie down with God, and God lie down with me. . . ." A
[181] simple and universal gesture of love, in which parent,
child or lover slips an arm under the loved one's head, is
carried into prayer at rest, "the arm of the Father", or
779 of Jesus or Mary, "under my head". This image must
be the inspiration of one of the loveliest of Christian tombs,
764 preserved by clan loyalty, respect for the dead, distance
and later forgetfulness on the priory isle of Inchmahome,
532 where the Highlands meet the Lowlands at the Lake of
Menteith. As on a number of medieval monuments,
knight and lady are sculptured side by side. But here
the two lie each with "an arm under the other's head",
the free arm of the knight reaching over to clasp hands

[1] While in Scotland the name Bride is now rare as a Christian name, that of Patrick is still found among Grants, Campbells, Macdonalds and others. It is even commoner than English speakers might suppose, owing to the practice—almost the necessity—of giving an English form to a Gaelic name when it is turned to English speech—as Daniel for Domhnuil (Donald), Aeness for Aonghas (Angus) or Peter for Padhruig (Patrick). Many a Gael in the Lowlands felt obliged to relinquish his baptismal (and ancestral) names, with their link to Celtic Christian tradition.

779 with his spouse. The knight, the first Stewart Earl of
764 Menteith, had died four years after his wife, in 1294.
• 532 Medieval sculpture was then attaining its height, as this
monument, in spite of the ravages of time, bears witness.
175 The following year, 1295, saw the commencement of "the
three hundred years war" with its repeated destruction
644 of Scottish arts and traditions of peace. Under King
[829] Alexander III, "that Scotland led in luve and law", peace
within the kingdom of Scots allowed a union embracing
[648] Gaelic Christian traditions and Scoto-Norman arts. After
his death this became all but impossible. So far as scholars
181 can tell me, this almost unnoticed monument remains
764 unique in Christendom, indeed in the world.[1] The arts
of Scotland, hitherto in touch with European achievement,
were shattered by invasions, and Gaelic tradition was only
to be maintained by the very poor, whose debtors, for all
time, we have become.

763 At the approach of death God's mercy and peace were
782 sought. Latterly Roman Catholic prayers stressed the
wish for Confession to a priest, followed by Supreme
Unction for the attainment of 'Happy death', *Bas sona*.[2]
[174] In early times confession seems to have been made as
willingly to the 'Soul-friend', followed by Benediction.
764 When death had come, the mourners sang of sleep and
home. In Lewis today funerals are conducted in silence
to the graveside, where the last service is held; but

[113] [1] *A unique medieval tomb at Inchmahome: a cultural link.* (Geddes, 1952.)
[2] It would be of deep interest to compare the attitudes to death found in 'Spiritual Songs' by Protestant Gaels like Buchanan or Grant, with songs on death which, though maybe of post-Reformation date, are of Roman Catholic origin (*e.g.* in Fr. Allan Macdonald's collection, poems on the Day
[171] of Judgment, and of Wrath; on age and on death; and on Purgatory: pp. 31, 85, 146; 34, 19, 21; 27). Some have much in common, both by virtue of the earlier traditions they shared and still more because of parallel trends of Reformation and Counter-Reformation. Cf. *Carmina*.

533

533 MUSIC--musical form and structure (e.g., scale, pitch, tone, tempo, rhythm); melody; harmony; vocal music (e.g., singing, humming, chanting); instrumental music (e.g., accompaniment, solo playing, orchestras); occasions for music; song styles (e.g., work songs, drinking songs, dance songs, war songs, love songs, lullabies, sacred music, dirges and laments); musical training and appreciation; composition of music; specialization (e.g., composers, minstrels, musicologists, musicians); organization (e.g., choirs, bands, orchestras); etc. See also:

Musical performances on the stage 545

233 "You got away from village life when you went to
829 the sheiling. The youngsters ran wild. Everyone talked
more freely somehow. It didn't feel like a Sunday out
233 there—the minister couldn't see that far. Only the
883 young men and women in their late teens or 20's were out
at the weekends. They would send the younger ones home.
They came out in their good clothes, from Saturday night
to Monday morning. Groups of young people walked out and
back together, the girls in one group and the boys in
• [533] another, joking and teasing. They sang the old songs and
learned new ones from each other. Some were good at
making up songs. You wouldn't believe how many people
could sleep together in a single sheiling. It was a
[829] heaven on earth. Everybody was one family. The hills
were filled with the sound of voices."

233 Not every family in the village went to the sheiling
Some families had enough land within the township to graz
their cattle. But they usually went out at the weekends,
for the fun and company.

237 One of the most important products of the cow was
241 not milk but dung, which was used to keep the poor land
231 productive. Because people did not have the enriched
234 animal feeds available today, a cow might not have a calf
and thus did not give milk, for four or five years.

585 bridesmaid(s). The house was filled each night with
[43] visitors bringing new gifts or coming to see the latest additions. Enough presents were given during this
[203] time to set up a household. Invitations to the wedding were issued verbally, by persons going around to each
[602] house. Anyone could come to the church ceremony, which was relatively informal and jovial, but only the "closest" relatives were invited to the sumptuous wedding dinner which followed the service: the bride and groom, their parents, aunts and uncles, first cousins and usually second cousins. Many more were invited to the wedding supper which started after the dinner, at about 10:00 p.m., and continued throughout the night.

Three main nights were distinguished, although
585 preparations and festivities might go on for weeks. The
252 first night was the night before the wedding, when women of the village brought hundreds of chickens, which they plucked and cooked. Meat, usually mutton, was also cooked and sliced. Butter was rolled into balls. Neighbors brought milk and other provisions and assisted in the baking for a week beforehand.

585 On the second night, hundreds of villagers ate the
[535] chickens and mutton prepared for the wedding supper,
[533] and danced to the music of a piper or other musicians.
[273] Many young boys had their first taste of beer or whiskey on these occasions.

156 sympathetic with each others' idiosyncrasies. A constant
572 joking keeps people at arm's length and discourages the
[522] development of empathy.

156 Accompanying this style of indirect, inhibited
154 expressiveness and the low level of stimulation are culturally prescribed opportunities for relatively uninhibited expressiveness. Such opportunities include the ceilidh ("visit"), the drinking situation (mainly for men), the role of clown or "character," and holidays
[166] such as New Year's. Although young villagers and
[484] emigrants often describe the village as "dull" and "dead,"
[181] the emigrants are happy enough to return to the island for short periods of time, during which they participate in those situations in which expressiveness and limited license are accepted.

156 3. Ceilidh, Clown, and New Year's Festivities: Only
154 on certain occasions is relatively spontaneous and unin-
574 hibited expressiveness condoned or encouraged within the township, and even then the form which this expressiveness takes is fairly narrowly circumscribed. The traditional
[178] ceilidh was such an occasion. In the past, people gathered
[517] regularly at night in the tigh ceilidh (the ceilidh house,
[538] or home of someone in which a genial atmosphere existed;
[533] the tigh ceilidh was often the home of someone who lived alone), where stories were endlessly repeated and elaborated,

156
154 genealogies told, and old songs were sung or new ones
574 composed. The concentration of expressiveness in these
178 forms resulted in a well-developed, oral repertoire of
[517] literature and music.
[538]
[533]

The ceilidh still exists today in the form of less
[538] regular gatherings. Stories and genealogies are seldom
[533] recited, but songs are still sung. A few new songs are being composed. The word ceilidh is used as both a noun and a verb to mean "a visit" or "to visit," but implies a casual, relaxed atmosphere rather than a formal visit. A formal visit is made by relatives living in Stornoway, government officials or businessmen, and is characterized by more constrained behavior.

156 The ceilidh of today is often accompanied by the
154 drinking of beer or whiskey, but a distinction may be
574 made between a gathering which includes both males and
273 females, and a drinking situation at which only males are
178 present. In the past, men often gathered in barns or weaving sheds to share beer made locally from barley or brought from town in a large keg. The drinking of whiskey
[178] was reserved for special occasions, such as births, weddings,
[434] funerals, and the festivities surrounding the New Year, but increased income has resulted in the consumption of whiskey on many other occasions. Heavy drinking is still an
[273] activity engaged in largely by males, and occurs in extra-village locations such as hotels and bothans (see Chapter 6).

166 The image of the island
484 as spiritual home is fostered by The Stornoway Gazette,
823 and by nostalgic songs, most of which were written by
204 islanders who emigrated to Canada in the first quarter
[533] of the century.

632 The crofting township as a strongly bounded network
241 continues to exist, although crofting as a socioeconomic pattern which evolved in a situation of limited social and geographical mobility, low cash reserves, and the restriction of a large population to a region of limited resources, is very different from crofting as defined by an office in Inverness. As far as the crofter is concerned, to be defined as a crofter by the Crofters Commis and other government agencies is to have access to resources which affect the environment in which he makes his choices.

241 The individual is faced with the semi-security of
288 crofting and weaving, in contrast with the exciting but risk-laden opportunities offered by the dominant urban-
[654] industrial mainland. Crofting and Harris Tweed have been protected by government legislation. Various subsidies
[745] and loans are available. In times of unemployment, social security is available. Extremely important as contributer
621 to boundedness are the non-economic incentives: the
156 individual has a place in a human community; he is given

warfare—destroyed its intimate tie with the home, with peace. The web the women had dyed, spun, woven and waulked together ceased to be a sacrament when the tartan was proscribed to men except when worn as a uniform with "England's cruel red".

The framers of this law, which stood on the statute book for over forty years, took full cognisance of what they did. Appended to the Act of 1747 was an oath which reversed every benediction said by the women at their work: "I . . . do swear, as I shall answer to God at the great day of judgment, I have not, nor shall have, any gun, sword, pistol or arm whatever, and never use tartan, plaid or any part of the Highland garb; and if I do, may I be cursed in my undertaking, family and property—may I never see my wife and children, father, mother, relations—may I be killed in battle as a coward and be without Christian burial in a strange land, far from the graves of my forebears and kindred; may this come across me if I break my oath". This Act, as law and symbol, struck full at the sacramental life of family, neighbour-team and clan community, in which labour and prayer had been indissolubly bound.[1]

(c) WORSHIP, CONGREGATIONAL AND PERSONAL: THE BOOK AND THE WORD

Little remains of the tradition of worship in the tiny oratories, chapels or 'temples' whose ruins stud the shores

[1] The collaboration of friends in Lewis may allow mention of the Gaelic version of A. Geddes, *The Spirit of the Tartan, a Song Drama* (English Version); *Souvenir Programme and Book of Songs* (Outlook Tower, Edinburgh, 1932). In this the spirit of this labour sequence embodied in its songs and runes is dramatised in its setting of custom and history. The Gaelic version was prepared by the generous labours of James Thomson, M.A., Bayble, and the late Duncan Macdonald, M.A., Sandwick, Lewis.

COMMUNITY FROM PAST TO PRESENT PT. II

181 great freakness, as there is for reticence.[1] But since
184 Augustine, orthodox religion, Catholic and Protestant, has
overstressed and misunderstood the folk-lore of 'the Fall'
[771] —originally, it seems, a legend of fertility and fulfilment!
[1] its part as a result of the teaching of the doctrine of the
[6] 'Fall', there arises an attitude to parenthood which
[775] falls short of rational understanding and reverence for
human life.[2] If fact be the best guard against superstitious
fancy, and if sensibility and tact can soften the first shock
of adolescence, then the Gael knew wisdom.

121 Returning to the main theme, it is clear that primitive
religion and folk-lore alike show misunderstandings of
cause and effect, and of the action of 'mind' on 'body'
[121] and 'matter'. What are facts to faith may be symbols to
science; yet if these symbols prefigure truth, they may
[121] outlast the present stage of scientific recognition. Gaelic
[121] belief and practice show a recognition of communal as
well as individual spirituality; of the depth of conscious-
[181] ness below its upper surface, and its upwelling power;
and of the fusion of both without, in all its beauty, as a gate

[1] Needless to say, Gaelic verse has its moments of coarse freedom like that of any language. Of the lively line (*puirt-a-beul*) sung when there is no piper or violin to play for dancing, most of the words are delightful, but a few are coarse. Yet the Gaelic language is so rich in the vocabulary of the sex of the lover whose opportunities in the cities had not improved his character—once quoted a coarse jingle to me, only to see little amusement at his song and some contempt for its sense. He excused himself by saying, "It's rough . . . it's rough—but it's not dirty"! His excuse sums up the creative expression of animal spirits found in Gaelic jingles. One may adapt it as "Sometimes coarse, but rarely or never vicious".

[2] A. Geddes, "The Origin of Sex in Genesis and a Missing Legend", *Hibbert J.* vol. 44, Nos. 1 and 2, 1945-46. Cf. *The Legends of Creation; an Anthropo-Geographical Interpretation of Genesis*, (ed.with map), Hibbert J. vol. 43 (end), 1945.

The Genesis have given attention to the second chapter of Genesis, and the response of the Gael. Gaelic spiritual tradition seems to have been less influenced by such Gaelic mythology; and to have held firmly to the first chapter, in its noble simplicity.

COMMUNITY FROM PAST TO PRESENT PT. II

176 intuitive and traditional, of the people, and their love for
[181] the good and beautiful. Song collectors from outside the
[184] Islands have found little and assumed that song had been
[533] swept away. Discretion is certainly needed for song col-
lection! Years ago in Bernera I had been told of a pretty
125 love lament I had not heard. Calling with my hosts to
533 invite him to their house that evening, we found the singer,
185 a burly crofter of fifty or so. We had been about to
mention the word 'song', when the word was checked on
our lips by a swift, warning glance. The singer lived with
his old mother and she must not be told that her son went
533 out on such an errand! Nevertheless, Islanders them-
[178] selves are collecting many unpublished songs, where
[814] strangers failed. The Laxdale School choir wins prizes at
many a national gathering or *Mod*, for their spirited singing
of songs, many of them unpublished. Owing in part to
their very isolation, these songs have remained as pure in
form as in the Catholic Isles, whether in time and rhythm
or in scale and mode. Thus the sub-intervals of 'quarter-
tones' of the modal scale add subtlety to the melodic line
of an air, as in the melodies of Wales or of distant India.[1]
These intervals are rarely heard on concert platforms,
being unrecognised by many 'Mod medallists'. They
are rarely known to professional musicians trained to
the mechanical scale of the piano, and who are asked,
as adjudicators, to award praise or criticism by alien
standards.

181 Courtesy and modesty are noticeable among the young

[1] M. Kennedy-Fraser, *Preface, Songs of the Hebrides*, vol. i. Cf. Glynn-Williams, *Walk Through Wales*, 1937 (London: Penguin). *For India see* A. H. Fox Strangways, *The Music of Hindostan* (1914), pp. 104 ff. and H. A. Popley, *The Music of India* (1921); cf. A. Geddes in A. Karpeles (ed.), *L'Inde et ses Arts*, Paris, 1931. While published phonographic records of Indian singing normally illustrate these intervals, those of Gaelic Hebridean singers rarely do, as they are accustomed to alter to suit a piano.

417 Gold about a people not unlike the crofters, and the prophecies
[112] were being fulfilled before the peoples' very eyes. In it any
[184] wonder that thousands gathered on the hillsides to listen to a
[179] minister whose dynamic appeals moved them to tears?

As the people turned to the new church and the emotionalism
[145] of the large outdoor gatherings, they continued to forsake
[533] their old customs and folklore. The songs, except in some
[185] cases the wealking songs which provided the tempo for shrinking
tweedsyn, and the tales were placed under clerical ban.[1] The
[783] Church and the 'God' insisted on the prerequisite of
gravity in all aspects of life for salvation.[2] The communion
roles were purged. In Bracadale, for example, there had been
258 communicant numbers. Following the Disruption there were
less than ten.[3] The same pattern was repeated elsewhere on
the island.[4]

[175] The religious patterns which had evolved were, never-
[176] theless, reinforcing much of the traditional way of life.
[178] The "men" of Skye had become elders in the Free Church. This
[783] status sanctioned their position in the community. Although
the age structure of the population had not yet altered

THE PEOPLE

175* If May is considered a busy month, June duties are even
[181] more pressing. Although the winter days are over, the rain-
[533] fall has begun to increase. A succession and variety of de-
[534] mands are made on the crofter's time. Once again the sheep
must be brought down to the "fank." This time the purpose is
to mark the lambs. The males, unless one or two healthy
specimens are selected for future use as rams, are castrated
and smeared with a dye to indicate their ownership. The
females are smeared and have their ears cut to signify both
ownership and age. Like the dipping, this operation requires
[174] the cooperation of the crofter and his family, the neighbors,
[232] and hired hands. Meat the sheep without lambs are dipped
[232] once again and given a dose of medicine for liver flukes and
[241] a variety of diseases. At the same time, the early hay and,
[241] perhaps, the early potatoes are ready for harvesting. The end
[133] of June brings the Highland Wool Fair in Inverness. If he
[262] has Cheviot sheep, as most crofters do, the man must go to
arrange for their wintering on the mainland and drive east
coast. Although Cheviots produce a finer wool than the more
hardy Blackface sheep, they do not stand up to the incessant
wind and rain of a Skye winter. If his wife can leave the
[134] children behind, she will accompany her husband. The old
[534] function of the Fair, the sale of wool, has disappeared under
government price control legislation.

[181] It is not unusual to have the early harvest delayed
until July, but even then the sowing may have to wait because
sheep must come first. On one of the dry days during the first

535 DANCING:-dance styles (e.g., imitative, pantomimic, symbolic, stylized); technique (e.g., movements of the head, trunk, and limbs); gesture, posture, and their symbolisms; aids, pair, and group dancing; choreographic patterns; extemporization and formalization; rhythm; musical accompaniment; occasions for dancing and associated dance forms (e.g., war dances, shamanistic dances, ballroom dancing, kip dancing); participants and spectators; dancing places (e.g., dance halls); dance costumes and paraphernalia; emotional expression in dancing; training in dancing; specialized dancers and dance leaders; choreographic arts allied to dancing (e.g., figure skating); etc. See also:

Ballet	536	Dance of the Dead	540

584 groups on the shellings or within the village as they
178 [839] were growing up, and even during courtship maintained
a fitting, somewhat rude interaction. "If he says he
wouldn't touch her with a barge pole, he's obviously
smitten." Someone considering the dangers of marrying
an outsider[1] commented, "A devil you know is better than
a devil you don't know."

584 Now that facilities for transportation have increased,
178 [145] couples tend to pair off in care rather than go in
groups. They may even be seen together on a date in
[535] public. Activities such as dances still begin late in
the night, lasting from about 10 p.m. until early
morning. The seriousness of a relationship is kept
secret for as long as possible, but weddings today
require long-term planning because wedding dinners are
584 held in hotels rather than within the village. At an
524 earlier time, serious intentions were announced only a
few weeks before the wedding, at a *ceitasch* or dinner
party which signified a betrothal. *Ceitasch* also
means "disentangling" or "reconciling," and was
described by one person as a means of "pouring oil

[1] The term "outsider" usually connotes non-Gaelic-speaking, but may also refer to someone from outside the village.

585 bridesmaid(s). The house was filled each night with
[173] visitors bringing new gifts or coming to see the latest
additions. Enough presents were given during this
[203] time to set up a household. Invitations to the wedding
were issued verbally, by persons going around to each
[142] house. Anyone could come to the church ceremony, which
was relatively informal and jovial, but only the
"closest" relatives were invited to the sumptuous wedding
dinner which followed the service. The bride and groom,
their parents, aunts and uncles, first cousins and
usually second cousins. Many more were invited to the
wedding supper which started after the dinner, at about
10:00 p.m., and continued throughout the night.

Three main nights were distinguished, although
[175] preparations and festivities might go on for weeks. The
[252] first night was the night before the wedding, when women
of the village brought hundreds of chicken pies, which they
plucked and cooked. Meat, usually mutton, was also cooked
and sliced. Butter was rolled into balls. Neighbors
brought milk and other provisions and assisted in the
baking for a week beforehand.

[175] On the second night, hundreds of villagers ate the
[252] chicken and mutton prepared for the wedding supper,
[173] and danced to the music of other musicians.
[203] Many young boys had their first taste of beer or whisky
on these occasions.

For some weeks after returning, the couple goes visiting
with a bottle. The scope of visits seems to have narrowed
to close relatives unable to attend the wedding, and
sometimes the custom is referred to as old-fashioned.
The bride usually sends pieces of bridal cake to
relatives who were unable to attend the wedding.

[Q. Death]: At a time of illness or injury, an
individual may see persons he has not seen for years.
The house is filled with a constant flow of visitors
and the visitors recount every detail of a sick person's
pallor and movement. The room is usually occupied by
visitors when a person breathes his last.

In the past, wake consisted of every house in the
surrounding neighborhood when a person died. This no
longer occurs. (The story is told of a weaver who called
a mill in Stornoway to say that he could not finish an
urgent vessel because there had been a death in the
village, and was told, "You keep on weaving till the
WHAPPIC dies.") However, dances in the village are
cancelled, and the bothan (an isolated hut in which
liquor is sold illegally) may close. Outdoor work, much
as peat-cutting, which would be widely seen is avoided.

Word of the death spreads throughout the village and
beyond within a few hours. From an immense, accumulated
inventory, memories of the deceased are brought out,

The organization receives a large proportion of its funds
from the Scottish Education Department, whose statutory
duty is to foster the speaking of Gaelic in Gaelic-
speaking areas. In 1970-71 a series of evening meetings
were sponsored by An Comunn in Stornoway, but also
in other towns and also in other ways. A family in
Shawbost was hired to a friendly family in Shawbost some months
ago and some geese which are captured by Bassmen
on the island of Sona once a year and are salted to make
a delicacy that is in great demand. Through such contacts
a family wanting to purchase a cow may receive word of one
that is being offered for sale in the village of a
Communion contact.

Services of Communion last five days. All services
except that held on Sunday evening are intended for the
communicants or full members of the church, also called
"the believers" and "good livers." During this time, no
dances are held in Shawbost, and in Carloway the hotel is
closed.

On Communion Sunday, the upper balcony of the church
is filled with villagers watching to see if any of the
recently converted have decided and have been allowed to
take Communion. Because the villagers watch very closely
the behavior of everyone else within the village, any change

THE PEOPLE

Most of the outward changes which have occurred in the island
took place in the two decades just after the first world war. Food,
for instance, now tends to be better balanced and contains more
nutrients. Staple diets in the past were mostly confined to a few
items, and based on the cereals. The crofter fish, particularly those with
essential oils (eg cod) were, of course, available; but only if the
fishermen were lucky in the catch. As for vegetables and fresh
fruit, it was not until after the 1920s that these became generally
available all the year round.

Another outward change has been in dress. Until the beginning
of the twenties, the women wore a black petticoat striped with
colours, a dark blouse, dark tam, dark shoes, and a knitted muffler
round the neck and over the head. In summer, the tartan shawl
was more typical of Sundays than of weekdays. Men's clothes
tended to be of the homespun type, rich in water-resisting oil.
Later they were replaced, as far as they could with reasonable wages, by
the villages would be abandoned by the young, perhaps with
no return such as hitherto on 'retirement.' Many young
people are content with life in the townships, provided
they can get a living there, though not all, for they are
somewhat divided; and work elsewhere, even in the mills
of Stornoway, is a counter-attraction.

Social life is undergoing changes which operate both
against and for maintaining the unity of the young. In the island,
household interchange of conversation, song and story,
the ceilidh, has declined. On the other hand, one feels
that, as regards religious prohibitions, and in spite of the
nervous tension expressed in 'Revivals', the young have
been greater freedom. Near one village a Nissen hut,
handed over to the Home Guard, was also used by young
people for monthly dances. When I asked a young crofter
prohibited from the Navy whether the Elders of the Kirk
made no protest, he replied that they had, but had to give
it up: "They say that we won't stand for it." This
would have been unthinkable during the First World War,

COMMUNITY FROM PAST TO PRESENT PT. II

developed through the township Grazing Committees, by
the Scottish Agricultural Organisation Society and the
associated Crofters' Agency. Lime and fertilisers were
purchased, and seed and other products sold, co-operatively.
The co-operative marketing of lobsters, taking
advantage of fluctuating London prices, has led to the
reconstruction of creels for storage. By these and other
means, government assistance is utilised but not squandered;
rather initiative in agricultural co-operation is
reinforced; and communal tradition is revived, linked
to personal responsibility through the crofters' lifelong
knowledge of one another.

As to the future, all agreed that unless the Harris Tweed
Industry were replaced, as far as they could see, by
the young, perhaps in the
[illegible] and by the young, perhaps with

[illegible] would have been unthinkable during the First World War,

CH. X BETWEEN TWO WARS, AND AFTER

or after it. After 1924-25, the Rector of the Nicolson
Institute, Stornoway, visited the village halls for village
education and recreation.[1] The scheme was never fully
realized except in one township, Sandwick, near Stornoway,
owing to the strength of puritanical opposition. In
particular, dancing by young folk was condemned as
"dragging down the graces of their brethren". This and other
[illegible] social standards, in becoming less
[illegible] and encouraging people to emigrate,
[illegible] and communal tradition is revived, linked
[illegible] responsibility through the crofters' lifelong
[illegible] of one another.

[1] W. J. Carmichael, "Social Amenities in the Western Isles", *Sociological Rev. (Lon. 1929)*.

There must be enough interaction between the relatively small number of people of similar standing within
the local group and beyond if the consanguinal and affinal
relationships are to be "maintained", and they are not
to lose their identity as a group apart. They must not only
interact with other county families, but the county families
must be endogamous. Once a year the county families of Skye
gather together this needed opportunity to reaffirm their solidarity,
to cement their relationship with the upper class of British
society, and to arrange suitable matches for their sons and
daughters. A Skye County Ball is held in November. The
"county people" come from near and far to attend the affair,
one of a series of local balls held throughout the nation.
If anyone has any doubts about his acceptance during the holders
of highest station, he receives his single but exquisite
answer at this time. He must be invited to the ball. For
three days and two nights the festivities continue. High
society has not forgotten how to enjoy itself with its tenantry
from Edinburgh. The local people who are "Pa-pa's" have
taken over Portree.

On the first night of the ball, the young people are
escorted from the homes of the Skye aristocracy, who not
as hosts, or the more fashionable hotels to the Skye Gathering
Hall by their parents. During the dance and the supper which
follows, suitable introductions are arranged for their benefit.
Shortly after the conclusion of the ball, the young
people appear in couples. If they want to chaperone

the Outer Isles, an area of recent depopulation, there are
enough youth to realize the dilemma of their elders. Of
their number, some leave the island until their dance
is a plank bridge. In Lilmour the crofters are looking
forward to "Effectual Calling." To defy the elders, or
allow their children to run counter to the wishes of the
elders, would mean a loss of face for extinction.

For the majority of crofters, any form of amusement
is objectionable, but there are slight differences among
the affiliates of the several sects. The Church of Scotland
is the most lenient. For adherents, concerts, film shows
and similar organized forms of entertainment may be admissible,
especially if they are held outside the neighborhood. There
is a "picture hall" from Glasgow to Portree on Tuesday and
Saturday night. Sports activities are often considered
as wholesome outlets for the youth. Some of the ministers,
feel the lack of social contact with their people and
believe that they should be more fully involved in the interests
of the Church of Scotland minister in
Lilmour occasionally attends the Crofters' Club, the only
secular activity attended in the neighborhood. Significantly,
Free Church opinion, although the voice of a minority, has
prohibited the playing of pipes and recitals of the Gaelic
Choir at the annual Lilmouth show. The Church of Scotland
and the Free Church are the only sects in the village hall.
Dances are condemned. This is not because dancing is

in a sin but because of the excessive drinking and immorality
which might result from a promiscuous gathering. Organized
dances are, in general, not objectionable. Nevertheless, in
view of the attitudes of the people to these secular activities,
the Church of Scotland crofter believes in much the same way as
his neighbor who adheres to another sect. The elders of the
other sects have no influence over everyone in the neighborhood.
Every man must act himself. They will my Delphinium
The Free Church and Free Presbyterian Church people
condemn any and all social gatherings where songs, stories,
or other diversions are indulged in. Dancing is considered
as expense to reason circumspect in behavior. They may
discuss their problems and gossip about their neighbors or the
wicked sassenach. They may engage in cooperative or individual
work. They may get together in the home. They may not engage
in such activities outside the home. Religion on Skye for
the majority has received attention on the home. Let us look
at some of the activities which are condemned. There is the
Beatrix Bank Holiday which is a day set aside by the crofters
to stimulating home industries in rural areas and providing
educational programs, especially demonstrations and lectures
on domestic arts. One meeting, for example, is May, and for
Free Church opinion, although the voice of a minority, has
prohibited the playing of pipes and recitals of the Gaelic
Choir at the annual Lilmouth show. The Church of Scotland
and the Free Church are the only sects in the village hall.
Dances are condemned. This is not because dancing is

[2] Darling and Lively, *Ha-Ha*, pp. 23-24.

that the people of Skye, including many of the ministers,
have not been favorably impressed by Skye West. The economic
benefit it has brought to the people of Skye. The Kirkhouse of
the Highland Games are alright, but the concerts, dances and
similar festivities only cause ill feelings.

As might be expected social life is more vivid in Portree
than in the towns and the aftermath of the Church of Scotland
parlour of a number of recreational activities. In the winter
there is badminton twice a week. In the spring and summer
there is a little golf and tennis. These activities are not
religious; they are climate. Town, too, there is shopping.
We have already noted the existence of many clubs. There are
regular dances. Boxing pictures take place twice a week.
All of these activities are rich in variety. The Dremen bring
a sure of less passive role. The "elect" of the smaller
sects who, by the least, very much disturbed by these
festivities. Many of the children attend the dances
the concerts and the boys play shinty. They can find
enough solidarity among those of their own age grade to outweigh
the threats of their elders. Apparently they find
enough security to be unaffected by the stern denunciations of
the minister from the pulpit. Even they marry, however, they
have to resent the pattern of their kinship, for now the
elders are in a position to exercise control by eliminating
access from their children. Some may turn to the Church of
Scotland.

Standing in marked contrast to Portree, in Glendale the
control by the aged is complete. There is not a single antisocial

'first-footing'. In the past the lads came in bands singing carols, and once admitted—refusal of hospitality being out of the question—any misunderstandings and quarrels of the past year had to be forgiven and forgotten. With individual visits this is no longer possible, for though these maintain friendship, they cannot easily and naturally heal a quarrel.

From Lewis three fine carols once sung by youths are recorded, of which the fidelity of Carmichael's translation goes far to render both sense and feeling (Nos. 55-57).[1] In Ness I have sought in vain for the old melodies from the descendants of Angus Gunn. Born about 1800, Gunn had lived for many years as a shepherd on the islet of North Rona, unreached by the burning zeal of the Evangelists, so that his traditional piety survived. Could they be found, these melodies would enrich the remnant of authentic Christian lore in Britain, for even the well-known English carols are mostly of modern reconstruction.

The first Christmas Hail opens, "*Ho Ri*, Hail to the King, Blessed is He. . . . Blessed be the house and all therein. . . . Lasting . . . and healthy round the hearth be ye. . . ." It goes on, "This night is the eve of the great Nativity, the great Noel [*Nochd oidhche Nollaige moire* . . .]; Born is the Son. . . ." It closes, "Shone the mountains . . . earth, and land, Heard was the wave upon the strand. . . . Blessed be the King . . . to all ages, to all time." A fragment from Tolsta, Lewis, sung by boys on New Year's Eve as they begged for a Noel bannock from house to house, latterly began and ended with playful nonsense, yet it retained its traditional climax: "[On the first day of the New Year] I saw the Threesome [The Trinity] going to the shore. The land shone, the

[1] No. 59 is set to an Eriskay chant in *Songs of the Hebrides*, vol. i, p. 159.

175 earth shone, The wave shone on the shore; The deer of
796 the mountain steep shone. . . ." [1]
533 "The Christ Child's Lullaby" is a lovely carol narrating the Christmas tale. Legend tells that it was sung by
175 'Mary-Mother' herself to an unwanted stepchild lost on
796 the moors, where his stepmother found him in the arms
533 of Mary, who sang as she lulled him. The stepmother
773 cherished this song with the lost child, henceforth loved as her own.[2] The poetry of the Gael, like the odes of Greece and the Psalms of the Hebrews, is luminous with the vision of mountains, land and sea, reflecting a light within that of sun or moon, and sonorous with the rhythm of wave, tide and season which are "of all ages and to all time,
[181] *gach linn gu brath*". Its adoration is full of nature and of humanity, yet it soars above mere nature worship or anthropomorphism.

175 While Christmas, more than any, was a festival of
796 leisure, others were closely linked to labour. The festival dates of Candlemas or Lent, of Saint Bride's, Saint Patrick's or Lady Day, marked the stages of spring's coming and the duties they brought. Summer came in at Beltane—held in May, though the word included other dates connected with spring fire; and on St. John's Day

113 [1] Donald Macdonald, M.A., MS. essay for the Royal Scot. Geog. Society.

[2] A short version is published in the *Songs of the Hebrides*, vol. i. A translator may choose from its 29 stanzas—though all are true to the Gospel and worth translation. Of the simple choral variant of the air (as published) Fr. Allan Macdonald told Miss Amy Murray his grief that it had superseded the melodic variety given to the Lullaby when sung by one singer at a time (*Celtic Review*, 1905–6). From three variants noted from oral singing one can arrange a melodic sequence. To pass from a major variant (set to stanzas on Jesus's mother, the shepherds and the 'kings') to minor variants (set to the tale of Herod's evil deeds) restores much of the dramatic intensity of this noble carol. Only deep feeling for the Gospels could create and maintain, without written help, so full a version of the words and variety of associated melody. (The complete words, *Taladh Chriosta*, are in Fr. Allan Macdonald's collection, p. 7.)

342 yard and occasionally a barley-kiln in which to dry grain
343 before malting it for home-brewed beer. A 'black mill',
351 with its primitive horizontal water-wheel, stands apart by
[251] some burnside.
[273] Round the circular hearth, a large company can assemble in very social fashion for talk, story and song, the meeting
354 *together* (*ceilidh*). By the transfer of the hearth from the
571 centre and the substitution of a gable fireplace and regular
• 538 chimney, the social circle is halved, while meantime the
[178] tales of the *ceilidh* are forbidden or forgotten. Happily the bench still stands against the wall, near to the open
[353] door, through which neighbours slip in with a word of greeting to find a customary welcome.

342 The dwellings on the summer pastures out on the
361 moors show great variety, illustrated in Fig. 10(B). A simple type in use is built of turf and stones, lightly roofed with
[178] turf placed on spars. A more primitive 'beehive' type (which fell out of use before 1900) was stone-built and
[171] corbelled, probably for lack of timber. And whereas the lighter type always stands by itself, the corbelled type was added to until a dozen cells formed a single mass, suggestive of ancient 'neolithic' hamlets as at Skara Brae in Orkney, described by Childe, and of the domed, corbelled huts of the ancient East.

[343] A further type was the 'spring house' of Tolsta, NE. Lewis, in which both cattle and folk sheltered in spring a little way from the village, before going out to the more
[124] distant moor. Mr. Donald Macdonald, F.R.S.G.S., a
[178] native of Tolsta, informs me that the spring house was in use until 1936. He remembers vividly how life in the shieling restored health and colour after the winter.

174 of the Norsemen, lay a succession of earlier periods. A
613 phase of primitive settlements is traceable in archaeo-
172 logical remains and in recent and contemporary survivals.
174 It is shown in the physical race-traits distinguishing those in one part of the Island from those in another. Fragments of tradition telling of the first Christian missionaries survived the Norse invasions and settlements, dated from A.D. 800 or before, down to Haco's defeat on the Clyde at Largs in 1256. These fragments can be linked to chronicles and to later tradition, on which they throw fresh light.

[144] A survey of the archaeology has been published,[1] but comparatively little, as yet, on race. Yet different communities are distinguished by marked racial types or strains. Although many, indeed most, of the race-strains of the Island must have entered it in prehistoric times, some are linked to tradition, and history accounts for the more
[141] recent immigrants. The striking element of race in the Outer Hebrides is a broad-headed type prevailing from Barra to the Lews, accompanied by medium stature and dark hair; it is also found across the Northern Minch. But within the Island are notable differences.

829 Variety of race being accentuated by difference in ways, the communities still comment pointedly upon one
• [538] another! For instance, an old saying is not forgotten: "The folk of Cladach, but the gentlemen of Uig!" (*Muinntir a' Chladaich, ach daoin' uasaile Uig*),
[433] 'Cladach' being the western 'Beach' district possessing
[632] ploughland but poor fishing, which covers the modern
[133] parish of Barvas (excluding the north-west cliff-promontory

[113] [1] Royal Commission on Ancient Monuments, *Outer Hebrides, Skye etc.*); 1928. V. G. Childe, *The Prehistory of Scotland*, 1935; *Scotland Before the Scots*, 1946.

174 to bleed or to set bones, while some elderly woman would
175 serve as physician and midwife. Spiritual consolation
462 and renewal too could be found, even in the absence of monk or nun, or of priest, minister or catechist. Enough
[463] here, that with agriculture and fishing, most crafts, except
[759] metal-work, were practised in every family. The 'range
[793] of skills' was therefore wider and richer in latent art than might be supposed from those needed on a little croft today.
[593] Hence the importance of understanding the roles of husbandman and housewife, of "the man and the woman of the house".

174 Their labours through the annual rhythm of the seasons
462 might be classed as efforts for the man and endurance for the women (Fig. 9). Man's muscular strength and free-
221 dom of limb rouse him to efforts demanded by the thrust
[181] and lift of peat-cutting, digging in stony soil, or pushing the foot-plough, step by step obliquely down a rocky slope. In the past an archer's chase of stag, wolf or boar demanded all a man's effort, and courage too, as fishing still does in the stormy north-western seas. With this facing of danger there came a gaiety that sparkled like the crest of a breaking wave. Women's work demanded by its unceasing activity a cheerful endurance, whether at labour on the croft, at corn-grinding, butter-making and peat-carrying, or carding, spinning and weaving; and with every task of day or season came the constant tending of cattle, of menfolk and children.

• [538] This allotment of seasonal tasks and skills is neatly put in the proverb, "A man's cow won't yield milk, nor a woman's horse ploughing" (*Cha bhi bainn' aig bo fir, 's cha bhi treabhadh 'an each mnatha*). Yet women have always taken a share of work on the croft—too heavy a share when the men were much away—and the habit of

175 couple advancing one on either side of it—many other
476 tasks were definitely team-work. Such was peat-cutting.
"When they are making peats, five people are employed.
175 One cuts the peat, another places it on the brink of the
476 ditch where it is dug; a third spreads it on the field, a
314 fourth pares and cleans the moss; and a fifth man is resting,
ready to relieve the man that cuts. The women are seldom
[462] at this work, but the men help one another alternately;
sometimes they must rest satisfied with fewer hands; but
the above is the full complement of men required to per-
[127] form the work, according to their tastes." Buchanan's
[178] description was written 160 years ago (1793); it remained
true till recently and generally it is so still. There was thus
a normal team practice for work—even a man to rest was not
• [538] forgotten! As the Gaelic proverb puts it: "They won't
make power (add strength) without a threesome and they'll
limp without a foursome!" (*Cha deanar treine gun triuir,*
[802] *'s bidh iad crubach gun cheathrar*). In Gaelic, as in Scots,
one speaks of a team according to its number, as "a pair,
a threesome, foursome" and so on, up to a tensome
(*deichnear*). In Lewis the farm-team was usually a foursome
or fivesome.

175 Only in exceptional cases was land worked and held
423 singly—as when a smith was kept busy at his anvil in
241 ploughing-time and harvest. Thus in 1715 one or two
rural smiths had single holdings of average value or more
[326] (£1), and one artificer or tin-smith (caird) a holding of
minimum value (5s.); and in the burgh all the small plots
[286] were held singly. As the women wove, at home mostly,
[462] no male rural weaver held a single plot; his weaving could
be done at slack times, so long as there was light; at busy
times he worked on the land with the rest of his team.

000 On the mainland, both Lowland and Highland, an

175 in communal organisation, historically brought about by
622 landlord or steward over a wide period, has commonly
557 been ascribed to some inherent feebleness in Gaelic
427 communal spirit. It is all the more vital to realise the
strength of community and its self-governance by neigh-
[623] bourly 'parliament' and chosen constable, by which the
people put their ideals into practice. These may be given
in the three traditional terms of fellowship, fairness and
freedom, summing up the Gaelic watchwords.[1] Unless the
struggle for freedom was too severe, fraternity, followed by
equality, came first.

• [538]

(E) STORM AND GALLEY; BATTLEFIELD AND REGIMENT

174 The peaceful round of daily life formed the most
614 enduring test of the mutual loyalty uniting the commoners
577 of the clan, and linking chief to people. Yet the tensest
ordeals came in hours of danger faced together, whether
[501] at sea in a small fishing boat or a many-oared galley, or in
[726] war in a clan company. The Gaels' own records must
speak for them. Many a song of the Isles conveys the
team-spirit of the crew though without describing its men.
174 And although Mary MacLeod's song of MacLeod's Galley
614 be irretrievably lost, there survives one epic poem portray-
501 ing the ship, the storm and, man by man, the crew who
warred against the waves and won. Alexander Mac-
• 538 donald's *Birlinn of Clanranald* is unmatched in Gaelic,
and probably in English, verse for its portraits of the crew
in action, from steersman to 'look-out'. The flowing
metrical translation by Pattison with Hugh MacDiarmid's
vivid prose helps to give the English reader some vision of
a crew of Gaelic freemen at their best.[1]

174 The poem opens in slow traditional rhythm with "the
614 Blessing of the Ship", the arms and the crew. Then the
501 bard, speaking for the stately skipper, "incites the sixteen
539 oarsmen to row" out of the bay, and they row to a rousing
577 shanty, a *Iorram*. Next, in readiness for the voyage and
[113]

[1] Thomas Pattison, *The Gaelic Bards* (2nd ed.), 1890 (pp. 1-28); and Hugh MacDiarmid (Ed.), *The Golden Treasury of Scottish Poetry* (pp. 65-85), 1940. Cf. A. Macleod (Ed.), *Sar Orain: Three Gaelic Poems*, Glasgow, 1933. The different themes of its sections, each in its own metre, have been published separately, in *The Songs of the Hebrides*, and elsewhere.

771 xviii. 19-20). The worldly wise might think that the
794 spiritual fare of these poor folk must have been lean indeed;
while others, having heard much of the Highlanders'
[173] 'pagan' superstitions, may think even worse! The evi-
• [538] dence from which to judge is found in survivals from a
rich lore, and for most readers seen but 'darkly' through
prose translations from the poetry of a tongue now known
to few.

771 The richest collection is Alexander Carmichael's *Car-*
538 *mina Gadelica* (*Ortha nan Gaidheal*).[1] Others were made
by the Rev. Fr. Allan Macdonald of Eriskay, and by the
Rev. Kenneth Macleod with Mrs. M. Kennedy-Fraser in
the *Songs of the Hebrides*. Included here are unpublished
verses given by crofter-friends in the Isles and others from
Fr. Allan Macdonald's collection,[2] hitherto untranslated.
What still remains has come down to us only by narrow
771 escapes. One is reminded of 'Father Allan's' early
539 death, after nursing his parishioners through an epi-
demic; and Carmichael's escape from drowning as "on

113 [1] *Carmina Gadelica: Ortha Nan Gaedheal.* Hymns and incantations
114 with illustrative notes on words, rites and customs, dying and obsolete;
orally collected in the Highlands and Islands of Scotland and translated into
English; vols. i and ii (1st ed., 1900; 2nd ed., 1928); vol. iii, 1940; vol. iv,
1941. The last two volumes were edited by the collector's grandson, Prof.
James Carmichael Watson, whose death as an Ordinary Seaman in war is
mourned by his friends, and has been described as a disaster to the cause
of Gaelic, and of humane learning in Scotland. One more volume edited
by James C. Watson awaits publication. (In the following, quotations are
referred to as from *Carmina*, followed by the number of the rune: Nos.
1-216, vols. i and ii; and Nos. 217-351, vol. iii. Vol. iv contains varied
lore.)

[2] Of all these four, the least known is Fr. Allan Macdonald's little
collection, *Comh-Chruinneachadh de Laoidhean Spioradail*, Hugh Macdonald,
Oban, 1893. It was privately printed, and lacks a translation and table of
contents. There could be no finer memorial to this man and the community
whose spiritual life he helped to record than a new edition of all its ancient
Gaelic 'spiritual songs', with the addition of others he wrote down before
his death in 1905, and perhaps, of some of his own poems, notably his famous
Eilean na h-óige, "Isle of the Young".

THE PEOPLE

SOCIAL LIFE

[571] In common with other aspects of island life, the social side has
[198] undergone considerable change. The world has been brought nearer the crofter's home by radio, television and film screen, reducing the social need for meeting with neighbours and friends
[574] for the ceilidh. The ceilidh was once the principal means of re-
[198] creation and instruction. There is no precise English equivalent for it, and it may be loosely described as an 'at home' to which all are welcome. It may be held in any house; in the past, the favourite resort was a home where the head (*fear an tigh*—man of the house) was an intelligent, communicative man; and if he had a number of eligible daughters so much the better. Ceilidhean were held after nightfall. Old tales were told, and songs sung, and public questions of the day were discussed. All women attending took with them an ample amount of work, sewing or knitting, to see them through the evening. Ceilidhean nowadays tend to be
[545] more organized, taking the form of popular 'concerts' which did not take root in the island until the turn of the century, though they were a common way of entertainment on the mainland at the time. Social life in the past was thus very intense, and was a natural evolution from the basic desire to forget the day's work and to have some pleasure of a kind.

[546] The pattern of recreation facilities has since become fairly varied. Films came early to Lewis, or rather Stornoway; the first Picture House was located in Keith Street, and presented both
[536] films and stage turns. A new Playhouse was opened in 1934 with *The Good Companions* and *Falling for You*, starring Jack Hulbert and Cicely Courtnedge. Films in the rural districts were a rarity, however, until in 1946 the Highlands & Islands Film Guild came into existence to bring the magic of the screen to
[207] scattered communities. This body ran several mobile cinema outfits in the deep crofting areas, until the advent of television in the region killed it off in 1971. While it existed, however, the Guild provided an essential service to remote communities and brought not only the world to their doorstep but ensured that they felt part and parcel of a much larger scheme of things.

[207] The first television service in Lewis began in 1959, 'piped' by

538

538 LITERATURE--literary styles; poetry (e.g., epic, lyric); verse forms (e.g., couplets, stanzas); poetic techniques (e.g., meter, rhyme, alliteration); prose forms (e.g., tales, sagas, proverbs, fiction, short stories, essays); narrative plot and structure; literary subjects and themes; characters (e.g., animals, man, gods); treatment (e.g., realism, fantasy, allegory, satire); composition; literary conventions; recitation and narration (e.g., occasions, audiences); specialists (e.g., poets, prose authors, story tellers, ghost writers); etc. This category is reserved for generalized descriptions of literature. For literary texts, and analyses and commentaries related to specific literary works see 539. See also:

197 behavior characteristic of the dominant group; but for
191 those that remain in the village, the language serves a
534 unifying function, although its form is limited in
188 diversity of elements.
578

184 Jokes are most humorous when told in Gaelic; and
197 conversation is punctuated with Gaelic proverbs and old
• 538 stories. There is a vast oral lore, expressed in Gaelic,
[522] of the village and generations of its members and their
[521] characteristics and escapades, a dense map of human events. All of these tales, proverbs and jokes have been told a
829 thousand times, but retain their unifying function. When speaking of today's children who do not go to the sheiling, a man says sadly, "They won't have our memories; this place will mean less to them than it does to us." The moor is not an empty wasteland, but a map of memories.
103 Thousands of place names are known, and behind every place
175 name is a story. The major landmarks such as mountains, lochs and headlands tend to have Norse names, from the days when the Norsemen raided and settled along the island coasts; but the smaller hillocks and fields and bends in the stream have Gaelic names, for example, Sheiling of the One Night, Field of the Slaves, Slope of the Stone
[184] Boys, Hillock of William's Sheiling. To know these place names and their histories is to participate in a distinct community, which has been made even more distinct by contrast with the dominant society.

000 relevant to village life, and thus is not attended to.
517 Comedies, soap operas and westerns constitute the
[207] favorite television programs. Many of the men read
• [538] adventure stories--war, western and detective--on the
[204] quiet Sunday afternoons. Magazines and newspapers most often received include The Daily Express, The Sunday Mirror, The People's Journal, The Stornoway Gazette, The Oban Times, and True Romance, documents dealing with local events or with scandal and dramatic personal
521 accounts. In general, the news of the mass media to
181 which this audience attends is gossip writ large. Such news, like local gossip, is discussed endlessly, in elaborate detail, until sapped of all potential to excite or until new events capture the attention of the village audience.

Events which occur in the open, treeless countryside
517 are vivid and dramatic. The generally low level of
181 stimulation enhances their dramatic effect. A man appears on the hillside or a car along the horizon, and all ears and eyes attend. The British system of perennial number plates on cars makes it easy to identify the shifting cast of characters even at night. Even children memorize long lists of number plates. There is a perpetual audience looking for a play.

156 sympathetic with each others' idiosyncrasies. A constant
572 joking keeps people at arm's length and discourages the
[522] development of empathy.

156 Accompanying this style of indirect, inhibited
154 expressiveness and the low level of stimulation are culturally prescribed opportunities for relatively uninhibited expressiveness. Such opportunities include the ceilidh ("visit"), the drinking situation (mainly for men), the role of clown or "character," and holidays
[166] such as New Year's. Although young villagers and
[483] emigrants often describe the village as "dull" and "dead,"
[181] the emigrants are happy enough to return to the island for short periods of time, during which they participate in those situations in which expressiveness and limited license are accepted.

156 1. Ceilidh, Clown, and New Year's Festivities: Only
154 on certain occasions is relatively spontaneous and unin-
574 hibited expressiveness condoned or encouraged within the township, and even then the form which this expressiveness takes is fairly narrowly circumscribed. The traditional
[178] ceilidh was such an occasion. In the past, people gathered
[517] regularly at night in the tigh ceilidh (the ceilidh house,
• [538] or home of someone in which a genial atmosphere existed;
[533] the tigh ceilidh was often the home of someone who lived alone), where stories were endlessly repeated and elaborated,

156 genealogies told, and old songs were sung or new ones
154 composed. The concentration of expressiveness in these
574 forms resulted in a well-developed, oral repertoire of
178 literature and music.
[517]
• [538]
[533]

The ceilidh still exists today in the form of less regular gatherings. Stories and genealogies are seldom
[538] recited, but songs are still sung. A few new songs are
[533] being composed. The word ceilidh is used as both a noun and a verb to mean "a visit" or "to visit," but implies a casual, relaxed atmosphere rather than a formal visit. A formal visit is made by relatives living in Stornoway, government officials or businessmen, and is characterized by more constrained behavior.

156 The ceilidh of today is often accompanied by the
154 drinking of beer or whiskey, but a distinction may be
574 made between a gathering which includes both males and
203 females, and a drinking situation at which only males are
198 present. In the past, men often gathered in barns or weaving sheds to share beer made locally from barley or
273 brought from town in a large keg. The drinking of whiskey
178 was reserved for special occasions, such as births, weddings,
434 funerals, and the festivities surrounding the New Year, but increased income has resulted in the consumption of whiskey on many other occasions. Heavy drinking is still an
[229] activity engaged in largely by males, and occurs in extra-village locations such as hotels and bothans (see Chapter 6).

181 ing but black. The young have found the island a much more
kindly place. They have never been forced by circumstances
to choose between predestination and despair.'

To take account of matters beyond the material level is in-
herent in the Gaelic Celt. Celtic poetry and song, legend and
• [538] folklore, all so alive with fancy and so sympathetic towards the
things of nature, reflect the inborn sensitivity and character of the
present-day Highlander and Islander. Fiction's caricature of the
island-dweller (not only in Harris and Lewis, but in the other
islands) has been taken by another society with a different cultural
background, with insufficient knowledge of historical facts, as be-
ing virtually authentic. The Western Isles have had more than
their share of 'observers' who have failed to penetrate to the inner
Gael. Only with a knowledge of the background, social, cultural,
ethnic, historical and so on, can the 'larger than life' islander be
seen in perspective—as a normal human being.

RELIGION

771 There are few communities in the British Isles which have, since
the Christian dawning, so closely integrated religious belief with
secular day-to-day living as the Harris and Lewis people. Though
many times the religious element in island life foundered in a
Sargasso Sea of outright superstition, it has managed to survive
to its present-day form which might be described as cathartic in
nature. When one attempts to investigate religion and super-
stition as two separate subjects, one is forced to consider either
both as one, or one as complementary to the other. Even in those
times during the island's history when materialism was prominent,
somewhere in the background religion was acknowledged in one
form or another.

* 195 As mentioned in Chapter 3, in 1610 Lord Kintail brought
795 Farquhar MacRae, the vicar of Gairloch, to Lewis. The first Earl
of Seaforth, who built a church in Stornoway (St Lennan's) was
nominally Episcopalian. During the temporary supremacy of
Episcopacy in Scotland, there was little disturbance in the High-
[793] lands of the Presbyterian organisation. The bishops controlled
[794] their dioceses; but the ministers controlled their parishioners. In

485 eighty visitors each year, but there is nothing similar in Lewis.
Hostellers who visit Stornoway can do little more than march
through the town to the mail-boat, or else return to Harris by the
next bus.

212 As might be expected, the reading tradition is strong, stem-
ming from a natural desire to learn and from the fact that the
ceilidh could only partly satisfy the need for mental stimulation,
not to mention the need to alleviate loneliness. A century ago
• 538 three books were to be found in many island homes: the family
* 195 Bible, often a massive volume clad in hairy calfskin, *Turus a'*
Ghriosdaidh (Pilgrim's Progress) and *Gras am Pailteas* (Bunyan's
219 *Grace Abounding*). As horizons became wider a public library
was set up in Stornoway in 1907 (see Chapter 8); a library was in
fact established there earlier, before 1897, but it was not a free
one. In round figures, the 15,400 people of landward Lewis
(Lewis excluding Stornoway) borrow some 70,000 books annually,
though of course the actual readership figures are higher, books
borrowed being passed round the family and exchanged with
others until the 'mobile' calls again. The mobile library service
was established by the Ross & Cromarty County Council in 1955
for rural villages in thirty-one school districts.

ISLAND EMIGRANTS

181 For all that the island is a tight-knit community, paradoxically it
167 breeds many men and women whose destinies are not worked out
within the confines of its own shores, but at the ends of far
horizons. This is typical of most Highland areas: some who leave
them make a mark on other societies often greatly exceeding the
size of the community they left behind. Many 'great' people are
also directly descended from a crofting ancestry; minds and spirits
bred in the Highlands and Islands have potential for development
not always apparent on native soil but sometimes fully realised in
alien surroundings and conditions.

* 175 Harris and Lewis have contributed their share, and still do, to
167 the general weal of skill, ability and intellect in all fields of human
554 endeavour. For centuries, the export of brains was normal. Pos-
sibly the best known is Sir Alexander MacKenzie, who discovered

821 Two sayings sum up the lag of the seasons in the West
824 and its effect on crops. The first runs, "Winter comes
241 not till after New Year, nor Spring till after St. Patrick's
• [538] Day" (*Cha tig Geamhradh gu cul Calluinn, no Earrach gu*
cul Fheill Paruig). St. Patrick's Day is the 17th of March,
but old-style reckoning put both dates later still. The
[538] other runs, "A frosty winter, a misty spring, a chequered
summer, and a bright, sunny autumn, never left dearth in
Scotland" (*Geamhradh reodhtanach, Earrach ceothanach,*
Samhradh breac riabhach, us Foghar geal grianach, cha
d'fhag gort riamh an Alba). The retort is that though
western summers may often be chequered with sun and
showers well suited for growing grass and grain, the
autumns are not really sunny, but rainy. Hence 'dearth'
—of grain—must result from spoiled harvests. Not so for
grass, unharmed by a wet autumn. Hay, if ensilage is not
possible, can usually be gathered unharmed in sunny spells
[132] of summer if cut in good time. Agriculturally, the climate
favours 'grass' rather than grain.

132 Plentiful rainfall and coolness throughout the year do
137 not allow of complete neutral decomposition of vegetable
[134] matter in the presence of air. Hence, year by year, a
residuum of acid humus accumulates as peat on the ill-
drained surface. Prehistorically, more favourable phases
of climate permitted the growth of pines. Knowledge of
present temperature and rainfall alone would suggest the
growth of broad-leaved deciduous trees, but these are
absent except in the sheltered policies of Stornoway Castle.
About 1695 Martin noted 'hazel and birch' occurring on
the south side of Loch Stornoway, but nowhere else on the
Island. Even there trees are stunted as if pruned by the
wind.

132 The further inhibitive influence is indeed the wind

132 (Fig. 6). The anemograph at the Butt of Lewis records
one of the highest of British averages for gales and frequent
breeze: for 1930–35 the mean frequency of gales (winds
over 38 miles per hour) was 62. The mean speed for
December and January is 25 m.p.h., which can best be
realised by imagining winter travel in an open car with
no wind-screen. This mean maximum is a reminder of
the difficulty of tree-growth, as gales loosen or quite uproot
• [538] the trees. It also helps to explain the proverb: "A long
sleep in a big wind" (*cadal fada ri gaoith mhoir*). This is
as true for the byre as the bed-closet, for what could cattle-
beast or man be doing out of doors in a winter gale?
Although the mean speed drops from 18 m.p.h. in April
to 13 or 14 m.p.h. in July and August, it rises in Septem-
ber to 18 m.p.h., with ill effects on the harvesting of late
crops. Winter winds blow in full force from the end of
September to mid-February at an average of 22 m.p.h.
or more. The gales make winter fishing dangerous, and
their force smashes breakwaters on the west coast.

Yet winds at the exposed cliff-height of the Butt are
only slightly greater than those of similarly placed spots
on the mainland coast, or islets like the Bell Rock (Firth
of Tay), and the east of the Island is comparatively sheltered.
For example, the mean annual speed of wind at the Butt
was 19·2 m.p.h., and for the same period at the Bell Rock
it was 18·2, at Aberdeen 9, and at Kew 7·6. When the
anemograph at the Butt was moved even to a 'well-exposed'
spot near Stornoway, the average number of gales for
1937–40 dropped to two-thirds of the preceding triennium.
With shelter, the difference from the Butt and the approach
to normal conditions on the mainland would become greater
[317] still. The planting of shelter-belts would foster crops,
comfort and activity on the Island.

233 away, and for a shorter period. The sheep wander over
311 the moors all the year round, though they hang about the
crofts when the winter is severe.

221 A comparison with mountainous Norway or the Alps
132 and their high summer pastures suggests itself; but in
Lewis altitude is almost negligible, and the shielings may
171 lie only two to five hundred feet above that of the crofts
[133] beside the shore. The difference between winter and
[311] summer is in any case less, snow being rare and the condi-
tions being such that even in summer the shieling pasture
remains poor. Hence it is that while modern Norse and
Alpine economy still maintain the summer pasture, the
shielings have died out in the Highlands and are slowly
decaying in Lewis. Seasonally, stock are transported over
longer distances, from Highland to Lowland pastures.

181 Reasons for the continuance of these and other crofting
[178] ways, or for their abandonment, are not of an economic
[461] order alone: not only the remuneration received for labour,
but the feeling for the work counts enormously. Visiting
a couple of distant shielings in the summer of 1919, I
found that two lads newly home from the Navy had come
up from their village 'for a holiday', bringing rods for
trout-fishing and high spirits for play. By day they fished
or flirted. By night they slept in one of the two shielings,
while the two laughing lasses they had come to visit shared
the none too wide couch of the other shieling with the
two older women there. One of these was a matron with a
motherly twinkle in her eye, the other was a spinster in
whose eyes there shone a memorably vivid light; she was
the sister (as I found later) of a noted minister on the main-
land. The bare simplicity of shieling life is traditionally
softened by fellowship and a gaiety that is not beyond
• [538] control. A Lowland poet once coined a famous phrase,

181 "the lone shieling of the misty island". Traditional
• [539] Gaelic songs tell rather of shielings grouped within hail,
[533] with their sweethearting and good cheer!

3. *Crops and Stock*, circa *1938*

178 As the thirties mark a transition between early condi-
241 tions prevailing until 1919 and those of 1947–53 (Appendix I),
the present tense is used.

311 Of the Island's 528,000 acres, including deer forests
632 on the Harris border partly grazed, there are 24,000
acres of arable and grass land. Barvas parish leads with
6500 acres, then come Stornoway, Uig and Lochs, Harris
being last with 3300 acres. Roughly one-third of the
Island's arable and grass land, or 32 per cent, is per-
manent grass, chiefly machar, with a maximum of 39
per cent in Uig, but a minimum of 9 per cent in rocky
311 Lochs, most of this on one small farm. About 10 per
242 cent of the arable and grass land area is given to hay
production; of this, rather less than one-third is rotation
hay grown on the plough rigs or parks, and rather more
than two-thirds is hay from permanent grass. Lochs,
lacking machar, has 20 per cent hay, while Barvas, better
[482] off for machar, has only 4 per cent. Even this proportion
of rotation hay shows an increase on the crofts since 1919.
Stornoway parish, it will be noted, occupies an inter-
mediate place, but if the facts for Point (Eye) district were
contrasted with those for the villages along the machar,
the differences between them would emerge clearly. As
it is, they can be guessed from the vegetation map showing
311 the machar. Oats is the chief crop, and occupies 33 per
242 cent or just one-third of the arable and grass of the Island;
excluding the permanent grass, it constitutes half the crop.

536

873 old-fashioned if you were speaking it. I wrote like that
197 in my first few papers, and my professor stroked through
185 words and asked, 'Would you say that?' We can even put in an English word now and then."

197 One result of this restriction in the scope of
185 experience in which Gaelic is used, and of the treatment of Gaelic by government bodies and voluntary associations as a rare zoo animal that must be preserved rather than allowed to change, is a decline in written creative
197 expression in Gaelic. There are perhaps three major
● 536 writers of Gaelic plays in Scotland, whose major battle is to be considered serious writers rather than colorful freaks or queer saints out to redeem Gaelic culture. "Once you become self-conscious about the language you speak," says one writer, "the language is dead." It has then become an artificial showpiece, a museum relic instead of a living, changing, flexible human tool.
197 Outside the village the maintenance of the Gaelic language
186 and other customs identified with "Celtic culture" occurs
[57] mainly as a result of interaction between "Gaels" and "Galls" (a Gaelic word meaning outsider or foreigner), as Gaelic speakers become self-conscious of their distinctiveness and either abandon their heritage (for example, MacIver 1968) or invest in it.

175 widowed mother and her family, working in farm and town-
771 ship, sending merriment at Christmas, and comforting
776 sorrow at Easter or All Souls. And even as He had told the Disciples to heal by faith, so, they thought, had He bidden them. Who could have told the people, in their ignorance, that in a later age they would suffer for this faith?

175 Thus upon the Lessons read in church (or out of doors)
771 and cherished as the root and stock of faith, there were
78 grafted three types of native shoot. These were the para-
• 538 phrases, the meditations or commentaries, and the parables or legends. The paraphrases should need no justification here, in so far as the four Gospels are each incomplete and complementary—the Celtic clergy may have known the fragments of a fifth; these 'fulfilled' the older Law and the Prophets. Of the meditations, few would be censured by a Protestant or Catholic theologian on points on which both would agree; points of disagreement in the meditations hardly concerned them. (Cf. in the Rev. Allan Macdonald's collection, "Thoughts on Death", *Smaointean air a' Bhas*, or *Carmina*, No. 7, and many more.) As a theologian might criticise the parables, legends or marginal tales of which so many were told in medieval Christendom, a word should be said of these.

771 Legends were told of the appearance of Saints to be-
773 lievers, such as that of "The Christ-Child's Lullaby", and of the life of the Holy family. The Gaelic sense of parable was strong (*Carmina*, vol. ii, Notes, *Caim*). In these legends was expressed what the people themselves would have felt and thought in joy or suffering. Legitimately, a preacher suggests a motive or circumstance to bridge the gap in a Bible record; the people did the same. When reverently retold, some suggested circumstance would in time grow to be a legend taking a place close to the Gospel story. A

771 single example may be given; so far as
773 recorded. I learned it in South Uist, wh

COMMUNITY FROM PAST TO PRESENT PT. II

771 538 788 as the days lengthened during Christmastide, old style, it may be called " The Rune of the World's Light ".

539

The world, ere came the Son of God,
was black, a bog forlorn :
Void of sun, moon or star,
void of body, heart or form.

'Twas Mary Mother lowly kneeled,
and gave the Inmost Being birth ;
Darkness and tears were driven afar,
the guiding star rose over earth.

Light on the land, the deep illumed
from sullen pool to ocean stream ;
Grief was laid and joy was raised,
with praise and hail and harping free.

Light on the hills, light on the plains,
light o'er grey-green sea and firth ;
Light o'er all the world as one,
the hour God's Son came down to earth.

(D) THE CYCLE OF LIFE

796 852 88 584 The stages in life's sequence are marked by noble runes, of baptism, initiation in adolescence, betrothal and marriage, childbirth, and of confession and consolation in trials throughout life and, at its close, of farewell. As might be fitting, the benedictions were given by either man or woman : to a child by a parent or elder ; to the young and strong by the wise ; and by lovers to one another. And in the past, especially in trial, the ' soul-friend ' ministered —*an anam-chara*, a neighbour chosen from lifelong friendships for steadfastness and understanding.

852 At birth a babe was baptized ; and in the name of Father, Son and Holy Spirit the nurse placed three drops

852 of water on the child's forehead, successively invoking wisdom, peace and purity. Lay baptism, recognised by Greek, Latin, Episcopalian and Presbyterian churches, may be partly of pre-Christian communal origin. It retained special significance in isolated communities. Where a clergyman might come within eight days, a temporary name was given at birth: 'Tonsured of the Lord' (*Maol-domhnuich*) if a male child, and Gertrude (*Griadach*) if a female. Her immediate duties over after a safe delivery, the midwife forthwith became the celebrant or (as it were) lay priestess, and her neighbourly helpers, her acolytes. As the midwife intoned her part they gave the responses. "By the Book itself," said a reciter in Uist, for many years a skilled midwife, "ear has never heard music more beautiful than the music of the watching women when they are consecrating the seed of man and committing him to the great God of life." Those who care to ponder the thoughts then spoken may believe her word. (*Carmina*, Nos. 50 and 217-219)

86 Initiation grew as understanding dawned and the babe passed on in childhood to be an older helper. Gaelic child-lore gives many a stimulus to an infant's intelligent apprehension of life about him, and to poetic appreciation. These may lead by natural steps to deeper things in adolescence. Homely teaching which led to a first communion, remained an intimate part of life in home and township.

From many parts of the Highlands and Isles, Carmichael and his friends gathered variants of verse prayers invoking graces in the young: Invocations of the Graces, *Orachan Buadha* (*Buadh*, victory, achievement or grace; Nos. 3 and 278-281). In Tiree, of which the thoughtful minister had sent a fragment of verses to Carmichael,

814 the invocation was addressed to boys and girls, in Uist to
869 youths and maidens. The loveliest version of all had been
539 spoken by an old, evicted woman and learned from her by
867 a lad who, as a poor crofter in old age, passed it down for record, for ever. Of this invocation Carmichael wrote, "Probably it was composed to a maiden on her marriage. The phrase '*eala dhonn*', brown swan, would indicate that the girl was young—not yet a white swan", a tender and delicate recognition of youth still to attain perfection.
869 Not a thought jars, each stanza building up the rising move-
536 ment of the whole. In the hundred lines of this poem, metre and assonance are regular except where growing intensity creates new rhythm and design; and the last vowel-rhyme of each stanza leads on to those of the next one, to form an unbroken accent to the climax.[1]
869 The Invocation begins, "I bathe thy palms. . . . And
539 I place the nine pure choice graces in thy fair food face.
867 The grace of form . . . of fortune . . . of goodness . . . of wisdom . . . of charity . . . of choice maidenliness

[114]

[1] Certain critics, struck with the variety of the poem but missing its thought-sequence and unity of form, took Carmichael's note of 'many fragments' to imply that the poem was a composite version, piously restored by the editor—in spite of his statement that it was taken down from a single reciter (one Duncan Maclellan). Carmichael's spiritual power of evoking treasure from the reciters was inexpressible from his utter honesty. And the publication, forty years later, of four Invocations and of scores of fragments (cf. No. 277) has added (to the internal evidence cited) further proof that the poem was no editorial assemblage. Without doubt, the poem has grown from the inspired meditation of generations of poet-worshippers in a hundred glens and isles. But the English reader should realise what the Gaelic ear may hear: this poem forms an organic unity; though many petalled it is a single flower. Readers familiar with medieval or earlier chants know that the enumeration of attributes is a feature common to all, whether in Church Latin or other tongues, as in the English mediæval hymn beginning, "God in my head, and in my understanding." In Gaelic, however, the richness and freedom of the vowel-pattern and rhythms carries the thought onward, now on wave to its climax. A comparison poet of France, Pierre Emmanuel, to whom I introduced this poem, exclaimed, "This is a Christian Song of Songs!"

869 . . . of whole-souled loveliness . . . of winning speech."
539 Then, after the tender image of the brown swan and fare-
867 well on departure to a new home, comes a string of exquisite comparisons: to shade and shelter in need, to safety of isle and strength of fortress, to gift of health for the ailing. Each grace, each image, expresses not simply individual qualities but relationships and service for others. After eight choice lines in praise of the girl's womanly gifts—from "Thine is the faith of Mary", through chosen attributes of Bride, the Fairy Woman, Penelope, Emir, Darthula and Maeve, to "the charm of the sweet singer (*Binnebheul*)"—the poem, in Gaelic that is sonorous and succinct, passes beyond the sphere of comparison with things or even personal qualities. It acclaims her joyous girlhood as one with the powers of life-giving, life-abundant things, and as a reflection of the Divine:

Thou'rt the joy in every delight,
Thou the sunbeam's radiant light;
Thou'rt the gate of a welcoming chief,
Thou the clearest star to lead;
Thou'rt the step of the deer on a height,
Thou the pace of a steed ere the fight;
Thou'rt the calm of a gliding swan;
of longings thou'rt the loveliness.

The lovely likeness of the Lord
In in thy pure face,
The loveliest form
Was ere on earth.[1]

[538]
[192]

[1] Poetic form is integral to the conception; hence this translation in verse. But alternatives to Carmichael's choice of English prose may complement his own, in bringing out the meaning. *Line 1, 'joy'*: *ionan*—and a delightful or wonderful thing'; *ni ebhlann*; l. 3, *dorus*, doorway; l. 4, *tlul*, guidance, land-mark, way; l. 6, *ntend*, steell, would imply, in *bile*, a tree of battle, and, by contrast, l. 7, *nionh ail*, calm (rather than 'grace') of a floating, swimming swan; l. 8, *ntu*, secret inclination, longing, and hence too, a person beloved; ll. 9, 11, *cruth*, form, shapeliness (and by implication),

539 And so, after every good wish for days, years and life,
867 the Invocation closes: "Peter has come and Paul" . . .
869 the Disciples and the Archangels. . . . Jesus the mild and the Spirit of guidance have come,

And the King of kings has come on the helm,
To bestow on thee their affection and their love,
A tharruath dhit-se graidh us ruin.

The idea of choice maidenliness which this Invocation
867 portrays, culminates in the thought of the loveliness that
[539] was Christ. It rises, too, to stirring virility: "the island at sea, the fortress on land", or "the step of the steed on the plain". Yet when all is said, it is a womanly image which prevails: after the fortress comes the well in the desert, and after the charger's step, the gracious calm of a floating swan. It is all the more significant that the Invocation was addressed both 'to boys and girls' in one isle, and 'to youths and maidens' in another. Not simply was boyhood taught to honour girlhood: ideal womanhood was invoked to raise manhood itself to fullness.

885 Women marriage, the husband replaced the maiden's
[242] anood or *ithom* that bound her uncovered hair by the wifely
585 bachlid, *ceann breid*. Folded diagonally, its three-cornered
539 shape came to symbolize the Trinity, in benediction on the bride's head.[1] A poem to a bride, "now beginning her dual course", commences, "A thousand hails to thee

[538] likeness. The short second stanza given stands out alone: the poem,
[192] having attained its climax by a rhythm sustaining the upward, sonorous movement, is hushed by its few simple words. In *From the Hebrides*, Mrs. Kennedy-Fraser rearranged one or two of these lovely stanzas, as one of her lyrics with refrain[1]. *Cf.* A. Geddes, *The Songs of Craig and Bos*, vol. ii, 1955.

[1] The kertch is spoken of in many songs, in which a lover hopes to place it on his young love's head, or a husband praises its whiteness as worn by his wife. When first I knew the Lews, the kertch was still commonly worn under the more recent Lowland mutch, and either framed a young face, or an old one, charmingly. The two have not quite vanished, though memories of what the kertch once symbolized are hard to find.

885 in thy kertch!" and counsels her to be hospitable yet wise,
537 and courageous though calm; to be frank yet tactful, dignified though kind. The themes of this ode's melodious
885 verse recall the virtues of a wife enumerated mnemonically
538 in the acrostic which concludes the Book of Proverbs.
593 For in that, too, there is mention of "strength and dignity, wisdom and kindness", and the poor are not forgotten as the wife goes tirelessly about her work, sets her servants to their tasks and sells her merchandise at a profit. Yet the acrostic's emphasis on the wife's work and its gain reveal the writer as a shrewd citizen seeking to train a wife to ceaseless exertion and business dealing, with her husband's private profit and public honour as a most important end! The singer of 'The Kertch'—man or woman, one cannot tell—thought of conduct not for its profit first, but for its virtue, and dwelt upon motive, mind and heart.[1]

105 To tide over the supreme crisis of childbirth the mother
844 was strengthened in confidence, courage and calm. The need was the greater before modern midwifery. In Sutherland as late as 1908, a good professional nurse tending a difficult case of childbirth, anxious and powerless without doctor, found comfort, hinted to older wisdom. The patient's mother first filled a small basin with water into
[788] which she put trinkets of gold and silver. "She then held the basin to her dying daughter's lips, and made her drink three mouthfuls of the water, each mouthful in the name of Father, and of Son, and of Spirit, 'the three Persons of the Trinity invoked in prayer, *Tri Pears na Trianaid chaoimh chumhachdach*'. Soon after, the child came . . .

[113]

[1] *Am Bruid*, 'The Kertch'. *Carmina*, No. 116. Its quiet paraphrase by Mrs. Kennedy-Fraser, set to a lovely air and refrain, will be found in *From the Hebrides*. First published (imperfectly) in *Neither Lochaber* by the Rev. Alexander Stewart (1882, p. 4) with delightful notes

105 and all was well. . . . 'How the trinkets in the water
844 could affect the case', continued the nurse, 'I do not know, but that some occult power was at work . . . I am
788 certain.'"[1] As to the gold, did not the Magi offer the same 'magic' at the Nativity? Is a drink of water not the
844 simplest physic to cool a fevered system? Is not each
788 Name of the Trinity, breathed by a mother to her daughter in labour in her turn, a Word of tender power and courage: while the slow rhythm of the three Names may calm the wild beasts which had brought on haemorrhage, and lead to safe delivery?

771 Throughout life there prevailed the concept of God as 'encompassing' man, woman or child, old or young, in their weakness. This image is ancient, and is found in the Psalms (10, 12, 32, 142). So long as faith were alive the Lord's aid might be called upon for another in need of help, or for one's own protection. To clarify the concept, unseen, by help of a thing seen, a circle was drawn with the hand round oneself or another, in fear, danger or distress.[2] By such innocent aid the people strengthened confidence in sickness and resistance in temptation, and concentrated prayer for delivery from evil.

888 As age approached, its gifts were honoured. For in
[271] age, experience, tempered by labour, is leavened by leisure; the experience won on land and sea, or in group-farm and home, can be weighed. And gifts of feeling, sown in childhood and growing through life, ripen as grandchildren come in from their herding or play to listen and learn.
[538] When manuscripts or books were unobtainable, readings rarely heard, and the people illiterate, teaching could only

[1] *Carmina*, vol. iv, p. 283.
[2] *Carmina*, vol. iv, Notes; cf. Nos. 248-250, etc. Encircling or circuiting symbolically, was also known by a word of which only the literal meaning is here known to most: *cuartachadh*.

888 be given by ear and learning come by heart. Hence elders
538 were the holders of an inheritance of treasures which must be sought from them or be lost for ever. But to be transmitted, the word must remain alive in the mind. Thus both the faculty of memory and the fruit it bore in an elder's mind brought respect, even veneration. Accuracy in retelling is still immensely valued, but so, too, were thoughtful commentary and poetic enrichment. Respect for elders, though general, was not given blindly, but personally and by choice.

888 As handed down, the Fifth Commandment runs:
271 "Honour thy parents and hold them in loving regard"
562 (*Striochd dha do pharantan 's thoir speis dhaibh*).[1] The community was pervaded by the Christian concept of a Holy Family, rather than by that of a patriarchate. This concept took root from the first missions to the Celtic community, with which it harmonised and which formed fertile ground for this Christian seed. Hence there was no general assertion of paternal, still less of patriarchal, authority at the expense of youth. Where equal honour is due to both parents, the mother finds equal duty and regard with the father. And although the home is close at hand while the mother's may be a little distance away, her parents are likely to be the younger and the more active and helpful to their grandchildren, and the influence of all four grandparents fairly balanced.

[184] The patriarchs Abraham, Isaac and Jacob are named
[773] in a hymn of the Lews, sung when going up with the flocks
[771] and herds to the shielings; even this may be a Presbyterian
[171] adaptation (*Carmina*). But until the overwhelming weight
[175]

[1] Rev. Allan Macfonald, p. 62, *Na Faistean*. The omission of the Mosaic paternal precedence may be a courtesy to motherhood implying equality in parenthood.

539

CH. VIII RELIGION AND SOCIAL CUSTOMS

795 but still more to their repeated justification in the name
771 of the Lord 'God'. 'God' the universal (*Elohim*) came
536 to be identified with the tribal god Jahveh or Yahweh,
[792] altered, late in Jewish history, to "the LORD God", the
000 term still used in Bibles. The war cry of the Jewish tribes,
they swept in from the desert or tightened their hold
upon citizens and cultivators, was that of many wild
wanderers, before and since, who have cried upon their
God of Battles, upon Jahveh, or Allah. Magnificent in its
affirmations of righteousness, the Old Testament can be
terrible in its details of piety.

795 The Bible (literally *Biblia*, the Books) reflects the search
771 of a people through centuries towards the idea of God;
536 but the tragedy of the Bible, or rather of its historic misuse,
came with the acceptance of all 'Scripture' as equal in
inspiration and truth. The early and the late were accepted
together, the mixed or false with the true. The custom of
seeking Divine guidance by simply opening a page of 'the
blessed Book'—that is, any text on any page of any one
of its books—was an example of such acceptance; and it
[795] was only possible for the literate. In Lewis, Macfarlane
records the custom, practised by 'The Men', late in the
nineteenth century.

Reading came late to the Islanders, but its effects were
178 as direct as among the Puritans or Covenanters at an earlier
178 period. The people, whose hearts had long since been
771 wrung with pity at the Crucifixion and who were steeped
[538] in reverence for the Gospels, became 'changed' indeed.
[2172] Once their minds had been crushed by the Old Testa-
[795] ment's massive weight, the 'change' was reinforced by the
vision of a world to come, limned by fevered imagination
in the New Testament's finale, the Apocalypse. The
'change' was brought by Evangelicals who had themselves

COMMUNITY FROM PAST TO PRESENT PT. II

178 developed through the township Grazing Committees by
178 the Scottish Agricultural Organisation Society and its
44 associated Crofters' Agency. Lime and fertilisers were
[792] purchased, and wool and other products sold, co-oper-
000 atively. The co-operative marketing of lobsters, taking
[2222] advantage of fluctuating London prices, has led to the
reconstruction of ponds for storage. By these and other
[538] means, government assistance is utilised but not squan-
dered; earlier initiative in agricultural organisation is
reinforced; and communal tradition is revived, linked
to personal responsibility through the crofters' lifelong
knowledge of one another.

As to the future, all agreed that unless the Harris Tweed
[795] industry flourished, with work at reasonable wages, the
villages would be abandoned by the young, perhaps with
[829] no return such as hitherto on 'retirement'. Many young
people are content with life in the townships, provided
they can get a living there, though not all, for they are
somewhat divided; and work elsewhere, even in the mills
of Stornoway, is a counter-attraction.

Social life is undergoing changes which operate both
178 for and against the retention of the young. On one hand,
538 household interchange of conversation, song and story,
[538] the ceilidh, has declined. On the other hand, one found
that, as regards religious prohibitions, and in spite of the
178 nervous tension expressed in 'Revivals', the young have
771 won greater freedom. Near one village a Nissen hut,
[635] handed over to the Home Guard, was also used by young
people for monthly dances. When I asked a young crofter
[635] invalided from the Navy whether the Elders of the Kirk
made no protest, he replied that they had, but had to give
it up: "They see that we won't stand for it." This
would have been unthinkable during the First World War,

100

THE MAKING OF THE CROFTING LANDSCAPE

17 All landscapes in these islands have roots in the distant past. Park is no exception. Yet many
crofting traditional features have been significantly modified or even obliterated by the twentieth
[12] century. Some have been significantly extended or significantly contracted in the greater pattern, and
changes in the relative importance of the various components of the crofting landscape have
[12] occurred. The crofting landscape has its beginnings in the late seventeenth century, although there
are traces of earlier settlement.

Archaeological evidence, in the form of a stone assisted found near Shawbost, a fort on the
[17] Dun Lochan, Loch Ceann Ear, and a medieval chapel at Gisla, Gress, provides the earliest
[17] record of human settlement in Park. Place-name evidence indicates Norse settlement, and
[17] the place-name Ceann Ear (Gaelic, Ceann Ear, 'the East end') is thought to be a Gaelic
[17] re-interpretation of the Norse Austrheim, a name which is the equivalent of Eastern
[17] Gaelic Ceann Ear. Place-name evidence is also suggestive of Norse or Norse-influenced
[17] settlement at Gisla and Tendhamnt settlement. All the present township names contain Norse elements,
[17] as do most of the coastal and inshore place-names.

The name Park is derived from the Gaelic 'Pàirc' (in the gen. or dat. case 'Pàirce'), and the name
[17] is thought to be a reference to the Deer Forest of Harris, the east mainland. During the eighteenth century, a tithe
[17] or rent was levied on the inhabitants of Harris and Lochs Bayhurst, Seaforth, and Stornoway for the upkeep of
[17] chiefs' tithe, to enclose the deer forest. Before the enclosure of the forest, the inhabitants of Harris
[17] had been allowed to hunt the deer, but after the enclosure, the tithe was paid instead. Although the name Park
[648] is thought to be a Gaelic name, it is also the name of an enclosure in Dip in the Netherlands which dates from the
[17] seventeenth century. Thus it may well be that after the Norse population had revived, linked
[17] with the Netherlands, they took over place-name practice.

[17] It is believed that settlement in what is now the Deer Forest began about 1850. Confirmation of
[17] this came from an unpublished manuscript by Donald Ian Macleod, who was living in Stornoway
[538] in Lochs some after 1900. In the song, the author laments the fact that he may never see the Forest
[537] again, and says of Park:

Tha mi ann cuimhn-ne bhith
Bhith fo bhròn aig na bodach
D'am bu chòmnaidh na dromain.

"I deplore the state of the forest ... that I should be in subjection to the cattle whose
[17] ancestors had been a cause of great joy." Macleod, who was a bard, sang. The song gives no indication of
[17] the date of the clearances, but it does indicate that the forest was a place of settlement in Park.

[17] The first documentary evidence of settlement in the present crofting area is the Judicial Rental
[537] of Lewis, taken by the Fortrieve Estate Commissioner, Colin Clan, in 1718. Clan listed the names of
[17] major tenants, living in Shawbost, Carishader, and Gisla (Gress) - all situated along the
[17] southern shores of Loch Erisort. There is local tradition that Kershader and Melfing were sheilings

1 The editor is indebted to Miss Bridget M. Cherry, B.A., B.Lit. for an analysis and
[17] evaluation of the place-name evidence - see Appendix C.

2 For this extremely interesting information and the translation, the editor is indebted to Mr.
[17] William Matheson, M.A., of the Department of Celtic, Edinburgh University.

101

[12] of the township with the larger society, and examines
[12] the effect of geographical and social marginality on
the boundedness of the township network. Chapter 6
discusses two important networks of social relations
within the township.

B. Township as Social Boundary System

632 The township constitutes a relatively firmly bounded
[12] system, though its boundaries are weaker than formerly
when the township was relatively self-sufficient
[494] economically. Township members worked together in small
fishing crews, and families relied on each other for
help when members of the family were away from the island
[12] on the fishing.

Relatives were expected to give priority to helping
[592] each other. According to one proverb, "A relative is
[592] your best friend." First and second cousins were
[538] considered especially close, but knowledge of one's
[538] kinsmen extended to at least the fourth generation.
[632] Ties of kinship became evident in ceremonies such as
[570] funerals and weddings. One Gaelic proverb says, "You
[570] know who your relatives are at weddings and funerals."
[632] At weddings the onus was on the members of the bridal
[538] party to remember their relatives. "You have to sit
[546] and calculate who is closely related, and all those

107

[621] used on different occasions, for example, to discourage
[621] deviant behavior or certain marital alliances. Any sign
[582] of physical or emotional disability in someone planning
to get married invites an attempt by other villagers to
discourage an alliance. According to a Gaelic proverb,
[538] "If you want to be praised, die; if you want to be
criticised, marry (Na tha thu airson do sholadh, bàsaich;
na tha thu airson do chàineadh, sòrd)." The villagers
[621] consider not only the behavior of the person but of his
[621] ancestors. The individual is perceived as belonging to
[582] a family unit which through many generations has manifested
certain physical and behavioral traits. Traits of behavior
such as shyness, heavy drinking, stealing and tight-
fistedness are interpreted as hereditary traits. "It's in
the blood (Tha e anns an t'fhuil)." "It's in the people."
[143] Particular occupations are also associated with families.
Storeowner, which is not so "urban" as to have a constant
turnover of population, contains many examples of
occupations passed down through generations.

In Chapter 3 I mentioned the development of several
[632] groups in the crofting township which seem to be in conflict
578 with the township as a strongly bounded system. People
who keep only sheep have come to blows with those who keep
both sheep and cattle; and a distinction between crofters
and non-crofters may be seen. Many persons have preferred

794 given at Christmas; in Lewis, Christmas is identified
481 with Catholicism, and is an institution which arouses
187 suspicion with New Year. To give two examples, a New
527 Year's dance is given, but not a Christmas dance; and
774 the mills continue working on Christmas if it occurs
187 on a week day, but close for at least two days at New
Year's. In Shawbost, hannan is defined as a party
associated with Hogmanay (New Year's eve).

In the recent past, until about ten years ago,
527 the boys dressed in women's clothes or wore masks. They
178 took turns wearing a cow's skin as they went from house
to house. In each house, the boy wearing the skin was
[538] hit by the others as he chanted the rann na hannar (rhyme
of the hannar):

Here I come again renewing Christmas
(Or, in another version: this is the New Year's night.)
I'll take the bread without the butter,
And the butter without the bread,
And the cheese by itself.
If you don't give me my bit handed,
Then this I refuse in a mangy potato.
It gives a heavy feeling.
It's not healthy.
If you don't give me my bit of butter and my lump of
cheese,
Everything you possess will be gotten by the crows
on St. Patrick's Day.

527 As the hainish na hannaran left the house in which
[143] they had received gifts, they blessed it. All food and
178 money was given to the woman who prepared the hannar.
[788] Today children tend to receive money from man
food, and use some of the money to buy sweets at the post

791 press themselves in terms of religious values and ideas, the fear
[143] of having committed unforgivable sin. The normal adjustment,
[538] reflections and mental stocktaking of middle life are possibly more
[538] readily precipitated towards depression in an emotional people
[159] prone to serious thought. This brings of course a concomitant
spectrum of problems in an area where in general a maid is expected to take a dram and stand it; lush nature and nurture are relevant factors. In the words of Cunningham Graham (1899), the medical adviser finds himself 'preaching teetotalism, that is for others, but himself taking his pint of whisky for the reason which have been so cogently set forth by St Paul the Apostle to the Calcdonians.' For those who comment in isolation on community's indulgence in alcohol, one must quote a Gaelic proverb: '*Tha cnuidseg fàsis an ceann gach fuid*'—Every peat end has its own smoke.

From the earlier times the Western Isles have indeed been regarded as supporting a population with an uncanny preference for spiritous liquors. To a certain extent the spirits were
[538] preceded by ill-nourished crofters to keep out the damp and cold when on the moors or at sea; and perhaps in a depressed economic or mental condition fell well within the range of the
available drugs—forgetting the old Gaelic proverb 'Better the little fire that will warm than the great fire that will burn.' The evil effects of drinking have certainly at times been serious: in 1869 Sir James Matheson addressed a circular letter of remonstrance to his tenants, calculating that those guilty of misconduct were liable to be deprived of their holdings. In 1920 a vote was taken in Stornoway under the Scottish Temperance Act, with the result that the town went 'dry'; three years later the poll was upheld. Then in 1926, with a majority of 84, Stornoway went 'wet' again.

[215] But the 'drink question' has been given undue prominence as
[733] dragged out of its island context. For instance, Wilson (1961)
[733] claims all but three of the licensed premises on the island (at Tarbert, Rodel and Carloway) and, as the chief centre for business and pleasure, must naturally attract anyone seeking refreshment

3: Geddes K-4, 5 (1919-1952) 1955 ES10 Highland Scots
Lewis and Harris

788 592 354 539 (in Gaelic) by a housewife in a Catholic isle, as our friendship matured. It had been said nightly at her fire by her father-in-law until his death (not long before), which had come after that of his wife. "I smoo'r the fire tonight, As Mary's Son smoo'red. Be it well with house and fire; Be it well with all our household. Who are on this floor? Peter and Paul. Who are on watch tonight? Light-white Mary and her Son. Thus God's voice taught, And the Angel spoke: The Angel at my house door, Until the clear day come tomorrow. Amen." As this variant shows, memory still lives in the Isles.[1]

788 593 776 [779] In these runes, the key to the words "as Mary's Son and as Mary did, in their day" is the example of filial duty, of wifely and motherly care. In spite of lapses to 'Mariolatry' during periods of decadence in the Roman Church, the virtual banishment of Christ's mother from Protestantism has led to a loss deeper than Presbyterian Scotland has yet realised. Her name was a daily reminder, both of a woman's part in the spiritual life of the home, and of a son's self-discipline and affection: in a word, of mutual love.

788 [236] [286] [461] [127] [538] For wool, the sheep were blessed, as in the "Clipping Blessing". There were blessings of the loom and of warping and weaving; and after neighbourly fulling or 'waulking' of the finished web, came its consecration. As the work was solitary and communal in turn, so the prayer. Carmichael's own fine prose translations should be studied (*Carmina*, vol. i, Nos. 108-113; cf. vol. iv, pp. 88-99). Yet, those being available, we quote rhythmic

[113] [1] Cf. Rev. Allan Macdonald, *Comh-chruinneachadh*, p. 107; *Carmina* (Nos. 84-87, 324-326); and M. Kennedy-Fraser, *Songs of the Hebrides*, vol. ii, p. 31. Sacred lore is not to be picked up lightly by a stranger. It was only upon the second of my prolonged stays under her hospitable roof that this good woman would admit and impart her knowledge, treasured in the secret places of her heart

3: Geddes K-4, 5 (1919-1952) 1955 ES10 Highland Scots
Lewis and Harris

538 versions to suggest the significant poetic form of the original.

788 236 "The Clipping Blessing", being addressed to creatures, is simple in thought and form, and its opening may be rendered:

> O come back woolly, though now you're shorn,
> By May, may each a lamb have borne,
> May lovely Bride you endow,
> And Mary fair sustain you now!

[825] [538] It goes on to beg protection from wolf and bear, as well as fox, hoodie crow and eagle, and closes with the opening couplet.

236 461 From start to finish the work must be true. The wool is from the sheep they reared—it is not got by 'thigging', as a landlord takes 'gifts' from poor tenants; the yarn is sound with no odds of thread from worn-out cloth; the web is their very own, not the clergyman's due (*Carmina*, 786 110, 113, 109). Only so can the goodwife's web be beauti- 788 ful, and blest. "Thrums nor odds of thread, my hand never kept nor shall keep. Every hue in the bow-of-the- [539] shower has gone through my fingers beneath the cross." [593] The weaver, with her household cares and her bairns about her, to be clear in mind must be calm in heart as, thread by [796] thread, she prepares her warp. To start, she chooses Saint Columba's Day.

[539]

> Thursday of blessings
> For warping and waulking,
> Thrice fifty strands
> To number . . .
>
> Ward away the evil eye!
> Or evil will, or aught awry,
> Consecrate, O Lord on High,
> My Loom . . .

771 xviii. 19-20). The worldly wise might think that the
794 spiritual fare of these poor folk must have been lean indeed;
while others, having heard much of the Highlanders'
[113] pagan' superstitions, may think even worse! The evi-
[538] dence from which to judge is found in survivals from a
rich lore, and for most readers seen but 'darkly' through
prose translations from the poetry of a tongue now known
to few.

771 The richest collection is Alexander Carmichael's *Car-*
538 *mina Gadelica (Ortha nan Gaidheal)*.[1] Others were made
by the Rev. Fr. Allan Macdonald of Eriskay, and by the
Rev. Kenneth Macleod with Mrs. M. Kennedy-Fraser in
the *Songs of the Hebrides*. Included here are unpublished
verses given by crofter-friends in the Isles and others from
Fr. Allan Macdonald's collection,[2] hitherto untranslated.
What still remains has come down to us only by narrow
771 escapes. One is reminded of 'Father Allan's' early
• 539 death, after nursing his parishioners through an epi-
demic; and Carmichael's escape from drowning as "on

113 [1] *Carmina Gadelica: Ortha Nan Gaedheal*. Hymns and incantations
114 with illustrative notes on words, rites and customs, dying and obsolete:
orally collected in the Highlands and Islands of Scotland and translated into
English; vols. i and ii (1st ed., 1900; 2nd ed., 1928); vol. iii, 1940; vol. iv,
1941. The last two volumes were edited by the collector's grandson, Prof.
James Carmichael Watson, whose death as an Ordinary Seaman in war is
mourned by his friends, and has been described as a disaster to the cause
of Gaelic, and of humane learning in Scotland. One more volume edited
by James C. Watson awaits publication. In following, quotations are
referred to as from *Carmina*, followed by the number of the rune: Nos.
1-216, vols. i and ii; and Nos. 217-351, vol. iii. Vol. iv contains varied
lore.)

[2] Of all these four, the least known is Fr. Allan Macdonald's little
collection, *Comh-Chruinneachadh de Laoidhean Spiraodail*, Hugh Macdonald,
Oban, 1893. It was privately printed, and lacks a translation and table of
contents. There could be no finer memorial to this man and the community
whose spiritual life he helped to record than a new edition of all its ancient
Gaelic 'spiritual songs', with the addition of others he wrote down before
his death in 1905, and perhaps, of some of his own poems, notably his famous
Eilean na h-Aige, "Isle of the Young".

771 a night of black mistiness . . . he waded nearly breast-
• 539 high" through the dangerous South Ford of Benbecula,
"conscious only of the roll and the singing of waters
and the rhythm of a poem he had taken down a few
hours before"—"The Invocation of the Graces", so
nearly lost with him! Much that Carmichael learned was
given him under a seal of confidence he never broke,
although he mourned the loss this meant. The confidence
he inspired—which even those who knew him only in their
childhood remember for life—was a source of his quiet,
unfailing power.

796 The following begins with the runes and rites of labour,
784 throughout the day, week and year, on land and sea and
[221] at home. Turning to the day of rest and to congregational
worship, one must enquire as to the presence of the clergy,
and question closely how far the people had access to the
Bible throughout the centuries: were they really cut off
from its riches, from its essence, as the Reformers and the
Evangelicals of last century asserted with such vehemence?
One can then turn to the runes and rites which opened the
phases of life, from birth to maturity, marriage and parent-
hood, leading at last to life's close.

128 But no social inheritance is without its burden. Having
181 told of the foundations of faith, something must be said
771 in the next chapter of the negative or superstitious side of
Island belief, of temptations and evils which the people
could face, and of others to which they submitted in
[124] ignorance. From the evidence of faith and wisdom, or
error, one must attempt some evaluation of attainment by
single souls and by the community, and of the power and
fullness of life in common.

175 As recorded by Carswell (and Martin), this prayer,
226 after calling upon the Trinity, tells that the Three-in-One,
788 ever living, guided Clan Israel through the Red Sea,
713 brought Jonah to land from the belly of the great ocean
beast, and led Paul and his companions from the torment
of the sea; after these three stanzas it closes with a general
supplication. As heard by Carmichael three centuries after
Carswell, the first three stanzas are identical, but they are
followed by the culmination. Recalling the hour "when
the storm poured on the Sea of Galilee . . .", the poem
goes on, "Be Thou, King of the elements, seated at our
helm, And lead us in peace to our voyage's end. . . ."
It is significant that the Reformation Liturgy includes the
story of Clan Israel's flight from their enemy whose
drowning forms the climax of the tale, and the absurd
miracle of the whale—a late interpolation in the con-
vincing original Hebrew poem on Jonah's voyage,[1]—but
that it omits the Christian climax, of the storm allayed by
Christ, the Helmsman of peace.

[539] Another fishers' rune (No. 120) concludes, "To whom
trembles the voice of the wind? To whom become tranquil
strait and ocean? To Jesus Christ, Chief of each saint,
Son of Mary, Root of Victory." These blessings, though
they refer to the Old Testament, dwell lovingly on the New.
Their thought is of the fishermen friends, Peter, Andrew
and John, of the Baptist and of Christ's mother, of Saint
Martin and later apostles to the Gael, and the Archangels,
and of Christ, Rock of rocks (*Carraig dil*), and the Trinity.
226 These bring strength in danger, peace after strife with the
776 elements, remembrance of the poor, and fellowship to the
crews. Peace and strength pervade the "Dawn Prayer of

[1] R. G. Moulton, *Modern Reader's Bible* (revised, 1935, pp. 1423-1424;
cf. Note to Matt. xii. 40, p. 1696).

788 Clanranald"[1] and echo in the opening benediction of
226 Alexander Macdonald's "*Birlinn* of Clanranald", without
which his 'Galley', for all the glory of its strife with
storm, would never have won its place in the heart of the
seafaring Gael.

788 As for journeys over sea, so for those over land, "Tra-
484 versing corries, traversing forests, traversing valleys, long
and wild . . .", the traveller or pilgrim, the drover or
emigrant, leaving home and his friends, would have their
prayers. They would accompany him on the first steps
of his way with cheer and laughter or with tears, as those
have told me who remembered my grandfather's leaving
• [539] his home in Strath Spey more than a century ago. These
journey-blessings were spoken by the traveller: "Life be
in my speech, sense in what I say . . .", or by those to
whom he was dear. (*Carmina*, No. 116; *Guidheachan*
Turais, Nos. 266-276.) In these prayers, bodily travel
and spiritual quest are sustained on the mountain-track by
the strength of home-ties and fellowship, and by the hos-
pitality of Christians on the path ahead.

When family and neighbour-team were closely knit,
their own harmony drew the stranger in. "The Rune of
Hospitality", threaded together from old fragments by
the Rev. Kenneth MacLeod, breaks out into the refrain
of the lark as she sings to the listening heart of the host:
[539] "Many, a many, a time a time, Comes the Christ in the
stranger's guise!"[2] Hospitality is truest when its sacri-
fice—so real in a land of poverty—is given as a duty but
with a smile!

[1] *Songs of the Hebrides*, vol. i, pp. ix-x.

Guidhiel, Dec. 1941.)

(b) SACRAMENTS OF THE HEARTH AND THE PLAIDING

788 For shelter and life by the hearth there are noble runes.
592 The house with its household was blessed, when newly
built by a bridegroom's friends, yearly after its thatching,
364 or regularly at nightfall. The blessing was said by the
goodman in the presence of his family and helper-neigh-
bours, or intimately by either of the parents as they went
to rest (*Carmina*, Nos. 44, 45).

In the darkness of the 'black house' the fire was a
354 centre of warmth and light, of life and union. "The
Blessing of the Living" (the Fire) was said by the house-
wife as she rekindled or, rather, uncovered the sleeping
788 embers when she rose. Those who, tired or in want,
592 have ever lit a fire in darkness may best feel, in her words,
how the glow without kindles the light within.
351
• 539 "I will kindle my fire today in presence of the angels . . .
Without malice . . . or fear . . . of any one under the
sun,
But the Holy Son of God to shield me."

And then (as the dim glow lightens and warms): "God,
kindle Thou in my heart within, A flame of love to my
neighbour, To my foe, to my friend, to my kindred all,
To the brave, to the knave, to the thrall. . . . From the
lowliest thing that hath To the name that is highest of
all (*Gu rwig an t-Aiteim is aiste*)." In spirit this reaches
universality; its verse-form is purest poetry (*Carmina*,
No. 82).

For the covering, smothering or smoo'ring of the
embers at night, the following was said to me not long ago

788 (in Gaelic) by a housewife in a Catholic isle, as our friend-
512 ship matured. It had been said nightly at her fire by her
364 father-in-law until his death (not long before), which had
• 539 come after that of his wife. "I smoo'r the fire tonight,
As Mary's Son smoo'red. Be it well with house and fire;
Be it well with all our household. Who are on this floor?
Peter and Paul. Who are on watch tonight? Light-white
Mary and her Son. Thus God's voice taught, And the
Angel spoke: The Angel at my house door, Until the clear
day come tomorrow. Amen." As this variant shows,
memory still lives in the Isles.[1]

788 In these runes, the key to the words "as Mary's Son
512 and as Mary did, in their day" is the example of filial duty,
776 of wifely and motherly care. In spite of lapses to 'Mario-
[719] latry' during periods of decadence in the Roman Church,
the virtual banishment of Christ's mother from Protestant-
ism has led to a loss deeper than Presbyterian Scotland has
yet realised. Her name was a daily reminder, both of a
woman's part in the spiritual life of the home, and of a son's
self-discipline and affection: in a word, of mutual love.

788 For wool, the sheep were blessed, as in the "Clipping
[236] Blessing". There were blessings of the loom and of
784 warping and weaving; and after neighbourly fulling or
[461] 'waulking' of the finished web, came its consecration.
[127] As the work was solitary and communal in turn, so the
538 prayer. Carmichael's own fine prose translations should be
studied (*Carmina*, vol. i, Nos. 108-113; cf. vol. iv, pp.
88-99). Yet, those being available, we quote rhythmic
[113]

[1] Cf. Rev. Allan Macdonald, *Comh-chruinneachadh*, p. 107; *Carmina*
(Nos. 84-87, 324-326); and M. Kennedy-Fraser, *Songs of the Hebrides*,
vol. ii, p. 31. Sacred lore is not to be picked up lightly by a stranger. It was
only upon the second of my prolonged stays under her hospitable roof that
this good woman would admit and impart her knowledge, treasured in
the secret places of her heart.

788 versions to suggest the significant poetic form of the
538 original.

788 "The Clipping Blessing", being addressed to creatures,
236 is simple in thought and form, and its opening may be
rendered:

O come back woolly, though now you're shorn,
By May, may each a lamb have borne,
May lovely Bride you endow,
And Mary fair sustain you now!

[825] It goes on to beg protection from wolf and bear, as well
[538] as fox, hoodie crow and eagle, and closes with the opening
couplet.

736 From start to finish the work must be true. The wool
461 is from the sheep they reared—it is not got by 'chigging',
as a landlord takes 'gifts' from poor tenants; the yarn is
sound with no odds of thread from worn-out cloth; the
web is their very own, not the clergyman's due (*Carmina*,
786 110, 113, 109). Only so can the goodwife's web be beauti-
788 ful, and bleat. "Thrums nor odds of thread, my hand
• [539] never kept nor shall keep. Every hue in the bow-of-the-
shower has gone through my fingers beneath the cross."
[913] The weaver, with her household cares and her bairns about
her, to be clear in mind must be calm in heart as, thread by
[194] thread, she prepares her warp. To start, she chooses Saint
Columba's Day.

[539]

Thursday of blessings
For warping and waulking,
Thrice fifty strands
To number . . .

Ward away the evil eye!
Or evil will, or aught awry,
Consecrate, O Lord on High,
My Loom . . .

286 Make smooth and even the warp of my loom
788 And grant thy blessing, God, on me,
• 539 On all who here find shelter and room
And dwelling . . .

Thine arm be round each woman here
Who waulks this web of mine,
O aid her in her hour of need . . .

Keep the flock that we may win
Sweet and nourishing milk to drink
And wool to give, to weans and kin,
For wear!

Even now in Harris or the Lews, a brief good wish may be uttered—a "Health and strength to the wearers!" as the perspiring women end the waulking; but in the past the web was finally consecrated. Each of the family who was to wear a portion of it was named by the weaver herself, who led the consecration (*Carmina*, No. 113).

May the well-loved wearer of my web
Never be wounded . . .
May the sanctuary shield of the Lord be his. . . .

286 The significance of this gift of hard-won cloth can now
532 be seen, first for the family but next for the neighbourly
614 team. We can understand how each 'set' or pattern of
[593] tartan stood for the spirit of the family and the group of
[621] kin and homeland, the clan. We conceive what it meant
to the Gael when the tartan, with "the Highland dress
[291] . . . or any part of it whatsoever", was forbidden "to
any man or boy" in the Highlands. Women were still
allowed to wear it, it was true, but the dress ceased to be
a symbol of community when its wear was confined to
[714] one sex. As a single exception, the Highland dress was
[175] retained for soldiers, but the militarisation of the tartan—
though it seized upon one strand of clanship, that of

771 single example may be given; so far as I know, it is un-
773 recorded. I learned it in South Uist, where Catholic and
Protestant mingle in tolerance and sympathy; it had been
[125] told by an old woman, a Catholic, to a young neighbour, a
[795] Protestant fisherman's son, later a minister.[1]

The story takes place after the Crucifixion. It may be
• 539 remembered that in the Gospels not a word is said of Jesus's
771 mother after His farewell to her from the Cross (John,
xix. 26). He—or she—who first conceived the legend may
have asked, would not a mother visit the tomb of the son
she had just lost? And surely she who at His birth had
cried, "My soul magnifies the Lord . . . my Saviour",
would be the first to seek Him out after His death? The
legend tells that, on the second day of the Entombment,
Mary, Jesus's mother, in an agony of mourning and sus-
pense, visited the tomb of her son, calling upon Him with
many an endearing name. From the tomb He answered
that she would be consoled, for He would arise. And He
told her that because of the depth of her love, of all forms
of human love a mother's would be accounted the highest
for ever after.

771 The Gael had fused the grandeur of the Old Testament
536 with the hope and humanity of the New; for them the
light of dawn on sea and snow awoke the light within. A
last example is taken from two fragments forming part of
[788] a single theme, perhaps of one original poem.[2] Chanted
[113]

[1] It is interesting to compare this quiet legend with the late Roman (and Episcopalian) "Apostles' Creed", apparently based on the vivid story in the *Gospel of Bartholomew*: after Christ "was crucified, dead, and buried. He descended into hell" (hades). Montagu R. James (translator), *The Apocryphal New Testament*, 1924.

[2] *Carmina Gadelica*, 301, 197. No translation can be perfect, and Carmichael offers alternatives: line 6, "*Ti nan dul*, Being of life", or "of the elements"; l. 13, "light on the plain" or "the land", *fearann*. The last line is intimate and simple: "The hour (or era) God's Son came in (among us)," a *steach*, as into a dwelling.

771 as the days lengthened during Christmastide, old style,
538 it may be called "The Rune of the World's Light".
788

The world, ere came the Son of God,
was black, a bog forlorn:
• 539 Void of sun, moon or star,
void of body, heart or form.

'Twas Mary Mother lowly kneeled,
and gave the Inmost Being birth;
Darkness and tears were driven afar,
the guiding star rose over earth.

Light on the land, the deep illumed
from sullen pool to ocean stream;
Grief was laid and joy was raised,
with praise and hail and harping free.

Light on the hills, light on the plains,
light o'er grey-green sea and firth;
Light o'er all the world as one,
the hour God's Son came down to earth.

(6) THE CYCLE OF LIFE

796 The stages in life's sequence are marked by noble
852 runes, of baptism, initiation in adolescence, betrothal and
88 marriage, childbirth, and of confession and consolation in
584 trials throughout life and, at its close, of farewell. As might
be fitting, the benedictions were given by either man or
woman; to a child by a parent or elder; to the young and
strong by the wise; and by lovers to one another. And
in the past, especially in trial, the 'soul-friend' ministered
—*an anam-chara*, a neighbour chosen from lifelong friend-
ships for steadfastness and understanding.

852 At birth a babe was baptized; and in the name of
Father, Son and Holy Spirit the nurse placed three drops

811 the invocation was addressed to boys and girls, in Uist to
869 youths and maidens. The loveliest version of all had been
538 spoken by an old, evicted woman and learned from her by
867 a lad who, as a poor crofter in old age, passed it down for
record, for ever. Of this invocation Carmichael wrote,
"Probably it was composed to a maiden on her marriage.
The phrase '*eala dhonn*', brown swan, would indicate
that the girl was young—not yet a white swan", a tender
and delicate recognition of youth still to attain perfection.
869 Not a thought jars, each stanza building up the rising move-
538 ment of the whole. In the hundred lines of this poem,
metre and assonance are regular except where growing
intensity creates new rhythm and design; and the last
vowel-rhyme of each stanza leads on to those of the next
one, to form an unbroken ascent to the climax.[1]

869 The Invocation begins, "I bathe thy palms. . . . And
• 539 I place the nine pure choice graces in thy fair fond face.
867 The grace of form . . . of fortune . . . of goodness . . .
of wisdom . . . of charity . . . of choice maidenliness
[114]

[1] Certain critics, struck with the variety of the poem but missing its thought-sequence and unity of form, took Carmichael's note of 'many fragments' to imply that the poem was a composite version, piously restored by the editor—in spite of his statement that it was taken down from a single reciter (one Duncan Macfellan). Carmichael's spiritual power of evoking treasures from the reciters was inseparable from his utter honesty. And the publication, forty years later, of four Invocations and of scores of fragments (cf. No. 277) has added (to the internal evidence cited) further proof that the poem was no editorial assemblage. Without doubt, the poem has grown from the inspired meditation of generations of poet-worshippers in a hundred glens and isles. But the English reader should realise what the Gaelic ear may hear: this poem forms an organic unity; though many petalled it is a single flower. Readers familiar with medieval or earlier chants know that the enumeration of attributes is a feature common to all, whether in Church Latin or other tongues, as in the English medieval hymn beginning, "God in my head, and in my understanding". In Gaelic, however, the richness and freedom of the vowel-pattern and rhythms carries the thought onward, wave on wave to its climax. A foremost poet of France, Pierre Emmanuel, to whom I introduced this poem, exclaimed, "This is a Christian Song of Songs!"

869 . . . of whole-souled loveliness . . . of winning speech."
• 539 Then, after the tender image of the brown swan and fare-
867 well on departure to a new home, comes a string of ex-
quisite comparisons: to shade and shelter in need, to safety
of isle and strength of fortress, to gift of health for the ailing.
Each grace, each image, expresses not simply individual
qualities but relationships and service for others. After
eight choice lines in praise of the girl's womanly gifts—
from "Thine is the faith of Mary", through chosen attri-
butes of Bride, the Fairy Woman, Penelope, Emir, Darthula
and Maeve, to "the charm of the sweet singer (*Binne-
bheul*)"—the poem, in Gaelic that is sonorous and succinct,
passes beyond the sphere of comparison with things or even
personal qualities. It acclaims her joyous girlhood as one
with the powers of life-giving, life-abundant things, and
as a reflection of the Divine:

Thou'rt the joy in every delight,
Thou the sunbeam's radiant light;
Thou'rt the gate of a welcoming chief,
Thou the clearest star to lead;
Thou'rt the step of the deer on a height,
Thou the pace of a steed ere the fight;
Thou'rt the calm of a gliding swan;
of longings thou'rt the loveliness.

The lovely likeness of the Lord
Is in thy pure face,
The loveliest form
Was ere on earth.[1]

[538] [1] Poetic form is integral to the conception; hence this translation in
[192] verse. But alternatives to Carmichael's choice of English prose may compli-
ment his own, in bringing out the meaning. Line 1, '*joy*', *ronas*—and a
delightful or wonderful thing[1]; *ni eibhinn*; l. 3, *dorus*, doorway; l. 4,
ial, guidance, land-mark, way; l. 6, *steud*, steed, would imply, in *Ailr*, 'a
field' of battle, and, by contrast, l. 7, *stimh eal*, calm (rather than 'grace')
of a floating, swimming swan; l. 8, *rún*, secret inclination, longing, and hence
too, a person beloved; ll. 9, 11, *cruth*, form, shapeliness (and by implication),

NEXT FICHE

8 STORNOWAY

STORNOWAY is the only real town in the Hebrides. Some even say that it is the only real town in the world, as its basic living patterns are those of the countryside from which it sprang. It has always been held in high regard by the islanders. In the past it was regarded as one of the most important places in the civilised world: a saying attributed to a primitive native has passed into a proverb: *'steornabhagh mhor a' chaisteal —baile 's mosha 'th'air an t-saoghal gu leir ach Bail'-ath-Cliath an Eirinn—'s iongantach nach eil an Righ fhein a' tighinn a comhnuigh ann!'* ('Stornoway the great, with its Castle, the largest town in the wide world, except Dublin in Ireland; surprising it is that the King himself does not reside therein!') The affectionate name for the town is 'Portrona', Port of Seals, which it is. A son of Stornoway once said, 'The founder of Portrona must have been some sea rover with a good eye for a refuge from the storm and the peril of his calling. No matter what winds rage outside, within the bay the mariner may drop his anchor, furl his sails, and take his ease.'

When the Vikings first came to the western isles of what was later in history to become Scotland, they found a sandy spit of land on which they could beach their longships in a sheltered bay. It was, however, more than a haven; it was a place in which to settle down and rear the first of many generations. Later the Norse-derived MacLeods took advantage of an outcrop of rock beside the beach to build a fortress. Later again a greenheart pier, and later still a concrete wharf, have given the town the outward symbols of economic and social significance.

Stornoway owes its origin to the Stornoway Beds, a sedimentary formation much younger than the Lewisian gneiss. These Beds have had two effects. First, their existence and formation allowed a deep indentation, giving a good harbour with a protecting isthmus not far way. The harbour itself is due to the erosion of these

from the old chiefs' families, as in the genealogies of MacDonald of the Isles and the MacLeods. A special feature contrasting with English history is that claims to differences of descent, instead of being maintained—as between the Saxon and the conqueror of Norman blood—were fused. Even when the ancestor of the chief was alien to the locality, the people and the chiefs ultimately claimed to be of one and the same descent. Neighbourhood softened the impositions of the hunting herdsman upon his human herd, and the feeling of kinship brought reconciliation.

How far, then, can the family name, which proclaims every 'son' and 'daughter' of Leod to be of the *clann*, the 'children'[1] of the first Leod, really betoken a blood tie? Both the differences of race to be found in clanship and the ties it formed are well brought out in a tale of Highland pride, still told with Highland laughter across the Minch in Kintail. A French skipper (an importer of claret) touching at Kintail three hundred years ago, met a short, dark man and asked him of whose clan he was. "The Clan Rae," was the reply, "but we are of two kinds, the tall, fair MacRaes and" (a little pityingly) "the short, dark MacRaes." "And which are you?" "I," said the wee, black fellow, drawing himself up, "am one of the tall, fair MacRaes!" "Then God help the short, dark MacRaes!" said the skipper. Even one link with the blood of the chief—and that not necessarily legitimate—was enough for a man to found a claim to kinship, not merely as a MacRae, but with the tall, fair chief through

[1] In Gaelic, as a man is called MacLeoid (son of Leod), so a woman is NicLeoid (daughter), and the clan, *Clann Leoid*. The absurd addition of 'son' to a woman's name (as in English surnames such as 'Johnson') is unthinkable in Gaelic, in which a woman would be named 'John's daughter', *NicIain*.

rents, and its end is in sight when these cease to provide for the lord's desires.

(E) STORM AND GALLEY; BATTLEFIELD AND REGIMENT

The peaceful round of daily life formed the most enduring test of the mutual loyalty uniting the commoners of the clan, and linking chief to people. Yet the tensest ordeals came in hours of danger faced together, whether at sea in a small fishing boat or a many-oared galley, or in war in a clan company. The Gaels' own records must speak for them. Many a song of the Isles conveys the team-spirit of the crew though without describing its men. And although Mary MacLeod's song of MacLeod's Galley be irretrievably lost, there survives one epic poem portraying the ship, the storm and, man by man, the crew who warred against the waves and won. Alexander Macdonald's *Birlinn of Clanranald* is unmatched in Gaelic, and probably in English, verse for its portraits of the crew in action, from steersman to 'look-out'. The flowing metrical translation by Pattison with Hugh MacDiarmid's vivid prose helps to give the English reader some vision of a crew of Gaelic freemen at their best.[1]

The poem opens in slow traditional rhythm with "the Blessing of the Ship", the arms and the crew. Then the bard, speaking for the stately skipper, "incites the sixteen oarsmen to row" out of the bay, and they row to a rousing shanty, a *Iorram*. Next, in readiness for the voyage and

[1] Thomas Pattison, *The Gaelic Bards* (2nd ed.), 1890 (pp. 1-28); and Hugh MacDiarmid (Ed.), *The Golden Treasury of Scottish Poetry* (pp. 65-85), 1940. Cf. A. Macleod (Ed.), *Sar Orain: Three Gaelic Poems*, Glasgow, 1933. The different themes of its sections, each in its own metre, have been published separately, in *The Songs of the Hebrides*, and elsewhere.

with words of heartening but well-weighed praise, each post with its duties is apportioned to the man best fitted for it by his temper, strength and skill—or even by some special weakness! First the steersman:

"Let this broad heavy hero sit at the helm, powerful and limber . . .
Light handed on a helm, watchful and wary, cautious yet quick . . ."

Then others "Put this great-fisted and shrewd man to grapple with the rigging. . . . Windwise, he'll work with him that holds the shrouds . . . a thick-set, broad and craggy champion . . . and with him that grips the sheet, a neat and handy fellow. Set at the prow our pilot, keen-eyed for the airts, and with a sure sight for each landmark like a guiding star. And set at the halyard this self-reliant seaman, tried and clear-headed, grimly alert. . . ." They put to sea, and as the sea roughens, the steersman cries, "Quick at my ear a man to watch for the rain-squalls! Choose me a fellow who's half-fearful, yet not a real coward . . . for he must be quick to shout when he sights a big sea bearing down on us. But let no other but himself be by me, lest there be babble and hubbub to bewilder us." Then, as the seas break over the open vessel:

"To bale her let this strong man rise, active and brave,
Who will not blanch or yield or tremble for the shouting wave. . . ."

Next, "Let two stout fellows, these thick-boned, rough and hairy chaps, haul on the ropes behind the sails, to raise or lower them as we're lowered or uplifted by the surging seas. . . ." And last, for fear one fail or be dashed overboard by a wave, six nimble men are picked to stand by,

ready to leap fore or aft: "Quick to move as the mountain hare . . . or the hounds after him; quick to climb as a squirrel in the spring-time". Then comes the stirring evocation of the storm, testing each man's mettle and the discipline of all, until at last, their ship battered and themselves bruised and weary but undaunted, the crew reach Islay and round the sheltering point of Carrickfergus. There, with thanks to the High King, they drop anchor, the *birlinn* rides in peace, and all find meat and drink and rest.

175 614 721 703

As at sea, so in war, loyalty could rise to heroism in individuals and corps. Young men were attached to their chiefs by chivalrous leadership in warfare, both before 1745 and later. The Highlanders' high character contrasted with that of most Regiments of the Line, too often disciplined with the lash while demoralised by debauchery. From Lewis the Islesmen went out to the Seaforth or the Ross-shire Highlanders. General David Stewart of Garth, historian of the Highland regiments and people, wrote of these two regiments that again and again their courage and coolness in battle were proved.[1]

175 618

Not less striking was the record of Gaels among civil populations, whether in Britain, as in the 'Forty-five, or abroad. In Germany in 1761 and 1762 much was said of the Highlanders' kindness, "for the boors were much better treated by those savages than by the polished English and French". Similarly in the Low Countries in 1814 and 1815, they were *enfants de la famille* and "kind as well as brave". The mayor of Brussels declared that they "called forth the attachment and esteem of all", and the inhabitants requested him "to endeavour to detain the 78th (2nd battalion Ross-shire) regiment of Scotchmen in the town, and to prevent their being replaced by other troops".

[113]

[1] *Sketches of the Highlanders*, 2 vols., vol. 1

175 702

The families of the young men might be willing to encourage enlistment. But they pled or bargained for an assurance that after service was over their sons should be returned to their homes and have land on which to settle down. The receipt of the bounty and their savings would help the men to pay rent later.

175 702 668

Passive resistance was offered at times, however, as when the Macleod Highlanders were raised in 1757, only a decade after the 'Forty-five. An Island friend has told me of a family tradition, that, as a young man at that time, his own great-grandfather was concealed to escape conscription. And the press gang was busy in Stornoway when the *Old Statistical Account* was written. Protest had usually to be made in secrecy or silence; but a revolt was organised by Stornoway men in 1793.[1] And the voice of one unwilling conscript has come down to us in a song, well known in the Isles (though little known in English), with the refrain—*Och ho ro*, brown lad, so bonnie (*'ille dhuinn*). Although it bears no sign of Jacobitism, it begins, "My grief to be wearing King George's red clothing!" It continues, "The short-coated sailors bore us to Holland. It was a Saturday evening when we fought; and many a wife was widowed ere dawn broke on the Lord's Day, their husbands ta'en, whom gold can never restore, stretched out among the rushes, blood pouring over their shoulders. . . .

[533] 175 702 668 539

'O'er the hills bear my greeting to Mull of the mountains;
Where cuckoos are cooing, on the braes before Beltane.'

'Bear my greeting to my mother, who nurtured me, to my sister who weeps for me, and to my sweetheart; I'll be home if death spares me."[2]

[2] Charles Stewart, *The Killin Collection*.

885 in thy kertch!" and counsels her to be hospitable yet wise,
537 and courageous though calm; and to be frank yet tactful,
dignified though kind. The themes of this ode's melodious
885 verse recall the virtues of a wife enumerated mnemonically
538 in the acrostic which concludes the Book of Proverbs.
593 For in that, too, there is mention of "strength and dignity,
wisdom and kindness", and the poor are not forgotten as
the wife goes tirelessly about her work, sets her servants
to their tasks and sells her merchandise at a profit. Yet
the acrostic's emphasis on the wife's work and its gain
reveal the writer as a shrewd citizen seeking to train a
wife to ceaseless exertion and business dealing, with her
husband's private profit and public honour as a most
important end! The singer of 'The Kertch'—man or
woman, one cannot tell—thought of conduct not for its
profit first, but for its virtue, and dwelt upon motive, mind
and heart.[1]

To tide over the supreme crisis of childbirth the mother
175 was strengthened in confidence, courage and calm. The
841 need was the greater before modern midwifery. In Suther-
land as late as 1908, a good professional nurse tending a
difficult case of childbirth, anxious and powerless without
a doctor, found herself indebted to older wisdom. The
patient's mother first filled a small basin with water into
788 which she put trinkets of gold and silver. "She then held
the basin to her dying daughter's lips, and made her drink
three mouthfuls of the water, each mouthful in the name
of Father, and of Son, and of Spirit, the three Persons
of the Trinity of kindness and power, *Tri Pears na Trianaid*
chaoimh chumhachdaich'. Soon after, the child came . . .

113 [1] *An Breid*, 'The Kertch'. *Carmina*, No. 215. A short paraphrase by Mrs. Kennedy-Fraser, set to a lovely air and refrain, will be found in *From the Hebrides*. First published (imperfectly) in *Nether Lochaber* by the Rev. Alexander Stewart (1883, p. 4) with delightful notes.

764 Carmichael found versions of a mourners' hymn then still
remembered as sung at funerals there. "Never could they
who had heard it forget the solemnity of the occasion,
where all was so natural and beautiful, and nature seemed
to join in the feelings of humanity."[1] "I am going with
thee to thy home! . . . Thy home of winter." ". . . To
thy home of autumn, spring and summer . . . to thine
eternal bed, thy perpetual sleep." "I am going home with
thee, thou child of my love, To my dear Son of blessing,
to the Father of grace."

764 *Tha mi dol dachaidh leat,*
• 539 *Go do thaigh! go do thaigh!*
Tha mi dol dachaidh leat
Go do thaigh geamhraidh . . .

Tha mi dol dachaidh leat,
A leanabh mo luaidh,
Go Macan nam beannachd,
Go Athair nam buadh.

"The Death Croon", handed down by the Rev. Dr.
Kenneth Macleod, leads on from almost the same opening,
the Soul-friend singing to the fellow-watchers' refrain:[2]
"Sleep, oh love, on thy Mother's bosom, Sleep while she
sings soft lullings to thee, The sleep of the Son on Mary's
breast. Sleep and put off from thee every woe. . . .
Sleep of Jesus's youth . . . life . . . and glory . . . of
His love . . . joy . . . and peace. . . . Sleep of the seven
virtues . . . the seven moons . . . the seven slumbers
upon thee. . . . Dream of Mary and God in her side,
Dream of Columba in Isle of Saints, Dream of the Child

[1] *Carmina*, No. 346. The word *Mac*, Son, is here given a tender diminutive form, *Macan*, 'dear Son', as if to complement the infinity of the Father's "achievement, victory or grace".
[2] *Songs of the Hebrides*, vol. i, pp. 98-105.

764 that never aged: Each one of these dreams, dear love, be
• 539 thine. . . .

The dusk of the Death-sleep is, love, in thine eye,
But softly thou'll sleep, softly sleep. . . .
In name of the Three in One,
Peace to thy plain,
The Christ is come . . .
Softly sleep, softly sleep. . . .

14 The late Professor Sir J. Arthur Thomson, deeply moved
on hearing it sung for the first time, exclaimed, "How
profound the civilisation of those who composed and
handed down this hymn of farewell!" The Soul-
friend and Watchers seem to unfold before us the wide
range of human love, and—as they recall the tender rela-
tionships of birth, childhood, parenthood and parting—to
touch the universal.

17 All landscapes in these islands have roots in the distant past. Park is no exception. Yet many crofting landscapes have been significantly re-fashioned within the present century after major changes in the nineteenth century. Park does not entirely correspond to the general pattern, and the present cultural landscape has its beginnings in the late seventeenth century, although there are traces of earlier settlement.

Archaeological evidence, in the form of a stone sunhead found near Habost, a dun on the brackish Loch Cromore, and a mediaeval chapel on Eilean Calum Cille, provides the earliest record of human settlement in Park. *Vikar-nam-veidhna*[1] indicates Norse occupation: the elements 'bost', a contraction of the Norse word *bólstaðr* – a homestead, and 'veit', a shed or hutty situated in pastureland but not regularly lived in, indicate a thin dispersion of farmers practising an extensive and transhumant economy: all the present township names contain Norse elements.

The name Park, is derived from the Gaelic 'A'Phairc' – the park or deer forest: the old name of the district was Deer-park ('Herd' is the same etymologically). During the eighteenth century, a dyke or turf-wall was built between Loch Erisort and Loch Seaforth – 'garadh an tighearna' – the lord of chiefs' dyke, to enclose the deer forest. A lodge for the gamekeeper was built. Park was shooting ground used by tenants in Big (near Leverburgh) – one of the Macleod shielings has the same Airigh (Shoinbuoli Chaim and Dondonal Cam was chief of the Macleods in Dig at the beginning of the seventeenth century. Thus it may well be that after the Norse population left or were absorbed, Park was simply used as summer pasture.

It is believed that settlement in what is now the Deer Forest began about 1650. Confirmation of this comes from an unpublished Gaelic ring by Archibald MacDonald (An Ciaran Mabach) composed in Leith soon after 1660. In the song, the author laments the fact that he may never see the Forest again, and says of Park

"'n ni leam caradh na fridhe
Bhith fo bhrón air mo bhaiseit
D'am bo chomadh cas-chrom."

"I deplore the state of the forest . . . . . that it should be in subjection to the caries whose livelihood is a cas-chrom" (lost plough – literally crooked spade). The song gives no indication of numbers, and unfortunately no rental of the period is extant.[2]

From rentals and other evidence, Park was the last area in Lewis to be colonised in permanent settlement, the fact that the population of Loche parish increased from 912 in 1755 to 1750 in 1831, supports the view that the late eighteenth century saw the extension of modern settlement in Park.

The first documentary evidence of settlement in the present crofting area is the Judicial Rental of Lewis, taken by the Forfeited Estates Commissioners circa 1771. This rental records tacksmen, or major tenants, living in Habost, Swainbost, and Eilean Calum Cille – all situated along the southern shores of Loch Erisort: there is local tradition that Kershader and Marivig were shielings

1 The editor is indebted to Miss Bridget M. Gordon, B.A., B.Litt. for an analysis and evaluation of the place-name evidence – see Appendix C.

2 For this extremely interesting information and the translation, the editor is indebted to Mr. William Matheson, M.A., of the Department of Celtic, Edinburgh University.

541

541 SPECTACLES -- patriotic celebrations; parades; fireworks displays; military reviews; secular pageants; carnivals, circuses, and rodeos; animal racing and fighting (e.g., horse and dog races, bull baiting, cockfighting); gladiatorial combats; public hangings; organisation of spectacles; financing (e.g., by profits, voluntary contributions, subsidies); admissions (e.g., gratis, by tickets); specialists (e.g., organisers, performers); etc. See also:
Breeding of racehorses. . . . . 320 Circus 822, 836

at Skeabost. A minister drove by one day and said to the 785
workmen, "Don't you know you're building a house for the Devil?" 795
One of the laborers, a Lowlander, replied, "It's a good thing 575
we have a place to keep him." The Order of the Eastern Star
and the Masons are condemned because, while they are religious,
they are secret orders. Even if the person's religion did not
stand in the way of his becoming a Mason, his distrust of
mystery probably would. As one young fellow said one night in
the bar when being chaffed about the Masons, "I'm not going
to join any secret organization until I know what the secret is."

Included among the objectionable activities by these two 785
churches are the traditional Highland Games, held each year 795
at Portree in August, probably about the time of the old Saint's 541
Fair. The day is a school holiday. Aside from New Years, it
is the big occasion of the year. People come in from all
over the Island. Few of the Skyemen actively take part in [526]
the contests of tossing the caber and throwing the stone, or
in the piping and dancing competitions, but they look forward
to the event. It gives them an opportunity to see their [571]
"friends" and join them in the pub for a dram. Although the [743]
ministers disapprove, they lack the backing of the "elect," so
the games go on each year. I hasten to add that they have
lost much of their appeal in recent years, but I am told that
this is due to the fact that the clique who runs the Skye
Council of Social Service has, in an effort to attract tourists
early in the season, set up Skye Week in May. Included in
the Skye Week program are Highland Games. I might also add

that the people of Skye, including many of the newcomers, 785
have not been favorably impressed by Skye Week. The consensus 795
is that it is not representative of Skye. For the Griathanach 541
the Highland Games are alright, but the concerts, dances and
similar festivities only cause ill feelings.

As might be expected social life is more vivid in Portree. 338
Here the members and the adherents of the Church of Scotland 53
partake of a number of recreational activities. In the winter [526]
there is badminton twice a week. In the spring and summer [526]
there is a little golf and tennis. The limitations are not
religious; they are climatic. Then, too, there is shinty.
We have already noted the existence of many clubs. There are [535]
regular dances. Moving pictures take place twice a week. [546]
All of these activities are run by newcomers; the Skyemen have [447]
a more or less passive role. The "elect" of the two smaller 795
sects are, to say the least, very much disturbed by these 794
frivolities. What is worse, the children attend the dances 224
and the concerts and the boys play shinty. They can find 853
enough solidarity among those of their own age grade to out- 52
weigh the threats of their elders. Apparently they find
enough security to be unaffected by the stern denunciations of
the minister from the pulpit. When they marry, however, they 794
have to recast the pattern of their behavior, for now the 853
elders are in a position to exercise control by withholding 624
baptism from their children. Some may turn to the Church of
Scotland.

Standing in marked contrast to Portree, in Glendale the 853
control by the aged is complete. There is not a single activity 55

543

543 EXHIBITIONS--international expositions; local and regional fairs; animal-judging contests (e.g., horse and dog shows); handicraft displays; automobile and flower shows; art exhibitions; special exhibits (e.g., by libraries and museums); offering of prizes and awards; organization of exhibitions; mode of finance (e.g., by sale of tickets, sale of articles on display, voluntary contributions); specialized organizers and dealers; etc. See also:

If May is considered a busy month, June duties are even 221
more pressing. Although the winter rains are over, the rain 231
fell has begun to increase. A succession and variety of de-
mands are made on the crofter's time. Once again the sheep
must be brought down to the "fank." This time the purpose is
to mark the lambs. The males, unless one or two healthy
specimens are selected for future use as rams, are castrated
and smeared with a dye to indicate their ownership. The
females are smeared and have their ears cut to signify both
ownership and age. Like the dipping, this operation requires 476
the cooperation of the crofter and his family, the neighbors,
and hired hands. Next the sheep without lambs are dipped 232
once again and given a dose of medicine for liver fluke and
a variety of diseases. At the same time, the early hay and, 241
perhaps, the early potatoes are ready for harvesting. The end 543
of June brings the Highland Wool Fair in Inverness. If he 233
has Cheviot sheep, as most crofters do, the man must go to
arrange for their wintering on the milder and drier east
coast. Although Cheviots produce a finer wool than the more
common Blackface sheep, they do not stand up to the incessant
wind and rain of a Skye winter. If his wife can leave the
children behind, she will accompany her husband. The old 534
function of the Fair, the sale of wool, has disappeared under 266
government price control legislation.

It is not unusual to have the early harvest delayed 221
until July, but even then the mowing may have to wait because 234
sheep must come first. On one of the dry days during the first 237

545

545 MUSICAL AND THEATRICAL PRODUCTIONS--public concerts; operatic productions; performances by dance troupes (e.g., ballets); burlesque and vaudeville; production of musical comedies and plays, stock companies, amateur musicals and theatricals; metropolitan show business (e.g., selection of a play, backers, producers, casting, try-outs, staging, rehearsals, promotion, advance sales, first nights, reviews, runs, motion picture rights, royalties, returns on investment, road companies); promotion of other musical and dramatic productions; etc. See also:

571 In common with other aspects of island life, the social side has
178 undergone considerable change. The world has been brought
nearer the crofter's home by radio, television and film screen,
reducing the social need for meeting with neighbours and friends
574 for the ceilidh. The ceilidh was once the principal means of re-
178 creation and instruction. There is no precise English equivalent
for it, and it may be loosely described as an 'at home' to which all
are welcome. It may be held in any house; in the past, the
favourite resort was a home where the head (*fear an tigh*—man
of the house) was an intelligent, communicative man; and if he
had a number of eligible daughters so much the better. Ceilidhean
were held after nightfall. Old tales were told, and songs sung, and
public questions of the day were discussed. All women attending
took with them an ample amount of work, sewing or knitting, to
see them through the evening. Ceilidhean nowadays tend to be
545 more organised, taking the form of popular 'concerts' which did
not take root in the island until the turn of the century, though
they were a common way of entertainment on the mainland at
the time. Social life in the past was thus very intense, and was a
natural evolution from the basic desire to forget the day's work
and to have some pleasure of a kind.

546 The pattern of recreation facilities has since become fairly
varied. Films came early to Lewis, or rather Stornoway; the first
Picture House was located in Keith Street, and presented both
536 films and stage turns. A new Playhouse was opened in 1934 with
The Good Companions and *Falling for You*, starring Jack Hul-
bert and Cicely Courtnedge. Films in the rural districts were a
rarity, however, until in 1946 the Highlands & Islands Film
209 Guild came into existence to bring the magic of the screen to
scattered communities. This body ran several mobile cinema out-
fits in the deep crofting areas, until the advent of television in
the region killed it off in 1971. While it existed, however, the
Guild provided an essential service to remote communities and
brought not only the world to their doorstep but ensured that
they felt part and parcel of a much larger scheme of things.

209 The first television service in Lewis began in 1959, 'piped' by

546

546 MOTION PICTURE INDUSTRY--production, distribution, and exhibition of motion pictures; script writing; casting; locations and sets; filming; special equipment and techniques (e.g., technicolor, sound); products (e.g., film plays, animated cartoons, educational and documentary films); system of distribution (e.g., chains, block booking, runs); motion picture theatre and their operation; specialists (e.g., producers, script writers, actors, cameramen, distributors, operators); economic organization of the industry; regulation; etc. See also:

scattered communities. This body ran several mobile cinema out-
fits in the deep crofting areas, until the advent of television in
the region killed it off in 1971. While it existed, however, the
Guild provided an essential service to remote communities and
brought not only the world to their doorstep but ensured that
they felt part and parcel of a much larger scheme of things.

209 The first television service in Lewis began in 1959, 'piped' by

the Outer Isles, an area of recent depopulation, there are 88
enough youth to resist the dictates of their elders.[25] If 89
they cannot have a dance in a hall, they hold their dance
on a plank bridge. In Kilmuir the crofters are looking
forward to "Effectual Calling." To defy the elders, or
allow their children to run counter to the wishes of the
elders, would mean a loss of all hope for salvation.

For the majority of crofters, any form of amusement 73
is objectionable, but there are slight differences among 74
the affiliates of the several sects. The Church of Scotland
is the most lenient. For adherents, concerts, film shows
and similar organized forms of entertainment may be admissible
especially if they are held outside the neighborhood. There
is a "picture bus" from Kilmuir to Portree on Wednesday and
Saturday night. Sports activities are often considered
as wholesome outlets for the youth. Some of the ministers,
feel the lack of social contact with their people and
believe they might do some good by taking part in life
outside the pulpit. The Church of Scotland minister in
Kilmuir occasionally attends the Crofters' Club, the only
secular activity admitted in the neighborhood. Significantly
Free Church opinion, although the voice of a minority, has
prohibited the playing of pipes and recitals of the Gaelic
Choir at the annual agricultural show. The Church of Scotland
minister in Sleat has taken a hand in the village hall.
Unorganized dances are condemned. This is not because dancing

539 And so, after every good wish for days, years and life,
867 the Invocation closes: "Peter has come and Paul" . . .
869 the Disciples and the Archangels. . . . Jesus the mild and the Spirit of guidance have come,

> And the King of kings has come on the helm,
> To bestow on thee their affection and their love,
> *A bhaireadh duit-se graidh us ruin.*

The ideal of choice maidenliness which this Invocation portrays, culminates in the thought of the loveliness that
867 was Christ. It rises, too, to stirring virility: "the island
at sea, the fortress on land", or "the step of the steed on
[539] the plain". Yet when all is said, it is a womanly image which prevails: after the fortress comes the well in the desert, and after the charger's step, the gracious calm of a floating swan. It is all the more significant that the Invocation was addressed both 'to boys and girls' in one isle, and 'to youths and maidens' in another. Not simply was boyhood taught to honour girlhood: ideal womanhood was invoked to raise manhood itself to fullness.

885 Upon marriage, the husband replaced the maiden's
[292] snood or *stiom* that bound her uncovered hair by the wifely
[585] kerchief, *am breid*. Folded diagonally, its three-cornered shape came to symbolise the Trinity, in benediction on
[539] the bride's head.[1] A poem to a bride, "now beginning her dual course", commences, "A thousand hails to thee

[538] likeness. The short second stanza given stands out alone: the poem,
[192] having attained its climax by a rhythm sustaining the upward, sonorous movement, is hushed by its few simple words. In *From the Hebrides*, Mrs. Kennedy-Fraser rearranged one or two of these lovely stanzas, as one of her 'lyrics with refrain'. *Cf.* A. Geddes, *The Songs of Craig and Ben*, vol. ii, 1955.

[1] The kertch is spoken of in many songs, in which a lover hopes to place it on his young love's head, or a husband praises its whiteness as worn by his wife. When first I knew the Lews, the kertch was still commonly worn
[178] under the more recent Lowland mutch, and either framed a young face, or an old one, charmingly. The two have not quite vanished, though memories of what the kertch once symbolised are hard to find.

that the people of Skye, including many of the newcomers, 785
have not been favorably impressed by Skye Week. The consensus 795
is that it is not representative of Skye. For the Sgiathanach 541
the Highland Games are alright, but the concerts, dances and similar festivities only cause ill feelings.

55

55 INDIVIDUATION AND MOBILITY--general statements covering several aspe of individuation and mobility; status, names, and naming. The term "status is here used to connote the position occupied by an individual in any repetitiv social relationship. The behavior exhibited by the occupant of a status is hi "role," i.e., his enactment of his part in the relationship. Societies tend to rank certain statuses as higher and lower, and within a status to rank the ro of different individuals in terms of how adequately they measure up to the cultural expectations for that status. The "prestige" of any individual reflec both the level of the various statuses that he occupies and the social estimate of his roles in each. Some statuses are ascribed and not achievable, being gained either automatically or not at all. An individual can enhance his pres tige through his own effort only by improving the performance of his roles or by moving into achievable statuses of higher social standing. By "mobility" is meant the means by which these objectives are accomplished.

The historical aspect of these regional facts is extremely significant to the evolution of Scots social life, and to developments of Presbyterian worship led by Elders in ferm-toun and Kirk; although suggested by comparisons throughout this book, they have still to be seriously followed out. As to the future, regrouping of our somewhat scattered agricultural population has been strongly urged in planning for post-war housing and community life. But sound planning must be based on survey, long overdue; though elementary, this key map appears to be the first of its kind for Scotland (Fig. 2). It is from these units of farm-team and township that Scots rural society must be rebuilt, region by region.

One further contrast between the farming and the crofting communities demands attention: it lies in the types of migration—one is tempted to say, of semi-nomadism. Crofters, though they move to and from their croft and township—to the city, the sea, or the New World—return home to their native township when they can, and to no other. Many farm servants, on the other hand, though they usually spend their lives in the county or region of their birth, have been on the move from farm to farm, year after year. What is true of Lowland Scotland seems rather true of North-east England, but not of 'the English Plain'. Unmarried Scots farm servants were hired for the half-year, and frequently moved after each new hiring, the married once a year. Families were annually uprooted—if indeed they could be said to strike root at all! The war-time 'Standstill' Order for Scotland began to check this migratory life; but its effects remain. Hence many men have few ties, their wives still fewer. The children could not grow up with their schoolmates: they could look back to no "Auld Lang Syne", of which the

178 but not as often as in the past. In the past boats
501 were in danger of being smashed by the strong seas
228 and winds that gained easy access to the Shawbost
[493] harbor; but today, because so many cars are available
[504] the boats can be sheltered in the more protected bays
of Carloway, five miles up the coast to the southwest
[434] of Shawbost. Despite this protection and the increase
in income since World War II which would enable more
people to buy boats, the number of boats remains small

175 In the past certain people were esteemed for
821 "knowing the wind and the sea." The sound of the turf
coming from different directions presaged different
kinds of weather; a line of white across the bay mean
bad weather in a few days. A fifty-year-old man says,
"My father and grandfather could tell when a storm was
coming. They needed to know, and they didn't have
radio and television to tell them. I would know the
signs, too, if I had listened to them."

175 Not only was there local fishing, but the men used
228 to hire themselves as crew on other fishing boats.
464 Several nicknames reflect this history. One family is
551 known by the nickname "Strachan," the surname of a man
who lived on the east coast of Scotland and on whose
boat the head of the Shawbost family had once worked as

97 One of the
93 richest sources of Gaelic vocabulary now available is
79 the Gaelic Bible, but many villagers, especially the
younger ones, complain that they are unable to understand
many of the Gaelic words used by the minister in his sermons.

Although provision for teaching Gaelic in the schools
17 was made in the Education Act of 1918, only within the
71 last ten years have schools incorporated classes in which
Gaelic is taught at both primary and secondary levels.
Gaelic is taught as a foreign language like French or Latin,
rather than used as a medium of instruction, which would
require a much larger vocabulary than most teachers possess.
[75] The present schoolmaster in Shawbost differs from past
[51] schoolmasters in that he addresses the children by their
Gaelic names,[2] and devises projects intended to encourage
a sense of pride in "Celtic culture."

The Department of Celtic Studies at the University of
3 Glasgow, which includes in its staff a Lewis poet and
7 several Scottish Nationalists, is described as "progressive."
5 According to an islander who is a student in the Department,
"They believe that if Gaelic is to survive as a language,
it must be written as it is spoken. At school we were
taught to write 'proper' Gaelic, Gaelic that's considered

[2] Persons who come from Gaelic-speaking areas are addressed and referred to by Gaelicized names, such as "Murchadh" rather than "Murdo," and usually these names take the form of patronymics, which may or may not include nicknames (for example, Iain Dhomhnuill Bhain, i.e., John the son of fair Donald).

197 Within the village there are no branches of An Comunn
178 Gaidhealach and few books written in Gaelic. Once a rural
166 family moves to Stornoway, children often refuse to speak
191 Gaelic, even though they understand it, and parents tend
to speak only English to their children, believing this
will help them "get on." In the next generation, the
[871] language is lost. Village children attending school in
Stornoway often prefer talking to their Gaelic-speaking
[867] roommates in English. A young island woman, married and
living in Edinburgh, says she would like her baby son
to learn Gaelic but feels that if he had a mixture of the
two languages the other children would laugh at him.

197 English is the language of the larger society, the
191 language spoken in school and the language required in
most jobs and in dealing with most officials. In Gaelic-
197 speaking areas, the speaking of English connotes high
191 554 status. If an English speaker mispronounces Gaelic words,
626 he is quickly forgiven, praised for trying to learn such
578 a difficult language, and asked why he bothers with a
language that "isn't any use anyway." But if a Gaelic
speaker makes mistakes in English, he is teased mercilessly.
• [551] Many nicknames derive from such mistakes; for example,
"Peter Squeak" got his name by mispronouncing the word
[524] "picturesque." People "win points" by competing with
each other in speaking English. "See how good you are in

FIRE AND SWORD

Recorded history begins with the Icelandic sagas. In 1098 Magnus 175*
Bareleg plundered Lewis and devastated the island with both fire
and sword. A skald named Bjorr Cripplehand, who accompanied
Magnus on the expedition, reported that 'Fire played in the fig-
trees of Liodhus; it mounted up to heaven. Far and wide the
people were driven to flight. The fire gushed out of the houses.'
The *Irish Annals* tell us that Skye was pillaged by the Norse in
794, and no doubt Lewis did not escape their attentions, then or
earlier. Towards the end of the ninth century a stream of Norse 175*
folk left their homes to start the work of colonisation. Iceland, 648
the Faroes, the Orkneys, the Shetlands and the Hebrides soon 167
became thriving communities in which the earlier native popula-
tion were as thralls, serving ruthless masters.

By about AD 1000, the island, with others as far south as Man,
was in the sure and steady grip of men of Scandinavian or semi-
Scandinavian origin, who were destined to become premier
clans such as Clan Donald. It was not until the Battle of Largs in
1263 that this grip was loosened. In 1266 the Western Isles
were ceded by Norway to Scotland, following which event the
Gaelic people and their former Norse masters were soon to be
merged in the marriage bed. As for the common language, it was [197]
the Celtic elements which took over after, one supposes, some
generations of suppression. The result in any case was a highly
individual people, strong in character, and resilient enough to
take the rough times with the smooth.

In the thirteenth century, Harris was in the possession of the 175
MacLeods of Harris, and Lewis belonged to three powerful clans: 614
the Morisons in Ness, the MacAulays in Uig, and the MacLeods [551]
of Lewis in the remainder of the island. Other smaller clans were
the MacIvers, the MacRaes, and the Nicolsons. The Harris Mac-
Leods were allied by kinship to the Lewis MacLeods, though the
relationship was to become quite distant—and their destiny more
fortunate. History from this time is one of disputes, internecine
warfare, murders, and similar crises deemed to be of the highest
importance by the clans, both inside the island and between the
islanders and strangers. An enormous amount of blood was spilled

The most important event in the agricultural history of the island at this time was the introduction of the potato. Though the exact date is not known, some evidence from the writer on Lewis in the *Old Statistical Account of Scotland* (1796) places it about 1757. 'With the utmost difficulty . . . the people were prevailed on to plant potatoes, but of which they now plant great quantities by the plough and by the spade, and find them to be the most useful of all crops raised in the Parish.' 175* 137 244

The substantial tacksman seemed, in Lewis, to deal kindly with those who called him Fear Baile (Town Man—almost a mayor, without the trappings and self-elected). Serious complaints against tacksmen are few. But winds of change were blowing. John MacKenzie, who had for some years been Chamberlain of the Lewis Estate, was examined before the Napier Commission in Edinburgh in 1883. He knew the island's history well. 427 175* [554]

> Till the beginning of this century, the greater part of the Lewis was in the hands of tacksmen, or middlemen, who got in some cases from their sub-tenants in money, produce, and labour what nearly paid their rents. There were the MacIvers of the Parish of Stornoway, the Morisons and Murrays of Barvas, the MacAulays of Uig, and the MacLeods of Lochs. When Mr Stewart-MacKenzie married the Hon Lady Hood, daughter of Lord Seaforth, and took the management of the estate into his own hands, he did away with the middlemen and let the land directly to the crofters. This, no doubt, was a step in the right direction, but it had its disadvantages, as the example of a good middleman, who looked after his people, and who was industrious in farming and attentive in stock-breeding, was beneficial to the people, though in some cases they may have been petty tyrants. NORTH RONA

hough the island is but a great lump of rock, Dean Monro says 175*
at in his time an abundance of corn was grown, by delving 241
ly, and an abundance of clover-grass for sheep. The island also 231
oduced a fine bere-meal which the islanders stuffed into the [429]
ins of sheep and sent, as their rent or tribute, to MacLeod of
ewis, along with mutton and fowls.

Of St Ronan's Chapel, still to be seen and reckoned the oldest 181
hristian building in Britain remaining in its original state, 175*
Monro says: 'As the ancients of the country allege, they leave a [346]
ade and a shuil [shovel] when any man dies, and upon the [429]
orrow find the place of the grave marked with a spade, as they
llege.' In 1695 Martin wrote of Rona in 1680:

The people repeat the Lord's Prayer, Creed, and the Ten Com- [788]
mandments in the Chapel every Sunday morning. They have [494]
cows, sheep, barley, oats, and live a harmless life, being perfectly
ignorant of most of those vices that abound in the world. They
know nothing of money or gold, having no occasion for either;
they neither sell nor buy, but only barter for such little things as
they want; they covet no wealth, being fully content and satisfied
with food and raiment; though at the same time they are very
precise in the matter of property among themselves; for none of
them will by any means allow his neighbour to fish within his
property . . . They concern not themselves about the rest of man-
kind except the inhabitants in the north part of Lewis. They take [551] •
their surname from the colour of the sky, rainbow, and clouds. [162]
There are only five families in this small island, and every tenant [342]
has his dwelling-house, a barn, a house where their best effects
are preserved, a house for their cattle, and a porch on each side
to keep off the rain or snow. Their houses are built with stone and
thatched with straw . . . When any one of them comes to Lewis,
which is seldom, they are astonished to see so many people.

Then came tragedy. Somehow, probably off a wreck, a swarm 175*
f rats landed on the island and consumed virtually all the food. 731
few months later, some seamen landed and robbed the islanders [145]
f their only bull. 'These misfortunes and the want of supply [166]
rom Lewis for the space of a year occasioned the death of all
hat ancient race of people.' Some years afterwards a new colony 175*
as sent to the island. In 1796, at the time of the *Old Statistical* 162

175 and still more to pay arrears, was "the rugged Hag,
241 Poverty, that would resist both King and Government".
427 We may guess that MacAulay passed a hint to the tenantry
451 that (in a good Gaelic idiom) they had better 'disremember'
details of arrears: and this they did.

195 Of the four names on the deposition quoted, one or
• 551 two may have been surnames, others the patronymics of
613 kinsmen. As is still the custom, clansmen knew one another
[198] by names of many kinds. Stature or colour was used to
distinguish a big John from a little one, a fair from a dark,
or a pale from a swarthy; occupations such as smith or
caird (artificer, not necessarily travelling tinker as now) were
[241] used, and also mere nicknames. Of the eighty-one crofters
[226] or fisher-burghers in Stornoway, fourteen were Mac-
Kenzies; and other mainland surnames, such as Fraser and
Gunn, Matheson and MacLennan, also showed their
descent from the immigrants brought in when MacKenzie
of Kintail founded the burgh to encourage fisheries after
1611. Each held a single holding, usually rented at two
shillings sterling.

175 To conclude, rentals about 1715 show (1) the character-
241 istic equalitarian grouping of small peasants as fellow-
427 workers in the hamlet-farms still held directly from the
631 superior, Seaforth; (2) the eighty-one small burghers of
Stornoway; and (3) tacksmen, responsible for the larger
part of the Island rent, but under whom we know that the
labouring peasantry, though without the local independence
of the others, also continued to dwell and to work together.
The tacksmen were to pass away, as many of them had
originally come, at the desire of a mainland lord, and the
lord, in his turn, was to leave; but the small peasantry of
immemorial stock still hold and work their land.

173 from the old chiefs' families, as in the genealogies of
622 MacDonald of the Isles and the MacLeods. A special
631 feature contrasting with English history is that claims to
[199] differences of descent, instead of being maintained—as
[171] between the Saxon and the conqueror of Norman blood—
were fused. Even when the ancestor of the chief was alien
to the locality, the people and the chiefs ultimately claimed
173 to be of one and the same descent. Neighbourhood
621 softened the impositions of the hunting herdsman upon
his human herd, and the feeling of kinship brought
reconciliation.

173 How far, then, can the family name, which proclaims
621 every 'son' and 'daughter' of Leod to be of the *clann*,
614 the 'children'[1] of the first Leod, really betoken a blood
829 tie? Both the differences of race to be found in clanship
and the ties it formed are well brought out in a tale of
Highland pride, still told with Highland laughter across
539 the Minch in Kintail. A French skipper (an importer of
claret) touching at Kintail three hundred years ago, met a
short, dark man and asked him of whose clan he was.
"The Clan Rae," was the reply, "but we are of two kinds,
the tall, fair MacRaes and" (a little pityingly) "the short,
dark MacRaes." "And which are you?" "I," said the
wee, black fellow, drawing himself up, "am one of the
tall, fair MacRaes!" "Then God help the short, dark
193 MacRaes!" said the skipper. Even one link with the
621 blood of the chief—and that not necessarily legitimate—
614 was enough for a man to found a claim to kinship, not
829 merely as a MacRae, but with the tall, fair chief through
• [551]

[1] In Gaelic, as a man is called MacLeoid (son of Leod), so a woman is NicLeoid (daughter), and the clan, *Clann Leoid*. The absurd addition of 'son' to a woman's name (as in English surnames such as 'Johnson') is unthinkable in Gaelic, in which a woman would be named 'John's daughter', *NicIain*.

(D) TACKSMEN AND SUBTENANTRY, FACTOR AND LORD: 1611–1800

175 We saw that in the Rent-roll of Lewis in 1718 the first
429 sixty-four entries, signed personally, recorded comparatively large holdings (tacks), the annual rentals of which were
614 from £3:6:8 to over £10, the occupant of one (or more)
621 of which would be styled Tacksman or 'Man of the Farmtown' (*Fear Baile*). While one or two tacks were shared, a few tacksmen may have held more than one tack—though one cannot be sure, owing to the recurrence of the same
• [551] Christian names in each clan. It is striking that half the tacks—though mostly small ones—were held by men of undoubted mainland names, of which there were twenty-two MacKenzies, four MacLennans and three Mathesons.
[166] These were doubtless the descendants of gentlemen from the mainland who in 1611 had helped to win and hold the
[551] Island for MacKenzie of Kintail, later Lord Seaforth. Of native Lewis names the principal are MacAulay, Morison and perhaps MacIver.[1] Only three small tacks were held by MacLeods, who may have been of Island stock. Lochs and Eye on the east coast had largely been granted in tack to the new-comers; on the south-west and west coast MacAulays and MacIvers held much of Uig and a few farms in Cladach; but more of Cladach and most of Ness (in the north) were still held by joint tenants. Stornoway was held by burghers, of whom perhaps two-thirds bore mainland names. The peasantry remained as unnamed subtenants on these holdings, of which the total rents show

[114] [1] The writers of the Brand Report (1902) assumed that MacIver is a native name. This would seem to be borne out by its frequency as a surname today, in contrast to NacKenzie, Matheson or MacLennan, though W. C. Mackenzie (1919, p. 92) thought the MacIver tacksmen arrived with Seaforth.

000 and to prevent their being replaced by other troops".

175 Such discipline was only possible when their officers
703 trusted to feelings and character. The officers were usually Highlanders, though some notable Lowlanders led Highland corps, and a Welshman commanded the Ross-shire Highlanders with success. Stewart, who had served with the regiment, after recounting their disciplined courage in battle in India, wrote: "The notice of all India was attracted by the temperate habits of the soldiers and Colonel Mackenzie's mode of punishment, by a threat to inform his parents of the misconduct of a delinquent, or to send a bad character of him to his native country". In the twenty-five years of peace and war during which the first battalion had been established, there had not been desertion among the men enlisted in the Highlands. "There were in this battalion nearly 300 men from Lord Seaforth's estate in the Lewis. Several years elapsed before any of these men were charged with a crime deserving severe punishment. In 1799 a man was tried and punished. This so shocked his comrades that he was put out of their society as a degraded man who brought shame to his kindred. The unfortunate outcast became unhappy and desperate, and Colonel Mackenzie, to save him from destruction, applied and got him sent to England, where his disgrace would be unknown and unnoticed . . . [and] he quite recovered his character."

If the officers' regard for their men led to true discipline, the men's expectations of high conduct from their officers brought forth leadership in the field. Mutual regard began in peace. When Stewart of Garth first joined his regiment as a young ensign, his colonel assigned to him an elderly private to act not only as servant, according to regulations,
• [551] but also as intimate counsellor. Stewart tells how this

175 private naturally addressed him in Gaelic by his Christian
703 name, and writes of him with the warmth and respect due
• [551] to an elderly relation. Something of this mutual regard remains; and young Englishmen of education have told me of their surprised admiration for the character of the best traditional type of 'Regular' Scottish, and particularly Highland, non-commissioned officer, before and during the two world wars.

175 Such bravery and character abroad led Stewart to the
829 conviction that their foundation must be the character of the peasantry at home. He held that the Highlanders' home life demanded support, and having served with the Sutherland Highlanders, he felt the deepest grief and anger at the clearances of the Sutherland estates by an English
[720] proprietor. When Stewart remarked that a few deaths mattered little when compared to the nation's renown, for this 'endures for ever', he referred to deaths in battle, which he analysed as typically of 1 to 2 per cent of the men. Whereas upon long voyages or in unhealthy stations, 25 per cent of soldiers or civilians might die of disease.

175 Yet, to the Gael, discipline did not mean blind sub-
703 mission to injustice. "Accustomed to obey their im-
614 mediate chiefs, who durst not break a compact with them, and to have promises punctually fulfilled, implicit submission was not yielded when they had rights to preserve." For the bond by which, of old, the Highlanders "were held to their superiors and one another" was "the bond
[648] of fidelity and affection. . . . In later times, when they entered the King's service, they considered themselves as contracting parties", and resented breaches of faith. Of eight mutinies in as many regiments, that of the Seaforth in 1778 should be instanced here. The regiment included many Lewismen, with Mackenzies and Macraes, and also

[Ploughed] [Ploughed]
common grazing - at present approximately correctly ploughed - cannot therefore provide
much employment. Hence it is the standard of agriculture that must be improved. Since the
land does not permit striking extension or improvement of the cultivated area, development
must be directed towards improving pasture, with more re-seeding and controlled grazing
similar to that already described. All this, however, is of little avail if prices for cattle, sheep
and wool remain low, or at least lower than prices prevailing on the mainland. The first priority,
therefore, in the establishment of a prosperous agriculture is a guaranteed market-price. Given
this, it might become worthwhile to take steps to increase the carrying capacity of the crofts.
It may be assumed that this would involve an all-round improvement which could give a firm
basis to the economic existence of the community: until this is achieved, stability and continuity
are out of the question.

GARYVARD

Gwenyth R. Page, B. A.

The landscape of the south-east coast of Loch Eriboll is a sombre and rugged one. The
Quaternary ice sheets left in their wake troughs now filled by the sea loch, innumerable lochs
covered in water lilies, a massive area of indeterminate drainage and expanses of bare gneiss.

Garryvard is set on the fringe of this landscape on a 20 to 25° slope with the crofts aligned
from the moor to the sea, on a mantle of drift. Here is the home of the MacLeods, the Mackinnons
and the Montgomerys. Life beats out its regular pattern of existence during the winter months
on the croft, followed by an increasing tempo and variety of work during the rest of the year. In
January and February the animals must be fed on hay or lose the battle to survive. In February
there are preparations for the year's tasks, making repairs and improvements to the croft.
Next month will find the crofter on the land, making or clearing drains and putting fences and
dykes in order. The tempo of life quickens with the year; April sees the first sheep dipping, the
land turned over, potatoes and oats sown. From mid-May, the sheep leave the crofts to fend
for themselves on the common grazing. The following three or four months are times of tremen-
dous activity on the moors when the peats are cut, to be stacked later, first in fours, then in
eights, so that the wind may dry them, till eventually bee-hive-shaped stacks - some four feet
high - can be seen near the peat banks in August. Then begins the wearisome task of carrying the
peats home, all too frequently in creels carried on the back, since the peat workings of Garryard
are on the moore up to half a mile from road. Altogether some two miles of roads are needed to
peat on their crofts, whilst others have permission to cut from Cromore or Cawstra common
grazings close to the road. All the while croft work continues, varying from hoeing, weeding and
cutting hay to the gathering of sheep for shearing. As there are no fences between the various
commons, crofters must travel from one township task to another, seeking their own. In August
the lambs are weaned. Hay making generally ends in August and is immediately followed by the
oat harvest in September. By the time both oats and hay have been gathered in, the potatoes
are lifted and the sheep are brought in from the common grazing about October 12th. The last
sheep dipping takes place in November and is followed by tupping.

There are eleven crofts altogether, though one is divided, each portion having a legal tenant
who has a half share in the common grazing. Two crofts are 12 acres in extent, the half crofts
2.75 acres only, though the acre cultivated on the common grazing by one of the latter crofters
since 1933, has recently been officially recognised. Most crofts are in strips running from the
sea-shore up the slope some 500 yards to the township dyke, and are clearly demarcated by
fences erected just after the last war. Three crofts have additional strips whilst one croft was
an extra strip belonging to another croft. The additional strips date back about 100 years to a
time when the township grew rapidly as a result of evictions in southern Park. One croft is
divided and worked in three separate parts so in effect there are fourteen operative units in Garryard.

553

553 NAMING--bestowal of names in infancy; name givers and namesakes; naming ceremonies; exchange of names; reciprocal relationships created by naming or name exchange; assumption of new names (e.g., occasions, ceremonial); posthumous assumption of names; reasons for name changing; bestowal and assumption of honorific names and titles; etc. See also:

Personal names	551	Godparents and godchildren	860
Twins	554	Ceremonies during infancy	855

The visitors each give the child a gift, especially a silver 842 coin. This token of good luck is placed under the child's 831 pillow. The relationships, then, are essentially reciprocal and individual.

The child's position within the extended family is also 553 fixed at the time of birth by his naming. As a rule, the first 851 son is named after his paternal grandfather, and the first daughter, after her maternal grandmother. The second son is given the name of his maternal grandfather, and the second daughter, that of her paternal grandmother. There are exceptions to this pattern. One grandmother was adverse to having her granddaughter named after her, because nowadays, with late marriage, the naming frequently follows the death of the individual. By far the most common exceptions occur when someone in either parent's family of orientation has passed away. Where the mother's father has died, the first boy is named after him. The same is true for girls when the father's mother has passed away. When a brother or sister of either parent has died, especially without issue, the second born is named "in honor of his memory." In these days of small families, this has led to giving a girl the equivalent of a man's name. There was, for example, Angusina who had been named after her uncle who was killed in the war. Again, with delayed marriage, the couple may have only one child. He or she is given the names of both the paternal and maternal grandparents, such as Ian (for father's father) Ducan (for mother's father) or Morag (after mother's mother) Flora (after father's mother). Aside from serving to identify members of

843

alternating generations and being felt as an obligation to 553 perpetuate family names, these various practices serve to limit confusion among a people who share rather few surnames. I never knew a child who had been named for his parents.

The relationship of father and child is formally es- 851 tablished at baptism. As we shall see in the following chapter, the mother takes little or no part in arranging for the sacrament. The spiritual welfare of the children is the father's 593 concern. He is also the disciplinarian, but in the pre-school years discipline is lax. Both parents freely indulge the child, and they spend a great deal of time with him. The belt, an 861 ever-present, ever-threatened means of punishment, only appears when the child assumes the rights and duties which he will exercise as long as he remains on his parents' croft.

When he begins school at five or, in remote townships, 847 at six, the rights and duties determined by age and sex begin 842 to emerge in perspective. Actually, the child has already begun to make a pretense, playfully imitating his or her father or mother, at assuming his role, but the influence of the sex category is not marked. A small boy may fetch some peat for the fire or some water for the dishes. Once he starts school, he is no longer asked to do these chores. As soon as he is able to carry a pail he may feed the chickens; now he only feeds the calves. His first real task is tending the cattle, bringing them down from the hill and driving them out after the milking. As time goes on, he learns how to plant and dig potatoes, cut turf, harvest hay and oats, and at last how to shear sheep.

554

554 STATUS, ROLE, AND PRESTIGE--relative prevalence of ascribed and achievable statuses; statuses adapted to particular personality types; general comments on the social ranking of statuses and roles; types of roles and achievable statuses which bring the largest rewards in prestige; individuals typifying the foregoing (e.g., celebrities, national heroes); symbolic tokens of the achievement of prestige (e.g., medals, titles, insignia, praise songs, special privileges); general statements on the various avenues of mobility (e.g., technological skill, wealth, shrewdness, valor, piety, wisdom); etc. See also:

121 individuals; rather, causal primacy in human action is given to the sociocultural environment, which determines what choices are available to be made and what behavior is valued. Because the exercise of choice is a human universal, i.e., a constant, it cannot be used to explain variation (cf. Barth 1966).

Actors within a community which is marginal to a larger industrial society make choices within an environment characterized by constraints and incentives which derive from both the local sociocultural system and the larger system. The state of boundedness of the local system is maintained or modified as a result of the strategies adopted by its members. I have suggested that the Scottish crofting township persists as a relatively strongly bounded system not because it is inherently static, isolated, or resistive of change, but because of the constraints and incentives stemming from the larger society. For example, the British government has provided various incentives to 657 197 554 encourage the persistence of crofting and township communalism; and to a certain extent, Gaelic speech or English spoken with a "Hielan'" (Highland) accent constitute social stigma (Goffman 1963) by which a person from the Highlands and Islands is assigned a somewhat lower social status in British social structur

175 228 464 551 a crew member. Another family is called "cook," the first job which a novice had to assume when he joined the crew of a fishing boat. One of the last men to go to the east-coast fishing is about 60 now. The men 221 241 434 came back from the fishing in time to bring in the oats, barley and potatoes, and the money was used for rent and the purchase of various foodstuffs and other goods. 353 They usually brought enough rolls of wallpaper to cover the stone-walled or wood-lined <u>tigh dubh</u> (black house) 434 for another year. Twenty pounds were good wages for a season. While the men were away at the fishing, the 452 571 remaining members of the family lived on credit from the local shops, and depended on the good will of their neighbors.

175 701 706 505 Many men joined the armed services, and were especially sought after by the Navy and the Merchant Service. In 1900, there were 2,500 Lewismen in the Naval Reserve.

175 228 484 571 435 Around the turn of the century, until the first world war and the growth of the weaving industry, the girls used to "follow the fishing." "Everyone came to the boat to see you off. You could go all the way to Aberdeen for 12/6 on a special fish-worker ticket." The girls went from the south of England to Shetland in the far north.

197 Within the village there are no branches of An Com
178 Gaidherlach and few books written in Gaelic. Once a ru
166 family moves to Stornoway, children often refuse to spe
191 Gaelic, even though they understand it, and parents ten
to speak only English to their children, believing this
will help them "get on." In the next generation, the
[871] language is lost. Village children attending school in
Stornoway often prefer talking to their Gaelic-speaking
[867] roommates in English. A young island woman, married an
living in Edinburgh, says she would like her baby son
to learn Gaelic but feels that if he had a mixture of th
two languages the other children would laugh at him.

197 English is the language of the larger society, the
191 language spoken in school and the language required in
most jobs and in dealing with most officials. In Gaelic
197 speaking areas, the speaking of English connotes high
●554 status. If an English speaker mispronounces Gaelic word
626 he is quickly forgiven, praised for trying to learn such
578 a difficult language, and asked why he bothers with a
language that "isn't any use anyway." But if a Gaelic
speaker makes mistakes in English, he is teased merciles
[551] Many nicknames derive from such mistakes; for example,
"Peter Squeak" got his name by mispronouncing the word
[524] "picturesque." People "win points" by competing with
each other in speaking English. "See how good you are

Education in the local school has included a great deal of religious instruction; in other words, religious and educational spheres commingle. Because of the relative prestige which the teaching profession offers to persons from the island, and because the islands are considered "isolated" by most persons looking for jobs (teaching posts on the island include an added sum which is designated as "isolation payment"), most of the island's teachers are themselves islanders. Education is one method by which one's position in the community is elevated. The high status derived from having advanced education also reflects favorably on the parents and position of the family. But teachers and others who return to the island are expected not to deviate from island norms in important matters, such as fundamentalist religious beliefs; hence teachers tend to perpetuate fundamentalist religious beliefs within the classroom.

Formerly the minister visited the school once each year to examine the children on their catechism, thus testing the state of religious instruction in the school. Several years ago this practice was stopped by the education authorities of the County Council, and the minister now gives a sermon in the school about once a month but is not allowed to examine the children. Many ministers are dissatisfied with the arrangement, as they are afraid that

The most important event in the agricultural history of the island at this time was the introduction of the potato. Though the exact date is not known, some evidence from the writer on Lewis in the *Old Statistical Account of Scotland* (1796) places it about 1757. 'With the utmost difficulty . . . the people were prevailed on to plant potatoes, but of which they now plant great quantities by the plough and by the spade, and find them to be the most useful of all crops raised in the Parish.'

The substantial tacksman seemed, in Lewis, to deal kindly with those who called him Fear Baile (Town Man—almost a mayor, without the trappings and self-elected). Serious complaints against tacksmen are few. But winds of change were blowing. John MacKenzie, who had for some years been Chamberlain of the Lewis Estate, was examined before the Napier Commission in Edinburgh in 1883. He knew the island's history well.

Till the beginning of this century, the greater part of the Lewis was in the hands of tacksmen, or middlemen, who got in some cases from their sub-tenants in money, produce, and labour what nearly paid their rents. There were the MacIvers of the Parish of Stornoway, the Morisons and Murrays of Barvas, the MacAulays of Uig, and the MacLeods of Lochs. When Mr Stewart-MacKenzie married the Hon Lady Hood, daughter of Lord Seaforth, and took the management of the estate into his own hands, he did away with the middlemen and let the land directly to the crofters. This, no doubt, was a step in the right direction, but it had its disadvantages, as the example of a good middleman, who looked after his people, and who was industrious in farming and attentive in stock-breeding, was beneficial to the people, though in some cases they may have been petty tyrants.

THE PEOPLE

eighty visitors each year, but there is nothing similar in Lewis. Hostellers who visit Stornoway can do little more than march through the town to the mail-boat, or else return to Harris by the next bus.

As might be expected, the reading tradition is strong, stemming from a natural desire to learn and from the fact that the ceilidh could only partly satisfy the need for mental stimulation, not to mention the need to alleviate loneliness. A century ago three books were to be found in many island homes: the family Bible, often a massive volume clad in hairy calfskin, *Turus a' Chriosdaidh (Pilgrim's Progress)* and *Gras am Pailteas* (Bunyan's *Grace Abounding*). As horizons became wider a public library was set up in Stornoway in 1907 (see Chapter 8); a library was in fact established there earlier, before 1897, but it was not a free one. In round figures, the 15,400 people of landward Lewis (Lewis excluding Stornoway) borrow some 70,000 books annually, though of course the actual readership figures are higher, books borrowed being passed round the family and exchanged with others until the 'mobile' calls again. The mobile library service was established by the Ross & Cromarty County Council in 1955 for rural villages in thirty-one school districts.

ISLAND EMIGRANTS

For all that the island is a tight-knit community, paradoxically it breeds many men and women whose destinies are not worked out within the confines of its own shores, but at the ends of far horizons. This is typical of most Highland areas: some who leave them make a mark on other societies often greatly exceeding the size of the community they left behind. Many 'great' people are also directly descended from a crofting ancestry; minds and spirits bred in the Highlands and Islands have potential for development not always apparent on native soil but sometimes fully realised in alien surroundings and conditions.

Harris and Lewis have contributed their share, and still do, to the general weal of skill, ability and intellect in all fields of human endeavour. For centuries, the export of brains was normal. Possibly the best known is Sir Alexander MacKenzie, who discovered

ISLAND EMIGRANTS

the MacKenzie River; he was born in Stornoway in 1764, in what was known as Luskentyre House, at the corner of Kenneth Street and Francis, where Martin's Memorial Church now stands. Another MacKenzie, Lt-Col Colin MacKenzie, was born in Stornoway about 1754 and went to Madras in 1772 as a cadet in the Engineer Corps under the East India Company. In India, MacKenzie followed a career of high professional distinction,

[TEXT CONTINUED ON PAGE 157]

Population trends *c* 1755 to 1961 for the island as a whole; for Lewis, including Stornoway; for Harris; and for Stornoway. The population peak occurred in 1911. The dip in the Stornoway curve was due to the effects of emigration, as is the more pronounced dip in the island curve. Stornoway's curve in 1961 was on the upward trend, due to migration from the landward parts of the island into the town. Over the past 150 years, however, population mobility within the island has been virtually nil; movement has been emigration rather than migration

ISLAND EMIGRANTS

surveying Mysore (40,000 square miles), a work of great difficulty, and ultimately becoming Surveyor-General of India. Though not island-born, Thomas Babington MacAulay, the first and only Baron MacAulay of Rothley, was an issue from the very heart of the Hebrides. He was only one generation removed from Gaelic-speaking ancestors. His grandfather was born in the Manse of Harris, and a great-grandfather in the far-off parish of Uig, in Lewis; a great-grandmother was born in the old Manse of Stornoway.

The MacIvers of Liverpool were a Lewis family who took a leading part in the development of regular steamship travel across the Atlantic and in the foundation of the Cunard Line. The brothers David and Charles MacIver first operated with passenger ships (the City of Glasgow Steam Packet Company, 1844) on the Clyde coast. Before that they ran a petty smack between Loch Roag and Campbeltown. Kenneth Morison, the founder of the Railway Clearing House, was born in Stornoway in 1805; in an unusual field there was Aeneas MacKenzie, who scripted many Hollywood films; W. E. Gladstone's mother was a native of Stornoway; and the last of the tea-clipper skippers was Captain Murdo Stewart MacDonald, who skippered the *Sir Launcelot*. Yet another local boy who made good is R. M. MacIver, who left Stornoway at the age of sixteen to make a journey, first to Edinburgh University and then on to Oxford, Canada and America. He has in his lifetime collected eight Honorary Degrees, became Lieber Professor of political philosophy at Columbia University, and President, and then Chancellor, of the New School for Social Research.

24 36 with its tied cottages and frequently a 'bothy' for the unmarried. Next to this comes the full-time small-holding,
(184) important in the North-east and the Southern Highlands of Scotland. Great as are the differences between these types of unit today, they go back, to a considerable extent,
(174) to common origins. The sites of the farms are ancient. And their people, though since divided into masters and men, are the successors to those who were once the 'kindly co-operators' of older 'farm groups', of Lowland *ferm-toun* and
(184) Gaelic *baile* (pronounced like 'ballie'). The island counterpart of these, and their life, will be described in Part Two. Hence, before we turn to further analysis of the Highlands and Isles, a word more should be said of Lowland types.

24 36 464 An important social index in the Lowlands of Scotland is the number composing the farm labour-team, averaged for each county. Villages and even hamlets are few, largely because farmers and farm servants live on the farms.
(171) Compared to those of most of England, Scots labour-teams are small. Yet, as the map indicates, there is a
(184) wide range from the 'large' teams of South-east Scotland, through the 'medium' teams of adjacent areas, to the 'small' teams of the West and North-east. Not only do the contacts of employer with employees partly depend upon the number in the team, but so do the farm servants' relations to one another. On the whole, the larger the team, the more formal its organisation; and the smaller
• (554) the team, the greater a worker's own responsibility. The
(178) 'family farmer' of the West and North-east is often an ex-farm servant. From Burns's time, his character and enterprise have been recognised in Scotland, and in the last forty years have become well known in South-east England. But the isolation of these little farms brought its problems and its hardships.

i [see map p. 16 .. analysi][20]

175 427 614 621 they were composed of at least one to four or five hamlet-farms. The tacksmen also had cottars for service.

Thus in Lewis a special reason, the accession of Seaforth, had led to the granting of many tacks to his own clansmen and to natives. Elsewhere in the Highlands the
175 procedure is noteworthy during the sixteenth, seventeenth
427 and eighteenth centuries, for the collection of rents from
614 the peasantry by means of large tenants had financial
184 advantages for the greater landlords (I. F. Grant, 1930). The tacksman's continuation as tenant depended on his
(661) paying regularly, for the lease was not a hereditary grant. A tack could also provide for a lord's younger sons or
(565) immediate relations, such as formed the gentry of the clan. Along with smaller lairds, these furnished the cadres of officers who led the clan regiments down to the 'Forty-five, and later the Highland Regiments of the line and the Fencibles down to Waterloo. Like MacKenzie, other great chiefs such as Argyle or Breadalbane leased tacks when they acquired the status of peers and took possession of fresh lands with Royal support, after vain resistance from native chiefs and their followers. In Lewis, the fiscal status of tacksmen was applied both to MacKenzie's supporters from the mainland and to those with ancient roots in the west of the Island. The latter may have thought a mere lease a poor substitute for hereditary tenure, though a legal compromise necessary if their possession was to be
(166) continued. The lack of permanent tenure ultimately led to the departure of their descendants.

175 621 614 From the families of these tacksmen have sprung most of those of Lewis birth or descent who achieved fame before the twentieth century. Of the MacAulays, we saw Zacharias was Chamberlain during and after the 'Fifteen.
• 554 Thomas Babington Macaulay came of the same line, as
(668)

175 554 614 621 did another Zacharias, closer than Thomas to the Lewis
• (668) tree, who worked nobly with Wilberforce for the emancipation of the slaves.[1] Still another connection was a Canadian emigrant, grandfather of the late T. B. Macaulay, LL.D. Alexander Mackenzie, the explorer of the Mackenzie River, was a descendant of Lewis tacksmen. MacIvers and Morisons also distinguished themselves.
(178) But the sons and daughters of crofters had to await the
(871) provision of education in English before they could rise in trade, learning or war; hence few Lewismen of the greatest Lewis name, MacLeod, achieved eminence until the twentieth century.

175 554 565 427 As for the peasantry, the interposition of a new or enlarged class of tenantry between themselves and the superior must have meant that they had to labour on the tacksman's home farm, and no doubt pay more in produce or cash. Hence the Gaelic saying that if the position of the small (joint) tenants was bad, that of the subtenants was worse, "the Evil One itself". Following the long fight with the Fife Adventurers, hardship may have been greatest where mainland tacksmen were placed above the joint tenants; but even under MacAulays and MacIvers rents may have been raised and some of the joint freedom lost which was still enjoyed in Ness. Whatever adjustments had been made in an earlier period had to be re-made with the beginning of Seaforth's new order.

In the following generations, contradictory accounts of lairds, factors and tacksmen are given by contemporary observers. Certain of these insisted that, given the poverty of the lands as a whole, the chiefs and landlords, factors and tacksmen, were the saviours of their people. Yet even among those who supported authority in general, there was
(113)

[1] Charles Booth, *Zachary Macaulay*, 1934.

175 seldom agreement as to which of these three types brought
• 554 the greater good or wrought the lesser evil. As elsewhere,
565 tacksmen declined by the end of the eighteenth century.
427 Buchanan wrote in 1793, "The greatest tacksman in Lewis is the Laird's ground officer"; but he added that the Island was for the most part inhabited by tenants holding directly from Seaforth, who "easily perceived the folly, as well as the inhumanity, of lending out the people on his island to imperious tacksmen, for the purpose of raising fortune to themselves on the ruins of the unfortunate subtenants". At a later date a former Chamberlain of the Lewis estate, John Munro Mackenzie of Calgarry, held otherwise. To the Napier Crofters' Commission in 1883, he said: "Till the beginning of this century the greater part of the Lewis was in the hands of tacksmen, or middlemen, who got in some cases from their subtenants in money, produce, and labour, what nearly paid their rents". Their names were those of the seventeenth century. Early in the century, "when Mr. Stewart-Mackenzie married the Hon. Lady Hood, daughter of Lord Seaforth, and took the management of the estate into his own hands, he did away with the middlemen, and let the land direct to the crofters.
(232) This, no doubt, was a step in the right direction, but it had its disadvantages, as the example of a good middleman, who looked after his people, and who was industrious in farming . . . and stock-breeding, was beneficial to the people, though in some cases they may have been petty tyrants." He might no doubt have added that they could, if need be, stand between a bad factor and the crofters.
(278) When they lost their tacks, some of these 'middlemen' turned to the growing fishing industry and helped to supply capital and enterprise as curers; their successors were active through the nineteenth century and I spoke with

175 the last of these in outlying villages after 1918. When
554 Matheson purchased the Island in 1844 he left the fishing
565 industry to the curers, great and small. Particularly before
427 most fishermen could speak and write English, the local
228 curers were best fitted to take action not only in marketing but in approaching the Government to aid the construction of piers and harbours. On the whole, their long ties with place and people, coupled with education, made them useful leaders of a community in which leaders were needed to adapt life to a changing economy. Here and there one or two small farmers survive, a little apart from the main townships. Aided by a long cultural tradition, they meet changing times by combining with their inheritance a sane selection of new elements.

175 Looking beyond the Island to the mainland, the time is
621 approaching for a fair assessment to be made of the historic
622 parts of chief and landlord, factor and tacksman. Not only
427 is there an enlarging body of documentation, but a growing
184 understanding of communal strands in tradition and of
178 changing social economy seen in relation to geographic
182 factors of place and region. And in the Gaeldom, conditions varied greatly between bordering areas from Mar to Kintyre,[1] and the heartland of tradition in the Hebrides. In the Island, one must remember the fundamental opposition, yet the recurrent readjustments of chiefs and people. These, and not only individual differences in character and conduct, explain the differences of experience and opinion
829 quoted above. The people's belief, so frequently given to me thirty years ago, that it was bad factors, not the landlord, who taxed and harried them unjustly, expressed an idealistic faith in a chief, rather than the facts of economy
565 and history. For lordship begins with the imposition of
113

[1] A. McKerral, *Scot. Hist. Rev.*, 1947.

175 Such are the mingled traditions of the Highland
701 regiments which served in so many wars, for right or for wrong. Of all the desperate alternatives before the Gael
614 —famine at home, semi-slavery in the factory towns, death-stricken sea voyages, pioneering in the forested hills of Eastern North America, or war, it was this last which offered the men not only the trappings and glamour of clanship but continuing fellowship. In the regiment a Gael was among friends. Modern civilisation offered him no other life promising social continuity and the hope of a return to croft and township, " if death should spare him ".

175 It would be wrong to suggest that only the gentry could
701 rise to command, for as English and literacy were acquired,
565 the sons of small tenants received commissions. British
554 military discipline has too often driven a breach between the men and the non-commissioned officers, spoiling the
703 latter's fitness for higher leadership. But among Highlanders " the bond of faith and affection " led naturally to commissioned rank. For generations, historic precedent
178 was carried on in living tradition.[1] Given education, the
871 sons of Island crofters have risen to command on land and sea; but education came late.

CONCLUSION

175 Thus in the ' little commonwealths ' of the farm-hamlets
621 grouped within the township, personal right and equal
631 shares were balanced by common duty, summed up in the principle of duty-right or coir.
577
614

[1] The tradition of leadership calls for review but here one can only cite examples. For instance, descendants of his neighbours in Strath Spey told me that my paternal grandfather, as a penniless lad speaking Gaelic and English (in which he was literate), enlisted in the Black Watch about 1829. He was known as a N.C.O. for his power of quiet, reasoning discipline. He thrice refused the offer of a commission, which was then given to others, of whom more than one rose to high command in the battalion.

to the traditions of the past. I shall discuss this further when I describe the extended family.

The Township. The township is a cooperating economic unit. Communal use of an interest in the common grazing lands gives the township its focus. Living on the several crofts, there will be found an aggregate of nuclear families and unmarried individuals who, especially in the older townships, are related and re-related on both sides. Only in the more modern townships does the degree of relationship become tenuous and finally disappear. In interpersonal activities the neighbors have a rate of interaction second only to that of the nuclear family.

The dominant social trait is the strong emphasis on the ascription of status on the basis of kinship, sex and age. There are no socially valued achieved statuses. The facts are simple. Males enjoy higher prestige than females, and the old men and women are respected by the youth. All of the same age grade and sex are essentially equal. Again we have a parallel with the Irish small farmer.[18]

There is no room for the expression of a role of leadership in economic activities. The governing principle of township administration is so-called primitive democracy. All males have an equal voice in determining the acceptance of any policy or action which concerns the group, and unanimous consent is necessary for the adoption of any change. Although each township has an elected grazing clerk and a grazing

[18]Cf. Arensberg, op. cit., pp. 45, 109-110; and Arensberg and Kimball, op. cit., pp. 63, 181-231.

committee, a legal requirement, these individuals lack authority. They are figureheads whose primary function to advise the government of the decisions reached by all crofters who share in the grazing and to regulate the u the land by self-imposed rights. In townships where the are owned as club stock the clerk serves to distribute profits from the sale of stock, and he may also keep a of the individuals who are entitled to payment for labor townships where money has replaced customary reciprocity In any cooperative venture beyond the family level, ther no one who can step forward to act as a foreman. The as sumption of this role would upset the basic status equal of the crofters, unless the person wishes to be regarded eccentric.

The Crofting Neighborhood. The crofting neighborhood co sists of an aggregate of individuals and nuclear familie who dwell in several townships, standing in close spatia proximity. It is, therefore, natural that the ties of residence and kinship should continue to operate. The i portant distinguishing features between the township and larger social entity are two: (1) cooperation in agricul and pastoral activities is replaced by mutual aid, and (there is a greater wealth of formal and informal inter- personal activities in which the people associate.

There are invariably established social circles wi which the individuals habitually move. One always consi of the individual's kinsmen, "his people," his family of orientation, and "his close friends," all other relative the fourth degree of relationship.

change in the use of the grazing land or a desire of the young men to fence the crofts in an effort to improve the individual crofts the old men must have their say. Through their position in the churches, the old men also are the paramount source of social control, preserving their traditional habits and statuses, including a severe limitation on all social activity of a frivolous nature. This religiously sanctioned control is strengthened by the inability of the youth to form a solidarity. Indeed, one of the most serious limitations of the society of Skye is the small number of young men and women, boys and girls and the few opportunities which they have to come together as a group. The functions of the old men's age grade are identical with those described for the Irish small farmer.[21] Another social circle is composed of the affiliates of the same religious sect. They are mainly a mutual aid group.

Although the status equality noted in the township for all of the same sex and age carries over to the larger community, there are always a few people who have an achieved status. The minister enjoys high social prestige as the spiritual guardian of the people. The doctor is valued for his role in caring for the people's physical well-being. The school teacher is respected because he educates the youth and often acts as a spokeman for the group. If there is a member of the landed gentry, he will be accorded the highest status in the area. It is interesting to note that the achieved status positions are most often filled by newcomers to the island. The shopkeepers and

[21]Arensberg, op. cit., pp. 125-139.

tradesmen are respected, but since most are crofters, they are treated like all other men.

The Village. The village contains a heterogeneous population. At least a third of the families have arrived in the recent past. They have come to fill positions in the county and national government offices; in Lowland directed banks or business houses which have extended their field of operations to Skye; and in the professions as doctors, lawyers, ministers, and schoolteachers. A few have come to Skye to open a shop or offer their services as tradesmen. The remainder are either Skye folk who have recently moved into the village to see employment or families that have been in Portree for one or more generations. Very few families seem to have lived in the village for more than three generations.

While there are many opportunities for an individual to achieve status in Portree, the cultural heritage and the economic limitations under which the Sgiathanach labors has not allowed him to compete with the newcomers. His ability to compete is further restricted by the prevailing policy of the government and the national corporations to bring in managerial and, often, clerical personnel from the outside. All share one socio-economic trait; they are non-crofting. As yet there is no class structure beyond the polarity of the landed gentry and the crofters who participate in village life. There is verticality. Highest prestige status is accorded to those who have been accepted among the local aristocracy. Below them rank the ministers, doctors, and school teachers.

the remainder of the population, as a general rule, it may aid that a person's status depends on personal qualities er than on occupation. This is especially true of men who an active part in the church. In terms of interaction, social hierarchy is extremely fluid. People who elsewhere Britain would be "working" or "middle" class not infrequently with members of the "upper" class in both formal and in- al social groups.[22] This underlying equalitarian pattern always characterized the interpersonal relations of Skye's ety. There is, of course, cleavage between the upper l of the society and the bulk of the population; inter- iage is impossible.

The social life of the village revolves around the new- rs and the landed gentry. In addition to the social les based upon age, sex, kinship, and religion, the indi- al belongs to several small groups of friends and, perhaps, w formally organized clubs. When the native-born take in the formal activities they do so as participants rather as organizers or directors. The necessary roles of leader- are left to the newcomers or to the landed gentry. The er, in particular, are responsible for community affairs, as the chief and his kinsmen were formerly looked to as leaders of the people. Occasionally, an influential new- r gives them able assistance. The influence of the old is not as marked in the village as in the crofting communities,

[22]Roy Lewis and Angus Maude, The English Middle Classes don: Phoenix House, 1949), pp. 13-26, 87-110.

mainly because there are enough young people to form a strong age grade of their own. The more liberal outlook of the villagers is, however, tempered by the old men.

Religion

The attachment to the past embodied in the social and economic aspects of the culture carries over into the religious life of the Sgiathanach. He is a Presbyterian who continues to worship and view the world within a pattern which characterized the Scots of the sixteenth and seventeenth centuries. The doctrine and theology are derived from the teachings of Calvin as interpreted by John Knox and refined by the Covenanters of the seventeenth century. To the original ethical code a strong measure of influence from the English Puritan movement has been added. The guiding principles are still foreordination and election. The dominant motivating factor is asceticism.

One of the outstanding features of the island today is the large number of churches for such a limited population. To serve the 8,600 people there are 21 churches with ministers and 13 mission stations. A hundred years ago, when the population was almost triple the present number, there were only seven ministers on Skye. The present abundance is the outcome of a series of religious schisms of the past century. There are now four Presbyterian sects. Of all the neighborhoods on Skye, only Glendale is religiously homogeneous.

employment as hands on fishing vessels. The young women followed these fleets seeking work as gutters and curers in the ports. Some may have made their way to Portree, where a woolen mill had been erected by the Highland Destitution Committee. The population of Portree increased during thes years from 510, in 1841, to 893, in 1881, but this can hard be regarded as a significant trend.

The really striking aspect of this period is the almo complete lack of protest by the Sgiathanach against the violation of his presumptive right to the land. The disapp of the tacksmen, of course, had left the people without the counselors and leaders in secular affairs, and many of the ministers, especially those who were themselves sheep farme counseled submission to the will of God. Then, too, the et of the Skyemen would not allow them to ventilate their grie They despised the Sassanach and felt that "the landlord was bad enough, but the factor was the Devil himself." Still those who knew them well and those who rambled by their cot wrote unanimously of a people who endured overwhelming suff in patience and reticence.[69] The betrayal of any weakness, especially before the cursed Sassanach, was a breach of pro

The Skyeman had not lost his capacity to respond to leadership. Throughout the nineteenth century there had be widespread and growing discontent all over Europe with the

197 behavior characteristic of the dominant group; but for
191
554 those that remain in the village, the language serves a
57
182 unifying function, although its form is limited in
189
578 diversity of elements.

184 Jokes are most humorous when told in Gaelic; and
197 conversation is punctuated with Gaelic proverbs and old
538 stories. There is a vast oral lore, expressed in Gaelic,
[522] of the village and generations of its members and their
[521] characteristics and escapades, a dense map of human events.
All of these tales, proverbs and jokes have been told a
829 thousand times, but retain their unifying function. When
speaking of today's children who do not go to the sheiling,
a man says sadly, "They won't have our memories; this
place will mean less to them than it does to us." The
moor is not an empty wasteland, but a map of memories.
103 Thousands of place names are known, and behind every place
175 name is a story. The major landmarks such as mountains,
lochs and headlands tend to have Norse names, from the
days when the Norsemen raided and settled along the island
coasts; but the smaller hillocks and fields and bends in
the stream have Gaelic names, for example, Sheiling of
the One Night, Field of the Slaves, Slope of the Stone
[184] Boys, Hillock of William's Sheiling. To know these place
names and their histories is to participate in a distinct
community, which has been made even more distinct by contrast
with the dominant society.

English, no Gaelic allowed. I can beat you any time...."
One person observed, "People here make fun of each other
all the time. They're always trying to be superior, to
get one over the other person. Speaking English gives
you a feeling of superiority."

If a Gaelic speaker chooses to speak English in a village situation where there are no officials present or other cues which make English-speaking appropriate, this indicates that he considers himself a cut above everyone else. "I went to help Calum pull his tractor out of the mud, and Malina was there with her husband. She was speaking English. Oh, I says to myself, lady, you're not for this place. You don't belong to this village."

In evaluating whether or not a particular woman is "snobbish," villagers may decide, "She must be; whenever I've seen her in the post office, she never speaks any Gaelic."

The sanctions against speaking English when all persons present speak Gaelic indicate the effect of interaction between a socially marginal group and the dominant group. The effect is to increase the emphasis on uniform behavior within the marginal group. The existence of a higher social stratum has diminished social differentiation within the village setting. Individuals may move out of that setting and adopt the language and other forms of

told about a people not unlike the crofters, and the prophesies were being fulfilled before the peoples' very eyes. Is it any wonder that thousands gathered on the hillsides to listen to a minister whose dynamic appeals moved them to tears?

As the people turned to the new church and the emotionalism of the large outdoor gatherings, they continued to forsake their old customs and folklore. The songs, except in some cases the waulking songs which provided the tempo for shrinking homespun, and the tales were placed under clerical bann.[75] The ministers and the "Men" insisted on the prerequisite of gravity in all aspects of life for salvation.[76] The communion roles were purged. In Bracadale, for example, there had been 258 communicant members. Following the Disruption there were less than ten.[77] The same pattern was repeated elsewhere on the island.[78]

The religious patterns which had evolved were, nevertheless, reinforcing much of the traditional way of life. The "Men" of Skye had become elders in the Free Church. This status sanctioned their position in the community. Although the age structure of the population had not yet altered

175 sufficiently to make age controls an irresistible force, the 178 prestige status of the small number of the "elect," those 182 795 who had experienced a saving change, and, in particular, the 793 554 elders gave them complete control over all social and religious activity. In a later chapter I shall have more to say about these facts. The important fact which I want to emphasize now is that the religious patterns provided a framework in which the culture could find continuity and through which the society could achieve a reintegration. The abhorrence of pagan-like customs resulted in a change of content, but there were positive results as well. Above all, there was a change in [24] focus for the culture and society. The decadent belief in clan brotherhood was replaced by a sense of belonging to a known religious brotherhood.

175 178 427 423 Summary. The third period of the modern phase of Skye's culture history saw the culmination of the process of commercialization of the land. All the influences necessary for the conversion of the subsistence economy, albeit a much [233] deteriorated economy, had begun to function. Sheep farming, on a commercial scale, formed the basis for the new economy. [167] Newcomers with the incentive and ability to introduce improved [184] methods of land utilization were replacing the conservative [311] and impoverished crofters and cottars. As the commercial [621] farmers consolidated their holdings, the communal townships [554] were being obliterated. The concept of individual possession of the land was replacing the customary rights of the small tenants, and a clearly defined social hierarchy, based on

from these influences. Now the government provided the capital, by grant, subsidy, and loan, and the guidance necessary for a fuller utilization of the land. The crofters who had already seen their subsistence economy disappear became a part of the national system of commerce. What effect have these influences had on the culture? 175 178 184 241

Throughout the modern epoch there has been a tendency to increase the production of exports, first cattle and then sheep, at the expense of the traditional subsistence crops. Within ecological limits, the national markets have determined what the Sgiathanach might produce. Since the environment has made Skye a pastoral land and agriculture is a poor risk in the best of years, abandonment of a subsistence economy has meant dependence on stock breeding for export. Commercialization of the land and increasing dependence on imported food has resulted in a growth of the importance of money. The decline in household industries, caused by economic deterioration, has also played its part in the people's dependence on currency. As a measurement of values, however, the importance of money has declined since the period of the large sheep farms. The crofter's margin of profit is small, and his opportunities to earn a wage are limited. Economic differentiation no longer [554] affects the traditional status values, except within the traditional polarity of landed gentry and tenant. 175 178 439 175 178 439 436

In a comparable way, the utilization of more efficient methods of production is less important now than it was during the period of the "Clearances." Techniques have improved for the majority in so far as labor saving devices are available, but the achieving of modern efficiency is precluded by the 175 178 427 241

6: Ducey	E-4,5	(1953-1954)	1956	ES10 Highland Scots ES10 Skye

crofting districts. Shops, schools, inns, and churches increased in numbers, but they have not clustered to form a village nucleus. In more recent years the county has tried to stimulate village growth by building houses at a few centers. Someday they may succeed in altering the settlement pattern.

As a consequence of the increasing integration of the Sgiathanach within the national scene, government regulations have expanded and have come to be enforceable by a local police. Government services too have increased in scope. Many of the traditional functions of the family and the local group are now functions of an ever increasing number of government employees. Nevertheless, the traditional statuses of the members of the group have persisted and social control has not been reduced in favor of action by the state.

The class structure has changed several times. It has vacillated between a leveling of socio-economic differentiation and a growing polarity of status. At present there is no local class structure beyond the old polarity of landed gentry and crofters. Those who fall between these groups are ranked on prestige values of long standing. Even though many of the intermediate group would be working or middle class if they lived elsewhere in Britain, on Skye personal factors play a more important role in determining prestige than socio-economic differences. Leadership and political power remain in the hands of the gentry.

If the foregoing material suggests that there is evidence on Skye for Redfield's concepts of disorganization

6: Ducey	E-4,5	(1953-1954)	1956	ES10 Highland Scots ES10 Skye

One further word of caution is in order before we proceed. It will soon become obvious to the reader that my main interest in the social organization of the Sgiathanach is a concern with status. In the final analysis, I have decided that this is the only fruitful means to seek cultural continuity despite population change. Therefore, I have glossed over many details of the social organization, and I have described others only in so far as they throw light on the ascription and achievement of status. With this in mind, let us turn to a consideration of the Islanders' society.

Kith and Kin within the Township and on the Croft

The society of the Sgiathanach is no different from any other society in the world in ordering interpersonal relationships by attaching cultural significance to the physical factors of kinship, age, and sex. As Linton has asserted, kinship establishes the individual's relation with his cultural recognized relatives; age and sex establish his relationship with the total society and the section of the culture in which he can participate.[10] Skye differs from many societies, especially contemporary American society, by using these factors exclusively in determining the status and role of the members of the township. The status and role of every individual is ascribed.[11] The only way an individual can achieve status is

[10] Ralph Linton, "A Neglected Aspect of Social Organization," American Journal of Sociology, Vol. XLV, No. 6 (December, 1940), pp. 870-886; and "Age and Sex Categories," American Sociological Review, Vol. VII, No. 5 (October, 1942), pp. 589-603.

[11] The theoretical concept, of course, is Linton's (The Study of Man, pp. 113-131).

6: Ducey	E-4,5	(1953-1954)	1956	ES10 Highland Scots ES10 Skye

by leaving, for if he fails to conform to the traditional norms and patterns of behavior, he will be locked upon as an eccentric. This fact has continuity through all periods of Skye's history.

We have already seen how the age and sex structure of the population has changed in response to social and economic conditions and how this change has influenced the ascription of statuses within the crofters' division of labor. Briefly, there has been a contraction of the number of opportunities for ascribing status. This had made it necessary for some men to perform tasks once the exclusive domain of women and for women to participate in activities which formerly were the responsibility of their men folk. Older people must now function in ways which once were the responsibilities of the youth and young adults. These changes, however, have been accompanied by persistencies, in particular a continuity of basic status values. I think this will become clear through a discussion of the family structure. We shall begin with the nuclear family.

The Nuclear Family. Since my interest is in status, I shall adopt the unorthodox procedure of considering the nuclear family in terms of the changing status of the individual member from birth to maturity. This will give us a dynamic picture of family life. At birth the individual's relationships within the crofting family and, to a lesser degree, within the township are established. Like those of his parents, who now have the ascribed statuses of mother and father, his relationships will remain unchanged until he marries and founds

share similar social attitudes and a distinctive way of life.[27] The investigator can understand the society with greater ease once he can equate the differing cultural expressions with the sense of status.

Ascribed status continues to be important in Portree, at least in stratifying the old Skye families. On the fringes of the village there are a few part-time crofters or tradesmen who keep some stock and grow a little grain and few potatoes. These men and their families as well as the crofters from the hinterland find their place in the village society through clique groups, in particular those based upon kinship and "friendship." Several of the county families reside in the village and, with the landed gentry who continue to live on their estates, take an active part in village life.

Between the two poles there is a large intermediate group. Their occupations range from the professions, including doctors, ministers, teachers, and lawyers; through employees of the national and county gouvernments, including estate factors, policemen, office managers, and clerks; to shopkeepers, tradesmen, truck drivers, and laborers. Elsewhere in Great Britain these people would fall into the middle and working classes.[28] On Skye such stratification is unimportant. If we cannot use the British scheme, we certainly cannot employ the American system developed by Warner.[29]

565 many newcomers and the high rates of inward, outward, and
mobility seems to have worked against any clear cut patter
Certainly, it requires more than non-membership in the hig
and lowest classes of socially recognized strata to form a
middle class. I look upon this indefinable strata as a ne
class. This is not meant to imply the absence of ranking
prestige status. Ranking is no less important than it is
the rural neighborhood.

As in the neighborhood, a few professions automatica
162 554 463 183 carry high prestige; these are the ministry, medicine, and
teaching. Otherwise, a man's prestige depends more on his
outside activities than his occupation. Bankers are often
thought of as having prestige. In Portree one banker is
highly regarded because "he does an awful lot for the chur
Another, although respected, as evidenced by the use of hi
surname when referring to him, is socially inferior because
"he never mixes with people" and "no one ever gets invited
to his house." The same holds for other occupations. One
man may be looked up to because he has taken an active pa
in organizing an old people's welfare committee and was
instrumental in founding the Skye Council of Social Servic
the only rural social service council in Scotland. Anothe
of the same occupation is looked down upon because he keep
to himself. To cast a shadow on whatever prestige he may
have, the people talk about a shady deal in which he suppo
got involved and claim that his wife sells eggs. No one b
a crofter's wife sells eggs. If a man is a native Sgiathe

tinction. During the war when Skye had its own little 875
y, he came to know many of the old crofters quite well. 554 576
ally, he came to use personal names when speaking to them
asked to be called by his first name. The people explained
t they might be older than he, but he was too important
be spoken to as anything other than mister.

The tradesmen and the shopkeepers in Glendale and 554 443
muir are not any different from any other man. They are
specialists. They are part-time crofters. We have to
n to Portree to see what status position they fill in the
iety of Skye. I might just add that they are on a first
basis with their neighbors, and, like the crofters, they
known beyond the neighborhood by their first name and
nship, such as Ian Borve or Murdo Stein.

To summarize, there is additional evidence for cultural 596 182
tinuity in the structure of the neighborhood. The ex-
ded family, although very unstable and, therefore, some-
t amorphous, is still a reality in the minds of the people.
still has two functions which it must have had in the
ote past: seeing that all are cared for and given a decent
al. The ascription of status noted for the township 554 182
ies over to the neighborho d, as does the underlying status
ility and need for unanimous consent. Among the crofters
ership is still undeveloped. The old men can enforce [888]
formity but they cannot lead. Although prestige ranking
eveloped, in the form of the achieved statuses of ministers,
ors, and teachers, it is significant that, except for the
ster in Glendale, all holders of prestige status are

newcomers to the neighborhood, if not the island. Let us now turn to Portree to see how important status is in this alien village.

The Trade-Center Village

We come now to a consideration of the trade center village of Portree. We have seen how this small settlement was created by a landlord in the early nineteenth century and how it has been fostered by the government. We have also seen how the village has assumed a host of important functions. Primarily, it exists to serve the rural neighborhoods and to provide a link with the outside world. For the crofting neighborhoods it is, in order of importance, an administrative, economic, religious, and social center. Here are found the Ministry of Labor, the Department of Agriculture, the National Assistance Board, the sanitary and road engineers, the local Registrar, the central police headquarters, the main post office and telephone exchange, the court of the justice of the peace, and the seldom functioning sheriff's court. It is to Portree that the Land Court comes to decide on such important matters as rents and succession to the croft. As a seat of education, Portree's influence extends even wider, for it is the only secondary school in all of the islands of the county of Inverness. For people on the southern end of the island the village exists only for administrative purposes.

The crofters of northern Skye are dependent upon the

the social superiors of women. The aged are the social superiors of the youth and young adults. The father determines how his wife and children will behave as long as they remain under his control. The old man, or men, determine what changes will be accepted or rejected. There is no way to question their decisions, unless one leaves the croft. Still, at the bottom, there is equality. No man can step forward as a leader. We are now in a position to look at the larger social grouping, the neighborhood.

Kith and Kin within the Neighborhood

During the days of the clan, the residents of the neighborhood were bound together by real and fictitious ties of consanguinity and affinity, which were reinforced by the strong attachment to the soil and propinquity. Only the fictitious bonds have been forgotten. Like the township, the neighborhood consists of an aggregate of conjugal families whose inter-personal relationships are reinforced by a complicated network of kinship. Once, perhaps as late as 100 years ago, the neighborhood was a highly cooperative social unit. When the local mills were in use and the church had not been broken by schism, the people must have had a more definite focus for their common interests. In more remote times, it was a defensive entity. Today the neighborhood is no longer a cooperative unit. On the analogy of the old horse plough and the caschrom, cooperation is essential to the township but superfluous to this larger group. That the neighborhoods have not lost the potential for concerted action in times of crisis is attested by the uprisings

offer help without an expectation of payment. Nevertheless, anonymous donations of food and casual visits make sure that none of their number becomes absolutely destitute. In Glendale this religious clique merges with the person's "people and friends." Kilmuir has two religious cliques.

We have had ample opportunity to examine the age-grades of Skye's society and in the next chapter we shall have a closer look at the functions of the age-grades, especially that of the old men. One of the most important weaknesses of the social structure, in my mind, is the lack of age mates for children and adolescents. They find it difficult, almost impossible, to come together as a sodality. In Kilmuir, for example, there are only fifteen boys under twenty in an area of ten square miles. A youth is anyone under forty. Of the total population 60 percent are over fifty. For this reason the important age grade clique tends to merge with the religious social circle. The situation is much the same in Glendale. There the age-grade and kinship groups are intertwined with the kirk congregation.

Status Equality within the Neighborhood. The fundamental status equality which we found for the crofters within the township carries over to the neighborhood, but, as would be expected, there is often a need for leadership in this larger group. Let us look at the two neighborhoods which I know best to cast light on the methods employed in the self-election of a leader and the means of expressing leadership as a role. Kilmuir has a Crofters' Club, which was originally formed by

a former school teacher. The present sponsor and chairman is his successor. The teacher is automatically rated socially because of his important function, educating the children of a people who value education, and his university background. Further, he is from the Outer Isles and, therefore, is not expected to conform to all the traditional norms. Were he a Sgiathanach he probably would not accept the office for it would conflict with older and far deeper values.

The Glendale club farm is administered by a committee of five, a secretary, and a chairman. Here all are crofters from the several townships. All, therefore, are equals. Who, then, might they have for a chairman? They have selected an elder of the church. A church elder is the highest lay official in church government and, on Skye, one of the oldest men in the neighborhood. As one man asked, "If you can't respect an elder, who can you respect?"

Selecting members for the committee and electing a secretary is a real problem. Each man serves for three years. How the original committee was formed I do not know, but I had an opportunity to see how vacancies are filled. In 1953 there were three vacant posts. Parliamentary procedure has been introduced, but it finds limited expression. For two of the seats, the retiring members were "re-elected;" a crofter nominated them and after a long pause another man seconded the nomination. No vote is taken; silence means unanimous consent. A story slightly off the point illustrates this. At the same meeting the committee's stock report was read. Following parliamentary procedure, it

had to be accepted. Not a word was heard. At length one crofter simply said, "No one has anything to say, so I guess we all are agreed." One of the former members of the committee could not be re-elected; he had passed away. This was a thorny matter. A series of men were proposed, and each in turn declined. Finally, a man was nominated and seconded before he had a chance to deny himself the honor. Election, of course, was automatic.

The committee administers the farm, handles stocking, employs the necessary shepherds, sells the stock, and rents the hunting lodge. They do so, however, within the now traditional framework. They have neither been granted nor assumed a role of independent action. They do not reach independent decisions. They rather weigh and put into operation decisions made by the Department of Agriculture. As we shall see, even the elder, despite his high prestige status, has power to enforce social conformity rather than the authority to direct or lead men.

It is significant that while the share-holding crofters own the farm and their crofts, they have not achieved independence from outside control. Many of the Glendale crofters frankly admit they are afraid of independence. As in any township or neighborhood there are two opposing groups. "There always is someone who tries to sabotage the whole thing," said one man. One group has favored the guidance of the officers of the Department. The other group resents the interference of the government in their affairs. At the same time, however, they do not want to be cast off on their own. They want some form

of farm management under a resident manager, preferably not a Skyeman. The attitude of the former faction was aptly expressed by one person who was about to leave Skye: "We need the Department. If they withdrew, we wouldn't have anybody to go to for anything." This is in striking contrast to the Irish small farmer for whom land ownership is an all important factor in regulating social interaction and status.[24] On Skye land ownership has not led to any change in the traditional status values. A Glendale crofter is not a better man because he owns land.

Prestige Ranking within the Neighborhood. In so far as prestige ranking is concerned, status is more developed within the neighborhood than within the township. In addition to the crofters and their families, there are always several individuals who are given status because of their performance of the necessary functions of ministering to the peoples' spiritual and physical needs and educating the children. These are the only achieved statuses which are valued by the crofters. Noteworthy enough, only the minister of Glendale serves his own "people and friends."

The minister's status depends to some degree on his denomination and the religious sympathies of the people. In Glendale the minister enjoys the highest possible status. In Kilmuir, with two ministers, each is valued by his own congregation with whom he interacts. Nevertheless, all ministers are treated with respect. They are always addressed as the Reverend Mister MacDonald or Mister MacDonald. It is interesting to note that

[24] Arensberg, op. cit., pp. 72-100; Arensberg and Kimball, op. cit., pp. 98-144.

while only the Church of Scotland ministers will assume roles in government, on the district council or the county council, on the education committee, and similar bodies, they have not been given higher status than the ministers of other denominations, who firmly believe the function of the minister is only to correct the public servants when they err.

The doctor is coming to fill a status held by no other person, except the county people, the landed gentry. Traditionally, they have ranked second only to the minister, but there is a marked trend to accord them more and more statu The doctors, of course, are less restricted in their social activities and can participate more fully in secular affairs than the ministers. They have a wider range of interaction, entering the homes of all regardless of sectarian differences. In Glendale there is no question about the relative positions of the minister and doctor, who lives in Dunvegan. In Kilmuir on the other hand, the doctor is vying with the ministers. He is always addressed by his title, but often, at least in indirect speech, he is Doctor (Ian) rather than Doctor MacLeod. Many of the doctors on Skye have begun to form a cleavage between their families and the crofters. They are sending their sons to private schools. The ministers' children attend the local schools.

The school teachers also enjoy high prestige status. They are always addressed by their surname, prefixed by mister, even by older men whom they call by their Christian names. One newcomer was especially struck by this careful

554 his own family of procreation or ceases to be an integral member of the social units. Many features of these relationships will persist throughout his life.

844 The Sgiathanach treats the event of birth as something in which man is only the agent of a higher power. This fact was brought home to me one night during a discussion of the declining size of families. The question of subsidies to encourage larger families was broached. Although all take advantage of government grants for their stock and care of the land, this form of subsidy was unanimously rejected. As one man said, this would place man in the unthinkable position of a creator. Only the essential arrangements for the care of the mother and her expected child are made before birth. There are no "showers." "Showers," said one woman, "how can you tell if the child will be a boy or girl, or even live?" Today most women go to the maternity hospital at Uig for the delivery, but a few prefer to remain at home under the care of their mothers. To expect that the father's mother would take charge, even under the clan system, would be carrying the 846 patriarchial emphasis too far. Within a few days, the obligations of the parents, their relations, and the people of the township become apparent. One by one the individuals and couples make their way to the cottage to welcome the child. This individual visiting is a modified survival of the old custom of "kirking," a group offering of thanks, at the church, for a safe mother and a healthy child, followed by a dance [57] and feast at home. The parents are obliged to provide a [273] dram of whiskey so that all the visitors can toast the child.

192 requirements of adulthood, and also old age, are still boys
561 and girls.

554 Status Equality within the Township. The ascription of status on the basis of age and sex has resulted in a straightforward [562] system of status. The facts are simple. Men are the social [561] superiors of women. Youth are socially inferior to their senio Men, or women, of a common age category are equals. We shall now examine a few interpersonal relationships to see how the [264] system operates. Unless a man and his wife are eating alone, women never eat with men. They wait until the men have finishe 576 before taking their meal. When neighbors come to visit, the 582 man of the house does not rise for a woman. He does rise for 594 a man and shakes him by the hand. The woman of the house, on the other hand, rises for both men and women. Furthermore, when a couple comes to call, the woman greets the man first. Only after he has been offered a chair does she greet the [858] woman. Young people are seen but seldom heard. They do not [882] speak unless addressed.

626 All societies allow some deviation from traditional 178 norms of expected behavior. On Skye, as elsewhere, excessive deviation is censured. Neither increased opportunities for education nor the steady flow of Skye men and women to the four corners of the earth, accompanied by the slow returning trickle, have disturbed these fundamental values. Like the youth who leaves home to achieve upward mobility through outward mobility, the man who returns must conform to the traditional norms, which he learned as a child, or be regarded

626 178 [571] as an eccentric. Included among these norms is a willingness to satisfy the curiosity of one's neighbors. Although the old woma who acts in mysterious ways is no longer regarded as a witch, two of the loneliest people I knew on Skye were two old spinsters who had kept their past concealed. No one in the township would have anything to do with them. Were it not for periodic visits by the local Red Cross, they could have died and hardly been missed.

554 626 829 This status equality for all of the same sex and age grade leaves no room for the status and role of a leader.[15] Occasionally, an individual fancies himself as a self-elected leader, but he is always resented by the remainder of the township and his neighbors do not hesitate to show their displeasure. As an eccentric, he is dubbed with a cynical title, such as "the sheriff." If he can keep himself immune to the taunts and jibes of the people, he is accepted in time or, rathe comes to be tolerated. He gives the people something to talk about. The aspiring leader becomes the subject of numerous jokes. Any human failing he displays is immediately taken as a means to censure him. These are negative social sanctions less drastic than ostracism. I only knew one of these self-styled leaders. He was a well traveled man and a walking encycleopedia of miscellaneous facts. Walking the hill with him, I was told how Boston compared with Glasgow; how the British fought the Crimean War; how the money they received from the Turks helped Skye during the potato famine; and how the

626 829 knew more about the world than about Skye. He could not ur-
stand why so many people made fun of him when he was only
trying to help.

626 632 In the absence of any traditionally valued status and
role of leadership, administration of the common interests
of the township members is the concern of all. We say in t
last chapter that primitive democracy is the guiding rule.
Each crofter has an equal voice in deciding any question
which affects the group and all, without exception, have to
agree before any action is taken. Consent is expressed by
silence. Typically, the crofters will have talked the
[624] matter over among themselves beforehand. At such times the
fact clearly emerges that the grazing clerk and the grazing
committee are no more than figureheads required by law.
They have no coercive or disciplinary powers. In any group
situation, their views are taken no more seriously than tho
of any other man.

887 888 It is the old men who gather at one anothers' homes o
on the hill on a summer evening to weigh the innovation whi
626 632 the youth want introduced. If they find the change accepta
they approve it at a meeting of the township by keeping sil
If they believe it will upset the communal system, they dis
approve it. The dissenting voice of one old crofter is all
that is required to maintain the conservative patterns,
economically and socially.

182 626 In summary, we may say that within the township and
on the croft the cultural patterns reveal a fundamental
continuity. As of old, status is ascribed. Men have remai

Villagers say he married above his station. His daughter, they believe, married below her station. He that as it may, he disowned his daughter. He never spoke to her again. The third case involved the marriage of one of the poor, but nevertheless accepted, gentry and a crofter's daughter. He has fared differently. Rather than cast him out, his mother refused to recognize the marriage. He was forbidden to bring his wife home. To this day he continues to divide his time between his estate and his "town house," where he keeps his wife. Further, this man, who I have been told should have become chief of Clan Ranald, is no longer of the county people.

Among the distinctive features which overtly characterize the county people is their ascribed status and role of leadership. Indeed, this is their most important function. As the tacksmen were once the counselors of their substemants, so today the landed gentry must fill this role which the Gréithanach from the croft will not assume. Even if a Skyeman here and there feels that the local proprietors would like nothing better than to have all the people behave like serfs, bowing and scraping before them, he expects the proprietors to get things done. In Portree the local gentry form the village council. During the war when they were on active duty, there was no village council. The Skye District Council, which replaced the old parish councils and which, acting as an agent for the County Council, is the only administrative body on the island, revels a similar membership. In any of

the nine election districts where a member of the gentry is resident, he is the people's choice. Otherwise, the post passes to a newcomer, especially a minister, if he will accept, a non-crofter of relatively recent arrival, a returned exile, or an eccentric. The Skye delegates to the County Council are similarly elected. The village of Portree and the neighborhood of Glenisle are represented by members of the county people; Kilmuir is represented by a minister of the Church of Scotland.

The function of the landed gentry emerges even more clearly when non-political leadership is considered. We may take the Skye Council of Social Service and the Old People's Welfare Committee as examples. The Skye Council of Social Service is dedicated to the promotion of the "general good of the community," and the assistance of the work of statutory authorities and voluntary organisations engaged in improving education, health, and economic conditions. Although the Scottish Council of Social Service claims this is a product of the people of Skye, it was not a spontaneous development. A retired Registrar General for Scotland was responsible for the initial interest. The Scottish Council seems to have stimulated this interest by securing financial assistance in the initial stages and paying 75 percent of the annual expenses. The local organizers were county people, and their success was due in no small way to the efforts of an officer of the Department of Agriculture. Today the "virile leadership and local followership," of which the Scottish Council is wont to speak, is to be found in one clique of the

landed gentry. The people take relatively little part in any of the activities. Most of the crofters with whom I spoke had only the vagguest idea of the work or the achievements of the council, beyond the fact that the council had instituted Skye Week to attract tourists.

The Old People's Welfare Committee was established in the winter of 1953. It provides us with an excellent opportunity to see how things are accomplished on Skye. For several months the clique which is responsible for the Skye Council of Social Service had been thinking that Skye needed some such agency to look after the old people. At length it was decided a public meeting should be held to give the people an opportunity to decide whether or not the need was acute. Each of the county people explained the need, aided by two social workers from Edinburgh. Then, with the assistance of a local minister, the doctor, and the officer from the Department of Agriculture, who aided in establishing the Skye Council, the people were gently led around to their position: A committee of investigation was organized to inquire into the matter in more detail. About a month later a second public meeting was held for the purpose of establishing a permanent Old People's Welfare Committee. Like the initial meeting, it was proceeded by a small conference among the gentry. The decision was that Skye should have a central committee and fourteen local committees. This was unanimously accepted. Now came the problem of who would serve. The first selections were obvious; in each local area the minister, doctor, and district nurse were "elected." When it came to the question

of individuals to organize each committee, no one was willing to accept the post without persuasion. In every case where there was a resident of the county people in the general vicinity, the man or his wife was chosen. The remaining chairs went to newcomers, especially doctors and teachers or their wives, mainly by default. They were not preacts. No one on Skye ever overtly seeks a role of responsibility. For the central committee, it was suggested, by a newcomer, that there should be at least two Skye people over sixty to get the point of view of the people who were to be helped. When the committee was finally formed, there was not one native Skye person on it. The chairman was the wife of a local landlord; the four members were another proprietor's wife, a Lowland woman, the minister, and an Austrian woman.

At no time was a vote taken. The person who can be persuaded to accept office is always unanimously "elected." On another occasion someone had made the mistake of nominating two women to fill one post. Rather than put the matter to a vote, the people present "elected" me, as a disinterested participant, to select the woman who would serve.

By the time I left the Misty Isle only one of the local committees had taken a step in the direction of organizing itself. A meeting was called in Kilmarnish where either a returned exile or the minister was to preside. Neither of them would step forward. Above the task fell to one of the county people. She drove up from Portree to take the chair and help the people elect the members of their committee. Her journey was fruitless. Hardly anyone attended the meeting,

and no one thought himself capable of running a future meeting. At least reports, the wife of another proprietor was having her impression that "it's not as easy as it sounds just to call a public meeting in Glendale," confirmed. While the majority of the crofters thought an Old People's Welfare Committee was a good idea, they had no intention of being instrumental in its organization or in assuming any position which might elevate them above their neighbors. Throughout this chapter, the stress on conformity has been apparent, let us now turn to the problem of social control for a clearer picture of how conformity is enforced and to see how the Gréithanach handles the deviant.

Social Control

Since social control is an important topic, I want to go into a further analysis of the manner in which the group influences the behavior of its members. For the sake of clarity, we must distinguish between social and political control. By social control I mean the informal pressure or spontaneous action which any organized group can muster to exert an influence on its members sufficient to encourage conformity to tradition patterns of behavior. Political control, to me, involves the independent or requested interference of the state, as represented by the police, in any case which involves the enforcement and maintenance of law and order as prescribed by legal enactments. On Skye the laws of the land do not always have the same meaning to the

strongly about this infringement of the traditional norms. Gossip spreads very rapidly. The offenders are said to be "no better than the tinkers." While tinkers are respected because they have the power of the evil eye, they are not accorded any more prestige than we would give a beggar. All who have any contact with the neighborhood or the village where the deviants live soon know all the details. Since most of the adulterers on Skye have been in Portree, it adds another brick to the wall which separates the rural neighborhoods and the trade-center village. The offenders normally leave Skye as quickly as possible.

The Gréithanach cannot be said to have a strong sense of property, or, more correctly, the land is valued as a place of residence and identity not as something to be bought and sold. We have seen that he uses his land communally and that he often will not leave a will for the house, not to mention his land. Even though the state thinks otherwise, he looks upon the natural resources of the island as his for the taking. At the same time, he normally respects the fruits of his neighbor's labor. Any one can cut peat on the moor, but no one, except an unthinking tourist, would take a piece of turf once it had been cut. In a similar way, the children are generally well behaved. In the village there is a bit of stone throwing, a little profanity, and unceremonly some drinking on the sly, but rarely do children show any disrespect for the rights of others. One contractor, a Lowlander who came up to Skye to make alterations on the school, was amazed. Skye

miserable they have left the island. Adultery, as we have seen, is an excellent illustration. Another example is church going. Almost everyone goes to church. It is expected. Several newcomers frankly admitted that they only go because the people would talk about them.

Gossip has another important social function. It is a means of social sanction, and as much reinforces the "unconscious system of meaning" to use Herskovits' words.[40] Through its positive and negative aspects, the use of gossip as a social sanction contributes to the solidarity of the group by creating a feeling of oneness. It can also accord status to individuals, and it can either make an individual with high status more secure in his belief of superiority or make a person of low status feel less inferior.

The crofters relish stories of human failings among those of high status. The landed gentry seldom give them much to talk about, but the few unexpected things they do, such as marrying outside their circle, are long remembered. The villagers often provide them with choice stories. Anyone, especially a native son, who moves into Portree or returns to Portree and sets up a business is bound to be talked about. You know what I heard? Well, I heard that he got his money down south and just beat the police out of town." Men who have shops which their fathers or grandfathers established escape, but the founder of the business is still remembered. "You know where the old man got his money? He was going home one night after a cattle sale with a group of

[40] Herskovits, Man and His Works, p. 222.

his neighbors, and he done them in and took all their money."

The villagers and, in particular, the county people enjoy amusing stories about the crofters. One tale concerns a crofter who received electricity from the Hydro-Electric Board. After the cottage had been wired, his wife bought him an electric razor. This created a problem. If he plugged the razor into the single light socket, he could not see to shave on a winter morning, but if he had the light on he could not plug in the razor. There are many stories about crofters who refused electricity because they were afraid the house might blow up if hit by lightning, and there is the favorite story of the old woman, on the Isle of Lewis, who thought electricity was fine to see to light her candle.

To see how gossip, bordering on tradition, is indicative of high prestige status, we may take the story of the doctor of Kilmuir. One day just after a cattle sale the doctor took the boat from Portree to Kyle. In addition to several local people and many cattle, there were two Sassunnach on board. The Englishmen asked the doctor how many cattle there were. He thought there were quite a few. A hundred, the Englishmen asked. "Sure," said the doctor. Two hundred, they asked. The doctor again said, "Sure." They then inquired whether or not the doctor could count. When he answered in the affirmative, they asked how many they and the doctor were. He replied, "One hundred, I am one and you two are nothings." The core of these stories always involves the doctor's getting the better of someone, especially an Englishman. It may be

Founded in 1951 as a single sheet of 200 words it has grown 204
to sixteen pages. It has the distinction of being the only
news magazine in Great Britain written in longhand. The 203
shopkeepers also pass along the local *kan*, as it is called.
There is a common belief that the telephone operators are
another source. I have known people to drive several miles
to make a call from a box in another exchange district because
they were sure the people of their neighborhood would have the
news before they had hung up the receiver, if they made the
call locally. The post office is also said to be a transmitter
in the bush telegraph; some say the post mistresses steam open 207
their letters. On shopping days in Portree the women carry 208
home more than the week's groceries. Down at the square at
night, they gather in small groups to transmit their tantalizing
tidbits of news and, perhaps, scandal.

Two status groups are left out of the normal gossip 203
cycle. These are the county people and the ministers. The 251
former may get a bit of *kan* from time to time, but much of the 775
local news passes without reaching them. The ministers'
information is generally limited to questions of health, events
in the life cycle, or cases of moral or religious backsliding
on the part of their congregations. The degree to which the
landed gentry participates in the verbal spread of news and
rumor depends to a great extent on personal qualifications.
There are one or two who have contacts through whom gossip
carries across the lines of cleavage in the social hierarchy.
Ministers are probably the least well informed of anybody on
the happenings of everyday life. Once when asking a minister

a question about a certain man I was told: "I can't help you 203
on that. Whenever I go into a shop or meet them on the street, 251
they change their conversation." Another told me I should ask 775
the doctor, "He's the one who really knows their problems."

Summary

The society of the *Sgiathanach* reveals additional evidence 182
for cultural continuity. In family structure, both nuclear 516
and extended, the patrilineal emphasis has been preserved. Even
though both suffer from chronic instability and the extended
family has become rather amorphous, kinship remains an important
regulator of interpersonal relationships. It involves obli-
gations and privileges which few take lightly. Within the 182
social units based on territory, the township and neighborhood 621
status continues to be ascribed on the basis of age, sex, 554
and kinship. Women have remained socially inferior to the
men. As the father controls his family, the old men of the
township and neighborhood exercise a power over their juniors
to force conformity to traditional ways. Fundamentally, all
of the same age and sex are equals. This status equality
underlies the entire social structure. There is no room for a
leader. When essential, the newcomer, normally the teacher or
minister, and the landed gentry are expected to assume the role
of leadership. In the village the emphasis on ascribed status
for the *Sgiathanach* is also important. The majority of achieved
statuses are left to be filled by newcomers. In the community,
as a whole, beyond the polarity of the landed gentry and the

crofters, an individual's prestige depends more on what he 182
does for the group than on occupation. 621
554

The society has a strong degree of integration. This 182
is shown by the requirement of unanimous consent on all under- 621
takings, even in the village, and by the continued success 554
of the group in exercising social control by positive co-
operated action and by employing gossip as a negative socia.
sanction. The norms of behavior and the values have remain d
common and clear.

We are now closer to an understanding of how the 128
Sgiathanach has maintained a continuity. For a full under-
standing of the social organization and to answer the question
why there has been continuity we must take one final step.
The religious aspect of the culture holds the key to the
unanswered questions.

good to say about him." Death is one of the two occasions for 743
an extended family gathering. Indeed, a man's prestige is best 554
seen at his funeral. Without exaggeration, death is the most 559
significant event of living. It is constantly visualized and
discussed. "Second Sight," the ability to foresee future 743
events, is mainly concerned with the death of one's "people"
and friends. Since the ministers have been striving to wipe
out this belief, it is difficult to get the people to talk
about it, except in retrospect. Still most of the people,
including many of the newcomers, and not a few of the ministers,
continue to believe that some old people,--they are always
old men and women,--are afflicted with this power. There
was an old man in one township who would not go out at dusk
for fear of seeing a funeral, and there was an old woman who
foretold her daughter's death. Lights seen in strange places
also tell of death. Even the sophisticated *Sgiathanach* who
has been born and missed in Portree sometimes forgets himself.
A current story on the island tells of a "ghost bus." The
headlights suddenly appear behind a driver on the Sligihan
road. For the newcomers this is a fanciful tale, but for
several of the natives it has a meaning, death.

All plans are prefixed with the phrase "If spared." 743
"If spared, we'll shear the sheep on Thursday." "If spared, 175
I'll go down to see my brother soon." Many of the newcomers
are made to feel very uneasy by this habit, which is as much
a form of speech as greeting people with, "It's wet," or,
"It's cold." When a *Sgiathanach* asks to have something done

or inquires about a person's plans, he says, "You'll do it 743
tomorrow, then, if spared." 175

Occasionally, a man's prestige status can be judged by 764
the fortuate the people have of his funeral. This, too, is 554
disturbing for the newcomers who prefer to face death when
the time comes. There is one member of the county people who
is extremely popular. Many speak of him as a "true Skyeman."
One day he was being discussed by a small group of women.
After talking about his interest in Skye and what a good man
he was, one summed up their estimation by saying, "Aye, what
a wonderful funeral he'll have." What higher compliment could
there be? The number who attend a person's funeral and,
recently, the number who drive to his funeral are indicative
of his status. Even though having a car does not give the 493
owner prestige - to the contrary it may give the people cause
to wonder where he got his money - to have "friends" with cars
does give prestige. When 200 or 300 men join in the funeral
procession to carry the body to the grave, all the "people"
of the deceased take pride in telling of the "mobs who came."

In death we find one aspect of the crofter's way of life 764
which puzzles the newcomer, especially the government officials, 554
more than anything else. The old people hoard their money.
Welfare workers frequently say, "You never know how much they
have until they die." There are a few crofters, mainly returned
exiles, who are known to have money but continue to live in
tumbled down houses. The newcomer says, "They must like to
live that way." Quite to the contrary, the *Sgiathanach* has 741
traditionally prepared for death early in life. Once the first

eternity. If he was one of the "elect," he will enjoy eternal 743
life. If he was not one of these venerable old men and women, 554
he can expect to suffer eternal damnation. Although baptism 251
is a sacrament and removes original sin, it is only the initial 783
step in the direction of salvation, which election alone con-
firms. Neither the minister nor any member of the bereaved 761
family offers a prayer. "What more can you do than bury him," 743
one woman asked. An old man said, "They are just as well 762
remembered without praying for them." In a community which
is dominated by the old people, and in the crofting neighbor-
hoods where so many of the crofters are very old, death can
be expected to disturb the equilibrium of social interaction.
In Glendale during November and December of 1953 funeral
processions made their way through the glen no less than nine
times. The function of the minister is to restore the dis- 743
turbed patterns, both in the family and in the neighborhood 783
(or village). All work stops in the township for three days
from the time of death. Some of the cosmopolitans of the 369
village, seeking to justify their deviating behavior, assert 829
that the lazy crofter looks forward to a funeral because it
means three days of idleness. In the village, of course, it 369
is no longer possible to bring daily life to a standstill be-
cause the villagers serve a wide area. The "people" of the
deceased do stop work and close their shops. On the day of the
funeral all blinds are drawn until after the procession has
passed.

As he would if there were illness in the family, the 993
minister calls on the bereaved family and leads them in family 764

allowing his flock to attend concerts, had a point of differ- 993
once with the Synod and was removed. In the Brae which had 775
been as staunchly Free Presbyterian as Glendale, roughly 778
half of the congregation changed their adherence to the Free
Church. The remainder have continued true to their own sect
under a new minister.

There are numerous Free Presbyterian families far 795
beyond the reach of a minister. All they can hope for is an
occasional visit, and there are no missionaries of this sect
on the island. Although they attend services at the nearest
kirk of the Free Church, doctrinal differences are still
important enough in their minds to keep them within the folds
of their sect. They were born in it and will die in it.
Moreover, despite the lack of a minister in Glendale between 778
1908-1911, 1913-1920, and 1931-1933, the people are as staunch 783
as ever. At such times one of the elders steps forward to 784
conduct services as he would during the temporary absence 554
of the minister. His ability to fill the role of a spiritual
leader fortifies his control and his prestige. This is true
in Portree. The elder, even a newcomer, who stands in the
pulpit is deeply respected. Identity with, and attachment 778
to the denomination is maintained in the absence of a minister
by visiting other churches at the Communion season and by
the visits of a minister on the Sabbath and for annual
Thanksgiving services following the harvest. So strong is 778
the sectarianism of the Glendale crofters that the Church of
Scotland minister for Duirinish is convinced that "Churchianity

There is another aspect to the prayer meetings. They are no longer held in the Church of Scotland in Portree. The ministers of the other sects say this is an indication of the low degree of spiritual enlightenment among that congregation. Further, Wednesday night is picture night in the village. The newcomers taunt the devout with, "off to the pictures?" 796 795 794 369

It is at these Wednesday night meetings that the people get to know one another. They participate in the worship through the eminent "Men," who in a society such as Skye where almost everybody is related on one side of the family or the other by some bond of consanguinity or affinity, are the "people" or "friends" of the worshippers. This custom of offering extempore prayers not only augments the prestige of the "elect" but it intensifies the unity of the group and makes them secure in the knowledge that they belong. This feeling of unity and the sense of belonging is further strengthened in some churches by setting aside a day of Humiliation. Services are held during which the congregation as a group beseech God for forgiveness for the poor spiritual condition of the world. In their minds the God of this world is surely the Prince of Darkness. 554 571 796 794 [602] [782]

But for the interaction of the members of the several sects, the control of the "elect" would not be as strong as it is. The elders of one kirk cannot exercise any direct control over the adherents of another sect. Through what agency could they express their judicial and authoritarian 794 795 626

that young sinners will not escape from his kingdom." Another of the same church expressed himself, "One is constrained to look upon this world as a great battlefield between Christ and the devil and between grace and sin. In our day the kingdom of darkness is carrying everything before it; the Prince of the kingdom of darkness is the god of this world." This attitude is not, however, carried to the extreme that characterizes the Old Order Amish in their determination to "Be not conformed to this world."[24] On Skye, the position is rather that the church, as Christ's witness, must resist the encroachment of worldly pursuits. In a world which is moving as fast as ours, the success of the resistance of the church is indicative of the hold of the pillars of the faith, the venerable old man, over the group. We have learned how the prestige status of the "elect" and the elders stems from their high position in the esoteric religious hierarchy, and how, through their power to withhold the sacraments, they enforce social control. When the elders sit in judgment of the father who has come to ask that his child be baptized, or the person who thinks he has experienced a "saving change," they base their estimation of him on his non-religious behavior as much as his knowledge of the tenets of the faith. He must not only attend church regularly and conduct family worship; he must also deny himself all pleasures of a frivolous nature. 785 779 888 626 794 [554] [785]

[24] Kollmorgen, Culture of a Contemporary Rural Community: The Older Order Amish of Lancaster County, Pennsylvania, p. 1

is a sin but because of the excessive drinking and immorality which might result from a promiscuous gathering. Organized dances are, in general, not objectionable. Nevertheless, in spite of the attitudes of the people to these secular activities, the Church of Scotland crofter behaves in much the same way as his neighbor who adheres to another sect. The elders of the other sects have an influence over everyone in the neighborhood. Every man must ask himself, "What will my neighbors say?"

The Free Church and Free Presbyterian Church people condemn any and all social gatherings where songs, stories, or other diversions are admitted. When people visit, they are expected to remain circumspect in behavior. They may discuss their problems and gossip about their neighbors or the wicked newcomers. They may engage in cooperative or individual work. They may eat together in the home. They may not engage in such activities outside the home. Religion on Skye for the majority has centred attention on the home. Let us look at some of the activities which are condemned. There is the Woman's Rural Institute, an organized woman's club dedicated to stimulating home industries in rural areas and providing educational programs, especially demonstrations and lectures on domestic arts. One meeting, for example, at Uig, not far from Kilmuir, was addressed by a school teacher on the subject of Highland Folklore. He was followed by a knitting contest and tea. Youth Clubs and Young Farmers Clubs do not exist, except in Kilmuir where the Young Farmers Club is under the Crofters' Club, and, of course, in Portree. Village halls are dens of iniquity. While we were on Skye one was built

control of the "elect" crofters. They, are the "elect," and their status is independent of the control of the venerable old men.

Summary

Whereas the culture of the Sgiathanach was oriented around the clan system in the remote past and was intelligible only by an awareness of the all-pervasive influence of the clan, today congregational religion provides the focus for the culture. If we are to understand the Sgiathan we must fathom his religion, that is, the interpretation which he has given to Calvinism. Moreover, this highly integrated and systematized aspect of his culture has provided the means for preserving cultural continuity. Economic and social organization aid us in recognizing how cultural continuity has been maintained. Religion puts at our finger tips the how and the way.

The basic status values have held good because religi has sanctioned them. The old men of the neighborhood have been successful in sustaining their statuses and habits through their position in the esoteric religious hierarchy. By holding the father responsible for the spiritual welfare of his family, and judging a man's spiritual enlightenment on his renunciation of mundane pleasures as well as his knowledge of religious tenets, the elders exercise judicial and authoritarian functions. At the same time, the status of the father within the family is strengthened. After a

is occupation matters very little. Unlike the Welsh,[35] he Sriathanach does not particularly look up to the man ho prospers. Indeed, the people are more than likely to ttribute his success to dishonesty or find fault with his haracter. I shall have more to say about this when we onsider the topic of gossip.

At the same time, occupation is a factor in the orration of cliques. The school teachers form one clique hich has tended to become more and more exclusive in recent ears. The shop keepers also have their small clique. nce a year they have a dance at the Royal Hotel. Within oth social circles there are, of course, special groups f friends who associate regularly. Age grades provide nother basis for clique formation. Clerks, shop assistants, nd employees of the government are divided on this basis. nce it is government and, apparently, business and nking house policy to use theremote rural areas for a aining ground and to make promotions, most of the new-mers and local residents who work for these agencies are ung men.

Neither occupation nor age-grades are exclusive factors determining the social structure of Portree as they are r the crofters. If they were, I could not support the sertion that there is fluidity among the village population. ere are several clubs and fraternal organizations, such a drama society, the Women's Rural Institute, An Comun

[35]Rees, op. cit., p. 127.

rather than Christianity is the prevailing practice in Glendale." 795 [798]
This attachment to a sect is all the more significant in the crofting neighborhoods because there is not one iota of difference in the Gaelic services in any church. The difference is doctrinal.

In the neighborhood the affiliates of the same church 571 794 have been said to interact with their fellows more regularly 795 than with the remainder of the group. They come together on 796 the Sabbath for a regular service and on Wednesday night for a prayer meeting. On the Sabbath they come as families, [593] husband, wife and children and they sit together. Normally [562] the sexes are segregated in public. Indeed, in the home [574] men keep to one side of the fire and women to the other when there are callers. They also leave in family groups. Their interaction is spiritual. There are no gatherings outside the church either before or after the service to gossip, discuss the stock, or even comment on the weather. They will all know who was absent, but they will only greet their fellows with a slight nod. The Wednesday night prayer meeting is different. This is a group situation. Some come by bus and gossip on the way. Others get together before and after the service for a chat. At these prayer meetings [554] the stature of the "elect" again emerges. They offer the [888] prayers on behalf of the congregation. The prayers, it should [782] be noted, are extempore. No form is followed. The basis for them are passages from Scripture and interpretations of the passages.

162 his occupation matters very little. Unlike the Welsh,[35]
59 the Sriathsnach does not particularly look up to the man
463 who prospers. Indeed, the people are more than likely to
183 [554] attribute his success to dishonesty or find fault with his character. I shall have more to say about this when we consider the topic of gossip.

463 At the same time, occupation is a factor in the
573 formation of cliques. The school teachers form one clique which has tended to become more and more exclusive in recent years. The shop keepers also have their small clique. Once a year they have a dance at the Royal Hotel. Within both social circles there are, of course, special groups
[561] of friends who associate regularly. Age grades provide another basis for clique formation. Clerks, shop assistants, and employees of the government are divided on this basis. Since it is government and, apparently, business and banking house policy to use theremote rural areas for a training ground and to make promotions, most of the newcomers and local residents who work for these agencies are young men.

[621] Neither occupation nor age-grades are exclusive factors in determining the social structure of Portree as they are for the crofters. If they were, I could not support the assertion that there is fluidity among the village population.
575 There are several clubs and fraternal organizations, such as a drama society, the Women's Rural Institute, An Comun

557 MANIPULATIVE MOBILITY--extent to which desirable statuses and the prestige they bring can be achieved by opportunistic manipulation of social relationships (e.g., cultivation of persons in authority, political machinations, exploitation of friends and relatives, backslapping, marriages of convenience); prominence and relative effectiveness of manipulative techniques as compared with acquisition of skills and wealth; desirable statuses achievable thereby (e.g., political preferment); etc. See also:

his bonnet in his hand and bowing low and reverently, he declares on honour in presence of earth and heaven, in presence of God and men—*Am fianuis uir agus adhair, am fianuis Dia agus daoine*—that he shall be faithful to his trust. This simple declaration of office is extremely impressive, though now, alas, becoming obsolete from the fears of the shallow thoughtless and the scoffs of the severely wise. The duties of the constables were to divide a new peat-moss into banks for which lots are cast, to see that every crofter does his share of free labour in road building and repair, to engage herds and the like." (*Napier Crofters' Commission*, 1884.)

Naturally such duties called not only for tact, firmness and authority, temporal and spiritual, on the part of the constable, but for strong backing by the crofters, as a body, of the man they had freely elected. But hence too, the advantage to a covetous landlord of superseding free election by appointing his own nominee. Martin found that this had been done in St. Kilda shortly before his visit (about 1695) and the people complained bitterly, as well they might. We shall see that the same suppression of liberty was resented in Lewis less than a century ago. As a mere estate employee, moreover, the constable's position between the landlord's factor (or ground officer) and his fellow-crofters, was always difficult; and it might be cruelly hard, as when he was forced to help in destroying a neighbour's house at an eviction. Neighbourly union in a township was damaged by this duality of function, when he who should have been their own impartial executive was in the landlord's pay. When affairs got too bad in a Lewis township the people would appoint their own constable in addition to the landlord's; even so, rivalry and dual functions weakened the community. Such weakness

3: Geddes K-4,5 (1919-1952) 1955 ES10 Highland Scots
Lewis and Harris

in communal organisation, historically brought about by landlord or steward over a wide period, has commonly been ascribed to some inherent feebleness in Gaelic communal spirit. It is all the more vital to realise the strength of community and its self-governance by neighbourly 'parliament' and chosen constable, by which the people put their ideals into practice. These may be given in the three traditional terms of fellowship, fairness and freedom, summing up the Gaelic watchwords.[1] Unless the struggle for freedom was too severe, fraternity, followed by equality, came first.

organized age-grades (e.g., composition, admission, advancement, symb
of membership, activities); relations between age levels and age groups;
division of labor by age; etc. See also:

Status and activities of children . . . . . 86 Sodalities . . . . . .
Status and activities of adolescents, adults,
and the aged 88

Additional modifications have been found in the division 178 182
labor. Although no Skyeman has shown a disposition to assume 162
sponsibility for domestic work, unless he lives alone, the
men of Skye are expected to function in roles which once were
led exclusively by men. Old men and women for many years [561]
have continued to perform tasks which formerly were their
lies as youths and young adults. These changes, like those
have pointed, are partially traceable to an incomplete
ustment to the contractual, commercial world. This has led [162]
striking alterations in the age structure of the population
it is the youth who forsake the island and the aged who
rn to return. Nevertheless, there have been no observable [554]
nges in the status system of the rural neighborhoods.
mitive democracy, distinguished from our form of democracy 621
the principle of unanimous consent rather than majority rule 554 182
times to operate in the townships. The existence of such
institution implies a maximum of equality co-existing with
inimum of authority. The continued ability of the crofters
maintain primitive democracy in a nation like Great Britain
possible only because there is a high degree of social
egration. The simple system of ranking, on the basis of [561]
and sex, has persisted. Men are the social superiors of [562]
en; old men are the social superiors of their juniors. I
lieve we shall understand how continuity of status has been
served if we turn to a consideration of the role of religion
the island.

If I am right in asserting that a belief in clan brother- 178
was an all pervading cultural pattern in bygone days and 182 619

sanctioned the qualities which had given the people their 178
characteristic strength of character. 182 771

The churches of Skye made conservatism an official policy in 1843, and in 1892 reaffirmed this policy. For well over 100 years religion has had a strength and vitality which has enabled the Skyeman to pass through times of extreme distress, not to mention chronic economic deficiencies. Among 182 554 ●
the most important religious sanctions are those which reinforce 771
the status values of the culture. The father's status in the 593
nuclear family was reaffirmed at a time when his socio-economic importance was declining. He has been held responsible for the spiritual welfare of his wife and children. The prestige 182
of the old men, the family-head elders, and their control over 554 771
the neighborhood group was similarly bolstered by making them 888
the judges of a man's spiritual enlightenment. Spiritual enlightenment is weighed on a scale which will not balance unless a person's religious knowledge is matched by conformity to the ways the old men think a man should behave. Again we 182
are not dealing with a completely negative attitude. In the 771
place of frivolous amusements, religion has offered highly [194]
emotional, spiritual patterns of behavior. Religion has preserved the Gaelic language by using it in formal worship and [197]
within the home for family worship. In these and other ways religion has indeed enabled the culture to achieve a reorientation and maintain its continuity.

How similar Skye is to the Old Order Amish in this respect.[3]

[3] Kollmorgen, Culture of a Contemporary Rural Community: The Older Order Amish of Lancaster County, Pennsylvania.

a tremendous strength. There are villagers who dislike the 182
crofters, but few would intentionally slight an old crofter's 571
wife because it might give her something to talk about. I 703
shall elaborate this point shortly when I come to social control.

If there had been a decrease in the frequency of inter- 182
action, the traditional norms and sanctions should have become 554 ●
less common and clear. In particular, social ranking based 565
on leadership in communal activities should have become less [571]
definite. Although anomie, as used by Homans, is an internal condition, I shall introduce a consideration of cross-group norms in order to present a clearer picture of the status system. Despite the extreme fluidity between the county people and the members of the intermediate social heirarchy in informal clique groups, such as the bridge club, there has been no tendency to obscure the lines of cleavage. The class structure, in terms of the whole community, has remained rigid. The county people are at the apex of the prestige status and class hierarchy. They are, of course, members of a group which extends across the length and breadth of Great Britain. In any neighborhood where there is a member of the landed gentry resident, he is always looked to for leadership. In Glendale, a privately owned neighborhood, a nearby landlord is their political spokesman. In Portree the gentry have done more than uphold social ranking based on leadership; they have created and introduced new activities in which they express their role. These are the Skye Council of Social Service, the village council, and the Old People's Welfare Committee. They may be aided by others, but their decisions are the others to be followed. The gentry

maintain their position by intermarriage, by educating their 182
children in England, and by interacting with people of similar 571 554 ●
status within the community and beyond. 565

The crofters continue to stand at the opposite pole. They seldom achieve status within their neighborhood. Upward mobility is possible only through outward mobility. Leadership fails to find expression among them in the township or the neighborhood. The rare exception is the crofter's son who becomes a [795]
minister and returns to lead his people spiritually. When the [794]
crofters must select a leader, from their own number, the status is accorded to an elder of the church. The elder [794]
already has high status because of his advanced age and his position in the kirk. As I have said, the continued operation of primitive democracy means a minimum of authority and a maximum of equality.

The intermediate group in the social hierarchy cannot be 182
profitably used in this discussion. They are primarily newcomers, 554
people from the Lowlands or England, who have joined with the 565
relatively few Skyemen who have left the croft. Sufficient time 167
has not elapsed for a class oriented structure to emerge. Then, too, they are not a numerous group. Still, status is important in the village. As in the crofting neighborhood, ministers, doctors, and teachers achieve high status through their occupation. For the remainder of the population of Portree, status depends more on personal qualities and outside activities, especially in the kirk, than on the way one may make his living.

While we are on the topic of status and ranking, let us 121
554

see what Linton, the most explicit exponent of the concept of 121
status and role, has to say about societies which are faced with 554
changing conditions and disorganization.[15] Linton believes that such societies attempt to develop new social patterns by allowing individual initiative, thought, and competition free rein. They are characterized by a wealth of achievable statuses. With adjustment, ascribed statuses again become common. The con- 554
clusion seems inescapable that Skye has adjusted. Perhaps a 626
few additional illustrations will make my point clearer. The crofter who assumes a role of leadership is regarded as an eccentric, someone to poke fun at no less than the village idiot. The crofters' children who find their status too con- 554
fining must leave the island to achieve status. Some succeed, 626
to a limited degree, by moving to Portree, but they are never 167
free of suspicion. Since the majority of achieved statuses on Skye are left to newcomers, it might be said that the Sgiathanach has selected place of birth as a means to ascribe status. Not infrequently the newcomer's acceptance is followed by his being placed in roles of responsibility in both formal organizations and informal groups. The reader may remember the case of the young man from the East Coast who found himself on no less than eleven committees. In Kilmuir the people are represented on the County Council by a minister and the Crofters' Club is run by the school teacher.

I believe that the most important feature of the concept 626
of anomie is the loss of social control which is said to follow 182

[15] Linton, The Study of Man, pp. 113-131.

555

555 TALENT MOBILITY--extent to which prestige can be gained by mastering or excelling in some complex or difficult cultural activity (e.g., religious ritual, fine arts, scholarship, war, technology, business); talents and skills most highly rewarded in prestige (e.g., directly rather than indirectly through the material remuneration they may bring); frequency with which such channels of mobility are chosen; desirable statuses achievable thereby; symbolic tokens of success; specific techniques (e.g., counting coup, writing a bestseller, making a scientific discovery, winning an Olympic race); etc. See also:

Education	87	Preferment of war veterans	729
Occupational specialization	463		

change in the use of the grazing land or a desire of the young men to fence the crofts in an effort to improve the individual crofts the old men must have their say. Through their position in the churches, the old men also are the paramount source of social control, preserving their traditional habits and statuses, including a severe limitation on all social activity of a frivolous nature. This religiously sanctioned control is strengthened by the inability of the youth to form a solidarity. Indeed, one of the most serious limitations of the society of Skye is the small number of young men and women, boys and girls and the few opportunities which they have to come together as a group. The functions of the old men's age grade are identical with those described for the Irish small farmer.[21] Another social circle is composed of the affiliates of the same religious sect. They are mainly a mutual aid group.

Although the status equality noted in the township for all of the same sex and age carries over to the larger community, there are always a few people who have an achieved status. The minister enjoys high social prestige as the spiritual guardian of the people. The doctor is valued for his role in caring for the people's physical well-being. The school teacher is respected because he educates the youth and often acts as a spokesman for the group. If there is a member of the landed gentry, he will be accorded the highest status in the area. It is interesting to note that the achieved status positions are most often filled by newcomers to the island. The shopkeepers and

[21] Arensberg, op. cit., pp. 125-139.

556

556 ACCUMULATION OF WEALTH--extent to which prestige can be gained through amassing wealth; means used to accumulate wealth or degree of skill involved; principal objects of wealth (e.g., money, cattle, slaves, land); relative importance of sheer accumulation, of display, of generosity in distribution; prominence of wealth accumulation as a mobility mechanism; desirable statuses achievable thereby; symbolic tokens of success; specific techniques (e.g., conspicuous consumption, potlatching, endowing a college, buying a title); etc. See also:

Property	42	Individual enterprise	672
Potlatches	481	Wealth in relation to social classes	565
Saving and investment	664	Hospitality	574

sufficiently to make age controls an irresistible force, the prestige status of the small number of the "elect," those who had experienced a saving change, and, in particular, the elders gave them complete control over all social and religious activity. In a later chapter I shall have more to say about these facts. The important fact which I want to emphasize now is that the religious patterns provided a framework in which the culture could find continuity and through which the society could achieve a reintegration. The abhorrence of pagan-like customs resulted in a change of content, but there were positive results as well. Above all, there was a change in focus for the culture and society. The decadent belief in clan brotherhood was replaced by a sense of belonging to a known religious brotherhood.

Summary. The third period of the modern phase of Skye's culture history saw the culmination of the process of commercialization of the land. All the influences necessary for the conversion of the subsistence economy, albeit a much deteriorated economy, had begun to function. Sheep farming, on a commercial scale, formed the basis for the new economy. Newcomers with the incentive and ability to introduce improved methods of land utilization were replacing the conservative and impoverished crofters and cottars. As the commercial farmers consolidated their holdings, the communal townships were being obliterated. The concept of individual possession of the land was replacing the customary rights of the small tenants, and a clearly defined social hierarchy, based on

wealth, rose above the indigent crofters and cottars.

These changes had a pronounced effect on the culture and the population. Economic hardship and evictions prompted emigration, forced many men and women to seek seasonal work away from home, and led to a reduction in the marriage rate. Crofting which had already become part-time agriculture now was a spare-time pursuit. The Sriathanach was dependent on money, on the wider economy, for the satisfaction of most of his needs. The croft was providing no more than a few potatoes for the table and some oats for the cattle, the crofter's only export. Still, no landless working force appeared. Portree had grown and there was a woolen mill, but there does not seem to have been any marked movement into the village by the crofters.

While much of what was meaningful to the people was being lost, the religious Revival continued. The conservatism of the "Men" became an official policy of a new church. The emotional approach of the ministers and the "Men," who were now elders in the church, and the emotionalism of the large outdoor meetings functioned to restore the social disequilibrium. Although the extended family, township, and nuclear family suffered from instability, the people found intelligible roles within the religious sphere of activity. Their religion was reinforcing their way of life. The abhorrence of much of the old culture was accompanied by a strengthening of many traits which reaffirmed the desirable status values. The culture found a new focus in congregational religion and was able to maintain a continuity while the content changed.

Owing to rounding totals may not add.

231 Table III reveals that there are 177 agricultural units with a souming; ten units are crofts in Glengravir without a souming and the remainder of the 219 units have no grazing rights. From this Table, it is clear that full stocking and overstocking increase with the size of the croft: the units of ten acres and over, on the basis of stock carry, would appear to be the most intensive
[463] worked. In all, just over half of the units take up their full souming. Table IV gives an
[561] analysis of employment ancillary to croft work for 141 of the 219 units and it would appear that
[887] neither ancillary employment nor age is significantly related to the intensity of croft working. Table V points to the fact that more full-time croftere are to be found on the larger units but that less than one in four of the younger and more active men are full-time crofters. Tables
[311] III, IV and V underline the fact that the larger units are also the more successful and it is significant that the larger units are almost all on the better land in the agricultural townships. The average size of holding in the agricultural township is nine acres, compared with less than eight acres in the fishing townships, where the land is much poorer and the cultivable area much more restricted.

175 The trends in agriculture are illustrated by Tables VI and VII. The Crofters' Commission ma
178 a survey of the crofts through the medium of Estate Factors in 1883; from Table VI it is evident
241 that the number of cattle was much higher at that time and that the cattle-sheep ratio in the
231 selected townships was 1:3 as compared with 1:25 in 1958. Table VII gives agricultural statistics for the parish of Loche as a whole; separate figures for Park are not available. Since 1913, radical changes in the crop and stock patterns have taken place; bere (Hordeum vulgare) has disappeared as a crop, and sown grass and permanent grass for hay have since 1947 become the leading crops. Horses have all but disappeared, and the cattle-sheep ratio has risen from less than 1:4 to 1:39 for the whole parish. Since 1938, cultivation in Lochs Parish has declined by 36
[518] per cent. Large areas of lazy-beds, no longer cultivated, are visible landscape signs of these
[824] changes; seaweed, the sine quae non for laybed cultivation, is no longer carried to the upper par of the crofts. In fact, many of the crofts no longer use seaweed as a fertiliser.

233 From the foregoing account, it is clear that there are two major agricultural problems in Par
241 the lack of sufficiently large crofts with good arable land and an insufficiency of common grazing; these deficiences bring in their train the problem of overstocking, and the existence of uneconomi holdings.

241 The more progressive crofters, significantly resident on the better crofts of the agricultural
242 townships, have shown how croft land can be improved by re-seeding and sowing down to grass,
176 practices which could be fruitfully extended throughout Park. In addition, several townships by c operative effort, have reseeded small areas of the commons grazings with splendid results.

241 However it is clear that it is not possible for 219 viable agricultural units to be maintained on the present crofting area. The optimum size of croft which could maintain a family is a moot point, for the location and situation of a croft and the quality of the land and common pasture would all have to be taken into account in making an assessment.

231 This problem was referred to a practical agriculturalist who was asked to state what size of
241 croft and number of stock would be required to provide an annual income of £300, excluding croft
242 benefit (milk, eggs and potatoes consumed on the croft) and any costing for labour. To fulfil these conditions, one of the fishing townships was carefully analysed, and the expert came to the following approximations, assuming that the rules of good husbandry were in force after the croft had been brought up to a good standard of cultivation and re-seeding had been carried out where possible on the outrun and Common Pasture, and provided there was no overstocking, and that present favourable subsidies and prices continue:-

6: Ducey	E-4,5	(1958-1954)	1956	ES10 Highland Scots ES10 Skye

to the traditions of the past. I shall discuss this further when I describe the extended family.

The Township. The township is a cooperating economic unit. Communal use of an interest in the common grazing lands gives the township its focus. Living on the several crofts, there will be found an aggregate of nuclear families and unmarried individuals who, especially in the older townships, are related and re-related on both sides. Only in the more modern townships does the degree of relationship become tenuous and finally disappear. In interpersonal activities the neighbors have a rate of interaction second only to that of the nuclear family.

The dominant social trait is the strong emphasis on the ascription of status on the basis of kinship, sex and age. There are no socially valued achieved statuses. The facts are simple. Males enjoy higher prestige than females, and the old men and women are respected by the youth. All of the same age grade and sex are essentially equal. Again we have a parallel with the Irish small farmer.[18]

There is no room for the expression of a role of leadership in economic activities. The governing principle of township administration is so-called primitive democracy. All males have an equal voice in determining the acceptance of any policy or action which concerns the group, and unanimous consent is necessary for the adoption of any change. Although each township has an elected grazing clerk and a grazing

no longer concerned with the necessity of having his 771
en baptized, the venerable old men, the family-head 554
, prolong their social control by sitting in judgment 183 626
ge who seek salvation. The strength of age controls [178]
icated by the continued ability of the elders to resist
tempts to introduce secular innovations to the crofting
orhoods. Even in Portree the majority of the people
der the watchful eyes of the old men.

Many of the meaningful patterns of interaction are 771
ous. The rites of passage function to augment social 182
l, restore disturbed equilibriums, and establish new 626
ed statuses. The rites of intensification, including
associated with death, function to restore disturbed
ns of interaction in the family, nuclear and extended,
e larger social groups and to establish meaningful
onships when large congregations gather for the
ation of communion. Religion for the majority is not 771
dependent on attending church on the Sabbath and [782]
ing Wednesday night prayer meetings. Every day of
ek begins with a prayer and ends with family worship.
cial activity outside the home is ideally limited to [52]
urch, and the church is never used for mundane activity.
n Portree are there a number of social activities to [369]
the people. Kilmuir has no more than a Crofters' [575]
or men, and Glendale has no social activities, unless
uld include the annual meeting of the share holders
farm.

796 into tiny squares. The ministers and the elders partake
794 first. A final hymn is full of rejoicing, and the minist
then exhorts the communicants to return to the world and
give witness and to live exemplary lives.

The evening service on Sunday is evangelical, intend
for non-believers. After this service the communicants
conduct a brief prayer meeting to give thanks.

[829] On Monday, the minister again tells the communicants
to go out into the world and declare publically their
experiences of the preceding day; and to demonstrate in
everything they do and say that they are believers. In
[178] the past, only a morning service was given, as most peopl
[484] had a long journey ahead of them to return home; but now
that cars are available, a similar evening service is also
conducted.

781 5. The Process of Conversion: The process of conver
794 may be slow or sudden, but conversion is most common at
796 middle age and among women. One informant wryly observed
[561] "Only recently women were allowed to have souls. But
[562] from the looks of the Communion table, mostly women are
[589] going to heaven." Many of the women taking Communion are
[822] dressed from head to foot in black, a color which indicat
their widowed status.

781 The first sign that a person is "following" (leannta
794 the church is that he begins to attend the weekly prayer

[192] This, perhaps, one reason for the government's attitude regarding deferments.

[192] Since the majority of the people converse among themselves in the Gaelic, I should like to conclude this study of the crofting family with a brief discussion of status in Gaelic terminology. The Gaelic language reveals the significance of several aspects of the relationship of family members and clearly marks the changing status of the individual. At birth both boys and girls are [561]leanabh. If the parents are feeling protective towards the child, at time of illness or some mishap, they use this term until the age of three or four, but, normally, at two the children are called [561]clann. Specifically, a small boy is [561]balach, and a small girl is [561]caileag. At puberty, when the [561]clann and their associates become conscious of the physical changes accompanying adolescence, a boy becomes [561]gille, and a girl, [561]nighean. With this change, the boy puts on his first pair of long trousers, and the girl receives her first long skirt. [561]Gille and [561]nighean apply until marriage. A brother and sister, however, often use them throughout life, as synonyms for [561]bràthair (brother) and [561]piuthar (sister). There is one additional fact which we should note at this time. [561]Nighean means both girl and daughter. Boys and the [561]clann, are distinguished. Any boy is [561]gille, but a son is [561]mac. Only at marriage does the [561]gille become a [561]duine, a man, and the [561]nighean, a [561]bean, a woman. Just as the girl and daughter are not distinguished, neither are woman and wife. [561]Bean means both. A man is not only a [561]duine; he is also a [561]fear, a husband. In the Gaelic, many people who have all the physiological

[192] [561] requirements of adulthood, and also old age, are still boys and girls.

[559]Status Equality Within the Township. The ascription of status on the basis of age and sex has resulted in a straightforward [562]system of status. The facts are simple. Men are the social [561]superiors of women. Youth are socially inferior to their seniors. Men, or women, of a common age category are equals. We shall now examine a few interpersonal relationships to see how the [249]system operates. Unless a man and his wife are eating alone, women never eat with men. They wait until the men have finished [576]before taking their meal. When neighbors come to visit, the [577]man of the house does not rise for a woman. He does rise for a man and shakes him by the hand. The woman of the house, on the other hand, rises for both men and women. Furthermore, when a couple comes to call, the woman greets the man first. Only after he has been offered a chair does she greet the [855]woman. Young people are seen but seldom heard. They do not [882]speak unless addressed.

[426] [176] All societies allow some deviation from traditional norms of expected behavior. On Skye, as elsewhere, excessive deviation is censured. Neither increased opportunities for education nor the steady flow of Skye men and women to the four corners of the earth, accompanied by the slow returning trickle, have disturbed these fundamental values. Like the youth who leaves home to achieve upward mobility through outward mobility, the man who returns must conform to the traditional norms, which he learned as a child, or be regarded

offer help without an expectation of payment. Nevertheless, anonymous donations of food and casual visits make sure that none of their number becomes absolutely destitute. In Glendale this religious clique merges with the person's "people and friends." Kilmuir has two religious cliques.

We have had ample opportunity to examine the age-grades [561] of Skye's society and in the next chapter we shall have a closer look at the functions of the age-grades, especially that of the old men. One of the most important weaknesses [857] of the social structure, in my mind, is the lack of age mates [882] for children and adolescents. They find it difficult, almost [561] impossible, to come together as a sodality. In Kilmuir, for example, there are only fifteen boys under twenty in an area of ten square miles. A youth is anyone under forty. Of the [162] total population 60 percent are over fifty. For this reason [561] the important age grade clique tends to merge with the re- [794] ligious social circle. The situation is much the same in Glendale. There the age-grade and kinship groups are intertwined with the kirk congregation.

Status Equality within the Neighborhood. The fundamental [621] status equality which we found for the crofters within the [534] township carries over to the neighborhood, but, as would be [571] expected, there is often a need for leadership in this larger group. Let us look at the two neighborhoods which I know best to cast light on the methods employed in the self-election of a leader and the means of expressing leadership as a role. Kilmuir has a Crofters' Club, which was originally formed by [573]

[162] his occupation matters very little. Unlike the Welsh,[35] [557] the Gàidhealach does not particularly look up to the man [463] who prosperes. Indeed, the people are more than likely to [183] [559] attribute his success to dishonesty or find fault with his character. I shall have more to say about this when we consider the topic of gossip.

[463] At the same time, occupation is a factor in the [573] formation of cliques. The school teachers form one clique which has tended to become more and more exclusive in recent years. The shop keepers also have their small clique. Once a year they have a dance at the Royal Hotel. Within both social circles there are, of course, special groups [561] of friends who associate regularly. Age grades provide another basis for clique formation. Clerks, shop assistants, and employees of the government are divided on this basis. Since it is government and, apparently, business and banking house policy to use the remote rural areas for a training ground and to make promotions, most of the newcomers and local residents who work for these agencies are young men.

[621] Neither occupation nor age-grades are exclusive factors in determining the social structure of Portree as they are for the crofters. If they were, I could not support the assertion that there is fluidity among the village population. [575] There are several clubs and fraternal organizations, such as a drama society, the Women's Rural Institute, An Comun

[35] Rees, op. cit., p. 127.

The man who seeks sensory pleasures and finds enjoyment in [785] mundane recreation is believed to be spiritually un- [779] enlightened. It seems almost an anticlimax to add that social life is restricted.

Beyond the Highlands and, indeed, within the Highlands [771] in certain prosperous areas, where poverty has not been [882] a factor of such importance that it requires religious [571] sanction, the Church of Scotland has endeavored to find room within the church for recreational activities, especially for the youth. As in America, the church feels a responsibility to the youth which requires a combination of religion and recreation if the citizens of the community are to be well-rounded adults. Youth programs and youth clubs, young adult groups, and social circles for the older men and women are an essential part of church work. In [794] an organizational sense, the Church of Scotland on Skye [571] has, at the most, a Woman's Guild which meets once a month to hear a lecture on a topic such as missionary work in India, and which holds an occasional sale of work to reduce the church debt or buy the minister an electric tea kettle to keep in his vestry; and a choir, which meets once a week for rehearsal. It is, as I have said before, not the overall policy of the church which determines the activities in which the people participate or which they reject. The [888] elders are the prime movers. Were the youth in Kilmuir [561] anyone under thirty, instead of anyone under forty, the [626] control of the aged might not be as strong as it is. In

the Outer Isles, an area of recent depopulation, there are [888] enough youth to resist the dictates of their elders.[25] If [561] they cannot have a dance in a hall, they hold their dance [626] on a plank bridge. In Kilmuir the crofters are looking forward to "Effectual Calling." To defy the elders, or allow their children to run counter to the wishes of the elders, would mean a loss of all hope for salvation.

For the majority of crofters, any form of amusement [785] is objectionable, but there are slight differences among [795] the affiliates of the several sects. The Church of Scotland is the most lenient. For adherents, concerts, film shows and similar organized forms of entertainment may be admissible, especially if they are held outside the neighborhood. There [546] is a "picture bus" from Kilmuir to Portree on Wednesday and [546] Saturday night. Sports activities are often considered [526] as wholesome outlets for the youth. Some of the ministers, feel the lack of social contact with their people and believe they might do some good by taking part in life outside the pulpit. The Church of Scotland minister in Kilmuir occasionally attends the Crofters' Club, the only secular activity admitted in the neighborhood. Significantly, Free Church opinion, although the voice of a minority, has prohibited the playing of pipes and recitals of the Gaelic Choir at the annual agricultural show. The Church of Scotland minister in Sleat has taken a hand in the village hall. Unorganized dances are condemned. This is not because dancing [535]

[25] Darling and Morley, op. cit., pp. 21-24.

Additional modifications have been found in the division [178] of labor. Although no Skyeman has shown a disposition to assume [192] responsibility for domestic work, unless he lives alone, the [626] women of Skye are expected to function in roles which once were filled exclusively by men. Old men and women for many years [561] now have continued to perform tasks which formerly were their duties as youths and young adults. These changes, like those we have [illegible], are partially traceable to an incomplete adjustment to the contractual, commercial world. This has led [162] to striking alterations in the age structure of the population for it is the youth who forsake the island and the aged who yearn to return. Nevertheless, there have been no observable [558] changes in the status system of the rural neighborhoods. Primitive democracy, distinguished from our form of democracy [621] by the principle of unanimous consent rather than majority rule, [534] continues to operate in the townships. The existence of such an institution implies a maximum of equality co-existing with a minimum of authority. The continued sodality of the crofters to maintain primitive democracy in a nation like Great Britain is possible only because there is a high degree of social integration. The simple system of ranking, on the basis of [561] age and sex, has persisted. Men are the social superiors of [562] women; old men are the social superiors of their juniors. I believe we shall understand how continuity of status has been preserved if we turn to a consideration of the role of religion on the island.

If I am right in asserting that a belief in clan brother- [178] hood was an all pervasive cultural pattern in bygone days and [192] [626]

445 yards (a weaver's yard is equal to 8 feet, a measure
283 which derives from the size of the frame once used
(BONE) to wind hanks of yarn). Payment varies according to
the number of colors used in the pattern. A weaver
292 may average 2½ tweeds per week when the work is available,
425 thus earning more than mill workers. A female mill
[562] worker earns about £11 or £12, and her male counterpart
about £3 more.

238 Because weavers are classed as self-employed, they
245 do not qualify for unemployment benefit. They may apply
657 for social security, but must submit to a "means" test,
and the possession of bank savings or other assets
disqualifies them from receiving such aid. All British
workers must pay a weekly sum for "insurance stamps," a
certain number of which makes the workers eligible for
small payments from the government during periods of
illness. Self-employed persons must pay for their own
insurance stamps, whereas employers pay for the stamps
of their workers. A weaver who does not keep up with his
payments of over one pound a week for insurance stamps
must pay the accumulated debt at a later time.

Weavers face other costs. They buy looms and bobbin-
491 winding machines, and pay for lighting, heating, and the
234 maintenance of all equipment. The preservation of this
292 anomalous status of "self-employed" is related to the
425
438

527 office or general store, preferring to divide the rest
178 between themselves for use at a later time. A 50-year-
431 old woman observed, "They don't appreciate the bannag
like we used to. They get this kind of rich food all
527 the time." The practices of wearing costumes and speaking
178 the rhyme are disappearing. Children used to have the
bannag until they left school at age 14 or 15; now only
the younger children go. "Children grow up more quickly
today."

529 A New Year's is celebrated perhaps most intensively
562 by the men, who after seeing the New Year in by watching
573 a special New Year's program on television go visiting
574 neighbors and relatives with bottles of whiskey. The
[184] custom of "first-footing" on New Year's eve is found
throughout Scotland; but in the Hebrides much visiting
and heavy drinking may last from New Year's eve until
the following Sunday. During this time, the woman of the
house, who usually refrains from drinking and to some
extent controls the drinking done by the males in her
house, relaxes her attitude, and may even participate.
The comment, "It's only once a year," is often heard.
[589] During this time, the shyest and most retiring bachelor
becomes a Romeo; this is the only time of year he may
be heard to mention the word marriage. For example, one
bachelor in his 60's chooses a "bride" each New Year, and
takes her with him on his all-night visiting.

796 into tiny squares. The ministers and the elders partake
794 first. A final hymn is full of rejoicing, and the minister
then exhorts the communicants to return to the world and
give witness and to live exemplary lives.

The evening service on Sunday is evangelical, intended
for non-believers. After this service the communicants
conduct a brief prayer meeting to give thanks.

[828] On Monday, the minister again tells the communicants
to go out into the world and declare publically their
experiences of the preceding day; and to demonstrate in
everything they do and say that they are believers. In
[178] this past, only a morning service was given, as most people
[489] had a long journey ahead of them to return home; but now
that cars are available, a similar evening service is also
conducted.

6. The Process of Conversion: The process of conversion
789 may be slow or sudden, but conversion is most common at
793 middle age and among women. One informant wryly observed,
[562] "Only recently women were allowed to have souls. But
from the looks of the Communion table, mostly women are
[589] going to heaven." Many of the women taking Communion are
dressed from head to foot in black, a color which indicates
their widowed status.

The first sign that a person is "following" (leannsail)
781 the church is that he begins to attend the weekly prayer
794

RELIGIOUS HISTORY

by Captain Dymes. The saint laboured mainly in the Hebrides; 175*
he died in the north of Scotland and was buried at Rosemarkie, 246
on the Scottish mainland. Tradition ascribes the building of the [173]
church to the tenth century by King Olaf of Norway. Though it
a more realistic date for its foundation is the fourteenth century.
That it occupies, as so many other small churches do, the site of a
former cell is quite acceptable. The church, no Dymes tells us, [562] *
had a 'sanctum sanctorum,' so holy in fact that no women were
ever allowed to enter it.

In Harris, the outstanding religious building is St Clement's,
at Rodel, described in Chapter 8. There are, sprinkled like a
measured largesse, small ruins of chapels, cells, oratories and wells;
but only tradition has clothed these tumbled stones with the aire
of the once-living. A map of the island will show up these sites,
which are well worth a visit if only to spend a short time in reflec-
tion under the island sky beside ancient stones.

Other old ruins are to be found on the island of Calum Cille
(Columba) in Loch Eriskort. It is on record that the monks who [199]
came from Iona to convert the islanders from pagan forms of
religion to Christianity landed on the island about the middle of
the sixth century. They founded a church with its burial ground,
that they dedicated to their master, hence the Gaelic name:
Eaglais, Cladh, agus Eilean Chalum Cille. Tradition also men-
tions a mill, Muileann-na-manach, but there is not one stone left
on another to indicate its exact site. The old burial ground served
the parish of Lochs for many generations until about a century
ago. The people of the island were in medieval and post-medieval
times profoundly religious; this reverence was more often than
not carried over into the half-world of superstition.

Though the tangible remains of religion's progress are to be 175*
seen, the recorded history of religious progress, its phases and 199
developments, is scant. One can only assume that it was the
Columban Church which first introduced the new Christianity
to the Lewis folk. The earlier religion was the stock on to which
the new was grafted. The result was an amalgam which was
nothing if not strange to those many visitors who came to com-
ment on the island scene; for it was neither Christian nor heathen.
Yet, again, a strong thread of veneration ran through the ancient

so literate as to have drawn up a bond, unaided and with a re- 175*
markable degree of legal precision. 212

It was not until Lewis belonged to the Seaforth family that 175*
anything in the nature of education generally came the way of 871
the common folk of the island. John Morison, a native of Lewis,
who wrote about 1690, says:

Quite for the time the country is possessed and sagile governed
by the Earle of Seaforth, by whose industrious care and benevo-
lence the people, formerly inclined to rudeness and barbarity, are
reduced to civilitie, much understanding and knowledge by the
flourishing schooll planted and maintained by the said Earle all
the time in the town of Stornoway. And not onlie the people of
the Lewis, but also those of the nist adjacent Iles. The gentlemens
sons and daughters are hered in that school to the great good and
comfort of their parents; so that there are few families but at least
the master can read and write: I do remember in my own
time that there was not three in all the countrie that knew A. b.
by A Bible.

Martin Martin mentions this Stornoway school as teaching both
Latin and English. During the eighteenth century a school for
teaching both those subjects with writing and arithmetic was
established.

Martin also indicates that it was never considered necessary [562] *
or desirable to educate girls, whether they were common folk or
daughters of the upper classes, unless they were daughters of
chiefs and next in line to succeed their father, there being no male
issue before them. Towards the close of the eighteenth century,
efforts were made to educate the children of the island. Paro-
chial schools had by that time been established; the Society in
Scotland for Propagating Christian Knowledge and the Gaelic
School Society supported several. Clergymen of the period, how-
ever, claimed that the advantages of education were not appreci-
ated; as a consequence, the schools were not well attended.

The SSPCK had its origins in 1701, when a few private gentle-
men met in Edinburgh and resolved to establish schools in the
Highlands and Islands, and to appeal to the public for subscrip- [213]
tions for the purpose. They had a fitful beginning, but Queen
Anne encouraged the scheme by royal proclamation and sub-

CLANSHIP

175 Mackenzie. For all that, in 1900 a crofter said: "We called
615 the old proprietor Seaforth, but I believe his right name
621 was the Prince of Welsh". To him the Earls were royal!
[824]

Freedom of intercourse is embodied in the language
to this day. With 'a stranger', a little spoken Gaelic
197 lessens 'strangeness' and quickens intimacy, because
565 Gaelic conveys emotional human relationships as English
576 rarely can—even the English of the 'democratic' Low-
lands. For instance, a well-dressed stranger, though
young, is usually addressed in English as 'sir' by a senior
crofter, and, just as in the South, without the expectation
of 'sir' or 'ma'am' in return. In English, that is, respect
is given to class. In Gaelic, age receives respect: it is the
stranger, if the younger, who adopts the respectful 'you'
(the second person plural, *abh*), while the crofter, if the
older, uses the friendly singular, 'thou' (*dhu*). If they
are of equal age, and neither is elderly, 'thou' would be
used by both. Similarly, respect is given to womanhood;
and an older woman who would say 'Sir' in English will
say 'My dear' in Gaelic.[1]

614 It is not only by daily contacts that we may understand
the relationship of people to chief, but by the height of
[175] feeling it may attain, and by the beauty of its expression.
[532] Among the finest of the later songs of praise to Gaelic
clanship and its chiefs are those composed by two Island
bards, a woman of Harris and a man of the Lewis. Mary
MacLeod, *Mairi Nighean Alasdair Ruaidh*, was a kinswoman
of the MacLeods of Dunvegan and Harris, and a beloved
[173]

[1] Calling on the sub-postmistress in a Highland place where I was known to be a friend of the land, I was addressed as "Sir". Had bitterly had we passed to Gaelic when this woman, my elder and a person of culture, laughingly used an expression then strange to me. Halted, and suddenly aby at being focused to translate, she said at last, "When thou wast a *boog* (just a boy)!" meant as a joke. But rightly, she would have been slightly shocked had I said 'thou' to her.

888 be given by ear and learning come by heart. Hence elders
588 were the holders of an inheritance of treasures which must
be sought from them or be lost for ever. But to be trans-
mitted, the word must remain alive in the mind. Thus
both the faculty of memory and the fruit it bore in an
elder's mind brought respect, even veneration. Accuracy
in retelling is still immensely valued, but so, too, were
thoughtful commentary and poetic enrichment. Respect
for elders, though general, was not given blindly, but
personally and by choice.

As handed down, the Fifth Commandment runs:
888 "Honour thy parents and hold them in loving regard"
771 (*Cuidhd do phaireant ri chuir speis dhaibh*).[1] The
562 community was pervaded by the Christian concept of a
Holy Family, rather than by that of a patriarchate. This
concept took root from the first missions to the Celtic
community, with which it harmonised and which formed
fertile ground for this Christian seed. Hence there was
no general assertion of paternal, still less of patriarchal,
authority at the expense of youth. Where equal honour
is due to both parents, the mother finds equal duty and
regard with the father. And although the father's home
is close at hand while the mother's may be a little distance
away, her parents are likely to be the younger and the
more active and helpful to their grandchildren, and the
influence of all four grandparents fairly balanced.

The patriarchs Abraham, Isaac and Jacob are named
[614] in a hymn of the Lews, along when giving up with the flocks
[773] and herds to the shieldings; even this may be a Presbyterian
[175] adaptation (*Carmina*). But until the overwhelming weight

[1] Rev. Allan Macdonald, p. 62, *Na Paisnean*. The omission of the Mosaic paternal precedence may be a courtesy to motherhood implying equality in parenthood.

absence of terms for in-laws, these relatives are simply 601
red to as the husband's or wife's kin. Hence, structurally,
xtended family on Skye is comparable to the Irish system,[19]
obviously, is dissimilar to our bilateral family structure.[20]
Because the extended family is so very unstable, it is 596
cult to describe it functionally. There was a time when
eople were divided into three communities of fate, the
rs of which were bound together by the bonds of real and
tious kinship. Today individuals whose remote ancestors
together in defense of their homes may not have seen
brothers in many years. The material I gathered allows
two generalizations. Any member of the extended family
ways free to call upon his kinsmen for help or, at least,
tality in need; and the closest surviving relatives always
their obligations and are ready to fulfill them. Thus,
amily is a mutual aid group. The primary responsibilities
kin are to see that all have food, shelter, and a proper
l.

There are additional social circles in the crofting 561 888 626
nity. The youth, young adults, and the aged are divided
age grades. Of these, the age grade of the old men is
ially important. They control the economic progress of
sland by their deliberative function concerning any
ation in the crofting system. Whether it is a suggested

ge in the use of the grazing land or a desire of the young 561
to fence the crofts in an effort to improve the individual 888
ts the old men must have their say. Through their position 626
he churches, the old men also are the paramount source of
al control, preserving their traditional habits and statuses,
uding a severe limitation on all social activity of a
clous nature. This religiously sanctioned control is
ngthened by the inability of the youth to form a solidarity.
ed, one of the most serious limitations of the society of
is the small number of young men and women, boys and girls
the few opportunities which they have to come together as
oup. The functions of the old men's age grade are identical
those described for the Irish small farmer.[21] Another 794
al circle is composed of the affiliates of the same religious
. They are mainly a mutual aid group. [476]

Although the status equality noted in the township for 554
of the same sex and age carries over to the larger community,
e are always a few people who have an achieved status. The [793]
ster enjoys high social prestige as the spiritual guardian
he people. The doctor is valued for his role in caring for [759]
people's physical well-being. The school teacher is re- [875]
ted because he educates the youth and often acts as a spoke-
for the group. If there is a member of the landed gentry, [545]
ill be accorded the highest status in the area. It is [555]
resting to note that the achieved status positions are most
n filled by newcomers to the island. The shopkeepers and

of the Old Testament made itself felt, as in Lewis-and-Harris in the nineteenth century, this narrower patriarchal example hardly affected thought.[1] Rooted in a wider form of family than a patriarchate, and reverencing a Holy Family and all fellowship, Gaelic society honoured age and parenthood for their inheritance, and childhood and youth for their promise.

Such ideals of human relationship led to the veneration of the Saints of the Gospels and of later history, and also of those of legend, especially Bride. Dedications to Bride or 'Bridget' are widespread from Wales to the Lews; yet her memory has been all but lost in Britain, except in the Isles. Carmichael wrote that "Bride and her services" are dear to the hearts of the people. She is called "Bride of the white feet . . . of calmness . . . of the kine; woman-comrade . . . and woman-helper . . ." "I am in the keeping of my Saint Mary: My companion beloved is Bride" (*Carmina*, Nos. 70-71; 263-264). As joy, steadfastness and attainment are generally linked to one notable stage in the life of each 'holy companion', the example, aid and fellowship of each saint in turn was especially sought, at a corresponding stage or crisis of one's own life.

The Gael's veneration for saintly men and women was shared by Catholic peasantry throughout Christendom; but its special quality seems to have been closeness of

[1] Clanship has repeatedly been said to be 'patriarchal', as an ideal and a system. A different conclusion, that community is the root of clanship (even in its political forms), may come as a surprise. The English or Lowland reader has had access only to the writings of strangers such as Burt. Not knowing Gaelic, these derived their information from Highland speakers of English who, deliberately or unconsciously, were biased by ranking as chief or gentry, and not unnaturally explained their position as patriarchal. Thus strangers ignored the co-parental life of farm-groups and townships, economically humble but spiritually rich, as the root of a clan-community.

Note: (1) The figure in parenthesis under 'females' indicates those who became 'migrants' on marriage.

Male emigrants from Uig go mainly to Glasgow and other parts of the mainland (table 51). Since 1939 (in effect since 1945) only 12% have gone overseas; 16% have moved to Stornoway and a further 10% to other parts of Lewis. This is almost entirely a movement in search of work. Female emigrants from the parish are less widely dispersed: more went to other parts of Lewis and fewer overseas. There is a special factor in the case of female emigrants. Social intercourse between the different island districts is very active, despite the apparent lack of facilities; almost a third of the female emigrants from Uig became migrants on marriage into other Lewis parishes. Even if we discount such migration, more women than men migrated from Uig between 1939 and 1959. Weaving retains young men but not the young women.

582 564 288

Migration from a crofting district is a somewhat indeterminate process. Young people of both sexes go to Glasgow or elsewhere in search of work. For a while they maintain their island homes but, eventually, they set up homes of their own. Our criterion of 'migration', as against (working permanently away', was this setting up of a home. Thus the critical point is often marriage and it will be noted (table 51 and Appendices B(3) and D(3) that a very large proportion of female emigrants appear to have emigrated on marriage; in the case of migration outwith Lewis this usually means that for some time previous to their becoming 'emigrants' they had seasonal or permanent employment away from home. Indeed, our enquiries showed that the great majority of young women who took employment on the mainland eventually married and settled away from Lewis. Only a small minority returned, often giving up their employment in order to care for ageing relatives. An island man may occasionally return with a mainland wife but cases of island girls bringing mainland men to settle in the island are rare indeed.

is this respect the critical age-group is 15-44 years (table 54). Few older people work away from home. Of that age-group, 138 (and of full persons are only. ers account for 139, men for only 139. the difference is a strong indication of the of employment opportunities for women in Lewis. The contrasting experience of ers is shown in the Skyeman's Skyeman Dig. A far greater proportion of men y away from the two northern districts than from the south. This reflects the greater importance of weaving in the north. The explanation for this lies in the generally smaller size of crofts of the north, partly in this type of employ- a suitable locality and partly in the customary choice of employment away, which ed in the district. Social customs, which may vary as between one township the next, has a strong bearing on whether and when young men and women choose to

Social Organization

54 The Croft. Ideally, the croft is the home of a nuclear 54 family. Social instability and economic limitations, however, have given rise to a situation in which the ideal is becoming progressively harder to attain. In fact, crofts which once were occupied by a three generation family group, that is, by grandparents, parents and children, are now inhabited by an aging bachelor, a spinster, or an unwed brother and sister. Others are the homes of an old widow or widower and, perhaps, one or two of their children who are well beyond marriageable age.

54 As an irremovable social entity, the nuclear family has been surrounded by the universally recognized functions of sexual gratification, economic cooperation, reproduction, and education. In addition, important functions of a religious and a social character have been given to it. The members share the work of the croft, have a higher rate of interaction than any other social group, and, in most homes, worship together seven days a week. Within the family, the father is the source of all authority. He directs the labor of his wife and children, determines their patterns of interaction outside the home, and leads them in family worship. The family's economic well-being and spiritual welfare are his responsibilities.

54 Learning the essential tasks necessary to the crofting 54 of life by imitation and informal guidance, sons move in the sphere of their father and daughters in the sphere of their mother. While the father is the disciplinarian, both children are expected to respect the wishes of their mother, except that they can never be asked to do the work of a woman. At the same time, however, in the absence of a boy, a girl will take his place in the division of labor. The high status of the male and the subservient position of the female have persisted over the centuries. Always, male and female relationships are reciprocal and complimentary.

The patterns of interaction and the statuses and roles 54 which are manifest within the nuclear family on Skye are much the same as those described for the Irish small farmers.[15] The main difference is the occupation of the Irish farm by a three generation family group. Comparable family structures are found in the United States among the old Order Amish and, apparently, among the mountain people of the Southern Appalachians, many of whom are descendants of Scottish and Irish migrants.[16] Under Le Play's classification, the Skyeman's family is the famille-souche or stem family.[17] Although strongly patriarchal, the family on Skye has been weakened by economic limitations. At the same time, the Sgriathanach, as a member of both a nuclear and an extended family, has not lost his attachment to the land, to his kinsmen, or

51

to the traditions of the past. I shall discuss this further 54 when I describe the extended family.

The Township. The township is a cooperating economic unit. 621 621 The township has an interest in the common grazing lands given 621 the township its focus. Living on the several crofts, there 621 will be found an aggregate of nuclear families and unmarried individuals who, especially in the older townships, are related and re-related on both sides. Only in the more modern townships does the degree of relationship become tenuous and finally disappear. In interpersonal activities the neighbors have a rate of interaction second only to that of the nuclear family.

The dominant social trait is the strong emphasis on the 621 ascription of status on the basis of kinship, sex and age. 564 There are no socially valued achieved statuses. The facts are simple. Males enjoy higher prestige than females, and the 564 old men and women are respected by the youth. All of the same 564 age grade and sex are essentially equal. Again we have a parallel with the Irish small farmer.[18]

There is no room for the expression of a role of leader- 621 ship in economic activities. The governing principle of 621 township administration is so-called primitive democracy. All males have an equal voice in determining the acceptance of any policy or action which concerns the group, and unanimous consent is necessary for the adoption of any change. Al- 620 though each township has an elected grazing clerk and a grazing

[18] Cr. Arensberg, op. cit., pp. 45, 109-110; and Arensberg and Kimball, op. cit., pp. 63, 101-231.

60

behavior which have given the individual and the culture their 781 ability to continue in spite of social instability and acute 782 economic hardship. In many respects, the Skyeman's religion is strikingly similar to that of the Welshman.[23]

The status of the father within the nuclear family has 127 been maintained, despite changing economic roles which might 127 have led to a loss of prestige, by his religious sanction. The aged men of the community, in particular the elders, the 620 elected lay kirk officers, have been able to continue to exer- cise stringent control over their families and neighbors. In 564 a negative way, the socially inferior status of the women has been maintained by debarring them from active roles in the church. In religious activity the people find meaningful patterns of interaction. The small congregations, rarely over 300 people, give the Skyeman a sense of belonging. In the 564 home the practice of daily worship intensifies family inter- action. Above all, at the semi-annual communion celebrations, 182 highly emotional meetings which partake much of revivalism, 771 the people find solidarity. As each church in turn celebrates 572 the Lord's Supper, the people from the neighboring churches of the same sect come to share one to five days of worshipping together and renewing their ties of friendship. At the daily church services the people meet and hear visiting ministers of their sect and the eminent Wee Members of the elect, from other parts of the island. The identical pattern is found in Wales where the intense patterns of interaction center around the singing festivals.[24]

[24] Ibid., pp. 129-130.

139

the dung from the byre, the peats from the moor, and the cats 175 from the fields. When the land had been turned by ploughing, 175 they yoked themselves to a harrow. The crofters, in Kilmuir, as 235 elsewhere, lost the right to the rivers for fish, to the moors 429 for game, and to the coast for sea weed. The land became ex- hausted from over tillage. They had clung tenaciously to the old methods. Even if they could have obtained credit and could have broken with the ways of their forefathers, the fear of reincurring would have deterred them.

A degree of preciousness can be given to this general 175 picture by comparing the arable acreage and stocking of Skye 175 in 1810, the year crofters first appeared, and 1870. In 1810, 233 30,000 acres were listed as arable, either cultivated or 311 susceptible to it; there were 18,000 cattle and 40,000 sheep.[66] By 1870 no more than 8,383 acres were considered as arable; there were only 9,341 cattle, but there were 136,077 sheep. The magnitude of this change can be emphasized by adding the fact that there were less than 14,000 sheep on the Island at the turn of the century.[67]

The end of the shieling life brought an end to the 175 traditional season for courting. Destitution forced a post- 594 ponement of marriage and an absolute reduction in the number 594 of marriages. As a natural consequence the birth rate declined. 175 In the decade 1861-1870 the birth rate of Skye stood at 26.1 178 compared with 34.6 for Scotland.[68]

254

A girl also makes an early pretense at assuming her role. 847 While a boy is never seen helping within the house, and, there- 424 fore, his duties begin later, a small girl soon begins to help make beds and do the cleaning. If she is an only child, or has been left behind by her brothers who have left the Island, she is expected to take their place on the croft. In any event, she will be taught how to milk, how to plant a garden, and how to help in all other tasks of crofting, except cutting 564 corn and sheaving. She learns at a very early age and in diverse ways that the primary role of a woman is to serve the needs of can, some man, throughout her life, unless she is strong enough to live alone.

Learning the virtues valued by their parents and the community, as well as the tasks essential to crofting, both boys and girls are indoctrinated with the ethos of the Islander long before they can understand the importance of their object lessons. They are separated by more than the division of labor of their parents. As we shall see, the almost unaltered status values of the culture relegate males and females to two different, but complimentary, spheres of activity.

871 As they progress in school, conflicts begin to develop. 150 In one way this is inevitable. Until 1953 there was no attempt to teach the children anything that would directly relate to the life expected of them on Skye. In particular there were no agricultural subjects. Even now, there is but one travelling teacher of agriculture to serve the entire

253

172 requirements of adulthood, and also old age, are still boys 564 and girls.

554 Status Equality Within the Township. The ascription of status on the basis of age and sex has resulted in a straightforward 564 system of status. The facts are simple. Men are the social 564 superiors of women. Youth are socially inferior to their seniors. Men, or women, of a common age category are equals. We shall now examine a few interpersonal relationships to see how the 260 system operates. Unless a man and his wife are eating alone, women never eat with men. They wait until the men have finished 572 before taking their meal. When neighbors come to visit, the 572 woman of the house does not rise for a woman. He does rise for a man and shakes him by the hand. The woman of the house, on the other hand, rises for both men and women. Furthermore, when a couple comes to call, the woman greets the man first. Only after he has been offered a chair does she greet the 553 553 man. Young people are seen but seldom heard. They do not speak unless addressed.

446 All societies allow some deviation from traditional 446 norms of expected behavior. On Skye, as elsewhere, excessive deviation is censured. Neither increased opportunities for education nor the steady flow of Skye men and women to the four corners of the earth, accompanied by the slow returning trickle, have disturbed these fundamental values. Like the youth who leaves home to achieve upward mobility through outward mobility, the man who returns must conform to the traditional norms, which he learned as a child, or be regarded

by a second cousin. The striking thing to realise here is that 595
the nearest surviving relative always knows his obligation and 596
is ready to fulfill it, without question. Fatherless children 597
are buried by either their paternal or maternal uncle. I have 598
not forgotten the existence of women. The simple fact is, 599
women play no part as sponsors. Indeed, the rare woman who goes
to the grave becomes the subject of lasting gossip. 562

Fundamentally, the system of kinship is patrilineal.
Linguistically, the terms for relatives may be bilateral, and 611
inheritance of possessions other than the name may be matters 612
of small importance, but the patrilineal emphasis remains.
The Gaisbhannaich lives in a man's world. I shall explore this 613
male dominance further in the following chapter. At present,
I want to briefly discuss two additional cliques.

Religious and Age-Grade Cliques. Like the members of any
society, the Gaisbhannaich associates most frequently with those
who share his interests and attitudes. It is natural, then,
for his associates, other than his kinsmen, to be people who
attend his church and people of his own age group. We need
not explore the nature of these cliques at this time; but
we should have some understanding of their function. The 573
religious clique is primarily a mutual aid group. There is 574
reason to believe that this particular group has lost much 575
of its importance of late, with the coming of the welfare
state. Many feel that the government pays people to look
after the aged and infirm. As far as doing a favor for someone
is concerned, few of the same kirk, other than close friends,

the child. Consequently, the sacrament is normally administered 587
without even the formality of a kirk session examination. The 588
ministers of the other churches assert that non-church-going, 589
drunken fathers whom the kirk session has refused have gone to 590
the Church of Scotland and have received the sacrament for their
children after pretending to mend their ways. They have then
come back to their former habits. It may be so, but at least
one man in Portree was very surprised to find that the Church
of Scotland can require a severe examination.

At baptism the child is formally introduced into the 591
folds of his father's church. His mother and father stand 592
before the minister and are admonished to bring up the child
in the nurture and admonition of God, to the best of their
ability.

Marriage is not a sacrament in Scotland, and, therefore 593
does not provoke any strong resentment beyond a feeling that
the Church of Scotland should not have the exclusive right
to preside the banns of marriage. It is too one time in 594
the life of a woman when she is the center of attention and 595
has complete control over the situation. She decides where
she will be married and what minister will preside. Church
affiliation seems to make little difference. At least, the
wedding of a daughter of a strict Free Presbyterian family
in the Church of Scotland did not give the people any cause
to gossip. Although a wedding is no more than a legal formality,
the vows made at marriage are sacred. It would not strike
Americans as being particularly significant to omit the promise
to obey from the ceremony; Americans are said to have an

equality of the sexes. On Skye, where women are the social 595
inferiors of men, its omission is curious. The ministers have 596
taken the promise of the ceremony out because, as one said, "The
man may be a rogue, irresponsible, making it impossible for
the woman to obey." Some nevertheless promises to be "loving,
truthful, and dutiful."

Election, as a passage rite, marks the attainment of the 597
status of the elderly. We already know that to become one of 598
the "elect" the individual, man or woman, must not only
experience a soul-saving change but also manifest steadfast
conformity to the ideals of behavior which have religious
approval. These ideals are the habits and statuses which
the old people are striving to maintain. Thus religion 599
sanctions the status of the venerable old people. Their 600
interpretation of "Effectual Calling" functions to provide 601
the elders, the most eminent of the "elect" with an additional
means to exercise their judicial and authoritarian roles.
There can be no rapid conversion. Whether or not the pro- 602
bationary period of three years imposed by the "Men" in the
last century is still enforced I do not know. The person who
believes he has experienced a saving change, "a visitation
from the Holy Spirit," is examined by the minister and his
elders. Like the father who is seeking baptism for his child,
such an old man or woman is judged on his knowledge of the
Bible and the Shorter Catechism and on his conformity to the
righteous life. No one can experience a saving change unless
he is known, by observation, to have lived an upright life.
The person who continues to pursue his own mundane pleasures

cannot be spiritually enlightened. The individual who is asked 603
about the nature of his visitation is not judged on his ability 604
to raise his family in the nurture of the church. He is rather
judged on his preparation to carry on the tradition. He must
be worthy of the respect due to one of his status. While old 605
women are numbered among the "elect," their exclusion from any
active role in the church has kept them socially inferior to
the old men.

I wish I could give some examples of the nature of this 606
"visitation;" however, Skye is a land where the direct question 607
is not used. One can ask a direct question without offending,
but the code of hospitality requires an either affirmative
answer or the answer you think your guest expects. My
circuitous promptings on this topic only succeeded in arousing
concern for my soul.

Two groups escape from the control of the elders as it 608
is exercised through acceptance of an individual into the 609
"elect." As mentioned earlier, the newcomers to Skye have 610
come from different backgrounds. Beyond the Highlands, the
meaning of "Effectual Calling" has changed over the years. The 611
youth attend a young communicants' class in which they are
taught the meaning of church membership. Notestein, writing
about the national character of the Scot, maintains that
interest in "election" has disappeared.[14] Most of the members
of the Church of Scotland in Portree would no doubt agree with
him. One attempt has been made on Skye to hold a young 612
communicants' class. It took place, of course, in the Church 613

[14] Notestein, op. cit., p. 157.

worship. If the deceased is a Gaisbhannach, the minister will 613
call every night, if he can. Otherwise, he may call only
once. His participation in family worship helps to reforms
the patterns of interaction within the nurture family and
within the small circle of "people," "friends," and neighbors
who come to visit and take part. Some sophisticated villagers 614
take this opportunity to justify their own deviations, such
as going to a concert; for them this is all "a religious ceilidh
with all their psalm singing, preaching, and greeting." The 615
people do not mean, as they do in Ireland, but the women are
seldom dry-eyed. Again the villager may comment that the
minister at least should say a few kind words about the dead,
"just to comfort his family."

On the day of burial a second and more inclusive rite of
intensification is held. On this occasion the function of the
minister, often aided by an elder, is to restore the equilibrium
within the total sphere in which the deceased habitually moved
during his life. If the person had high prestige status, the
ministers of two churches conduct the family worship. All
the "people," "friends," and neighbors, both men and women,
attend. The minister begins with a prayer for the family,
asking God's guidance. This is followed by the singing of a
few verses of psalm by all who have gathered. Next the minister
reads from Scripture. He concludes with another prayer for
the family. If there are two ministers, or a minister and
an elder present, they alternate in leading the group. If
there are any present who do not "have the Gaelic," they
also alternate between English and Gaelic. We have seen how 616

her brothers and their wives come to visit, and at New Years 616
they came by with their bottle of wine, whisky being a man's 617
drink, to toast the New Year.

Excepting Glendale, where church membership and af- 618
filiation is synonymous with the neighborhood, the township 619
may contain affiliates of two or three churches. One small
township contains two Free Church families, two Free
Presbyterian families, and one Church of Scotland family.
As in any township, they visit one another and cooperate
in handling the sheep flocks. Further, the Church of
Scotland family often gets out the truck on the Sabbath
and drives everyone to church. This is one of those isolated
townships far off the beaten track. Although I certainly
agree that people who meet together at a church and pray
together get to know each other better because of their
religious unity, in this township the families have come
to know each other better because they go off to their
respective churches together. There is a firm, basic belief 620
among the people that no one should be slighted, even by a 621
minister, because he has differing religious sympathies.
Some time ago, the minister begins with a prayer for the family,
asking God's guidance. This is followed by the singing of a
few verses of psalm by all who have gathered. Next the minister
reads from Scripture. He concludes with another prayer for
the family. If there are two ministers, or a minister and
an elder present, they alternate in leading the group. If
there are any present who do not "have the Gaelic," they
also alternate between English and Gaelic. We have seen how 622

rather than Christianity is the prevailing practice in Glendale.[15] 623
This attachment to a sect is all the more significant in the
crofting neighborhoods because there is not one iota of differ-
ence in the Gaelic services in any church. The differences is
doctrinal.

In the neighborhood the affiliates of the same church 624
have been said to interact with their fellows more regularly 625
than with the remainder of the group. They come together on 626
the Sabbath for a regular service and on Wednesday night
for a prayer meeting. On the Sabbath they come as families, 627
husband, wife and children and they sit together. Normally 628
the sexes are segregated in public. Indeed, in the home
men keep to one side of the fire and women to the other when
there are callers. They also leave in family groups. Their
interaction is spiritual. There are no gatherings outside
the church either before or after the service to gossip,
discuss the stock, or even comment on the weather. They
will all know who was absent, but they will only greet their
fellows with a slight nod. The Wednesday night prayer
meeting is different. This is a group situation. Some come
by bus and gossip on the way. Others get together before
and after the service for a chat. At these prayer meetings 629
the stature of the "elect" again emerges. They offer the 630
prayers on behalf of the congregation. The prayers, it should 631
be noted, are extempore. No form is followed. The basis for
them are passages from Scripture and interpretations of the
passages.

Additional modification have been found in the division 632
of labor. Although no Skyeman has shown a disposition to assume 633
responsibility for domestic work, unless on lives alone, the
women of Skye are expected to function in roles which once were
filled exclusively by men. Old men and women for many years 634
have been continued to perform tasks which formerly were their
duties as youths and young adults. These changes, like those
we have reviewed, are partially traceable to an incomplete
adjustment to the contractual, commercial world. This has led 635
to striking alterations in the age structure of the population
for it is the youth who forsake the island and the aged who
years to return. Nevertheless, there have been no observable 636
changes in the status system of the rural neighborhoods.
Primitive democracy, distinguished from our form of democracy 637
by the principle of unanimous consent rather than majority rule,
continues to operate in the townships. The existence of such
an institution implies a maximum of equality co-existing with
a minimum of authority. The continued ability of the crofters
to maintain primitive democracy in a nation like Great Britain
is possible only because there is a high degree of social
integration. The simple system of ranking, on the basis of 638
age and sex, has persisted. Men are the social superiors of 639
women; old men are the social superiors of their juniors. I
believe we shall understand how continuity of status has been
preserved if we turn to a consideration of the role of religion
on the island.

If I am right in asserting that a belief in clan brother- 640
hood was an all pervading cultural pattern in bygone days and

565

CLASSES--presence or absence of stratified groups between which mobility is to at least some extent possible; number and ranking of social classes; composition and distribution; basis of differentiation (e.g., wealth, occupation, ascribed status, conquest); class consciousness; degree of class organization; integration of cliques with classes; class prerogatives and disabilities; insignia and stigmata of classes; relations between classes; extent of intermarriage; status and affiliation of children of interclass marriages; special social classes (e.g., royalty, nobles and commoners, bourgeois and proletariat); etc. See also:

Mobility 58
Political statuses 62, 63, 64, 66
Occupational specialization 463
Standards of living 611

Poverty 735

286 175 731 735 of potato crops by blight had contributed to widespread poverty. The production of cloth for non-local markets 286 175 741 439 was promoted initially by philanthropic proprietors in an effort to ameliorate such conditions. Lady Dunmore, of the Dunmore family that owned Harris during most of the 19th century, was largely responsible for developing a market in London and elsewhere for cloth woven in Harris. [565] The cloth was popular first among the aristocracy, who [438] wore it for hunting and other sporting occasions. The [435] romantic image of a cottage industry promoted for charitable purposes contributed to the market value of the tweed.

The market expanded in the second half of the 19th century, aided by ladies of leisure who followed the example 286 441 175 set by Lady Dunmore (cf. Hunter 1964: 24-26). The production of cloth for a commercial market spread from Harris to the southern isles, but was slow in coming to [964] Lewis, where the proprietor, Sir James Matheson, provided the people with construction jobs. After Matheson died in 1878, weaving for outside markets began in Lewis in the parish bordering Harris, and the name "Harris Tweed" was used because a market for cloth of this name had already been established. By World War I, weaving for outside markets was being done in all four parishes in Lewis. In 1899 there were 55 looms in Lewis and over 200 in Harris.

THE CROFTING TOWNSHIP

[61] The crofting township is not quite akin to the English or Lowland village. Primarily it is a collection of dwellings of families who, as social units, gain their subsistence from the land surrounding the houses. The smallest number for a township is four family units. A functional unit of four men was the minimum
[76] necessary for a boat crew, or for the teamwork necessary to cultivate land; co-operation was essential at all forms familial were to survive. And from this grew the same spirit of communal work which in Lewis is seen at its best in the efforts to reclaim peat bog and turn it into fertile grassland.

[61] Hebridean townships come close to being the nearest approach
[125] to a classless society. The shape of a township is largely dictated by the nature of the surrounding land. The shape of most of those in Harris and in Lewis is either scattered or linear (houses disposed in line at varying distances from each other), with little natural
[191] cover, either plantation or scrub. Often the main road runs through the township; some have begun to develop lateral roads, to give, from the air, the appearance of planning on a grid system.
[144] Where gardens are cultivated, the produce tends to be a summer vegetable supply for the household, little if any finding its way to
[172] Stornoway shops for sale. Peat is the usual fuel, though in townships near to the centres of population, Stornoway coal is burned; the cost of freight, however, makes it expensive.

[171] Most of the townships are owned by commercial companies; individual lairds own some five dozen; the remainder belong to public bodies and trusts. The actual distribution of ownership of land on the island is as follows. Harris is virtually owned by individual lairds; a small percentage is owned by commercial companies. The Lochs region of Lewis has a mixed ownership: commercial companies, lairds, and public trust, the former being the largest. Stornoway parish is wholly owned by public trust. The Ness district is virtually the property of commercial companies; a small fraction belongs to public trust. The Uig district is the same, the smaller proportion, less than 10 per cent, being the concern of an individual laird.

In Lewis, the public body mentioned is the Stornoway Trust,

[173] his near kin. Again, much as in the medieval *gestes* of
[621] France, fosterage of an heir by a clanswoman formed the
[614] closest possible tie to at least one family of the people
[829] from ancient to recent times. For it linked the heir by
[171] sympathy—though not by equal obligation—to elders and playmates in childhood and his contemporaries in later life.

• [565] To re-state this 'contradiction' of equality and privileges, we have thus a hierarchy of 'class' imposed upon a 'classless' society. For the joint farms and the township were essentially classless. The two classes, the lord and the people, were primarily opposed, war having placed the conqueror above those who fed him. This state of things was not active 'class-war', for the armistice could endure indefinitely by means of the bargain made between the classes for some exchange of services; none the less, it was built upon class conquest.

[175] That all should ultimately claim the lineage of their
[565] chief was a remarkable solution to the hereditary opposition
[614] of class. A man who knew the Islanders well, John Lane
[622] Buchanan (1793), noted how in conditions of the utmost poverty the poorest addressed each other as 'lady and
[576] gentleman', *lean-usual* and *shire-usual*, a courtesy not lost today. And every clansman had a right to shake the hand of his chief, as Edmund Burt observed in his vivid *Letters*
[577] *from the North* (written after 1721). Indeed the sense of mutual obligation implicit in Gaelic society is well illustrated by the homely word *coir*, usually translated 'right'; it is equally used for right's correlative, duty—as when a Scots or Irish crofter may say "You've a right (a duty) to help your mother"—and for a 'right' (privilege) to shake the chief's hand. An English equivalent would be duty-privilege, or duty-right. Similarly, the same

[175] • [565] [614] [622] words are used for neighbourly help among crofters and for services to the chief.[1]

Full freedom of choice in marriage prevailed among the people, who honoured marriage and enjoined continence; but the position of the chief placed him apart from
[175] [582] the rest of the community. Now, the more equalitarian the community, the more free are a man's choices in choosing one another on grounds of mutual affection, passion and respect; the parents, too, are more likely to encourage or support a suitor for their child because of character and virility, rather than means.

[175] The lads of the clan, chief and people, grew up together
[565] in an isle or glen. But in manhood, while a labouring lad
[582] sought a wife from the girl playmates of his childhood and his fellow-workers at the peats, at the harvest, or in the shielings, a chief's choice was confined to his own class. In pre-feudal clanship, tanistry, *i.e.* the choice of a chief among the higher kin, gave a wider choice for marriage near home than feudal primogeniture, irrespective of the wishes of the chief's kin except in extreme cases of unfitness. In Scotland, tanistry prevailed even in the royal line until the eleventh century. But with the dominance of primogeniture, the young chief chose a bride outside his own community for reasons other than those of human feeling, honoured by Gaelic lyrical and religious tradition and even by the Church.

As a result, the chieftain's son was granted a licence forbidden to the rest, a temptation to maidens and a bad

[192] [476] [1] *Cuid* (cognate with *quota*) means a portion, lot or share, or what is one's own (*i.e.*, *pro. indefi.*) and the associated verb *fuidich* means not simply to share but actively to help. The apportioned lodging given to the chief and his 'suit' of 'lads' was the 'coidhecht'—*cuid-oidhche*; while the famous motto of the Seaforth Highlanders is Help the King!—*Cuidich an Righ!*

[175] • [565] [582] example to lads! Often of tall, fair stock, physically superior from better feeding, accustomed to have his own way, better taught, finely dressed, free and welcomed wherever he went in the glen that fed and fostered him, the young chief had favour on his side; moreover he was protected from the vengeance of jealousy. A song in praise of a young chief of Clan Leod boasts that "the girls
[830] would give their snoods for Rory"! When she lost her maiden snood to him, a girl would be counted, and be free: 'natural' child not dishonoured, but granted a share of paternal affection and inheritance. After marriage, a chief's
[175] lady made allowances for his past. But licence, once a
[839] habit, is hard to check, and the Gael tell bitter tales of jealous wives, married for policy, and their revenge upon a rival. One gathers that where there were enough gentry to meet, choose and intermarry freely, *ménage* was the order, if the
[562] used by both. Similarly, respect is given to womanhood; and an older woman who would say 'Sir' in English will say 'My dear' in Gaelic.[1]

[614] It is not only by daily contacts that we may understand the relationship of people to chief, but by the height of feeling it may attain, and by the beauty of its expression.
[175] [533] Among the finest of the later songs of praise to Gaelic clanship and its chiefs are those composed by two Island bards, a woman of Harris and a man of the Lews. Mary MacLeod, *Mairi Nighean Alasdair Ruaidh*, was a kinswoman of the MacLeods of Dunvegan and Harris, and a beloved

[123] [1] Calling on the sub-postmistress in a Highland place where I was known to be a friend of the laird, I was addressed as "Sir". But hardly had we passed to Gaelic when this woman, my elder and a person of culture, blushingly; and the expression then came to me. Halted, and suddenly shy at being forced to translate, she said at last, "When thou wast *a lamp* (just a boy!) "*mair lib the cnap!*" But rightly, she would have been slightly shocked had I said 'thou' to her.

[175] Mackenzie. For all that, in 1900 a crofter said: "We called
[613] the old proprietor Seaforth, but I believe his right name
[621] was the Prince of Welsh". To him the Earls were royal!
[829] Freedom of intercourse is embodied in the language to this day. With 'a stranger', a little spoken Gaelic
[197] lessens 'strangeness' and quickens intimacy, because
• [565] Gaelic conveys essential human relationships as English
[576] rarely can—even the English word 'democratic' Lowlands. For instance, a well-dressed stranger, though young, is usually addressed in English as 'sir' by a senior crofter, and, just as in the South, without the expectation of 'sir' or 'ma'am' in return. In English, that is, respect is given to class. In Gaelic, age receives respect: it is the stranger, if the younger, who adopts the respectful 'you'. The seniority of person plus, in some degree, that of the crofter, if the older, uses the friendly singular, 'thou' (*thu*). If they are of equal age, and neither is elderly, 'thou' would be

[614] [1] *Gaelic when this manuscript was in preparation, I was asked by a Gaelic scholar to make a translation of the Gaelic phrase, "Mairi Nighean Alasdair Ruaidh, a kinswoman of the MacLeods of Dunvegan and Harris, and a beloved*

[175] they were composed of at least one to four or five hamlet-
[427] farms. The tacksmen also had cottars for service.
[614]
[621] Thus in Lewis a special reason, the accession of Seaforth, had led to the granting of many tacks to his own
[175] clansmen and to natives. Elsewhere in the Highlands the procedure is noteworthy during the sixteenth, seventeenth
[427] and eighteenth centuries, for the collection of rents from
[614] the peasantry, by means of tacks, was a financial
[621] advantages for the greater landlords (I. F. Grant, 1930).
[184] The tacksman's continuation as tenant depended on his
[661] paying regularly, for the lease was not a hereditary grant.
[175] A tack could also provide for a lord's younger sons or
• [565] immediate relations, such as formed the gentry of the clan.
[427] Along with smaller lairds, these furnished the cadres of officers who led the clan regiments down to the Forty-five, and later the Highland Regiments of the line and the Fencibles down to Waterloo. Like MacKenzie, other great chiefs such as Argyle or Breadalbane leased tacks when they acquired the status of peers and took possession of fresh lands with Royal support, after vain resistance from native chiefs and their followers. In Lewis, the fiscal status of tacksmen was applied both to MacKenzie's supporters from the mainland and to those with ancient roots in the west of the Island. The latter may have thought a mere lease a poor substitute for hereditary tenure, though a legal compromise necessary if their possession was to be
[662] continued. The lack of permanent tenure ultimately led to the departure of their descendants.

[175] From the families of these tacksmen have sprung most
[621] of those of Lewis birth or descent who achieved fame
[614] before the twentieth century. Of the MacAulays, we saw
[554] Zacharias was Chamberlain during and after the 'Fifteen.
[668] Thomas Babington Macaulay came of the same line, as

[175] did another Zacharias, closer than Thomas to the Lewis
[554] tree, who worked nobly with Wilberforce for the emanci-
[614] pation of the slaves.[1] Still another connection was a
[621] Canadian emigrant, grandfather of the late T. B. Macaulay,
[668] LL.D. Alexander Mackenzie, the explorer of the Mac-
kenzie River, was a descendant of Lewis tacksmen. MacIvers and Morisons also distinguished themselves.
[178] But the sons and daughters of crofters had to await the
[811] provision of education in English before they could rise in trade, learning or war; hence few Lewismen of the greatest Lewis name, MacLeod, achieved eminence until the twentieth century.

[175] As for the peasantry, the interposition of a new or
[554] enlarged class of tenantry between themselves and the
[614] superior must have meant that they had to labour on the
• [565] tacksman's home farm, and no doubt pay more in produce
[427] or cash. Hence the Gaelic saying that if the position of the small (joint) tenants was bad, that of the subtenants was worse, "the Evil One itself"[1]. Following the long fight with the Fife Adventurers, hardship may have been greatest where mainland tacksmen were placed above the joint tenants; but even under MacAulays and MacIvers rents may have been raised and some of the joint freedom lost which was still enjoyed in Ness. Whatever adjustments had been made in an earlier period had to be re-made with the beginning of Seaforth's new order.

In the following generations, contradictory accounts of lairds, factors and tacksmen are given by contemporary observers. Certain of these insisted that, given the poverty of the lands as a whole, the chiefs and landlords, factors and tacksmen, were the saviours of their people. Yet even among those who supported authority in general, there was

[113] [1] *Charles Booth, Zachary Macaulay*, 1934.

175 seldom agreement as to which of these three types brought
554 the greater good or wrought the lesser evil. As elsewhere,
565 tacksmen declined by the end of the eighteenth century.
427 Buchanan wrote in 1793, "The greatest tacksman in Lewis is the Laird's ground officer"; but he added that the Island was for the most part inhabited by tenants holding directly from Seaforth, who "easily perceived the folly, as well as the inhumanity, of lending out the people on his island to imperious tacksmen, for the purpose of raising fortune to themselves on the ruins of the unfortunate subtenants". At a later date a former Chamberlain of the Lewis estate, John Munro Mackenzie of Calgarry, held otherwise. To the Napier Crofters' Commission in 1883, he said: "Till the beginning of this century the greater part of the Lewis was in the hands of tacksmen, or middlemen, who got in some cases from their subtenants in money, produce, and labour, what nearly paid their rents". Their names were those of the seventeenth century. Early in the century, "when Mr. Stewart-Mackenzie married the Hon. Lady Hood, daughter of Lord Seaforth, and took the management of the estate into his own hands, he did away with the middlemen, and let the land direct to the crofters.
[232] This, no doubt, was a step in the right direction, but it had its disadvantages, as the example of a good middleman, who looked after his people, and who was industrious in farming . . . and stock-breeding, was beneficial to the people, though in some cases they may have been petty tyrants." He might no doubt have added that they could, if need be, stand between a landlord and his tenants.
[228] When they lost their tacks, some of these 'middlemen' turned to the growing fishing industry and helped to supply capital and enterprise as curers; their successors were active through the nineteenth century and I spoke with

175 the last of these in outlying villages after 1918. When
554 Matheson purchased the Island in 1844 he left the fishing
565 industry to the curers, great and small. Particularly before
427 most fishermen could speak and write English, the local
278 curers were best fitted to take action not only in marketing but in approaching the Government to aid the construction of piers and harbours. On the whole, their long ties with place and people, coupled with education, made them useful leaders of a community in which leaders were needed to adapt life to a changing economy. Here and there one or two small farmers survive, a little apart from the main townships. Aided by a long cultural tradition, they meet changing times by combining with their inheritance a sane selection of new elements.

Looking beyond the Island to the mainland, the time is approaching for a fair assessment to be made of the historic parts of chief and landlord, factor and tacksman. Not only
175 is there an enlarging body of documentation, but a growing
621 understanding of communal strands in tradition and of
672 changing social economy seen in relation to geographic
427 factors of place and region. And in the Gaeldom, conditions varied greatly between bordering areas from Mar to
184 Kintyre,[1] and the heartland of tradition in the Hebrides.
[178] In the Island, one must remember the fundamental opposi-
[182] tion, yet the recurrent readjustments of chiefs and people. These, and not only individual differences in character and conduct, explain the differences of experience and opinion
[829] quoted above. The people's belief, so frequently given to me thirty years ago, that it was bad factors, not the landlord, who taxed and harried them unjustly, expressed an idealistic faith in a chief, rather than the facts of economy
[565] and history. For lordship begins with the imposition of
[113]

[1] A. McKerral, *Scot. Hist. Rev.*, 1947.

175 rents, and its end is in sight when these cease to provide
621 for the lord's desires.

(e) STORM AND GALLEY; BATTLEFIELD AND REGIMENT

174 The peaceful round of daily life formed the most
614 enduring test of the mutual loyalty uniting the commoners
577 of the clan, and linking chief to people. Yet the tensest
[561] ordeals came in hours of danger faced together, whether
[726] at sea in a small fishing boat or a many-oared galley, or in war in a clan company. The Gaels' own records must speak for them. Many a song of the Isles conveys the
174 team-spirit of the crew though without describing its men.
614 And although Mary MacLeod's song of MacLeod's Galley
501 be irretrievably lost, there survives one epic poem portray-
538 ing the ship, the storm and, man by man, the crew who warred against the waves and won. Alexander Macdonald's *Birlinn of Clanranald* is unmatched in Gaelic, and probably in English, verse for its portraits of the crew in action, from steersman to 'look-out'. The flowing metrical translation by Pattison with Hugh MacDiarmid's vivid prose helps to give the English reader some vision of a crew of Gaelic freemen at their best.[1]

174 The poem opens in slow traditional rhythm with "the
614 Blessing of the Ship", the arms and the crew. Then the
501 bard, speaking for the stately skipper, "incites the sixteen
539 oarsmen to row" out of the bay, and they row to a rousing
577 shanty, a *Iorram*. Next, in readiness for the voyage and
[113]

[1] Thomas Pattison, *The Gaelic Bards* (and ed.), 1890 (pp. 1-18); and Hugh MacDiarmid (Ed.), *The Golden Treasury of Scottish Poetry* (pp. 82-84), 1940. Cf. A. Macleod (Ed.), *Sar Orain: Three Gaelic Poems*, Glasgow, 1935. The different themes of its sections, such as its own metre, have been published separately, in *The Songs of the Hebrides*, and elsewhere.

175 Such are the mingled traditions of the Highland
701 regiments which served in so many wars, for right or for
565 wrong. Of all the desperate alternatives before the Gael
[614] —famine at home, semi-slavery in the factory towns, death-stricken sea voyages, pioneering in the forested hills of Eastern North America, or war, it was this last which offered the men not only the trappings and glamour of clanship but continuing fellowship. In the regiment a Gael was among friends. Modern civilization offered him no other life promising social continuity and the hope of a return to croft and township, "if death should spare him".

175 It would be wrong to suggest that only the gentry could
701 rise to command, for as English and literacy were acquired,
565 the sons of small tenants received commissions. British
554 military discipline has too often driven a breach between
433 the men and the non-commissioned officers, spoiling the latter's fitness for higher leadership. But among Highlanders "the bond of faith and affection" led naturally to
[103] commissioned rank. For generations, historic precedent was carried on in living tradition.[1] Given education, the
[108] sons of Island crofters have risen to command on land and
[Gaelic] sea; but education came late.

CONCLUSION

175 Thus in the 'little commonwealths' of the farm-hamlets
621 grouped within the township, personal right and equal
631 shares were balanced by common duty, summed up in the
577 [illegible] of duty right or [illegible]
614

[1] The Highland Regiments are legion and one can only cite examples. For instance, descendants of his neighbours in Strath Spey told me that my paternal grandfather, as a pensioner led speaking Gaelic and English (in which he was literate), enlisted in the Black Watch about 1829. He was known as a N.C.O. for his power of quiet, reasoning discipline. He thrice refused the offer of a commission, which was then given to others, of whom more than one rose to high command in the battalion.

423 In May 1918 Lewis was bought by Lever of Port
565 Sunlight, then Baron Leverhulme of Bolton-le-Moors (his
157 birthplace), the head of a great combine with 50,000 white
174 and 25,000 black employees. Meeting him in Lewis Castle in August 1919, Dr. Hardy and I found him troubled by a human situation he had failed to diagnose. Short and stocky but very erect, quick-eyed and rapid of manner, and with a wide expressive mouth, he spoke earnestly of his plans; but his eyes flashed and his mouth set, as he rapped out, "They keep putting off, yet they leave the people in houses *not fit for Kaffirs*!" The question, "What objective inspired—or misled—Leverhulme to buy the Island?" is answered by his son and biographer.[1]

159 By 1917 Leverhulme had felt it was time to devolve
423 his personal authority over his business, in the interests
433 of its future. Hence he looked about him for an estate in which he could exercise "his passion for changing the face of nature", and his eagerness for 'planning' with drawing board and T-square, and for philanthropy.[2] He nearly bought an estate in the Midlands in order to develop it; but work had already begun there, and he wished to find a place which would be his to remodel from the start. Thirty years before, Leverhulme had visited Lewis and now in 1917 he spent a week there, motoring all over the Island. "He was enraptured . . . he saw not merely a countryside in need of more and better roads, not only a residence and grounds capable of alteration and improvement, but a problem to be solved, a human and racial problem which had so far baffled all who had tried to solve it. . . . He had been told the Lewis man was lazy,
[13] [illegible]

[1] Leverhulme (2nd Viscount), *Leverhulme: By His Son*, 1927, chap. xxvi, p. 271 ff. Lord Leverhulme, who had thought of styling himself 'Of the Isles' took the title 'Of the Lewis'.

[2] Leverhulme (1927), cf. pp. 81-86.

change in the use of the grazing land or a desire of the young 561
men to fence the crofts in an effort to improve the individual 688
crofts the old men must have their say. Through their position 676
in the churches, the old men also are the paramount source of social control, preserving their traditional habits and statuses, including a severe limitation on all social activity of a frivolous nature. This religiously sanctioned control is strengthened by the inability of the youth to form a solidarity. Indeed, one of the most serious limitations of the society of Skye is the small number of young men and women, boys and girls and the few opportunities which they have to come together as a group. The functions of the old men's age grade are identical with those described for the Irish small farmer.[21] Another 774
social circle is composed of the affiliates of the same religious sect. They are mainly a mutual aid group. [172]

Although the status equality noted in the township for 554
all of the same sex and age carries over to the larger community, there are always a few people who have an achieved status. The [773]
minister enjoys high social prestige as the spiritual guardian of the people. The doctor is valued for his role in caring for [757]
the people's physical well-being. The school teacher is respected because he educates the youth and often acts as a spokesman for the group. If there is a member of the landed gentry, [545]
he will be accorded the highest status in the area. It is [555]
interesting to note that the achieved status positions are most often filled by newcomers to the island. The shopkeepers and

[21] Arensberg, op. cit., pp. 125-139.

tradesmen are respected, but since most are crofters, they are 559
treated like all other men.

The Village. The village contains a heterogeneous population. 621
At least a third of the families have arrived in the recent 143
past. They have come to fill positions in the county and 147
national government offices; in Lowland directed banks or business houses which have extended their field of operations to Skye; and in the professions as doctors, lawyers, ministers, and schoolteachers. A few have come to Skye to open a shop or offer their services as tradesmen. The remainder are either Skye folk who have recently moved into the village to see employment or families that have been in Portree for one or more generations. Very few families seem to have lived in the village for more than three generations.

While there are many opportunities for an individual to 554
achieve status in Portree, the cultural heritage and the 184
economic limitations under which the Sgiathanach labors has not allowed him to compete with the newcomers. His ability to compete is further restricted by the prevailing policy of the government and the national corporations to bring in managerial and, often, clerical personnel from the outside. All share one socio-economic trait; they are non-crofting. As 545
yet there is no class structure beyond the polarity of the landed gentry and the crofters who participate in village life. There is verticality. Highest prestige status is accorded to those who have been accepted among the local aristocracy. Below them rank the ministers, doctors, and school teachers.

For the remainder of the population, as a general rule, it may be said that a person's status depends on personal qualities rather than on occupation. This is especially true of men who take an active part in the church. In terms of interaction, the social hierarchy is extremely fluid. People who elsewhere in Britain would be "working" or "middle" class not infrequently join with members of the "upper" class in both formal and informal social groups.[22] This underlying equalitarian pattern has always characterized the interpersonal relations of Skye's society. There is, of course, cleavage between the upper level of the society and the bulk of the population; intermarriage is impossible.

The social life of the village revolves around the newcomers and the landed gentry. In addition to the social circles based upon age, sex, kinship, and religion, the individual belongs to several small groups of friends and, perhaps, a few formally organized clubs. When the native-born take part in the formal activities they do so as participants rather than as organizers or directors. The necessary roles of leadership are left to the newcomers or to the landed gentry. The latter, in particular, are responsible for community affairs, just as the chief and his kinsmen were formerly looked to as the leaders of the people. Occasionally, an influential newcomer gives them able assistance. The influence of the old men is not as marked in the village as in the crofting communities,

[22] Roy Lewis and Angus Maude, The English Middle Classes (London: Phoenix House, 1949), pp. 13-26, 87-110.

compared with 34.9 for Scotland. The death rate among Skyemen, however, was 17.4 compared with 22.0 for Scots in general. But Scotland had a net emigration rate of only 3.6 while the Skyemen were leaving at a rate of 16.5. In this decade no fewer than 3,115 left Skye.

By the end of the third period an additional influence of the process of commercialization had become apparent. The social hierarchy was modified in the direction of greater socio-economic differentiation.[68] At the time of the "Forty-five" Skye was inhabited by the families of three clan chiefs, 139 tacksmen, 517 joint-tenants, 1031 subtenants, and 444 servants. There were now 10 landlords. The tacksmen had been replaced by 29 graziers and 12 small farmers. The joint-tenants, subtenants, and servants had become 2043 crofters and 1227 cottars. In the past there may have been one innkeeper, at Portree, and a few millers; now there were 32 innkeepers, millers, and merchants.

The changes which we have been considering could not have left the patterns of interaction undisturbed. Cooperation among the members of the township would have been unnecessary. Since all were affected by prolonged destitution, mutual aid must have been severely curtailed. The extended family was broken by emigration. The nuclear family was seldom intact for more than part of the year. It seems the majority of the able-bodied men were travelling to the east coast each spring to find

[68] Lachlan MacDonald, The Past and Present Position of the Skye Crofters, pp. 4-5, 6-7, 11-12, 14-15; and J. G. MacKay, "Social Life in Skye from Legend and Story," TGSI, Vol. XXIX (1922), pp. 260-290.

sanction and endowed with privileges and immunities by which self-regulation, stability, expansion, and improvement might be attained. Additional provisions called for the replacement of the repudiated customary usages by national laws of land tenure.

The Crofters' Holdings (Scotland) Act of 1886 embodied many of the Commission's proposals.[80] The crofter became, perhaps, the only class, as a horizontal segment of the population, with a minimal legal definition. He was a pastoral agriculturalist who resided on his holding, the annual rent of which was less than £30, (later raised to £50) in a crofting parish. Such an individual was entitled to a fixed, fair rent, just compensation for improvements made by himself or his predecessors in the same family should he leave his holding, security of tenure, and modified right to bequeath the holding to a member of his family. Except for the statutory conditions that he must not alienate the holding from his family, sublet without consent, or violate the rights of his neighbors or his landlord, including withholding rent and contributing to the deterioration of the land and dwelling, the crofter was given all the privileges of a landowner with few of the responsibilities. A Crofters Commission, with executive functions, was established to carry out the provisions of the act and to assign "available" land to the townships as

[80] I owe a debt of gratitude to innumerable government officials in Portree, Edinburgh, Glasgow, and London for their patience and cooperation in providing me with the necessary information to discuss this final period of the history of Skye. The facts are theirs; the interpretation is my own responsibility.

culture which can hardly be distinguished from that of the Lowland rural areas, but it has by no means disappeared.

Socially, these changes, particularly the introduction of national laws of land tenure, involved a leveling of the social hierarchy. The old polarity of the land lord and tenant, with an intermediate group of doctors, ministers, and tradesmen, was restored. The place of the tacksman, of course, has been filled by the government. The bulk of the population was once again undifferentiated socially or economically. Land lost much of its commercial value for the proprietors. It once again had more of an intrinsic value, almost as in the days of the clan. The status of the proprietors, locally and as a horizontal segment of the total British population, depended on land ownership. The graziers and the proprietors who had appeared during the "Clearances" withdrew, selling out to the national government.

These changes did not work to halt the continuous outward flow of the Sgiathanach. To the contrary, increasing integration with the national culture created new needs, such as a demand for a higher standard of living and an opportunity to achieve status, and provided the training necessary for the youth to find roles more suitable to their talents elsewhere in the world. The young men and women of Skye journeyed to the Lowlands to join the national labor force, to enter the professions, or to seek other permanent employment. Thus, emigration changed from a movement by families to a movement by individuals. At the same time, the benefits of the crofters' legislation and the program of government assistance made it possible for the

crofting districts. Shops, schools, inns, and churches increased in numbers, but they have not clustered to form a village nucleus. In more recent years the county has tried to stimulate village growth by building houses at a few cente Someday they may succeed in altering the settlement pattern.

As a consequence of the increasing integration of the Sgiathanach within the national scene, government regulations have expanded and have come to be enforceable by a local police. Government services too have increased in scope. Many of the traditional functions of the family and the local group are now functions of an ever increasing number of government employees. Nevertheless, the traditional statuses of the members of the group have persisted and social control has not been reduced in favor of action by the state.

The class structure has changed several times. It has vacillated between a leveling of socio-economic differentiati and a growing polarity of status. At present there is no local class structure beyond the old polarity of landed gentr and crofters. Those who fall between these groups are ranked on prestige values of long standing. Even though many of the intermediate group would be working or middle class if they lived elsewhere in Britain, on Skye personal factors play a more important role in determining prestige than socio-econon differences. Leadership and political power remain in the hands of the gentry.

If the foregoing material suggests that there is evidence on Skye for Redfield's concepts of disorganization

121 The inapplicability of Warner's scheme within the United States has been demonstrated by Kroeber,[30] and its use beyond the [554] United States has been censured by Steward.[31] Now, while the British tend to admit more freely to the existence of class than Americans do, the social fluidity of the village has impressed many newcomers who grew up in the Lowlands or England.

121 If stratification exists,[32] there is general agreement 565 that cleavage or social distance will be found. Murdock, to cite only one authority, has said the cultural differences and social distance commonly present between groups separated spatially are frequently found in socially separated groups.[33] 565 This is certainly true for the landed gentry and the crofters, but in regards to the intermediate population, Portree seems to be very much like Sublette, Kansas.[34] The presence of the

[32] My general approach to the class structure followed that of James West (Plainville, U. S. A. [New York: Columbia University Press, 1945], pp. 116-130); but I also used Warner's objective-reputational technique (W. Lloyd Warner, M. Meeker, and K. Eells, Social Class in America. A Manual of Procedure for the Measurement of Social Status [Chicago: Science Research Associates, 1949]); and I employed the so-called "judges" technique. For a clear presentation of this last approach, see Leonard Broom and Philip Selznick, Sociology (Evanston, Ill.: Row, Peterson and Co., 1955), pp. 172-173.

[33] Murdock, op. cit., pp. 265-266. See also Linton, The Study of Man, and Gillan, The Ways of Men, p. 355.

[34] Earl H. Bell, The Culture of a Contemporary Rural Community: Sublette, Kansas (Rural Life Studies," No. 2; Washington, D.C.: United States Department of Agriculture, 1942), cited by Loomis and Beegle, op. cit., p. 384.

many newcomers and the high rates of inward, outward, and upward mobility seems to have worked against any clear cut pattern. Certainly, it requires more than non-membership in the highest and lowest classes or socially recognized strata to form a middle class. I look upon this indefinable strata as a neo-class. This is not meant to imply the absence of ranking or prestige status. Ranking is no less important than it is in the rural neighborhood.

As in the neighborhood, a few professions automatically carry high prestige; these are the ministry, medicine, and teaching. Otherwise, a man's prestige depends more on his outside activities than his occupation. Bankers are often thought of as having prestige. In Portree one banker is highly regarded because "he does an awful lot for the church." Another, although respected, as evidenced by the use of his surname when referring to him, is socially inferior because "he never mixes with people" and "no one ever gets invited to his house." The same holds for other occupations. One man may be looked up to because he has taken an active part in organizing an old people's welfare committee and was instrumental in founding the Skye Council of Social Service, the only rural social service council in Scotland. Another of the same occupation is looked down upon because he keeps to himself. To cast a shadow on whatever prestige he may have, the people talk about a shady deal in which he supposedly got involved and claim that his wife sells eggs. No one but a crofter's wife sells eggs. If a man is a native Sgiathanach

575 (a Gaelic group), the Masonic Order, the Eastern Star, and a post of the British Legion, which have representatives
574 from all walks of life. But far the most interesting
575 group is the village bridge club. If bridge clubs in America are status conscious, those in Britain are especially aware of "social" and "cultural" distinctions. In Portree such
574 differences matter very little. Like all of the above
575 167 mentioned organizations, the membership of the bridge club is predominantly newcomers. It includes members of the gentry, teachers, shop keepers and shop assistants, office workers, and a mechanic. Once a week they come together for an evening of cards and a few drinks. In all formal organizations, the roles of leadership are left to newcomers or the gentry. One young man, to give an extreme example, wondered one day why he spent so much time attending committee meetings. On reflection, he found that he was an officer in no less than eleven clubs. It is to the gentry, however, that we must turn to see the real expression of leadership.

The County Families

565 The landed gentry have been considered separately be-
184 cause they belong to the neighborhood in which they reside; to the trade-center village, where they spend much of their time either visiting each other or performing some social service; and to the community as a whole. Even more than belonging to Skye, they form a part of the national class system of Britain. They are the "county families." Next

565 to the aristocracy they are among the foremost citizens of
184 the nation, and two of the local gentry are included among the nation's peerage. Although I doubt if any of these land owners can validate a claim to being direct descendants of the clan chiefs or descendants of the cadets of the clans, several of them are related in one way or another to the central derbfine of the old clans.

Occupying the highest status positions, the county families manifest many social and cultural expressions which distinguish them from the remainder of the population. The men are always given the distinction of a military title; they are major, colonel, or general. One man has not seen
565 military service, but he is given a rank anyhow. In indirect
184 speech their title often includes their residence or estate,
576 such as Col. Macleod Mulgrave or Mrs. Macleod Mulgrave. Behind their backs, they may be referred to by their first name, prefixed by the title, but never in direct speech.

565 Religiously, many tend to be Episcopal sympathizers, in
184 contrast to the staunchly Protestant crofters. The men all
795 attend the local kirk of the Church of Scotland and serve as elders of the kirk, but their outlook is quite different from that of their conservative tenants. One family is
565 Catholic. As would be expected, all are property owners.
184 This is not a question of socio-economic status as much as
423 one of social differentiation. The loss of large parts of their estates, under the pressure of debt contracted by their ancestors, has not reduced their prestige.

184 There must be enough interaction between the rela-
565 tively small number of people of similar standing within the local group and beyond if the consanguinial and affinal basis of the class is to be maintained, and they are not
582 to lose their identity as a group apart. They must not only interact with other county families, but the county families
184 must be endogamous. Once a year the county families of Skye
565 are given this needed opportunity to reaffirm their solidarity,
535 to cement their relationship with the upper class of British
584 society, and to arrange suitable matches for their sons and daughters. A Skye County Ball is held in November. The "county people" come from near and far to attend the affair, one of a series of local balls held throughout the nation. If anyone has any doubts about his acceptance among the holders of highest status, he receives his simple but explicit answer at this time. He must be invited to the ball. For three days and two nights the festivities continue. High society has come to Skye and has brought with it its caterers from Edinburgh. The local people say the "Ya-ya's" have taken over Portree.

On the first night of the ball, the young people are escorted from the homes of the Skye aristocracy, who act as hosts, or the more fashionable hotels to the Skye Gathering Hall by their parents. During the dance and the supper which follows, suitable introductions are arranged for their sons and daughters. On the second night of the ball, the young people appear in couples. If I were asked to characterize

000 the ball in a few words, I would say, it is a marriage market.

565 Social distance and class endogamy can also be demon-
582 strated by a negative approach to the question. Within recent years there have been a few cases of marriage across the social cleavage line. The results, as we shall see, show a strong drive for social exclusiveness. One of the county people married a daughter of the "new rich." Her father was a crofter's son who made a fortune as a whiskey distiller and exporter, especially during the days of prohibition in the United States. His fortune made, he returned to Skye and purchased part of the old Clan MacLeod lands. Although land ownership is a prerequisite for being included among the upper stratum, neither land nor wealth guarantees acceptance for a man from the croft. No one received the marriage of his daughter happily. The villagers and crofters
582 said it was a marriage of necessity. The young aristocrat's parents' reaction is at least partially reflected by the fact that it was one of those very rare Skye marriages which end in divorce. Until his remarriage in 1954, he was the only divorced man on Skye. In the second case, a crofter married into a county family. His wife was the daughter of one of the most prominent ministers of the Church of Scotland in the present century. Although the minister was himself the son of a school master, his high prestige status had led to his acceptance by the "first family of Skye," and his second marriage was into this family. Some of the crofters and

565 villagers say he married above his station. His daughter,
582 they believe, married below her station. Be that as it may, he disowned his daughter. He never spoke to her again. The third case involved the marriage of one of the poor, but nevertheless accepted, gentry and a crofter's daughter. He has fared differently. Rather than cast him out, his mother refused to recognize the marriage. He was forbidden to bring his wife home. To this day he continues to divide his time between his estate and his "town house," where he keeps his wife. Further, this man, who I have been told should have become chief of Clan Ranald, is no longer of the county people.

565 Among the distinctive features which overtly characterize
559 the county people is their ascribed status and role of leadership. Indeed, this is their most important function. As the tacksmen were once the counselors of their subtenants, so today the landed gentry must fill this role which the
626 Sgiathanach from the croft will not assume. Even if a Skyeman here and there feels that the local proprietors would like nothing better than to have all the people behave like serfs, bowing and scraping before them, he expects the proprietors
565 to get things done. In Portree the local gentry form the
559 village council. During the war when they were on active
623 duty, there was no village council. The Skye District Council, which replaced the old parish councils and which, acting as an agent for the County Council, is the only administrative body on the island, reveals a similar membership. In any of

565 the nine election districts where a member of the gentry is
559 resident, he is the people's choice. Otherwise, the post
666 passes to a newcomer, especially a minister, if he will accept, a non-crofter of relatively recent arrival, a returned exile, or an eccentric. The Skye delegates to the County Council are similarly elected. The village of Portree and the neighborhood of Glendale are represented by members of the county people; Kilmuir is represented by a minister of the Church of Scotland.

565 The function of the landed gentry emerges even more
559 clearly when non-political leadership is considered. We
747 may take the Skye Council of Social Service and the old People's Welfare Committee as examples. The Skye Council of Social Service is dedicated to the promotion of the "general good of the community," and the assistance of the work of statutory authorities and voluntary organizations engaged in improving education, health, and economic conditions. Although the Scottish Council of Social Service claims this is a product of the people of Skye, it was not a spontaneous development. A retired Registrar General for Scotland was responsible for the initial interest. The Scottish Council seems to have stimulated this interest by securing financial assistance in the initial stages and paying 75 percent of the annual expenses. The local organizers were county people, and their success was due in no small way to the efforts of an officer of the Department of Agriculture. Today the "visible leadership and local followership," of which the Scottish Council is wont to speak, is to be found in one clique of the

565 landed gentry. The people take relatively little part in any
559 of the activities. Most of the crofters with whom I spoke
747 had only the vaguest idea of the work or the achievements of the council, beyond the fact that the council had instituted Skye Week to attract tourists.

The Old People's Welfare Committee was established in the winter of 1953. It provides us with an excellent oppor-
523 tunity to see how things are accomplished on Skye. For several months the clique which is responsible for the Skye Council of Social Service had been thinking that Skye needed some such agency to look after the old people. At length it was decided a public meeting should be held to give the people an opportunity to decide whether or not the need was acute. Each of the county people explained the need, sided by two social workers from Edinburgh. Then, with the assistance of a local minister, the doctor, and the officer from the Department of Agriculture, who aided in establishing the Skye Council, the people were gently led around to their position. A committee of investigation was organized to inquire into the matter in more detail. About a month later a second public meeting was held for the purpose of establishing a permanent Old People's Welfare Committee. Like the initial meeting, it was proceeded by a small conference among the gentry. The decision was that Skye should have a central committee and fourteen local committees. This was unanimously accepted. Now came the problem of who would serve. The first selections were obvious; in each local area the minister, doctor, and district nurse were "elected." When it came to the question

565 of individuals to organize each committee, no one was willing
559 to accept the post without persuasion. In every case there
747 there was a resident of the county people in the general vicinity, the man or his wife was chosen. The remaining chairs went to newcomers, especially doctors and teachers or their wives, mainly by default. They were not present. No one on Skye ever overtly seeks a role of responsibility. For the central committee, it was suggested, by a newcomer, that there should be at least two Skye people over sixty to get the point of view of the people who were to be helped. When the committee was finally formed, there was not one native Skye person on it. The chairman was the wife of a local landlord; the four members were another proprietor's wife, a Lowland woman, the minister, and an Austrian woman.

At no time was a vote taken. The person who can be persuaded to accept office is always unanimously "elected." On another occasion someone had made the mistake of nominating
623 two women to fill one post. Rather than put the matter to a vote, the people present "elected" me, as a disinterested participant, to select the woman who would serve.

By the time I left the Misty Isle only one of the local committees had taken a step in the direction of organizing itself. A meeting was called in Waternish where either a returned exile or the minister was to preside. Neither of them would step forward. Again the task fell to one of the county people. She drove up from Portree to take the chair and help the people elect the members of their committee. Her journey was fruitless. Hardly anyone attended the meeting,

565 and no one thought himself capable of running a future meeting.
559 At last reports, the wife of another proprietor was having
747 her impression that "It's not as easy as it sounds just to call a public meeting in Glendale," confirmed. While the majority of the crofters thought an Old People's Welfare Committee was a good idea, they had no intention of being instrumental in its organization or in assuming any position which might elevate them above their neighbors. Throughout this chapter, the stress on conformity has been apparent, let us now turn to the problem of social control for a clearer picture of how conformity is enforced and to see how the Sgiathanach handles the deviant.

Social Control

626 Since social control is an important topic, I want to go into a further analysis of the manner in which the group influences the behavior of its members. For the sake of clarity, we must distinguish between social and political
12 control. By social control I mean the informal pressure or spontaneous action which any organized group can muster to exert an influence on its members sufficient to encourage conformity to tradition patterns of behavior. Political control, to me, involves the independent or requested interference of the state, as represented by the police, in any case which involves the enforcement and maintenance of law
671 and order as prescribed by legal enactments. On Skye the
826 laws of the land do not always have the same meaning to the

747 125 members. That the Sgiathanach has not been influenced by
747 the laxity of the newcomers in self-examination is indicated by the existence of 450 adherents. Further, the Free Church has only 21 members in a congregation of some 200, and the Free Presbyterian Church only 20 members in a congregation of 320.

The esoteric religious hierarchy established by the "Men" during the nineteenth century revivals continues to influence the lives of the people. From the small number of the "elect" are chosen the elders, the venerable guardians of behavior, and the deacons. The majority have been baptized
565 but are in a lesser condition. Shall we stretch an analogy and ask is this not comparable to the social hierarchy of ceann-cinnidh (clan chief), daoin'-uaisle (tacksmen), and clanna (clansmen) of the past? This much is certain: a strong hierarchial sense must be numbered among the persistenci
888 In our discussion of the Islanders' economy we noted
575 two significant facts concerning the sodality of the old
747 men of the neighborhoods. We saw that they have a deliberative
622 function in discussing economic innovations before they pass down to the townships, and that they are able to block any innovation of which they disapprove through the requirement of complete unaninity in township affairs. We may also recall the statement, "If you can't respect an elder of the church, who can you respect?" We may now add they have judicial and authoritarian functions in the religious sphere of activity, and, through their status within the church, they ultimately control the patterns of social behavior.

maintain their position by intermarriage, by educating their 182 571 554 565 children in England, and by interacting with people of similar status within the community and beyond.

The crofters continue to stand at the opposite pole. They seldom achieve status within their neighborhood. Upward mobility is possible only through outward mobility. Leadership fails to find expression among them in the township or the neighborhood. The rare exception is the crofter's son who becomes a [795] minister and returns to lead his people spiritually. When the [794] crofters must select a leader, from their own number, the status is accorded to an elder of the church. The elder [794] already has high status because of his advanced age and his position in the kirk. As I have said, the continued operation of primitive democracy means a minimum of authority and a maximum of equality.

The intermediate group in the social hierarchy cannot be 182 profitably used in this discussion. They are primarily newcomers, 554 565 people from the Lowlands or England, who have joined with the 167 relatively few Skyemen who have left the croft. Sufficient time has not elapsed for a class oriented structure to emerge. Then, too, they are not a numerous group. Still, status is important in the village. As in the crofting neighborhood, ministers, doctors, and teachers achieve high status through their occupation. For the remainder of the population of Portree, status depends more on personal qualities and outside activities, especially in the kirk, than on the way one may make his living.

While we are on the topic of status and ranking, let us 121 554

175 a crew member. Another family is called "cook," the
228 first job which a novice had to assume when he joined
484 the crew of a fishing boat. One of the last men to go
[551] to the east-coast fishing is about 60 now. The men
[221] came back from the fishing in time to bring in the oats,
[241] barley and potatoes, and the money was used for rent
[434] and the purchase of various foodstuffs and other goods.
[353] They usually brought enough rolls of wallpaper to cover
the stone-walled or wood-lined tigh dubh (black house)
[434] for another year. Twenty pounds were good wages for a
season. While the men were away at the fishing, the
[452] remaining members of the family lived on credit from
[571] the local shops, and depended on the good will of
their neighbors.

175 Many men joined the armed services, and were
701 especially sought after by the Navy and the Merchant
706 Service. In 1900, there were 2,500 Lewismen in the
505 Naval Reserve.

175 Around the turn of the century, until the first
228 world war and the growth of the weaving industry, the
484 girls used to "follow the fishing." "Everyone came to
[571] the boat to see you off. You could go all the way to
[435] Aberdeen for 12/6 on a special fish-worker ticket."
The girls went from the south of England to Shetland
in the far north.

of Scotland in Portree. Only one girl appeared for instruction. After the significance of her preparation had been fully explained, she declined to take the final step. She did not disagree with the minister's view that she was prepared for membership and communion, but she was afraid of what her friends in the Free Church and Free Presbyterian Church might say. She was probably wondering what the middle-aged adherents of her church might have to say, too. When the Sgiathanach takes his first Communion, in Glendale, Kilmuir, or Portree, the people must be able to look up to him.

The second exception to the age-grade requirement rules among the county people. Because of their social position in the community, which rests on the expression of their statuses, as roles, as landlords, village and neighborhood representatives and leaders, and members of the national class system, and because of their education in England, the county people attain membership in the church at an early age. Some have become elders of the church at twenty-one. To subject them to the control of the crofters would, obviously, be incompatible with their social standing. Although they are all Church of Scotland, here again religion is a reinforcing factor for the structure of the society.

Dying, the final act of living, reveals a host of traits which only receive covert expression during an individual's life. While the youth is censured for his spontaneous pleasures and the adult is criticized for his behavior, the deceased is always respected. As one woman said, "It is the one time in a person's life that the people have nothing but

parents and to Sabbath school, nor would they allow children 178
to play games in the home. Today the children of the Church 796
of Scotland people are allowed to go for a walk, read, or 857
play games. Tourists, frequently, if not always, intolerant 484
of the strict Sabbath, have no doubt contributed to this 178
relaxation of taboos. Although a further development of the 796
tourist industry would be advantageous economically, tourists are a threat not only to the Sabbath but also to the whole religious complex. They set examples which the youth are only too ready to emulate. Before the war every hotel on 485
the Island, including all in Portree, and every boarding 796
house posted notices requesting visitors to refrain from using their cars for touring on the Sabbath. In many of the guest homes the request was the equivalent of a warning of removal. Today the signs are gone. Still not content, the tourist agencies in England and the Lowlands continue to make snide remarks in their literature, suggesting "a little more tolerance is needed in certain quarters." The youth and some 178
adults of Portree now have begun to go off for a drive around 796
the island. One reason why the Sabbath is still strong in 484
Kilmuir and Glendale is that tourists are not accepted in either district.

Strict Sabbath observance distinguishes three broad 796
groups on the Island. Portree is set apart from the crofters 565
by laxity, and the county people are set apart from the [369]
crofters by using the day for visiting and having afternoon [571]
teas together. The gentry, of course, are not under the

control of the "elect" crofters. They, are the "elect," 796
and their status is independent of the control of the vener- 565 626
able old men. 554

Summary

Whereas the culture of the Sgiathanach was oriented 771
around the clan system in the remote past and was intelli- [178]
gible only by an awareness of the all-pervasive influence
of the clan, today congregational religion provides the
focus for the culture. If we are to understand the Sgiathanach, [121]
we must fathom his religion, that is, the interpretation
which he has given to Calvinism. Moreover, this highly 182
integrated and systematized aspect of his culture has pro- 771
vided the means for preserving cultural continuity. Economics
and social organization aid us in recognizing how cultural
continuity has been maintained. Religion puts at our finger
tips the how and the why.

The basic status values have held good because religion 771
has sanctioned them. The old men of the neighborhood have 554
been successful in sustaining their statuses and habits 183 626
through their position in the esoteric religious hierarchy.
By holding the father responsible for the spiritual welfare [593]
of his family, and judging a man's spiritual enlightenment
on his renunciation of mundane pleasures as well as his
knowledge of religious tenets, the elders exercise judicial
and authoritarian functions. At the same time, the status [593]
of the father within the family is strengthened. After a

a tremendous strength. There are villagers who dislike the crofters, but few would intentionally slight an old crofter's wife because it might give her something to talk about. I shall elaborate this point shortly when I come to social cont

If there had been a decrease in the frequency of interaction, the traditional norms and sanctions should have becom less common and clear. In particular, social ranking based on leadership in communal activities should have become less definite. Although anomie, as used by Homans, is an internal condition, I shall introduce a consideration of cross-group norms in order to present a clearer picture of the status system. Despite the extreme fluidity between the county peopl and the members of the intermediate social heirarchy in inform clique groups, such as the bridge club, there has been no tendency to obscure the lines of cleavage. The class structur in terms of the whole community, has remained rigid. The cour people are at the apex of the prestige status and class hiera They are, of course, members of a group which extends across the length and breadth of Great Britain. In any neighborhood where there is a member of the landed gentry resident, he is always looked to for leadership. In Glendale, a privately own neighborhood, a nearby landlord is their political spokesman. In Portree the gentry have done more than uphold social rankin based on leadership; they have created and introduced new activities in which they express their role. These are the Skye Council of Social Service, the village council, and the Old People's Welfare Committee. They may be aided by others, but their decisions are the orders to be followed. The gentry

l be called into National Service. It has become very
d to obtain a deferment. One reason is that the govern-
t believes too many have been dodging their obligation.
re was a man, for example, who applied for a deferment
his son on the ground that he was needed on the croft.
inarily the boy might have been deferred, but not when the
icer found his father was collecting unemployment compen-
ion. The most popular field for girls at eighteen is
sing. One family has sent three girls through nursing
ool. Another popular profession, for both boys and girls,
teaching. The boys who go to university take their degrees
pure science, medicine, and agriculture.

There is an interesting contrast here between the Highlands
the rest of Great Britain, especially England. In England
working men consider sending their children on to college.
Skye, the majority of those who go to the university from
local schools are from poor homes. The landed gentry send
ir children to preparatory schools in England, and most of
doctors send their sons to private schools. Somehow the
s and girls from the crofts scrape through. An additional
t I might mention is that despite the government's interest
maintaining the Highland population because, among other
sons, it is a reservoir for the armed forces, very few boys
even fewer girls voluntarily select a military career.
eed, few men have seen service with the Army or Navy. The
viously mentioned sample of the marital status of males also
ealed that only 57 of the 270 men have seen active service
units other than the Territorial Army or Home Guard. This

264 The only occasions on which it is customary to
574 someone an entire meal is at a work party, such as p
576 cutting. On such occasions the preparation of meals
[461] [476] done in an atmosphere of competition and mutual scrut
and the meals are often elaborate. At other times, t
requirements of etiquette can be minimally fulfilled
giving foods which are still relatively abundant, but
which were much more abundant when the land was culti
[262] and cows kept. Such foods are barley bread, oatcake
264 clotted sour milk, cream and fresh butter. These foo
571 are usually offered to visitors along with tea, and i
574 past this custom served to minimize the economic disp
between villagers, to spread scarce resources. A sim
[737] [431] function was served by the practice of giving part o
each catch of fish to old widows and other villagers
need of aid. Even though food is more abundant and c
today, the taking of tea, and especially food, during
visit is still very important.

173 A 50-year-old man who "married into" a croft rec
[581] [428] "I came from a family of ten children. Everyone had
leave, or marry a girl with a croft. Only the eldest
could inherit the croft." There was little room for
423 581 romanticism in the fight for scarce land among the so
of large crofter and non-crofter families. "The most

32 with the decision which they know is to be made usually
71 do not attend the meeting. Thus, apparent consensus is
46 always maintained.

Changes in the character of the township as social
32 78 boundary system are apparent in ceremonial occasions such as weddings and funerals, which will be discussed in the following pages.

14 1. Courtship and Marriage: Courtship occurred during the dark hours when the older members of a household had gone to bed. A great deal of courting was done in company. Because transportation was limited, groups of young people went together to dances; and on other nights, bands of young men would visit a house in which several girls were sleeping together, climb in through a window, and perhaps lie beside the girls, fully dressed, filling the dark with whispered jokes. Such a custom, a form of bundling, was called "night visiting" (ruith na h-oidhche); the male visitor was called caraid na h-oidhche, "companion of the night."

When couples began serious courting, they would meet outside at night, or the girl would let her bramar (sweetheart) into the house after the old people had gone to bed. A couple would never consider walking hand in hand along the road during the day. Boys and girls were seated separately in school, went around in separate

The
570 organization receives a large proportion of its funds
197 from the Scottish Education Department, whose statutory
186 duty is to foster the speaking of Gaelic in Gaelic-
[189] speaking areas. In 1970-71 a series of evening meetings were sponsored by An Comunn in Stornoway; but the serious meetings, such as readings of Gaelic poetry, were attended largely by schoolmasters.

Associations which sponsor Highland dancing and the opportunity to get together with other Gaelic speakers thrive in Glasgow, London, Toronto and Detroit, everywhere
[148] but in the Gaelic-speaking Highlands. Such associations serve important functions in situations of interaction between Gaelic speakers and members of the dominant society; they provide identity and self-defense against those who react to them as members of a lower-status minority group.

A girl who teaches Gaelic in Glasgow and comes home
535 to the island only for holidays never goes to the island
186 dances, but loves going to the dances sponsored by the
148 Lewis and Harris Society in Glasgow. All the young people from the islands come, and dance away accumulated insults in a fiery sense of belonging.

464 A girl who worked in hotels on the mainland found
197 herself speaking Gaelic with her fellow workmates who
186 came from Lewis or other Gaelic-speaking areas, although
571

464 on the island she had spoken English in school and had
197 not given much thought to which language she was speaking.
186 "I suppose it was because the other girls couldn't under-
571 stand us. They always used to mimic us, making noises like they were talking it. It was nice to be able to talk about things and not have anyone else understand, especially when they teased us so much."

197 But on the island itself, the number of persons
178 speaking Gaelic is declining; and the scope of the language,
[192] i.e., the range of situations to which it applies (as reflected in the diversity of vocabulary used), is becoming
196 more restricted. A psychological experiment in which the
191 semantic differential was used to study the organization of English and Gaelic vocabulary in the cognitive processes of Gaelic speakers suggests that Gaelic speakers are not bilingual but monolingual in particular situations (Macleod
197 1966). Gaelic is the language of hearth, home, family and
191 community. English is the language of education, the business world, and various transactions with the larger
197 society. Most Gaelic speakers spoke only Gaelic when they
871 entered school, but were required to speak only English in
191 the classroom. One islander recalls, "The first English
[176] words you learned were 'Sit' and 'Stand.' Those were the days you got strapped if you spoke any Gaelic." Children were addressed by their full English names. One of the

873 old-fashioned if you were speaking it. I wrote like that
197 in my first few papers, and my professor stroked through
185 words and asked, 'Would you say that?' We can even put in an English word now and then."

197 One result of this restriction in the scope of
186 experience in which Gaelic is used, and of the treatment of Gaelic by government bodies and voluntary associations as a rare zoo animal that must be preserved rather than allowed to change, is a decline in written creative
197 expression in Gaelic. There are perhaps three major
536 writers of Gaelic plays in Scotland, whose major battle is to be considered serious writers rather than colorful freaks or queer saints out to redeem Gaelic culture. "Once you become self-conscious about the language you speak," says one writer, "the language is dead." It has then become an artificial showpiece, a museum relic instead of a living, changing, flexible human tool.
197 Outside the village the maintenance of the Gaelic language
186 and other customs identified with "Celtic culture" occurs
571 mainly as a result of interaction between "Gaels" and "Galls" (a Gaelic word meaning outsider or foreigner), as Gaelic speakers become self-conscious of their distinctiveness and either abandon their heritage (for example, MacIver 1968) or invest in it.

197 English, no Gaelic allowed. I can beat you any time...."
191 One person observed, "People here make fun of each other
554 all the time. They're always trying to be superior, to
626 get one over the other person. Speaking English gives
578 you a feeling of superiority."
[524] If a Gaelic speaker chooses to speak English in a village situation where there are no officials present or other cues which make English-speaking appropriate, this indicates that he considers himself a cut above everyone else. "I went to help Calum pull his tractor out of the mud, and Malina was there with her husband. She was speaking English. Oh, I says to myself, lady, you're not for this place. You don't belong to this village."

In evaluating whether or not a particular woman is "snobbish," villagers may decide, "She must be; whenever I've seen her in the post office, she never speaks any Gaelic."

The sanctions against speaking English when all
197 persons present speak Gaelic indicate the effect of inter-
191 action between a socially marginal group and the dominant
554 group. The effect is to increase the emphasis on uniform
571 behavior within the marginal group. The existence of a
184 higher social stratum has diminished social differentiation
578 within the village setting. Individuals may move out of that setting and adopt the language and other forms of

197 behavior characteristic of the dominant group; but for
191 those that remain in the village, the language serves a
554 unifying function, although its form is limited in
571 diversity of elements.
184
578

184 Jokes are most humorous when told in Gaelic; and
197 conversation is punctuated with Gaelic proverbs and old
532 stories. There is a vast oral lore, expressed in Gaelic,
[522] of the village and generations of its members and their
[521] characteristics and escapades, a dense map of human events. All of these tales, proverbs and jokes have been told a
829 thousand times, but retain their unifying function. When speaking of today's children who do not go to the sheiling, a man says sadly, "They won't have our memories; this place will mean less to them than it does to us." The moor is not an empty wasteland, but a map of memories.
103 Thousands of place names are known, and behind every place
175 name is a story. The major landmarks such as mountains, lochs and headlands tend to have Norse names, from the days when the Norsemen raided and settled along the island coasts; but the smaller hillocks and fields and bends in the stream have Gaelic names, for example, Sheiling of the One Night, Field of the Slaves, Slope of the Stone
[184] Boys, Hillock of William's Sheiling. To know these place names and their histories is to participate in a distinct community, which has been made even more distinct by conti with the dominant society.

621 character traits just by virtue of his belonging to a
156 particular family; he is protected from the "out"
world even though he may have broken its rules. The
[521] village provides a colorful arena of recreation in the
[574] form of ceilidh, the character, and holidays such as
New Year's.

[78] A major system of order and meaning is provided by
194 religion, and by the opportunity to belong to a tightly-
[181] knit religious clique. Lewis is sometimes called Tir an
t-soisgeul, Land of the Scriptures, in contrast with
• 571 the decadent outer world. The male drinking fraternity
[123] constitutes a second important group. And for everyone
[521] there is the cinema of their neighbors' activities,
which are placed in a vast human calendar that includes
the behavior of many generations.

Chapter 6

THE BIBLE AND THE BOTTLE

• 571 Two of the most important networks in the village are
794 the converted members of the Free Church, and the drinking
273 fraternity of the males, especially the unmarried males
who lack the obligations of married men, and who can
therefore drink with greater freedom.

A. The Bottle

273 The word "whiskey" (or "whisky," as it is spelled in
175 Scotland) is almost synonymous with "Scotland," despite
the fact that the earliest reference to whiskey in that
country appears only in the late 15th century. The word
is derived from the Gaelic uisge beatha, "water of life,"
a translation from the Latin aqua vita.

Martin Martin (1716: 3) describes the types of liquor
made from "corn" in the Outer Hebrides as Common Usquebaugh,
Trestarig (three times distilled), and Usquebaugh-baugh
(four times distilled). He states, "...two spoonfuls of
this last Liquor is a sufficient Dose; and if any Man
exceed this, it would presently stop his Breath and
endanger his life."

273 one night of the week in which controls are imposed, by
275 the arrival of Sunday when no one is supposed to drink.
[571] The bothan was occasionally open on Friday night, and
on Monday night. ("If there's anything left from Saturday
[221] night, we finish it on Monday.") During the summer of
1971 when the days were long and filled with communal
township activities such as peat-cutting, the bothan was
open every night of the week. The bothan closed when the
man supplying it with drink suddenly died, and has not
reopened.

273 2. Functions of Drinking: If a man decides not to
• 571 participate in drinking, he is not praised for his self-
156 control or his ability to abstain; rather, people say,
"What's the matter with him that he doesn't mix?" A man
goes off to the hotel or to a bothan "for a wee nip" or
"for a pint" (the pint of beer which serves as a chaser
for glasses of straight whiskey). Both phrases are
euphemisms for the huge amount of whiskey and beer which
must be consumed if a man is to satisfy the canons of
social intercourse which obtain. A man can drink alone
or, in the company of others, drink very little only at
great social cost.

"You can't go in for a casual pint in a place like
the bothan because it's a place where people mix, and
you're bound to meet old friends you haven't seen for

273
• 571
156 a while. It would be an insult not to take a drink with
[576] them; you mustn't miss your round."

273 The usual practice when drinking with friends is
571 for one person to buy the drinks; everyone drinks
156 together, and then someone else buys the next round. To
431 drink slowly is to indicate that you intend to miss your
round. A relative who returns to the island for a holiday
usually pays for more rounds than he receives, and may
spend as much as L80 in a single week.

If a man wants more drink than his fellows, he has
several choices. He may step up the pace of drinking by
buying more rounds, which means that he is likely to pay
a larger share than the others during the evening as they
will be ready to quit before he is; or he may keep a bottle
hidden outside the room, and disappear periodically for a
private nip, after which he returns to the group.

273 As incomes have grown, excessive drinking, which was
571 once confined to a small number of occasions, has also
156 increased. In the days when money was scarce, people shared
178 with others what they had. Elaborate and relatively lavish
424 ceremonies in which all community members participated
were possible because of the contribution in labor and goods
of members of the community. The custom prevailing today is
to use the added money not to purchase more goods and services,
to travel, or in other ways that might result in both social

273 differentiation and differentiation in personal experience,
• 571 but to use it in the community, as social coin. The few
156 men who refuse to get involved in drinking episodes that
178 would deplete their available funds are called "mean"
434 and "tight-fisted."

"If I had a wish, I'd choose to live the same life all
over again, maybe a wee bit rougher. We don't get a chance
here. The poverty keeps us down. But what does it matter
to be a schoolteacher or a minister? What good does it do
you? If I have a shilling in my pocket, I've got to spend
it. I remember ten years ago, I went into town with L60
in tweed payments to buy a new stove. I met some of my
[435] pals, so I put L20 down on a L50 stove and spent the rest.
What a time we had."

"I went for a holiday on the mainland and came back
[484] with money in my pocket because it's no use drinking in a
place where you don't know people. You want a yarn."

273 Drinking occurs at night behind the gray, concrete
571 shield of the bothan or in hotels. Drinking situations
156 provide opportunities, rare in the repressive arena of the
154 village, to express emotions and ideas. These expressions
can always be retracted in the cold, sober light of day.

"I used to be an alcoholic. Now I spend most of my
weekends feeding my brother lager so he won't get the DT's.
When something good happens, I wish like hell I could get

[Page 159 is blank; text continues on p.160

273
• 571 out and celebrate. There's no other way to express
156 myself."
154

"Now that Ruaridh has stopped drinking, he's no
very interesting to talk to. He's very dull these d
He doesn't say a thing."

273 During the Communions, a sense of excitement an
571 holiday permeates the village. Among the converted
521 members of the Free Church, this feeling is expresse
794 vigorous participation in long church services and m
792 in the homes of the converted. In the rest of the vi
the unconverted men don their best suits and head for
hotel, or the bothan opens earlier in the week than u
All special occasions such as fank days or the arriva
of relatives generate excitement, which is most often
expressed, among the unconverted men, by drinking.

273 A man may propose to a woman, and the next day "
571 this rash action with impunity. When a man has been
[584] drinking, he is more likely than on other occasions t
be openly affectionate to a woman, or to express stro
feelings of friendship to his fellows. "It's the only
time when you're really happy. You can sing, tell you
life story. It's the only time when people are really
friendly. But it's a false friendship, because when y
meet someone the next day, he's not the same person.
distant, cold. You feel depressed. You want to recre
the situation, so you start drinking again."

element, the weaver, is essential to its production. In 1960 weavers receiving tweed yarns from the mills totalled about 1,500 persons, a number which held for about three years and then started dropping at a rate of about 100 a year. In 1971 the number of weavers was less than 1,000, and trends of change appeared to presage a continued dwindling of numbers. It is estimated that emigration increased during 1970-71. Men have returned to the sea, have gone to Glasgow as laborers, or have taken advantage of training courses offered by the Labor Exchange, courses that will eventually remove them from the island setting.

The instability of the industry and the fluctuation in amount of weaving work available at any given time has created an environment in which personal ties and individual maneuvering rather than a widespread adherence to impersonal rules such as equal distribution are emphasized. Strategies which involve the mobilization of kinship and neighborhood ties and involve an emphasis on personal relationships rather than the depersonalization usually associated with industry are made possible by economic factors such as the dependence of decentralized weavers on centralized mills. The watchfulness and consciousness of one's neighbors so characteristic of village life prevail. Questions about the state of

288 57 458 [521] [576] Questions about the state of "the tweed" permeate all discussions, and often constitute an initial greeting. "Have you got a tweed in the loom? How many do you have? Did you see Stickey's tweed van going into Pairc? Did you hear that Newalls has an order for about 800 pieces...?"

"The mills brought me two tweeds, and I got two in town myself. I stuck those two in the attic so that anyone who came in would be none the wiser," says one person in a whisper. Neighbors are in and out of each others' houses and loomsheds, observant and questioning, on the lookout for any indication that they have missed out on some transaction in the competition for scarce goods.

D. Weaving as Strategy

286 178 402 When weaving was done on a wooden hand loom, the weaver required a longer period of apprenticeship. Weaving was "more of an art," as some of the older weavers remember it today. Not only was the shuttle thrown back and forth by hand, but the lifting of different threads in the warp was done by manipulating four foot pedals in the correct order. Today, the 288 178 402 process of weaving is very much simplified: the weaver pushes only two foot pedals, and simply keeps an eye on

288 178 402 the automatic shuttle; all other processes have
built into the design of the Hattersley loom (cf.
Thomson 1969). In other words, weaving does not
288 463 very specialized skills and is not difficult to l
A sailor can come home and learn to weave in a sh

after having been absent from the loom for a long
[571] Neighbors substitute for each other when someone
if a tweed is "urgent." Wives help their husband
[593] young boys their fathers and uncles. Such low-le
specialization and substitutability are complemen
to crofting activities and the maintenance of nei
hood ties, and may be seen to favor continuance o
occupation of weaving.

874 286 [467] The Lews Castle College in Stornoway, establ
as a technical college in 1953 in a building that
formerly the home of Sir James Matheson, offers t
courses in weaving for adults which last for ten
and qualify a person for membership in the Weaver
Union (cf. Stornoway Gazette, March 16, 1968). T
[872] college also sends weaving instructors to all the
schools on the island to instruct young boys in t
654 286 288 rudiments of weaving. The Highlands and Islands
Development Board have in the past offered loans
grants with which to purchase looms, and governme
has protected the mills.

233 654 As these quotations bring out, the subsidy enables people to risk rearing cattle under conditions that would otherwise make success very uncertain.

476 571 5. Communalism: Despite the decline in various agricultural activities and the individuation of land use, some activities persist which require mutual aid. [484] Conditions of low geographical mobility, in which mutual watchfulness and competitive gamesmanship have developed (see section on "Social Marginality"), contribute to the strong boundedness of the township network. There is still competition over who begins an agricultural [156] [221] activity at a particular time of the year. No one wants to be so early that he stands out like an over-eager novice running risks of frost or other bad weather, but there is an element of pride in being the first to 314 harvest potatoes or bring in the peat. Almost everyone 571 cuts peat, a time-consuming and back-breaking job made 476 pleasanter with a large labor force; and every aspect of the activity--the time of cutting and bringing in, the length of time required to cut peats, the size of the peats when dry, the type of meal served to the work crew, the evenness of the final peat stack--is subject to intense scrutiny.

463 326 [874] [204] [521] One of his apprentices was his sister's son, who built another smithy not far away. "This was the center of gossip. People gathered there while he shoed horses that came from Barvas to Carloway."

444 178 A number of shops were established in Shawbost that sold clothing, cooking ware and groceries. At [494] one time they numbered six altogether. These shops also ran the first buses between the village and [479] [443] Stornoway. Gradually these businesses disappeared because of competition with larger companies. Mobile grocery vans and butcher shops and bakers began coming in the late 50's, and gradually took over the trade in large parts of the island, undercutting the local busi- 178 nesses. Income from weaving had already weakened self- 434 sufficiency derived from the intensive use of land and 571 sea and also weakened the formerly heavy reliance on 621 local ties and mutual aid. Today an army of town- 44 463 dwelling entrepreneurs and employees constitute a major 178 proportion of the traffic on the island roads. Grocers, [472] [484] fish dealers, bakers, sellers of soft drinks, garbage collectors, insurance salesmen, mobile banks, coal dealers and others extend goods and services from centralized sources to a market which has money to pay for them. The island's participation in this extensive market system is affected by its marginality to the

602 576 585 764 people will be doing the same. If they think they're close enough to be invited, they'll be annoyed if you don't include them." At funerals, relatives of the deceased to about third cousins were expected to participate.

621 602 476 571 When a population has lived in a small area for generations, a dense network of kinship develops. This fact, and the importance placed on mutual aid among fellow villagers, fostered the feeling that the network of township members, who ploughed, fished and tended cattle and sheep together, was also a network of kinsmen. "We're all the same people." "It's all one family here." Occupational and kinship spheres of social activity commingled. The importance of neighbors in contrast [539] with relatives was reflected in such proverbs as, "A neighbor close at hand is better than a relative in a distant land."

621 594 [178] [571] The nuclear family did not, according to Cohen's criteria, constitute a firmly bounded system. Then as now, women preferred the company of their "own kind," that is, the company of other women. The men worked and spent periods of recreation with other men. Children 621 596 spent about as much time in the homes of grandparents, uncles or fellow villagers as they did in their own homes. A 60-year-old woman remembers that it was a

621 571 476 A 60-year-old woman remembers that it was a common practice, when she was young, for children from large families to live for as long as six weeks with other families who were relatively better off. They would help harvest the hay or the potatoes or bring in the peat in return for food, lodging and perhaps some clothing. "They usually ate better than they did at home." The children were not necessarily relatives of the families with whom they boarded.

621 572 Strong friendship, that is, the kind of friendship associated with mobile urban life in which persons confide in each other and share secrets and build up an individual relationship based on extensive knowledge [602] of one another, was nonexistent. A "friend" was a relative, or someone who gave aid when it was needed.

621 178 572 181 Today it is sometimes said, "It used to be that your relatives were your best friends; now your best friends are better than your relatives." An old man [602] will meet another on the road and say, "I used to see more of you when you needed me." Neighbors used to [231] share sheep that were killed; now households kill and [251] consume their own sheep, and freeze the meat which they cannot use immediately. Groups that walked out together [464] to the peat to finish the job in a single day are being replaced by individual family units that can motor out 000 and do the job in stages. People prefer to give money

Despite these tendencies, an individual is still enmeshed in familial and village ties. Villagers walk in and out of each others' houses without knocking; only a "stranger" knocks. Goods such as tape recorders, binoculars and books are passed around the village; people even borrow each others' reading glasses.

Children are "borrowed" as well. They are loaned out to relatives and neighbors to run errands, or may even live with them. They are scolded as often by a neighbor or other villager as by a parent. A child might be told, "When someone (any adult) tells you to do something, you do it, no matter who that person is." The parents of one household are criticized for taking their children's side against other children and other parents. "He's teaching his children not to mix with others. One child is as good as another. They may be good one day, but they're likely to be bad the next." A child or adult who enjoys spending time by himself is still considered extremely odd. An important criterion by which someone's mental health or general personality is evaluated is whether or not he "mixes" well. It is fairly common for childless households to "adopt" a child of neighbors or relatives; that is, the child spends a great deal of time with them. They may go to the child's house to put him to bed at night, or the

632 578 to neglect crofting and to concentrate on weaving. Those who still participate in crofting activities may neglect their communal obligations, such as going out on the moor after sheep, and may prefer to harvest crops, cut peat or perform other agricultural activities independent of other villagers.

632 182 462 Despite these tendencies, certain criteria of firm boundedness are still found in the township network. All the adult males of the township, including non-crofters, are responsible for serving as officers in the township grazing committee. The committee draws up rules for the [654] organization of communal crofting activities, and applies for grants from the Crofters Commission or Department of Agriculture, for example, to build a new township fence, plant trees as shelter belts for livestock, extend a peat road, or to fence and reseed areas of moorland in "township [464] reseeding schemes" (see Chapter 2). All adult males of the township are expected to provide labor to implement such plans.

632 571 666 Township meetings, chaired by the clerk of the grazing committee, are held twice a year. A vote is taken when any decision is to be made. The vote is usually unanimous, as all discussion, argument and persuasion have occurred before the meeting, and those who disagree

fourth degree of relationship. Although the extended 621
ly is now rather amorphous compared to what it must have 571 602
a century or two ago, it is still very real to the 596
thanach. Once, perhaps, the townships and their historic 591
cedents were patrilocal settlements. Then, of course, 175
question of the availibility of land and the legality of
ivision were of small importance. Now the rigid system 591
and use enforces neo-local post-marital residence, often 127
great distance from the parents, and very often means
the younger generation must join the constant outward
ent of the population. Thus, the extended family is
m, if ever, found intact. Indeed, the only times its
rs come together as a group is at a funeral or a wedding.
ese occasions the strong patrilineal emphasis becomes ap-
t, and the fact that the individual always remains a
r of his or her family group is revealed. It is, then, a
family.

In structure the extended family includes all males and 596
es out to, and including, third cousins. The kinship 601
nology is descriptive. Excepting grandchildren, all
ives are distinguished by sex and generation. Members of
arental generation and lineal descendents of the parents
teral kin are distinguished by their relationship to the
idual's parents. Members of the grandparental and great-
parental generations and their lineal descendents are
arly distinguished. The same descriptive technique ex-
to kinsmen of the first and second descending generations.

For the remainder of the population, as a general rule, it may 554 184
be said that a person's status depends on personal qualities
rather than on occupation. This is especially true of men who
take an active part in the church. In terms of interaction,
the social hierarchy is extremely fluid. People who elsewhere 545
in Britain would be "working" or "middle" class not infrequently
join with members of the "upper" class in both formal and in-
formal social groups.[22] This underlying equalitarian pattern 57
has always characterized the interpersonal relations of Skye's
society. There is, of course, cleavage between the upper 582
level of the society and the bulk of the population; inter-
marriage is impossible.

The social life of the village revolves around the new- 571 184
comers and the landed gentry. In addition to the social 554
circles based upon age, sex, kinship, and religion, the indi-
vidual belongs to several small groups of friends and, perhaps,
a few formally organized clubs. When the native-born take
part in the formal activities they do so as participants rather
than as organizers or directors. The necessary roles of leader- 545
ship are left to the newcomers or to the landed gentry. The
latter, in particular, are responsible for community affairs,
just as the chief and his kinsmen were formerly looked to as
the leaders of the people. Occasionally, an influential new-
comer gives them able assistance. The influence of the old 888
men is not as marked in the village as in the crofting communities,

---

[22] Roy Lewis and Angus Maude, The English Middle Classes (London: Phoenix House, 1949), pp. 13-26, 87-110.

mainly because there are enough young people to form a strong age grade of their own. The more liberal outlook of the villagers is, however, tempered by the old men.

Religion

The attachment to the past embodied in the social and economic aspects of the culture carries over into the religious life of the Sgiathanach. He is a Presbyterian who continues to worship and view the world within a pattern which characterized the Scots of the sixteenth and seventeenth centuries. The doctrine and theology are derived from the teachings of Calvin as interpreted by John Knox and refined by the Covenanters of the seventeenth century. To the original ethical code a strong measure of influence from the English Puritan movement has been added. The guiding principles are still foreordination and election. The dominant motivating factor is asceticism.

One of the outstanding features of the island today is the large number of churches for such a limited population. To serve the 8,600 people there are 21 churches with ministers and 13 mission stations. A hundred years ago, when the population was almost triple the present number, there were only seven ministers on Skye. The present abundance is the outcome of a series of religious schisms of the past century. There are now four Presbyterian sects. Of all the neighborhoods on Skye, only Glendale is religiously homogeneous.

CHAPTER VI

THE ISLANDERS' SOCIETY

The Units of Social Organization

Since the Sgiathanach has consistently been more bound to his locality groups than the relatively mobile members of the main stream of Western Society, I think that we shall find a pause to review the character of the social systems which are primarily based on territoriality a valuable aid to our understanding of how cultural continuity has been preserved. By now we are all well aware of the fact that the township is the efficient economic unit. It is also a social entity. The members of each township display a consciousness of common interest, symbolized by the communal hill grazing; and their inter-personal relationships, reflecting ties of kinship and friendship, reveal a rate of interaction second only to those of the crofting family. In most of the townships, the people are related and re-related on both sides by descent and marriage. Laid out along the coast or in a fertile glen, with the cottages on the individual crofts, it has a discernible form. The township is a small cluster of five to twenty homes; approximately an equal number of garden-like farms, stretching out behind the houses; and,

342 343 351 251 273 354 571 538 178 353 342 361 178 171 343 124 178

yard and occasionally a barley-kiln in which to dry grain before malting it for home-brewed beer. A 'black mill', with its primitive horizontal water-wheel, stands apart by some burnside.

Round the circular hearth, a large company can assemble in very social fashion for talk, story and song, the meeting *together* (*ceilidh*). By the transfer of the hearth from the centre and the substitution of a gable fireplace and regular chimney, the social circle is halved, while meantime the tales of the *ceilidh* are forbidden or forgotten. Happily the bench still stands against the wall, near to the open door, through which neighbours slip in with a word of greeting to find a customary welcome.

The dwellings on the summer pastures out on the moors show great variety, illustrated in Fig. 10(B). A simple type in use is built of turf and stones, lightly roofed with turf placed on spars. A more primitive 'beehive' type (which fell out of use before 1900) was stone-built and corbelled, probably for lack of timber. And whereas the lighter type always stands by itself, the corbelled type was added to until a dozen cells formed a single mass, suggestive of ancient 'neolithic' hamlets as at Skara Brae in Orkney, described by Childe, and of the domed, corbelled huts of the ancient East.

A further type was the 'spring house' of Tolsta, NE. Lewis, in which both cattle and folk sheltered in spring a little way from the village, before going out to the more distant moor. Mr. Donald Macdonald, F.R.S.G.S., a native of Tolsta, informs me that the spring house was in use until 1936. He remembers vividly how life in the shieling restored health and colour after the winter.

621 423

pastures of machar and moor, each man had not so much a 'common interest' or duty as, individually, a 'like interest' or right. As now, each unit, whether team or individual, would tend to desire a maximum stock for itself, perhaps hoping it would have "the luck to rear" a little more than its apportioned souming, at the risk of the over-stocking which results in common loss. But though need, greed or rivalry offered temptations, morality invited careful sharing and was enforced by common interest. The chief distinction between team and township was that the tasks of the farm-team were constructive and, like that of the boat's crew, active and co-operative. It is true that in the township certain tasks were co-operative, such as the wolf scaring of old times or the fox 'hunting' or shooting on mainland moors today. The modern gathering of sheep is also done together. But no constructive effort was involved in the allotment of shares on the machar or of stock on the moor, which were—and remain—matters merely for communal control, not communal effort.

423 476 632

• 571

Now, the quality of a group alters with its quantity. The intimate cohesion of a very small group of no more than half a dozen members, diminishes with an increase in number; but increase brings a compensating gain in diversity. Ten or a dozen people tend to break up into sub-groups, whether for small jobs or to enjoy conversation. The smallness of a group limits the number of relationships; an increase in number multiplies sub-groups, and life is enriched. After living long with fewer than half a dozen acquaintances, the same subjects keep cropping up in talk, the same tales are re-told, too often, and people cannot get away from one another's idiosyncrasies! A very small addition turns the scale by renewing variety. Here lay the social value of a township and neighbourhood,

621 476 632

101 621 68 365 465 164

hinterland with the outside world, Portree is a center fo tourists during the summer. Due to the people's dependen on tourism and also the presence of newcomers, the villag participate in a number of social activities which are no tolerated elsewhere on the island because of religious as cism.

Glendale and Kilmuir are crofting communities, each

476

a population of about 300. All, except the ministers and school teachers, are dependent on the breeding of cattle sheep and the growing of a limited amount of grain, potat

47

and hay for all or a large part of their livelihood. All bilingual, speaking Gaelic and English. Neither communit

47 31

has a village nucleus, but both have an economic focus. G has a cooperative farm, and Kilmuir has a drained loch wh has been divided among the small farmers. The significan

42 164

differences between them are three. The Glendale people land owners. In this respect they are rather unique in t

42

Highlands. The Kilmuir residents, like most Highlanders, their crofts. The second difference is religious. Glend

79 18

is religiously homogeneous while Kilmuir includes church- of three Presbyterian sects. Finally, no formal social activities other than an annual meeting of the share-hold in the farm is allowed in Glendale, but Kilmuir has a clu organization for the men who gather for lectures and disc of economic problems.

• 57

221 rams are put out in November, the pace becomes slower, the
231 main job being the feeding of cattle.

434 The economy is neither a subsistence nor a self-sufficient economy for the majority. All but a few large crofters have to supplement their income from the croft with some form of outside employment or independent source of income, for ex-
427 ample, contributions from a child or a pension. For many the
361 croft is no more than a home. For an aged person, it provides a means of living cheaply. The rent, which is fixed by law,
427 is only nominal, and the taxes are negligible. There is more to
571 crofting than simple economic considerations. Indeed, if it
361 were only a matter of economy, the system would have been
[554] abandoned long ago. It is a way of life in which the individual finds meaningful patterns of interaction and an ascribed status compatible with his aspirations. The land is more than a potential source of income. It is the ancestral home. The tie to the land is an expression of the sentimental bond of kinship.[12] Many, perhaps the majority, have spent a good part of their lives in other parts of the world working for a wage and looking forward to the day they might return to the Misty Isle. Although only the Glendale crofters are land owners, the law has given the tenants complete security of tenure and the right to bequeath the croft to a member of their family. Thus, they can return to their township and find solidarity.

---

[12]Cf. Ibid., pp. 64, 81.

committee, a legal requirement, these individuals lack 621
authority. They are figureheads whose primary function is 632
to advise the government of the decisions reached by all the 554
crofters who share in the grazing and to regulate the use of 624
the land by self-imposed rights. In townships where the sheep are owned as club stock the clerk serves to distribute the profits from the sale of stock, and he may also keep a tally of the individuals who are entitled to payment for labor in townships where money has replaced customary reciprocity. In any cooperative venture beyond the family level, there is no one who can step forward to act as a foreman. The assumption of this role would upset the basic status equality of the crofters, unless the person wishes to be regarded as an eccentric.

The Crofting Neighborhood. The crofting neighborhood con- 621
sists of an aggregate of individuals and nuclear families 632
who dwell in several townships, standing in close spatial 571
proximity. It is, therefore, natural that the ties of common residence and kinship should continue to operate. The important distinguishing features between the township and the larger social entity are two: (1) cooperation in agricultural and pastoral activities is replaced by mutual aid, and (2) there is a greater wealth of formal and informal interpersonal activities in which the people associate.

There are invariably established social circles within 621
which the individuals habitually move. One always consists 571
of the individual's kinsmen, "his people," his family of 602
orientation, and "his close friends," all other relatives within the fourth degree of relationship.

361 above the settled area, the hill. In its spatial existence, the township is normally bounded at either extremity by one or more similar clusters of homes and patches of land.

621 571 As it exists in space, so it exists in time. Allowing for the removal of the population during the "Clearances" and for a certain amount of arbitrariness on the part of the government commissioners responsible for replanning during the past fifty odd years, the majority of the townships are decended from the old farms on which the clansmen lived as tenants and subtenants. On the rent rolls and in local traditions, the townships bear the names of these long forgotten farms. The functions of the township include the provision of a means of livelihood and systematic arrangement of social relationships. Both functions are made possible by the formal structure and are facilitated by the informal organization of the members.

The next significant social unit is the neighborhood. This is not the neighborhood of current American sociological and anthropological usage; it is the Old World open country neighborhood. As such, it corresponds to Murdock's community, "the maximal group of persons who normally reside together in face to face association,"[1] and differs from MacIver's definition of neighborhood, "the first grouping beyond the family which has social significance and which is conscious of some local unity."[2] MacIver's simplest community, as he

[1]George P. Murdock, Social Structure (New York: The MacMillan Co., 1949), p. 79.

[2]Robert M. MacIver, Society: A Textbook of Sociology (New York: Farrar and Rhinehart, Inc., 1937), p. 148.

621 571 calls it, is my township. Nevertheless, since I share Kroeber's feeling toward the free coinage of terminology,[3] I shall not look for a new word.[4] The neighborhood on Skye is a collection of townships which are separated from surrounding clusters by 361 topographical features. Along the coastal plains and up the glens stretch the crofts, some parallel to each other, like the French line village, and others spread out in the checker board form of the true British open county neighborhood. Scattered among the crofts, one finds one or two shops, a few workshops, and a post office. The focal point for the members is provided by the church, or a pair of churches, and the school, which more often than not stand together. There is no other nucleus of community buildings which even approximate a village center.

621 571 Social factors as well as geographical features play their role in determining the extent of the neighborhood. It has been suggested that the upper limit for the size of a group is determined by the prevalent form of their economy which limits the possibility of forming close contacts with habitual attitudes.[5] Although the neighborhoods and the component townships contained many more people a hundred years ago than they do today, all are now within the maximal figures suggested by Linton and Murdock for agricultural pastoralists, 350 and

[3]Kroeber, Anthropology, p. 261.

[4]I suppose Murdock's "deme" would be an acceptable substitute (op. cit., p. 63). Arensberg has used Einzelhof to describe the Irish pattern (The Irish Countryman, p. 43)

[5]Murdock, op. cit., p. 81; and Ralph Linton, The Study of Man, p. 218.

621 571 450 respectively.[6]

Unlike the township, the neighborhood typically has no formal organization and is not necessarily a cooperating, 621 economic unit. Always, of course, there is a consciousness 571 186 of common interest. In the case of Glendale this is spiritually symbolized by the church and economically, by the large club 368 farm in which all the owner-occupiers have a share. In Kilmuir there are two churches, standing close together, and the crofters have a common economic focus in the drained loch which all use in equal shares for meadowland. There is also a crofters' club. Further symbolization of their common interest is provided by traditions, memories of notable personages and events peculiar to themselves. Always, the consciousness of common interest is expressed by a feeling of superiority over the members of other neighborhoods.

361 There is but one trade-center village on the island, the village of Portree.[7] It is the only true nucleated settlement. Built on the square, but still retaining the appearance of an overgrown hamlet, it is a small grouping of non-agricultural dwellings, government offices, churches, shops, a school, and the homes of those who make their living by serving the 621 rural areas. In addition to its function of providing goods and services for the surrounding neighborhoods, it also links the island with the outside world. Although thirty-six miles from the mainland, it is the entry port for the government officials,

[6]Murdock, loc. cit.; and Linton, loc. cit.

[7]For a discussion of the importance of the trade-center village, see Loomis and Beegle, Rural Social Systems, pp. 188-197.

as an eccentric. Included among these norms is a willingness to satisfy the curiosity of one's neighbors. Although the old woman who acts in mysterious ways is no longer regarded as a witch, two of the loneliest people I knew on Skye were two old spinsters who had kept their past concealed. No one in the township would have anything to do with them. Were it not for periodic visits by the local Red Cross, they could have died and hardly been missed.

This status equality for all of the same sex and age grade leaves no room for the status and role of a leader.[15] Occasionally, an individual fancies himself as a self-elected leader, but he is always resented by the remainder of the township and his neighbors do not hesitate to show their displeasure. As an eccentric, he is dubbed with a cynical title, such as "the sheriff." If he can keep himself immune to the taunts and jibes of the people, he is accepted in time or, rather, comes to be tolerated. He gives the people something to talk about. The aspiring leader becomes the subject of numerous jokes. Any human failing he displays is immediately taken as a means to censure him. These are negative social sanctions less drastic than ostracism. I only knew one of these self-styled leaders. He was a well traveled man and a walking encycleopedia of miscellaneous facts. Walking the hill with him, I was told how Boston compared with Glasgow; how the British fought the Crimean War; how the money they received from the Turks helped Skye during the potato famine; and how the

[15]Cf. Darling and Morley, "The Social Situation," The West Highland Survey, pt. VI, pp. 24-25.

during the "Clearences."

Strong in-group feeling is manifested not only in a belief that people of other neighborhoods are not quite as good somehow, but also by the tendency to withhold social acceptance. There is, for example, a family of newcomers in Kilmuir. One day when they were being discussed one old crofter remarked, "Well, when they have been here as long as Jock over there, they will be just like one of us." It turned out that Jock's family had come to Kilmuir three generations ago. More than once I was reminded of the story of the Yorkshire man who moved from one village to another. He persisted in calling everybody a foreigner, and when asked why, he replied, "I've lived here sixty years, and they still call me a foreigner." The newcomer to Skye is known only by his nationality. The few Polish war refugees are "the Poles." The man from England is "the Englishman" or, in Gaelic, Sassanach, a term also applied to Lowlanders. They have no real place in the scheme of things.

Within the neighborhood, there are invariably established social circles within which the people habitually move. These cliques take several forms on Skye,[16] as in most cultures, and cross cut each other as well as the townships. The most important clique consists of "my people and friends," the individual's kinsmen. The Sgiathanach carefully distinguishes between his "family," his wife and children; his "people,"

[16]Although I consider "clique" to be an unfortunate choice of terms, because it has unfavorable connotations in the lay mind, it has been introduced into the vocatulary of the social sciences; see, e.g., Steward, Area Research, pp. 40, 49; Murdock, op. cit., p. 88; Loomis and Beegle, op. cit., p. 135.

his parents, brothers, and sisters; and his "friends," his m
remote kinsmen.[17]

The Extended Family. I regret to say that I am unable to pr
a complete picture of the functioning of the extended family.
In view of what I have already said about instability in the
nuclear family, it should not surprise the reader to learn tha
I could not uncover even the approximation of an extended fa
Too many absent relatives thwarted my investigation. I do n
however, regard this omission as a serious handicap. After
we know almost nothing about the rights and responsibilities
of the individual members of the derbfine during the clan da

The important fact for my study of cultural continuity is that the derbfine is still a reality in the minds of the people.[18] The fact that the extended family today is as much a four generation group as the derbfine was brought home to me early in the study by a casual remark by an officer of the Department of Agriculture. "I don't understand these people," he said, "they'll tell you they're not related to someone, an then you find out they're fourth cousins." What this means is the people commonly distinguish only near cousins (first cousins) and cousins (second and third cousins) in English. I always took a great deal of persuasion to get a person to say a "friend" was a distant cousin.

This distinction is drawn even finer in the Gaelic.

[17]Cf. Arensberg and Kimball, op. cit., pp. 79-80

[18]Cf. Ibid., pp. 79-90.

000 return to their own homes at night. There is now less
796 need for the generalized hospitality of the past, which
794 was given to anyone who came to the door looking for food
829 and shelter. Through these visits some families in
571 different villages have, however, established relation-
574 ships which are kept up by exchanging hospitality at times of Communion and also in other ways. A family in
262 Ness may send to a friendly family in Shawbost some guga,
251 goalings of solan geese which are captured by Nessmen on the island of Rona once a year and are salted to make a delicacy that is in great demand. Through such contacts a family wanting to purchase a cow may receive word of one that is being offered for sale in the village of a Communion contact.

796 Services of Communion last five days. All services except that held on Sunday evening are intended for the communicants or full members of the church, also called
535 "the believers" and "good livers." During this time, no
485 dances are held in Shawbost, and in Carloway the hotel is closed.

796 On Communion Sunday, the upper balcony of the church
794 is filled with villagers watching to see if any of the
829 recently converted have decided and have been allowed to take Communion. Because the villagers watch very closely the behavior of everyone else within the village, any change

781 153 "It was the Monday after the Communions, about midnight. I was lying in bed not thinking about anything in particular. Then all of a sudden I felt God speaking to me. It was the strangest feeling, like I didn't feel safe. With each tick of the clock, time was running out, the world was rushing to its end.

"Four days I was like that, dazed and uncertain, not feeling safe. I was sitting down, unable to work. I didn't know what I was doing most of the time. Then all of a sudden I had a vision, of Christ on the cross who died for us. I had been praying to God and here was my answer, trust in the Lord Jesus Christ. God does everything for you. He makes you breathe, lifts your lungs in and out, makes your blood flow. Everything is in the Bible, every event in 1970. Once I realized that, I could take the days as they came, from one day to the next. We came bare into this world, and we leave it bare; but I'm certain of one thing, that we go with Jesus into heaven after death, and no one can talk me out of that."

781 571 Although conversion is supposedly an individual matter, and one's fate is thought to be pre-determined, conversion often occurs among many persons at the same time. "It's like a chain of fireworks. Once one person goes, the rest go, too." Through the dense network of social contacts that criss-crosses the island, villagers are aware of

781 conversions that take place in other villages. "Five
• 571 persons converted recently in Lochs. Two used to drink
a lot, they're saying." Sometimes mass conversions occur,
[786] called "revivals," during which people shout, chant,
speak in tongues, and sometimes collapse.

794 Although strict observance of religious practices
829 must be maintained by the converted while they are on the
island, it is possible for them to relax this observance
when they visit mainland cities. The converted see nothing
wrong with attending plays or movies in Glasgow, as long
as no one observes them. A non-believer once commented
wrly, "They believe in the 11th commandment: thou shallt
not be seen." Women who have spent many years in domestic
service on the mainland, where they generally live very
different sorts of lives from those of island people, often
return to the island to retire. They then take up the
[292] color of their surroundings. The long black dress then
becomes the appropriate garb for them on Sundays. As one
person observed, "Women deposit their curam in the Left
Luggage Department at Stornoway, and pick it up fifty years
later."

779 The beliefs of the Free Church include explanations
for all events. "Everything of importance that happened
in history is recorded in the Bible." Predestination lies
behind all unexpected events; a sense of fatalism dulls

THE CROFTER

241 The pursuit of agricultural processes, their growth, development
and improvement, to establish a foundation for a secure society
has never been easy on the island. The unyielding nature of the
[135] base rock, Archaean gneiss, its hardness, its non-porous property,
have all contributed to the resultant pattern and character of
society which emerged. Though one is tempted to define crofting
as an agricultural activity, it is also something much more intan-
[113] gible: a way of life. To quote the Napier Report on *The condition
of the crofters and cottars in the Highlands and Islands of Scot-
land* (1884): 'Habit and local affection bear so great a sway in
[181] the actions of mankind, that Highlanders will be found who would
rather be proprietors in the mountains of Skye, or the wastes of
Lewis, than on the fertile plains of Manitoba.' 'There is the
Island of Lewis, with poor, peaty soil covering the Archaean
gneiss, but with a crowded, lively, vivid community,' said the
Taylor commision in 1955 (Commission of Inquiry into Crofting
Holdings).

The Highland crofter is the subject of an extensive literature.
[657] A special authority, the Crofters Commission, exists solely for
the purpose of caring for his needs. He has special rights and
privileges which are safeguarded by the Land Court. Crofters'
unions have formed themselves into a strong federated wall for the
system's defence.

241 Socially, the term 'crofter' means, on the island at any rate, a
423 landholder who cultivates his own (arable) holding, his croft. He
233 shares the common pastures with his fellow-crofters, each of whom
has a right to carry a sum of so much stock, the 'souming'. These
• [571] common pastures or grazings are a social link of some consider-
[632] able significance, forming the basis for the crofting township, as
[621] distinct from the communities set up under the influence of some
agricultural land use such as hamlet or village, where there are
both small-holders and true farms, and the only communal land
is the village green or common. For instance, outside the crofting
counties area the main unit of Scots life in the country is the
farm, with its tied cottages. Then come the full-time small-hold-
ings important in the north-east and the southern Highlands.

SOCIAL LIFE

In common with other aspects of island life, the social side has undergone considerable change. The world has been brought nearer the crofter's home by radio, television and film screen, reducing the social need for meeting with neighbours and friends for the ceilidh. The ceilidh was once the principal means of recreation and instruction. There is no precise English equivalent for it, and it may be loosely described as an 'at home' to which all are welcome. It may be held in any house; in the past, the favourite resort was a home where the head (*fear an tigh*—man of the house) was an intelligent, communicative man; and if he had a number of eligible daughters so much the better. Ceilidhean were held after nightfall. Old tales were told, and songs sung, and public questions of the day were discussed. All women attending took with them an ample amount of work, sewing or knitting, to see them through the evening. Ceilidhean nowadays tend to be more organised, taking the form of popular 'concerts' which did not take root in the island until the turn of the century, though they were a common way of entertainment on the mainland at the time. Social life in the past was thus very intense, and was a natural evolution from the basic desire to forget the day's work and to have some pleasure of a kind.

The pattern of recreation facilities has since become fairly varied. Films came early to Lewis, or rather Stornoway; the first Picture House was located in Keith Street, and presented both films and stage turns. A new Playhouse was opened in 1934 with *The Good Companions* and *Falling for You*, starring Jack Hulbert and Cicely Courtnedge. Films in the rural districts were a rarity, however, until in 1946 the Highlands & Islands Film Guild came into existence to bring the magic of the screen to scattered communities. This body ran several mobile cinema outfits in the deep crofting areas, until the advent of television in the region killed it off in 1971. While it existed, however, the Guild provided an essential service to remote communities and brought not only the world to their doorstep but ensured that they felt part and parcel of a much larger scheme of things.

The first television service in Lewis began in 1959, 'piped' by

and clothing, firing and shelter produced met local needs. Further questions of early economy belong to Part Two, as do those of the festivals by which the seasons were initiated and closed, along with the phases of human life.

A century later (as indicated in the lower graph), agricultural tasks were much the same, but the character of fishing had altered greatly. Herring fishing was at its height in the Island for some fifteen years, or half a generation, before 1914; but it never recovered from the difficulties of the war and after-war periods. The curves of the summer, autumn and winter fishing indicate the 'full-time' activity of summer, and the 'part-time' work of early winter. Not only the men, but the women participated, the women being employed in gutting and kippering. Boats and men fished further afield. Women were employed in gutting in early summer in the Scots East Coast fishing, which preceded that of the West Coast and was followed by the East Anglian autumn fishing. Some line-fishing continued locally in summer, but it has now almost ceased. The building and repair of roads increased after the middle of the century. The carting of peats, stacked by the roadsides, lessened 'creeling'; but it is particularly haulage by lorry which has replaced carrying by the creel, so lightening women's labour.

Indoors, primitive crafts tended to be superseded as machine-made articles replaced those of native material and manufacture; but the *ceilidh* ('*cailey*'), the meeting 'together', continued, though the arts of song and poetic improvisation declined. In Harris the women had woven and spun for centuries and have continued to do so for home use and sale; in Lewis the women gave up weaving in the last century, few spinning since then and none weaving. Thirty years ago only an occasional weaver, always a man, could be

r than Christianity is the prevailing practice in Glendale." 795 [798]
attachment to a sect is all the more significant in the
ing neighborhoods because there is not one iota of differ-
in the Gaelic services in any church. The difference is
inal.

In the neighborhood the affiliates of the same church 571 794
been said to interact with their fellows more regularly 795
with the remainder of the group. They come together on 796
Sabbath for a regular service and on Wednesday night
a prayer meeting. On the Sabbath they come as families, [593]
and, wife and children and they sit together. Normally [562]
sexes are segregated in public. Indeed, in the home [574]
keep to one side of the fire and women to the other when
e are callers. They also leave in family groups. Their
raction is spiritual. There are no gatherings outside
church either before or after the service to gossip,
uss the stock, or even comment on the weather. They
all know who was absent, but they will only greet their
ows with a slight nod. The Wednesday night prayer
ing is different. This is a group situation. Some come
us and gossip on the way. Others get together before
after the service for a chat. At these prayer meetings [554]
stature of the "elect" again emerges. They offer the [888]
ors on behalf of the congregation. The prayers, it should [782]
ted, are extempore. No form is followed. The basis for
are passages from Scripture and interpretations of the
ages.

There is another aspect to the prayer meetings. They 796
are no longer held in the Church of Scotland in Portree. 795
The ministers of the other sects say this is an indication 794
of the low degree of spiritual enlightenment among that 369
congregation. Further, Wednesday night is picture night in
the village. The newcomers taunt the devout with, "off to
the pictures?"

It is at these Wednesday night meetings that the people 554
get to know one another. They participate in the worship 571
through the eminent "Men," who in a society such as Skye 796
where almost everybody is related on one side of the family 794
or the other by some bond of consanguinity or affinity, are [602]
the "people" or "friends" of the worshippers. This custom of
offering extempore prayers not only augments the prestige of
the "elect" but it intensifies the unity of the group and
makes them secure in the knowledge that they belong. This
feeling of unity and the sense of belonging is further
strengthened in some churches by setting aside a day of
Humiliation. Services are held during which the congregation [782]
as a group beseech God for forgiveness for the poor spiritual
condition of the world. In their minds the God of this world
is surely the Prince of Darkness.

But for the interaction of the members of the several 794
sects, the control of the "elect" would not be as strong as 795
it is. The elders of one kirk cannot exercise any direct 626
control over the adherents of another sect. Through what
agency could they express their judicial and authoritarian

functions? Certainly not the kirk session. But since they 7
share a common tradition, which is reinforced by interaction
and mutual respect, the elders impose more or less common
standards. The norms are the by-product of the history of
Skye. If there was cleavage, might not the behavior of the
people begin to diverge? In Kilmuir there are three sects.
Two of them have churches. The Church of Scotland is in the
majority. The Free Presbyterians are a definite minority;
I think there is only one family of them. Although several
ministers of the Church of Scotland have begun to follow
the example of the national church elsewhere in Scotland and
celebrate Christmas, at least on an appropriate Sunday,
there is no Christmas in Kilmuir any more than there is in
Glendale. The custom is said to be "popish." Naturally,
if the birth of Christ is not celebrated, his rebirth cannot
be commemorated at Easter. All churches, on the other hand,
celebrate New Years, which is also the traditional time to
exchange gifts among members of the family. It is a time
of license. After midnight the people of the townships 7
practice "first footing." Until early in the morning, the [2
people make their rounds exchanging visits and toasting one
another and the New Year with whiskey, for the men, and wine,
for the women. The people of Kilmuir are noted for their
inter-relationships. "You have to watch what you say up
there," I was told, "they're all relatives and friends of
each other."

The situation in Portree for the Sgiathanach is much the

same as in the crofting areas. When a young girl presented 794
herself for instruction in the significance and meaning of 796
church membership, preparatory to her acceptance of Communion, 369 626
she refused to take the final step not because of any personal religious problem, but rather because such a step would upset her normal associations. What her Free Church and Free Presbyterian friends would say was her main concern. Who was she to become an "elect" member? Here, then, is the answer to how the elders of the other sects are able to control behavior of the larger group, through the fear of gossip as a negative social sanction and, perhaps, rejection.

The semi-annual Communion celebrations are rites of 794
intensification par excellence. Although some churches 796
celebrate only one commemoration of the sacrament, and it may be as early as February or as late as November, the months from late April until early September, are commonly referred to as the "Communion Season." The activities of the people during this period cast additional light on the influence of religion in ordering social relationships. While [573] [571]
clique membership based on sectarian affiliation is a secondary factor in determining the patterns of interaction in the extended family in the local group, it is very important in determining one's wider relationships, the relationships between the neighborhoods and between the Sgiathanach and the mainland Highlander.

Within living memory thousands used to come to the 178
Communion celebrations from all parts of Skye and many nearby 794 796

mainland villages and crofting areas. Ministers from 178
neighboring and even distant churches used to come to take 794 796
part in conducting the services. There was no church to hold so many people, so the Communion was celebrated outside. Then, of course, the population was much larger and the majority belonged to one church, the Free Church.

The Communion Season is still marked by large gatherings 794
of people at each church in turn. The "elect" from the 796
neighboring churches and the ministers from churches near and far exchange visits. The adherents also participate in the celebration of the Lord's Supper. From Thursday until 794
Monday the homes of the people in the vicinity are open to 796 574
their relatives and friends who have come to partake of the sacrament or who find the highly emotional atmosphere and gregariousness stimulating. Some, especially the "elect" stay for the five days. Others will spend one or more nights. During the day and in the evening, whenever they are not [571]
attending religious services, they visit their "people" and "friends" to renew ties which in many cases have been allowed to languish since the last Communion. Thus, we find religion [182]
sanctioning the time-honored custom of Highland hospitality. It is interesting to note that many a woman who depends on [485]
the tourist trade for a good share of her income will not accept paying guests at this time. The local people have a further 794
share in extending hospitality to their visitors. All who 796 574
are able send food to the manse (parsonage) to lessen the 793
burden on the minister who extends hospitality to the visiting clergy and as many of the laity as he can. This

help without an expectation of payment. Nevertheless, 794
ous donations of food and casual visits make sure that 573
f their number becomes absolutely destitute. In Glendale
eligious clique merges with the person's "people and
s." Kilmuir has two religious cliques.

We have had ample opportunity to examine the age-grades 561
e's society and in the next chapter we shall have a
look at the functions of the age-grades, especially
f the old men. One of the most important weaknesses 857
social structure, in my mind, is the lack of age mates 883
ildren and adolescents. They find it difficult, almost 561
ible, to come together as a sodality. In Kilmuir, for
e, there are only fifteen boys under twenty in an area
square miles. A youth is anyone under forty. Of the [162]
population 60 percent are over fifty. For this reason 561
mportant age grade clique tends to merge with the re- 794
s social circle. The situation is much the same in
le. There the age-grade and kinship groups are inter-
with the kirk congregation.

Equality within the Neighborhood. The fundamental 621
equality which we found for the crofters within the 534 571
p carries over to the neighborhood, but, as would be
d, there is often a need for leadership in this larger
Let us look at the two neighborhoods which I know best
light on the methods employed in the self-election of
r and the means of expressing leadership as a role.
has a Crofters' Club, which was originally formed by 573

her brothers and their wives came to visit, and at New Years they came by with their bottle of wine, whiskey being a man's drink, to toast the New Year. 576 795 273 562

Excepting Glendale, where church membership and affiliation is synonymous with the neighborhood, the township may contain affiliates of two or three churches. One small township contains two Free Church families, two Free Presbyterian families, and one Church of Scotland family. As in any township, they visit one another and cooperate in handling the sheep flocks. Further, the Church of Scotland family often gets out the truck on the Sabbath and drives everyone to Church. This is one of those isolated townships far off the beaten track. Although I certainly agree that people who meet together at a church and pray together get to know each other better because of their religious unity, in this township the families have come to know each other better because they go off to their respective churches together. There is a firm, basic belief among the people that no one should be slighted, even by a minister, because he has differing religious sympathies. Were this not so, think of the position in which I would have found myself. One Free Presbyterian family put it this way, "Who can tell which church is the right one since they all claim to be on top of the pole? Maybe they all are and everyone will get to his final resting place." The "all" was later qualified to exclude Catholics. One of the gentry told me an amusing story on this point. One day during the 621 795 571 795 829 798

794 thanksgiving service. The visiting ministers, the "elect,"
794 and the adherents go their own separate ways. They have spent
five days in intense, emotional spiritual communion and they
carry away with them definite, vivid remembrances. Many of
them will meet again in a few weeks when they will exchange
[571] the roles of guests and hosts. The reciprocal nature in all
interpersonal activity on Skye is well developed. In many
ways, the Communion season parallels the Welsh Song Festivals.[18]

794 We noted earlier in our discussion of the Communion
794 season that there has been a decline in the number who attend
178 the Communions. I should like to add a few general consider-
ation to what I have already said on this point. Aside from
the influence of depopulation, there have been several influ-
ential factors in operation. The smaller attendance is
traceable to some extent to an almost imperceptible movement
by the youth away from the more conservative denominations.
The ever-increasing necessity of working for a wage, es-
pecially since most employment opportunities are in summer time
programs, is another cause. This factor is not, however,
important within the local kirk district because most ad-
herents and all the "elect" who work take a vacation in order
to attend. It does mean that visitors may only be able to
attend on the Sabbath.

179 The custom of visiting has almost disappeared in some
794 churches, including the Church of Scotland in Portree where
794 the fellowship meeting is no longer significant because the
369
574

[18] Rees, op. cit., pp. 129-130.

The man who seeks sensory pleasures and finds enjoyment in 785
mundane recreation is believed to be spiritually un- 779
enlightened. It seems almost an anticlimax to add that
social life is restricted.

Beyond the Highlands and, indeed, within the Highlands 771
in certain prosperous areas, where poverty has not been 883
a factor of such importance that it requires religious 571
sanction, the Church of Scotland has endeavored to find
room within the church for recreational activities, es-
pecially for the youth. As in America, the church feels
a responsibility to the youth which requires a combination
of religion and recreation if the citizens of the community
are to be well-rounded adults. Youth programs and youth
clubs, young adult groups, and social circles for the older
men and women are an essential part of church work. In 794
an organizational sense, the Church of Scotland on Skye 571
has, at the most, a Woman's Guild which meets once a month
to hear a lecture on a topic such as missionary work in
India, and which holds an occasional sale of work to reduce
the church debt or buy the minister an electric tea kettle
to keep in his vestry; and a choir, which meets once a week
for rehearsal. It is, as I have said before, not the over-
all policy of the church which determines the activities
in which the people participate or which they reject. The 888
elders are the prime movers. Were the youth in Kilmuir 561
anyone under thirty, instead of anyone under forty, the 626
control of the aged might not be as strong as it is. In

is a sin but because of the excessive drinking and immorality 785
which might result from a promiscuous gathering. Organized 795
dances are, in general, not objectionable. Nevertheless, in [535]
spite of the attitudes of the people to these secular activities,
the Church of Scotland crofter behaves in much the same way as
his neighbor who adheres to another sect. The elders of the [888]
other sects have an influence over everyone in the neighborhood. [554]
Every man must ask himself, "What will my neighbors say?"

The Free Church and Free Presbyterian Church people 785
condemn any and all social gatherings where songs, stories, 795
or other diversions are admitted. When people visit, they 571
are expected to remain circumspect in behavior. They may 574
discuss their problems and gossip about their neighbors or the
wicked newcomers. They may engage in cooperative or individual
work. They may eat together in the home. They may not engage [769]
in such activities outside the home. Religion on Skye for 785
the majority has centered attention on the home. Let us look 795
at some of the activities which are condemned. There is the 575
Women's Rural Institute, an organized woman's club dedicated
to stimulating home industries in rural areas and providing
educational programs, especially demonstrations and lectures
on domestic arts. One meeting, for example, at Uig, not far
from Kilmuir, was addressed by a school teacher on the subject
of Highland Folklore. He was followed by a knitting contest
and tea. Youth Clubs and Young Farmers Clubs do not exist,
except in Kilmuir where the Young Farmers Club is under the
Crofters' Club, and, of course, in Portree. Village halls
are dens of iniquity. While we were on Skye one was built

at Skeabost. A minister drove by one day and said to the 785
workmen, "Don't you know you're building a house for the Devil?" 795
One of the laborers, a Lowlander, replied, "It's a good thing 575
we have a place to keep him." The Order of the Eastern Star
and the Masons are condemned because, while they are religious,
they are secret orders. Even if the person's religion did not
stand in the way of his becoming a Mason, his distrust of
mystery probably would. As one young fellow said one night in
the bar when being chaffed about the Masons, "I'm not going
to join any secret organization until I know what the secret is."

Included among the objectionable activities by these two 785
churches are the traditional Highland Games, held each year 795
at Portree in August, probably about the time of the old Saint's 541
Fair. The day is a school holiday. Aside from New Years, it
is the big occasion of the year. People come in from all
over the Island. Few of the Skyemen actively take part in [526]
the contests of tossing the caber and throwing the stone, or
in the piping and dancing competitions, but they look forward
to the event. It gives them an opportunity to see their [571]
"friends" and join them in the pub for a dram. Although the [793]
ministers disapprove, they lack the backing of the "elect," so
the games go on each year. I hasten to add that they have
lost much of their appeal in recent years, but I am told that
this is due to the fact that the clique who runs the Skye
Council of Social Service has, in an effort to attract tourists
early in the season, set up Skye Week in May. Included in
the Skye Week program are Highland Games. I might also add

contrast the friendly and homely atmosphere of the English 275
"pub" with the austerity of the public bar on Skye. The same 185
man who went into the "Coach and Four" to play a game of
darts and sing a few songs over his pint of beer goes down
to the local hotel bar on Skye to toss off his dram, follow
it with a pint of beer, and chaff his neighbors. "There is
nothing else to do." Skye exiles in Glasgow, and not only 275
the youngest of them, often complain about the lack of 167
opportunity for social intercourse at home. What they really 571
mean is that "there is nothing else to do" unless they do
not care about the reaction of their "people and friends."
Moreover, they may want to return some day to stay, and,
then, they will have to face the judgment of the old men in
their neighborhood.

Another contrast of the Welsh and the Sgiathanach can 525
be found in their respective attitudes towards gambling.
Traditionally, both enjoyed forms of recreation in which
competition plays a major part, but the Welshman today does
little gambling, implicitly because of his religious outlook.[27]
The Sgiathanach, too, is not an open gambler, but the football
pools find many interested individuals on the Misty Isle.
There was, for example, the deacon in one church who forgot he 526
had a meeting to attend. Much to his dismay, when another 794
member of the kirk stopped by to see why he was late, he was
busy filling out his football coupon. Dissimilarities, of 785
course, are not particularly significant. In both regions

[27] Ibid.

parents and to Sabbath school, nor would they allow children 178
to play games in the home. Today the children of the Church 796
of Scotland people are allowed to go for a walk, read, or 857
play games. Tourists, frequently, if not always, intolerant 484
of the strict Sabbath, have no doubt contributed to this 178
relaxation of taboos. Although a further development of the 796
tourist industry would be advantageous economically, tourists
are a threat not only to the Sabbath but also to the whole
religious complex. They set examples which the youth are
only too ready to emulate. Before the war every hotel on 485
the Island, including all in Portree, and every boarding 796
house posted notices requesting visitors to refrain from
using their cars for touring on the Sabbath. In many of the
guest homes the request was the equivalent of a warning of
removal. Today the signs are gone. Still not content, the
tourist agencies in England and the Lowlands continue to make
snide remarks in their literature, suggesting "a little more
tolerance is needed in certain quarters." The youth and some 178
adults of Portree now have begun to go off for a drive around 796
the island. One reason why the Sabbath is still strong in 484
Kilmuir and Glendale is that tourists are not accepted in
either district.

Strict Sabbath observance distinguishes three broad 796
groups on the Island. Portree is set apart from the crofters 565
by laxity, and the county people are set apart from the 369
crofters by using the day for visiting and having afternoon [571]
teas together. The gentry, of course, are not under the

including almost all with private flocks, the crofters continue 178
to cooperate. The church has been broken by schism, not once 182
but four times. On Skye, however, the schisms have had as 795
their purpose conservatism, not greater leniency as in Hilltown. 182
Moreover, the schisms have been solidifying factors. The
progressively more dynamic world denying sects, after a period
of communal strife, have given the people an emotional unity.
The crofters have become dependent on the trade-center village 182
and the wider national markets. Many must seek employment beyond
the island. The interests of the Sgiathanach are not outside
the neighborhood, except in so far as events from the outside
affect them and, especially, to the extent that ties of kinship
and religious brotherhood reach beyond the local group. We
are hardly talking about the same situation as Homans. As we
continue to explore this condition we may also ask has there
been a decline in the frequency of interaction in the internal
sphere of activity?

The old ceilidh has disappeared under clerical bann, but 182
it has been replaced by "going to have a crack," going to visit 571
and gossip with one's friends and "people." The people may [178]
no longer gather to hear the old men tell stories of clan battles.
They now discuss the latest local gossip and the news of the
outside world. The Islander has never been given to formal [575]
social organizations; they half distrust such orders as the
Masons and Eastern Star. Still there are chapters of both in
Portree. In the crofting neighborhoods face to face relation-
ships continue to preserve strong interpersonal sentiments. The [203]
postman's van and the grocer's trucks have relieved the people

from the necessity of daily calls at the post office and shop, 182
but the drivers serve the function of passing on the news of the 571
day at each stop. 203

Standing in the place of many of the traditional social 182
outlets which have disappeared or been modified, there are the 794
religious occasions for joining together as a small group. We
have found the Sgiathanach to be very religious. Everyone is [796]
expected to go to church on the Sabbath, and everyone goes to
church. Irregular attendance soon becomes noticed by one's
neighbors, the kirk elders, and the minister. Concern over [626]
what one's neighbors may think, in itself a strong motivating
factor, is reinforced by a forbidding fear of what the venerable
old men may do whenever an opportunity presents itself. There
are Wednesday night prayer meetings for further social inter-
course. Above all, there are the semi-annual Communions which, 182
except in Sleat and Strath and one Bracadale sect, bring to- 794
gether the people of the kirk, the members of the same sect from 796
other neighborhoods, and affiliates of the denomination from
the mainland. Even the adherent, the individual who has not
experienced a saving change because he is not old enough, normally
takes his vacation, if he is employed, at the time of the
Communions in order to attend.

The decline in interpersonal religious strife does not 182
mean that strong personal sentiments are not present. No one, 571
other than the eccentric, is indifferent to his neighbors or 203
others with whom he may have dealings. The crofter and his [442]
village cousin may not bother to vote, but they closely watch [666]
and freely discuss their representatives. Gossip has retained

a tremendous strength. There are villagers who dislike the 182
crofters, but few would intentionally slight an old crofter's 571
wife because it might give her something to talk about. I 703
shall elaborate this point shortly when I come to social control.

If there had been a decrease in the frequency of inter- 182
action, the traditional norms and sanctions should have become 554
less common and clear. In particular, social ranking based 565
on leadership in communal activities should have become less [571]
definite. Although anomie, as used by Homans, is an internal
condition, I shall introduce a consideration of cross-group
norms in order to present a clearer picture of the status
system. Despite the extreme fluidity between the county people
and the members of the intermediate social heirarchy in informal
clique groups, such as the bridge club, there has been no
tendency to obscure the lines of cleavage. The class structure,
in terms of the whole community, has remained rigid. The county
people are at the apex of the prestige status and class hierarchy.
They are, of course, members of a group which extends across
the length and breadth of Great Britain. In any neighborhood
where there is a member of the landed gentry resident, he is
always looked to for leadership. In Glendale, a privately owned
neighborhood, a nearby landlord is their political spokesman.
In Portree the gentry have done more than uphold social ranking
based on leadership; they have created and introduced new
activities in which they express their role. These are the
Skye Council of Social Service, the village council, and the
Old People's Welfare Committee. They may be aided by others,
but their decisions are the orders to be followed. The gentry

aintain their position by intermarriage, by educating their 182
hildren in England, and by interacting with people of similar 571 554
tatus within the community and beyond. 565

The crofters continue to stand at the opposite pole. They
eldom achieve status within their neighborhood. Upward mobility
s possible only through outward mobility. Leadership fails
o find expression among them in the township or the neighbor-
ood. The rare exception is the crofter's son who becomes a [795]
inister and returns to lead his people spiritually. When the [794]
rofters must select a leader, from their own number, the
tatus is accorded to an elder of the church. The elder [794]
lready has high status because of his advanced age and his
osition in the kirk. As I have said, the continued operation
f primitive democracy means a minimum of authority and a
aximum of equality.

The intermediate group in the social hierarchy cannot be 182
rofitably used in this discussion. They are primarily newcomers, 554 565
eople from the Lowlands or England, who have joined with the 167
elatively few Skyemen who have left the croft. Sufficient time
as not elapsed for a class oriented structure to emerge. Then,
oo, they are not a numerous group. Still, status is important
n the village. As in the crofting neighborhood, ministers,
octors, and teachers achieve high status through their occupation.
or the remainder of the population of Portree, status depends
ore on personal qualities and outside activities, especially
n the kirk, than on the way one may make his living.

While we are on the topic of status and ranking, let us 121 554

religious groups." As a result of urbanization almost all 171
rural areas have experienced the pangs of social mobility and 182 771
few have escaped unscathed from a clash with the economic 786
forces which impinge from the outside. This predisposes the 781
people to the appeal of an emotional religion, revivalism.
Frequently, the sect becomes uncompromising and rejects the
outside world in an attempt to bolster group security. The
sequence of events on Skye enables me to add that the sect
can also reject a great deal of the former content of the
culture. Be that as it may, the authors show how emotional [571]
religious movements restore or replace meaningful patterns
of interaction among groups whose social systems have deteri-
orated. Revivalism is a counter agent for anomie.

The first period of social and cultural disequilibrium 175
which the Sgiathanach experienced may be placed in the first 178 771
half of the nineteenth century, with a climax around 1840. 786
To paraphrase Loomis and Beegle, it was no mere coincidence 182
that an emotional religious movement should have appeared and
found so many converts. The closing years of the eighteenth
century had witnessed numerous changes in the content of the
culture and the collapse of the old social heirarchy. While
these events doubtlessly had an influence on all levels of
the society, it was not until the turn of the century that
they broke forth upon the masses. Within a decade a revival
had reached effective proportions. This was a time of estate
reorganization. The tacksmen, the traditional leaders, were
quickly disappearing. The runrig farm was being abolished.
Sheep were beginning to replace men in one parish (Bracadale).

ver signs there were of social or cultural dis- 175
n, or threatened disintegration, in the nineteenth 178
y have disappeared. Steward's theory that folk 182
o not entirely disappear but are rather modified 771
readaptation to the higher level of socio-cultural 786
n of which they become a part is borne out by the 121
om the Isle of Skye.[17] At the same time, on the

572 FRIENDSHIPS--conceptualization of friendship; informal friendships and their development; formal friendships (e.g., best friends, guest friendship); reciprocal obligations of friends; etc. See also:

Economic partnerships 472
Economic cooperation 476
Blood brotherhood and other artificial kin relationships 608
Relationships with nonrelatives 609

A 60-year-old woman remembers that it was a 102
621 common practice, when she was young, for children from
571 large families to live for as long as six weeks with
476 other families who were relatively better off. They would help harvest the hay or the potatoes or bring in the peat in return for food, lodging and perhaps some clothing. "They usually ate better than they did at home." The children were not necessarily relatives of the families with whom they boarded.

621 Strong friendship, that is, the kind of friendship
572 associated with mobile urban life in which persons confide in each other and share secrets and build up an individual relationship based on extensive knowledge
[602] of one another, was nonexistent. A "friend" was a relative, or someone who gave aid when it was needed.

621 Today it is sometimes said, "It used to be that
178 your relatives were your best friends; now your best
572 friends are better than your relatives." An old man
181 will meet another on the road and say, "I used to see
[602] more of you when you needed me." Neighbors used to
[231] share sheep that were killed; now households kill and
[251] consume their own sheep, and freeze the meat which they cannot use immediately. Groups that walked out togethe
[464] to the peat to finish the job in a single day are being replaced by individual family units that can motor out
000 and do the job in stages. People prefer to give money

of farm management under a resident manager, preferably not a Skyeman. The attitude of the former faction was aptly expressed by one person who was about to leave Skye: "We need the Department. If they withdrew, we wouldn't have anybody to go to for anything." This is in striking contrast to the Irish small farmer for whom land ownership is an all important factor in regulating social interaction and status.[24] On Skye land ownership has not led to any change in the traditional status values. A Glendale crofter is not a better man because he owns land.

Prestige Ranking within the Neighborhood. In so far as prestige ranking is concerned, status is more developed within the neighborhood than within the township. In addition to the crofters and their families, there are always several individuals who are given status because of their performance of the necessary functions of ministering to the peoples' spiritual and physical needs and educating the children. These are the only achieved statuses which are valued by the crofters. Noteworthy enough, only the minister of Glendale serves his own "people and friends."

The minister's status depends to some degree on his denomination and the religious sympathies of the people. In Glendale the minister enjoys the highest possible status. In Kilmuir, with two ministers, each is valued by his own congregation with whom he interacts. Nevertheless, all ministers are treated with respect. They are always addressed as the Reverend Mister MacDonald or Mister MacDonald. It is interesting to note that

[24] Arensberg, op. cit., pp. 72-100; Arensberg and Kimball, op. cit., pp. 98-144.

share similar social attitudes and a distinctive way of life.[27] The investigator can understand the society with greater ease once he can equate the differing cultural expressions with the sense of status.

Ascribed status continues to be important in Portree, at least in stratifying the old Skye families. On the fringes of the village there are a few part-time crofters or tradesmen who keep some stock and grow a little grain and few potatoes. These men and their families as well as the crofters from the hinterland find their place in the village society through clique groups, in particular those based upon kinship and "friendship." Several of the county families reside in the village and, with the landed gentry who continue to live on their estates, take an active part in village life.

Between the two poles there is a large intermediate group. Their occupations range from the professions, including doctors, ministers, teachers, and lawyers; through employees of the national and county gouvernments, including estate factors, policemen, office managers, and clerks; to shopkeepers, tradesmen, truck drivers, and laborers. Elsewhere in Great Britain these people would fall into the middle and working classes.[28] On Skye such stratification is unimportant. If we cannot use the British scheme, we certainly cannot employ the American system developed by Warner.[29]

[27] Cf. MacIver, op. cit., pp. 166-167.

[28] Cf. Lewis and Maude, The English Middle Classes.

[29] W. Lloyd Warner and Paul S. Lunt, The Social Life of a Modern Community (New Haven: Yale University Press, 1941); and The Status System of Modern Community (New Haven: Yale University Press, 1941).

162 his occupation matters very little. Unlike the Welsh,[35]
554 the Sgiathanach does not particularly look up to the man
463 who prospers. Indeed, the people are more than likely to
183 [556] attribute his success to dishonesty or find fault with his character. I shall have more to say about this when we consider the topic of gossip.

463 At the same time, occupation is a factor in the
• 573 formation of cliques. The school teachers form one clique which has tended to become more and more exclusive in recent years. The shop keepers also have their small clique. Once a year they have a dance at the Royal Hotel. Within both social circles there are, of course, special groups
[561] of friends who associate regularly. Age grades provide another basis for clique formation. Clerks, shop assistants, and employees of the government are divided on this basis. Since it is government and, apparently, business and banking house policy to use theremote rural areas for a training ground and to make promotions, most of the newcomers and local residents who work for these agencies are young men.

[621] Neither occupation nor age-grades are exclusive factors in determining the social structure of Portree as they are for the crofters. If they were, I could not support the assertion that there is fluidity among the village population.
575 There are several clubs and fraternal organizations, such as a drama society, the Women's Rural Institute, An Comun

[35] Rees, op. cit., p. 127.

565 landed gentry. The people take relatively little part in any
554 of the activities. Most of the crofters with whom I spoke
747 had only the vaguest idea of the work or the achievements of the council, beyond the fact that the council had instituted Skye Week to attract tourists.

The Old People's Welfare Committee was established in the winter of 1953. It provides us with an excellent oppor-
[573] tunity to see how things are accomplished on Skye. For several months the clique which is responsible for the Skye Council of Social Service had been thinking that Skye needed some such agency to look after the old people. At length it was decided a public meeting should be held to give the people an opportunity to decide whether or not the need was acute. Each of the county people explained the need, aided by two social workers from Edinburgh. Then, with the assistance of a local minister, the doctor, and the officer from the Department of Agriculture, who aided in establishing the Skye Council, the people were gently led around to their position. A committee of investigation was organized to inquire into the matter in more detail. About a month later a second public meeting was held for the purpose of establishing a permanent Old People's Welfare Committee. Like the initial meeting, it was proceeded by a small conference among the gentry. The decision was that Skye should have a central committee and fourteen local committees. This was unanimously accepted. Now came the problem of who would serve. The first selections were obvious; in each local area the minister, doctor, and district nurse were "elected." When it came to the question

second cousin. The striking thing to realize here is that 593
nearest surviving relative always knows his obligation and 144 [602]
eady to fulfill it, without question. Fatherless children [603]
buried by either their paternal or maternal uncle. I have
forgotten the existence of women. The simple fact is, [562]
n play no part as mourners. Indeed, the rare woman who goes
the grave becomes the subject of lasting gossip.

Fundamentally, the system of kinship is patrilineal. 611
guistically, the terms for relatives may be bilateral, and [601]
eritance of possessions other than the name may be matters [428]
small importance, but the patrilineal emphasis remains.
Sgiathanach lives in a man's world. I shall explore this [128]
e dominance further in the following chapter. At present,
ant to briefly discuss two additional cliques.

igious and Age-Grade Cliques. Like the members of any 573
iety, the Sgiathanach associates most frequently with those
share his interests and attitudes. It is natural, then,
his associates, other than his kinsmen, to be people who
and his church and people of his own age group. We need
explore the nature of these cliques at this time; but
should have some understanding of their function. The 794
igious clique is primarily a mutual aid group. There is 573 [476]
son to believe that this particular group has lost much [178]
its importance of late, with the coming of the welfare
te. Many feel that the government pays people to look
er the aged and infirm. As far as doing a favor for someone

ub, which was originally formed by 573

a former school teacher. The present sponsor and chairman 573
is his successor. The teacher is automatically rated socially 875
because of his important function, educating the children of a 554
people who value education, and his university background.
Further, he is from the Outer Isles and, therefore, is not
expected to conform to all the traditional norms. Were he a
Sgiathanach he probably would not accept the office for it
would conflict with older and far deeper values.

The Glendale club farm is administered by a committee 573
of five, a secretary, and a chairman. Here all are crofters 241 554
from the several townships. All, therefore, are equals. Who, 794
then, might they have for a chairman? They have selected an elder
of the church. A church elder is the highest lay official in
church government and, on Skye, one of the oldest men in the
neighborhood. As one man asked, "If you can't respect an elder,
who can you respect?"

Selecting members for the committee and electing a secretary 573
is a real problem. Each man serves for three years. How the 241 554
original committee was formed I do not know, but I had an
opportunity to see how vacancies are filled. In 1953 there were
three vacant posts. Parliamentary procedure has been introduced,
but it finds limited expression. For two of the seats, the
retiring members were "re-elected;" a crofter nominated them
and after a long pause another man seconded the nomination. No
vote is taken; silence means unanimous consent. A story slightly
off the point illustrates this. At the same meeting the committee's
stock report was read. Following parliamentary procedure, it

55 Lies are frequently told. "Every other sentence my
61 father says is a lie. If you believe half of what he
77 says, you're a fool. If you believe a quarter of what
93 he says, you're getting near the truth. If you believe
an eighth of what he says, it's probably the wrong eighth."

56 Villagers engage with each other in constant, quiet
21 game-playing. They are dependent on each other for many
things, but try to minimize the control that others have
over them while improving their own positions. If someone
brings plants or shrubs as a gift, the response is likely
to be, "She was probably pruning her garden and needed to
get rid of the leftover garbage." Such negativism releases
the person from feeling obligated. (See Emmett 1964:
16-17, for a description of a similar situation in Wales.)
A man who is asked about his new tractor replies, "Its
faults will come out later." If he were to say it was
all right and then it broke down, he would have lost points.
In discussing the mental health of a villager recently
returned from Craig Dunain (a mental hospital near Inverness)
someone observed, "He's better than the doctor who let him
out." If another breakdown were to occur soon, someone
would be sure to comment, "And so-and-so said he looked
all right."

56 Such training allows little room for the development
72 of close friendships in which the individuals involved are

156 sympathetic with each others' idiosyncrasies. A constant
572 joking keeps people at arm's length and discourages the
[522] development of empathy.

156 Accompanying this style of indirect, inhibited
154 expressiveness and the low level of stimulation are culturally prescribed opportunities for relatively uninhibited expressiveness. Such opportunities include the ceilidh ("visit"), the drinking situation (mainly for men), the role of clown or "character," and holidays
[166] such as New Year's. Although young villagers and
[484] emigrants often describe the village as "dull" and "dead,"
[181] the emigrants are happy enough to return to the island for short periods of time, during which they participate in those situations in which expressiveness and limited license are accepted.

156 3. Ceilidh, Clown, and New Year's Festivities: Only
154 on certain occasions is relatively spontaneous and unin-
574 hibited expressiveness condoned or encouraged within the township, and even then the form which this expressiveness takes is fairly narrowly circumscribed. The traditional
[178] ceilidh was such an occasion. In the past, people gathered
[517] regularly at night in the tigh ceilidh (the ceilidh house,
[538] or home of someone in which a genial atmosphere existed;
[533] the tigh ceilidh was often the home of someone who lived alone), where stories were endlessly repeated and elaborated,

havior which have given the individual and the culture their 781
ility to continue in spite of social instability and acute 182
onomic hardship. In many respects, the Skyemen's religion is
rikingly similar to that of the Welshmen.[23]

The status of the father within the nuclear family has 182
en maintained, despite changing economic roles which might 771
ve led to a loss of prestige, by his religious sanction. [549]
e aged men of the community, in particular the elders, the [888]
ected lay kirk officers, have been able to continue to exer-
se stringent control over their families and neighbors. In [567]
negative way, the socially inferior status of the women has
en maintained by debarring them from active roles in the
urch. In religious activity the people find meaningful
tterns of interaction. The small congregations, rarely over
0 people, give the Skyemen a sense of belonging. In the [593]
me the practice of daily worship intensifies family inter-
tion. Above all, at the semi-annual communion celebrations, 182
ghly emotional meetings which partake much of revivalism, 771
e people find solidarity. As each church in turn celebrates 781 [572]
e Lord's Supper, the people from the neighboring churches
the same sect come to share one to five days of worshipping
gether and renewing their ties of friendship. At the daily
urch services the people meet and hear visiting ministers
their sect and the eminent Men, members of the elect, from
her parts of the island. The identical pattern is found in
les where the intense patterns of interaction center around
e singing festivals.[24]

had to be accepted. Not a word was heard. At length one crofter simply said, "No one has anything to say, so I guess we all are agreed." One of the former members of the committee could not be re-elected; he had passed away. This was a thorny matter. A series of men were proposed, and each in turn declined. Finally, a man was nominated and seconded before he had a chance to deny himself the honor. Election, of course, was automatic.

The committee administers the farm, handles stocking, employs the necessary shepherds, sells the stock, and rents the hunting lodge. They do so, however, within the now traditional framework. They have neither been granted nor assumed a role of independent action. They do not reach independent decisions. They rather weigh and put into operation decisions made by the Department of Agriculture. As we shall see, even the elder, despite his high prestige status, has power to enforce social conformity rather than the authority to direct or lead men.

It is significant that while the share-holding crofters own the farm and their crofts, they have not achieved independence from outside control. Many of the Glendale crofters frankly admit they are afraid of independence. As in any township or neighborhood there are two opposing groups. "There always is someone who tries to sabotage the whole thing," said one man. One group has favored the guidance of the officers of the Department. The other group resents the interference of the government in their affairs. At the same time, however, they do not want to be cast off on their own. They want some form

the approaching evening and many nights to come. 794 796 [573]

Saturday is a day of preparation. After a morning vice, those who have been examined by the elders and ad- ted to church membership, and the visitors who satisfy the ers of the kirk that they are worthy to receive Communion, ive tokens which will admit them to the Lord's Table on following day.

On the Sabbath the service is oriented around an "Action mon." The minister speaks of the sufferings and blessings Christ. At the conclusion of the sermon, the Lord's Table "fenced." Once all the Highland churches gave communion a table with a rail around it. Now there is only one kirk Skye with the fenced table, the old parish church in cadale. Today the first few pews are used. The minister 794 ws a sharp distinction between those who are entitled to 796 at the "table" and those who do not have the right to 573 take of Christ's body and drink of His blood. The former reminded of the dangers which neglecting to come forward olves. The latter are warned of their promised damnation a consequence of partaking unworthily. Since only the [888] men and women are worthy of the sacrament, the minister's [626] ortions and denouncements function to sanction the prestige [182] the old people before the congregation and the wider com- ity. After reading from the Bible, offering a prayer, and 794 ressing the communicants on their humble position, the bread 796 wine is distributed.

The Communion is concluded on Monday morning with a

264 The only occasions on which it is customary to feed
•574 someone an entire meal is at a work party, such as peat-
576 cutting. On such occasions the preparation of meals is
[461] done in an atmosphere of competition and mutual scrutiny,
[476] and the meals are often elaborate. At other times, the
requirements of etiquette can be minimally fulfilled by
giving foods which are still relatively abundant, but
which were much more abundant when the land was cultivated
[262] and cows kept. Such foods are barley bread, oatcakes,
264 clotted sour milk, cream and fresh butter. These foods
57 are usually offered to visitors along with tea, and in the
574 past this custom served to minimize the economic disparities
between villagers, to spread scarce resources. A similar
[737] function was served by the practice of giving part of
[431] each catch of fish to old widows and other villagers in
need of aid. Even though food is more abundant and diverse
today, the taking of tea, and especially food, during a
visit is still very important.

173 A 50-year-old man who "married into" a croft recalls,
[581] "I came from a family of ten children. Everyone had to
[428] leave, or marry a girl with a croft. Only the eldest son
could inherit the croft." There was little room for
423 romanticism in the fight for scarce land among the sons
581 of large crofter and non-crofter families. "The most

597 child may come to spend nights or longer periods of time
62 with them.

476 To some extent villagers are still dependent on
621 each other for various kinds of help. It is considered
[576] extremely bad manners to refuse labor, a tool, or food
to anyone who requests them. If someone refuses to aid
another, people say, "What will he do when he needs
[443] help?" This attitude has made the island a paradise
for the few salesmen who, in the last few prosperous
years, have started to visit its communities; villagers
find it difficult to say no to anyone who comes to their
door with a request, including the request that they
buy something.

621 A woman in childbirth was formerly attended by a
•574 local midwife, and kept in bed for two or three weeks.
844 "Other women, both relatives and friends, came and staye
with them at night, fixing them warm tea and milk,
whispering bhronag bochd (poor soul), how awful you look
just as today the neighbors gather at times of illness
and death. It is more difficult for neighbors to come
[178] to the bedsides of young mothers of today, who are all
[743] taken to the hospital in Stornoway to have their babies;
but the neighbors manage to visit the hospital, which ha
no choice but to ignore its rule of only two visitors
per bed at a time.

[For information on the curamach (the "clique of the converted

"), see category 794.]

same as in the crofting areas. When a young girl presented 794
herself for instruction in the significance and meaning of 796
church membership, preparatory to her acceptance of Communion, 369 626
she refused to take the final step not because of any personal religious problem, but rather because such a step would upset her normal associations. What her Free Church and Free Presbyterian friends would say was her main concern. Who was she to become an "elect" member? Here, then, is the answer to how the elders of the other sects are able to control behavior of the larger group, through the fear of gossip as a negative social sanction and, perhaps, rejection.

The semi-annual Communion celebrations are rites of 794
intensification par excellence. Although some churches 796
celebrate only one commemoration of the sacrament, and it may be as early as February or as late as November, the months from late April until early September, are commonly referred to as the "Communion Season." The activities of the people during this period cast additional light on the influence of religion in ordering social relationships. While [573] [571]
clique membership based on sectarian affiliation is a secondary factor in determining the patterns of interaction in the extended family in the local group, it is very important in determining one's wider relationships, the relationships between the neighborhoods and between the Sgiathanach and the mainland Highlander.

Within living memory thousands used to come to the 178
Communion celebrations from all parts of Skye and many nearby 794 796

People prefer to give money in exchange for car rides or other help, including peat-cutting, because "than you're independent." Friendships are still weak, relative to friendships in urban settings. Most information which is shared between individuals rapidly enters the pool of communal gossip. Although many persons emphasize the importance of mutual aid in defining a friend, some emphasize the ability to confide and keep secrets.

Today many of the younger villagers do not know their relatives to the extent that their elders did. In one family, a girl who was about to get married had to ask her brother, who was the only one of the siblings interested in kinship connections, whom to invite to the wedding. It is still useful to retain an inventory of one's relatives. "I have cousins in Glasgow and Australia that I've never seen, but if I ever go there I'll have a place to stay." With the increase in transportation and income, more islanders are taking brief trips away from the island. During these trips, they almost always stay with relatives.

It is frequently said that children are now "cheekier," less inclined to run errands and obey orders meekly, and that they prefer to watch television or read books by themselves to playing with each other.

527 Whereas at other times of the year there are specific
273 times which are considered appropriate for visiting,
• 574 especially if the visit includes a bottle, at New Year's
visitors may appear in the middle of the night or at
any time during the day. Some men may stay up for four
[513] nights in a row, going back home for a few hours of sleep
522 or a bite to eat before setting off again. Various pranks
527 are played. Men climb through the windows of darkened
574 houses, or wake up sleepers by making animal sounds. One
man went around the village showing a pig's foot to women
as though it were a penis.

527 But whether lasting for one night or for five,
festivities end with the arrival of Sunday; and the usual
comment is, "Thank God it's Sunday."

166 The "exiles" prefer to return at such times as New
221 Year's, or during the summer months when the beaches are
484 inviting and the gales absent. They remember the
[529] "characters" and other features of village life which
give it color, often forgetting the drab background out
of which the color was forged. Some villagers whose
siblings have married and left the island continue to live
alone in the house mainly to keep the house in order for
their return. "I wouldn't close the house on them. They
come back every summer." A man thinking of emigrating

1: Parman E-4.5 (1970-1971) 1972 ES10 Highland Scots ES10

621 character traits just by virtue of his belonging to a
156 particular family; he is protected from the "out"
[527] world even though he may have broken its rules. The
• 574 village provides a colorful arena of recreation in the
form of ceilidh, the character, and holidays such as
New Year's.

781 A major system of order and meaning is provided by
794 religion, and by the opportunity to belong to a tightly-
[181] knit religious clique. Lewis is sometimes called Tir an
t-soisgeul, Land of the Scriptures, in contrast with
571 the decadent outer world. The male drinking fraternity
273 constitutes a second important group. And for everyone
[521] there is the cinema of their neighbors' activities,
which are placed in a vast human calendar that includes
the behavior of many generations.

1: Parman E-4.5 (1970-1971) 1972 ES10 Highland Scots ES10

794 called on an awful lot to give prayers in church, and it's
781 hard for some of them to get up and speak." The Reverend
829 Macleod notes in his diary that private meetings were
[175] initiated on the island in 1826.

A quarterly meeting (coinne raith) is held in Stornoway,
[196] to which many of the converted from the villages go. The
Communions are held twice a year. "Special services," or
"small communions," held soon after the Communions, are
intended as evangelical services for young people, that is,
services enjoining people to convert. These services,
which last from Monday through Friday, were started in
Ness after the first world war.

796 4. The Communions (Orduighean): Communions are given
794 twice a year, during autumn and late winter. They are
scheduled for different weeks in different parts of the
island, and neighboring congregations close their churches
when Communions are being held nearby, so that during the
Communion season some persons may attend a number of
services at different churches.

In the days when transportation was limited, visitors
796 coming from a distance away stayed for an entire weekend.
• 574 All households prepared food and made ready for any over-
794 night visitors who might arrive without prior warning.
178 Guests often slept on mattresses laid on the floor. After
484 facilities of transportation improved, it became common
for people to drive down for the day in private cars and
return to their own homes at night.

1: Parman E-4.5 (1970-1971) 1972 ES10 Highland Scots ES10

000 return to their own homes at night. There is now less
796 need for the generalized hospitality of the past, which
794 was given to anyone who came to the door looking for food
829 and shelter. Through these visits some families in
571 different villages have, however, established relation-
• 574 ships which are kept up by exchanging hospitality at
times of Communion and also in other ways. A family in
[262] Ness may send to a friendly family in Shawbost some guga,
[251] gealings of solan geese which are captured by Nessmen
on the island of Rona once a year and are salted to make
a delicacy that is in great demand. Through such contacts
a family wanting to purchase a cow may receive word of one
that is being offered for sale in the village of a
Communion contact.

796 Services of Communion last five days. All services
except that held on Sunday evening are intended for the
communicants or full members of the church, also called
[535] "the believers" and "good livers." During this time, no
[485] dances are held in Shawbost, and in Carloway the hotel is
closed.

796 On Communion Sunday, the upper balcony of the church
794 is filled with villagers watching to see if any of the
829 recently converted have decided and have been allowed to
take Communion. Because the villagers watch very closely
the behavior of everyone else within the village, any change

THE PEOPLE

SOCIAL LIFE

571 In common with other aspects of island life, the social side has
198 undergone considerable change. The world has been brought
nearer the crofter's home by radio, television and film screen,
reducing the social need for meeting with neighbours and friends
• 574 for the ceilidh. The ceilidh was once the principal means of re-
198 creation and instruction. There is no precise English equivalent
for it, and it may be loosely described as an 'at home' to which all
are welcome. It may be held in any house; in the past, the
favourite resort was a home where the head (*fear an tigh*—man
of the house) was an intelligent, communicative man; and if he
had a number of eligible daughters so much the better. Ceilidhean
were held after nightfall. Old tales were told, and songs sung, and
public questions of the day were discussed. All women attending
took with them an ample amount of work, sewing or knitting, to
see them through the evening. Ceilidhean nowadays tend to be
[545] more organised, taking the form of popular 'concerts' which did
not take root in the island until the turn of the century, though
they were a common way of entertainment on the mainland at
the time. Social life in the past was thus very intense, and was a
natural evolution from the basic desire to forget the day's work
and to have some pleasure of a kind.

546 The pattern of recreation facilities has since become fairly
varied. Films came early to Lewis, or rather Stornoway; the first
Picture House was located in Keith Street, and presented both
[536] films and stage turns. A new Playhouse was opened in 1934 with
The Good Companions and *Falling for You*, starring Jack Hul-
bert and Cicely Courtnedge. Films in the rural districts were a
rarity, however, until in 1946 the Highlands & Islands Film
Guild came into existence to bring the magic of the screen to
[207] scattered communities. This body ran several mobile cinema out-
fits in the deep crofting areas, until the advent of television in
the region killed it off in 1971. While it existed, however, the
Guild provided an essential service to remote communities and
brought not only the world to their doorstep but ensured that
they felt part and parcel of a much larger scheme of things.

207 The first television service in Lewis began in 1959, 'piped' by

COMMUNITY FROM PAST TO PRESENT PT. II

788 Clanranald "[1] and echo in the opening benediction of
226 Alexander Macdonald's "*Birlinn* of Clanranald", without which his 'Galley', for all the glory of its strife with storm, would never have won its place in the heart of the seafaring Gael.

788 As for journeys over sea, so for those over land, "Traversing corries, traversing forests, traversing valleys, long
484 and wild . . .", the traveller or pilgrim, the drover or emigrant, leaving home and his friends, would have their prayers. They would accompany him on the first steps of his way with cheer and laughter or with tears, as those have told me who remembered my grandfather's leaving
[539] his home in Strath Spey more than a century ago. These journey-blessings were spoken by the traveller: "Life be in my speech, sense in what I say . . .", or by those to whom he was dear. (*Carmina*, No. 116; *Guidheachan Turais*, Nos. 266-276.) In these prayers, bodily travel and spiritual quest are sustained on the mountain-track by the strength of home-ties and fellowship, and by the hospitality of Christians on the path ahead.

788 When family and neighbour-team were closely knit,
• 574 their own harmony drew the stranger in. "The Rune of Hospitality", threaded together from old fragments by the Rev. Kenneth MacLeod, breaks out into the refrain of the lark as she sings to the listening heart of the host:
[539] "Many, a many, a many a time, Comes the Christ in the stranger's guise!"[2] Hospitality is truest when its sacrifice—so real in a land of poverty—is given as a duty but with a smile!

[1] *Songs of the Hebrides*, vol. i, pp. ix-x.
[2] "*Gur minig, a minig, a minig . . .!*" "*Duan na h-aoigheachd*". (*An Gaidheal*, Dec. 1942.)

574 his own family of procreation or ceases to be an integral
554 member of the social units. Many features of these relationships will persist throughout his life.

844 The Sgiathanach treats the event of birth as something in which man is only the agent of a higher power. This fact was brought home to me one night during a discussion of the declining size of families. The question of subsidies to encourage larger families was broached. Although all take advantage of government grants for their stock and care of the land, this form of subsidy was unanimously rejected. As one man said, this would place man in the unthinkable position of a creator. Only the essential arrangements for the care of the mother and her expected child are made before birth. There are no "showers." "Showers," said one woman, "how can you tell if the child will be a boy or girl, or even live?" Today most women go to the maternity hospital at Uig for the delivery, but a few prefer to remain at home under the care of their mothers. To expect that the father's mother would take charge, even under the clan system, would be carrying the
846 patriarchial emphasis too far. Within a few days, the obligations of the parents, their relations, and the people of the township become apparent. One by one the individuals and couples make their way to the cottage to welcome the child. This individual visiting is a modified survival of the old custom of "kirking," a group offering of thanks, at the church, for a safe mother and a healthy child, followed by a dance
• [57] and feast at home. The parents are obliged to provide a
[273] dram of whiskey so that all the visitors can toast the child.

192 requirements of adulthood, and also old age, are still boys
561 and girls.

554 Status Equality within the Township. The ascription of status on the basis of age and sex has resulted in a straightforward
[562] system of status. The facts are simple. Men are the social
[561] superiors of women. Youth are socially inferior to their seniors. Men, or women, of a common age category are equals. We shall now examine a few interpersonal relationships to see how the
[264] system operates. Unless a man and his wife are eating alone, women never eat with men. They wait until the men have finished
576 before taking their meal. When neighbors come to visit, the
542 man of the house does not rise for a woman. He does rise for
• 574 a man and shakes him by the hand. The woman of the house, on the other hand, rises for both men and women. Furthermore, when a couple comes to call, the woman greets the man first. Only after he has been offered a chair does she greet the
[858] woman. Young people are seen but seldom heard. They do not
[882] speak unless addressed.

626 All societies allow some deviation from traditional
178 norms of expected behavior. On Skye, as elsewhere, excessive deviation is censured. Neither increased opportunities for education nor the steady flow of Skye men and women to the four corners of the earth, accompanied by the slow returning trickle, have disturbed these fundamental values. Like the youth who leaves home to achieve upward mobility through outward mobility, the man who returns must conform to the traditional norms, which he learned as a child, or be regarded

605 spouses not too long ago.[23] Perhaps, more than any other
592 factor, it is the tendency of the aged parents to hold on
477 to the croft until they die that is struggling the kinship
573 system. Still the extended family is a strong mutual aid
602 group. Anyone with a recognized degree of kinship is
576 entitled to hospitality. When the exiles return to visit
602 the Misty Isle, they always try to make the rounds of their
• 574 kinsmen. This is more than a question of not becoming an economic burden on a favorite aunt; they do not want to be guilty of slighting anyone. There is reciprocity here.
[265] In return for food and shelter, the visitor freely gives his kinsman all the news he has gathered about the activities of their distant kin. He acts like a roving reporter, cementing the solidarity of an otherwise fragmented group.

602 The expression given to the degree of consanguinity and
764 affinity is revealed most completely at a funeral. As one of the two occasions on which the extended family comes together, the other being a wedding, it reveals a host of significant traits. The first thing I noticed was that although the inavailability of land and the illegality of subdivision enforces neo-local post marital residence, burial is ideally patrilocal. On more than one occasion the steamer came in at night with a body which had been shipped home from Glasgow or
602 Edinburgh for interment in the deceased's neighborhood. This
573 also means that the husband and wife remain integral members of their respective families. The founding of a family of

[23] Norman MacLeod, Reminiscences of a Highland Parish, p. 196

blitz of London he was talking with a crofter's wife, and they 799
got to discussing Hitler. "What a terrible man he is," she 829
said, "Why he's worse than...worse than...almost as bad as the 798
Pope." In another township there is a Church of Scotland 795
missionary, a lay preacher. His religious sectarianism does 797
not prevent his interacting with the Free Presbyterians, who are in the majority. Not infrequently, he visits his neighbors and when they need help on the croft he is prepared to lend a hand. When he pays a call, he establishes the tempo of interaction at mealtime or tea time by saying grace and returning the thanks. This is part of the hospitality 574 •
of the Sgiathanach. The visitor is always asked to say 782
grace.

What is true of the township on Skye, is also partly 621
true of the neighborhood. Here the members and adherents of 794
the same church do get to know one another better because of a common faith, or their particular interpretation of a faith common to all. They see each other with greater regularity. Then, too, since the congregations are small, they feel they belong. At the same time, the patterns of interaction are not exclusive, except in Glendale. The religious cliques are [476]
mutual aid groups, doing what they can for the infirm and [745]
destitute; they are not opposing factions. Nor does religious homogeniety mean the absence of factions. Glendale has its independents who are set against the disciples of the Department of Agriculture. Anyone who knows Wales may be struck by this 79
difference, for in Wales the people are attached to a particular 17

574 584 on troubled waters," or bringing the two families together.[2]

585 The most important of the ceremonies surrounding marriage was not the church service (posadh) but the wedding dinner and dance following the church service (banais, from bean meaning "woman" or "wife," and feis meaning "feast").

"House weddings," as they were called, were held in the home of the bride. For several weeks beforehand, [431] neighbors and relatives brought gifts to the bride's house, where they were displayed in a room set aside for them along with the dresses to be worn by the bride and

---

574 584 184 [2] Morag Macleod of the School of Scottish Studies describes a custom still existing on the Isle of Scalpay off the Isle of Harris, called reiteach mor (big reiteach), in contrast with the reiteach bheag (small reiteach) or simple dinner party which existed until fairly recently on mainland Harris. The reiteach mor is a dramatic event involving a humorous exchange between male speakers for "the groom's side," and male spokesmen for "the bride's side." The bride is hidden, and the groom's men ask for the bride indirectly. They desire a sheep, perhaps, or a length of tweed. The desired object constitutes a theme which is developed in humorous give-and-take between the two sides, as various females are brought out one by one by the bride's people, from the most undesirable old maid to the bridesmaid and finally to the bride. Until the bride finally appears, the groom's spokesmen must find something wrong with each female presented, along the lines of the chosen theme. The sheep's fleece is not curly enough, and so on. The bride sits at the table after she appears, is given a glass of whiskey which she sips and then passes to her fiance, and the performance is over.

585 on these occasions. At some point during the night the bride and groom were prepared for their wedding night together. The bride's female companions undressed her, prepared her for bed, and put her into the bed with a hot water bottle. She shared some sherry with them, and they went out, whereupon the groom was brought in by his male companions. After much joking the couple were left together.

[574] On the third night, a dinner was given for the older persons who had not been able to come to the "big" wedding.

[293] For some time after the wedding, the married couple [431] visited relatives and neighbors who had been unable to come to the wedding, taking a bottle of whiskey with them.

585 House weddings declined in number during the war when 178 food was rationed, and as more persons changed from the [342] "black house" to the less easily cleaned and more elaborately furnished "white house." Most weddings are [485] now held in hotels, and consist of a single wedding dinner and dance; they are often held on Thursdays, the day of the banais in the past. The emphasis on community participation still exists: even though the practice of holding hotel weddings has limited the number of guests, an effort is made to invite someone from each household in the neighborhood. In part to avoid disappointing the

585 178 For some weeks after returning, the couple goes visiting with a bottle. The scope of visits seems to have narrowed to close relatives unable to attend the wedding, and sometimes the custom is referred to as old-fashioned.

[431] The bride usually mails pieces of bridal cake to [205] relatives who were unable to attend the wedding.

758 574 2. Death: At a time of illness or injury, an individual may see persons he has not seen for years. The house is filled with a constant flow of visitors, and the visitors recount every detail of a sick person's [763] pallor and movement. The room is usually occupied by visitors when a person breathes his last.

763 46 [178] [288] In the past, work ceased in every house in the surrounding neighborhood when a person died. This no longer occurs. (The story is told of a weaver who called a mill in Stornoway to say that he could not finish an urgent tweed because there had been a death in the village, and was told, "You keep on weaving till the weaver dies.") However, dances in the village are [535 444] cancelled, and the bothan (an isolated hut in which liquor is sold illegally) may close. Outdoor work, such as peat-cutting, which would be widely seen is avoided.

763 [203] Word of the death spreads throughout the village and beyond within a few hours. From an immense, accumulated inventory, memories of the deceased are brought out,

763 relived and shared. The person's exact age and the 764 identity of his closest kin are discussed. A van is 574 immediately dispatched to bring benches from the church, [493] which are set up throughout the house of the deceased, and over the next few days a constant stream of visitors [431] fills the benches. The visitors bring tea, sugar, biscuits and other provisions for the days and nights of communal trial. The tigh fhaire, "house of watching," as this wake is called, continues until the day of the funeral.

764 In the past, persons sat up all night with the body. [825] "It took so long to get a coffin. You didn't want to [178] go in and find half the face eaten away by rats." This custom is dying out, but lights are usually left on in the room in which the coffin is placed. When an all-night wake occurs, the atmosphere is one of relaxed story-telling and the sad laughter of reminiscence.

764 574 At least two nights of "waking" usually precede the funeral. During this time, hundreds of villagers attend [152] the tigh fhaire. Grief is expressed throughout the vast network in which the dead person was enmeshed. On rare occasions when a single night precedes burial, the house is filled to overflowing.

Throughout the day and evening, waves of newcomers enter, and other sitters slip quietly away. Kinswomen of

764 the deceased or the remaining family assist in preparing 574 endless cups of tea, using the provisions that are brought by the visitors. The newcomers enter, exchange greetings, memories, sighs and moral judgements in rapid whispers. "Oich, oich... that should teach us, we're all going to go. That's how it was meant to be. It makes you wonder why we live at all, well, well." They recall other deaths. "That was a bad death. His liver was bad, and he turned yellow, then all black...." [152] They weep, circumspectly observe the appearance of the [197] room and its occupants, and speak only in Gaelic, the language of hearth and heart.

764 793 The minister usually attends a prayer meeting which is held in the tigh fhaire around midnight of the night before the funeral, but his presence is not necessary. The prayer meeting may be conducted by the elders. The elders may also hold the service which precedes the burial. The minister may walk for a short distance in the funeral procession or speak a brief few words at the graveside, but his role in the community drama is minimal.

764 621 592 At least one person from all households within the village is expected to go to the tigh fhaire of someone who has died within the village, "to show respect." The male head of the household is expected to attend the

156 sympathetic with each others' idiosyncrasies. A constant
572 joking keeps people at arm's length and discourages the
[522] development of empathy.

156 Accompanying this style of indirect, inhibited
154 expressiveness and the low level of stimulation are culturally prescribed opportunities for relatively uninhibited expressiveness. Such opportunities include the ceilidh ("visit"), the drinking situation (mainly for men), the role of clown or "character," and holidays
[166] such as New Year's. Although young villagers and
[484] emigrants often describe the village as "dull" and "dead,"
[181] the emigrants are happy enough to return to the island for short periods of time, during which they participate in those situations in which expressiveness and limited license are accepted.

156 3. Ceilidh, Clown, and New Year's Festivities: Only
154 on certain occasions is relatively spontaneous and unin-
• 574 hibited expressiveness condoned or encouraged within the township, and even then the form which this expressiveness takes is fairly narrowly circumscribed. The traditional
[178] ceilidh was such an occasion. In the past, people gathered
[517] regularly at night in the tigh ceilidh (the ceilidh house,
[538] or home of someone in which a genial atmosphere existed;
[533] the tigh ceilidh was often the home of someone who lived alone), where stories were endlessly repeated and elaborated,

156
154
• 574 genealogies told, and old songs were sung or new ones
178 composed. The concentration of expressiveness in these
[517] forms resulted in a well-developed, oral repertoire of
[538] literature and music.
[533]

The ceilidh still exists today in the form of less
[538] regular gatherings. Stories and genealogies are seldom recited, but songs are still sung. A few new songs are
[533] being composed. The word ceilidh is used as both a noun and a verb to mean "a visit" or "to visit," but implies a casual, relaxed atmosphere rather than a formal visit. A formal visit is made by relatives living in Stornoway, government officials or businessmen, and is characterized by more constrained behavior.

156 The ceilidh of today is often accompanied by the
154 drinking of beer or whiskey, but a distinction may be
574 made between a gathering which includes both males and
273 females, and a drinking situation at which only males are
178 present. In the past, men often gathered in barns or weaving sheds to share beer made locally from barley or
273 brought from town in a large keg. The drinking of whiskey
178 was reserved for special occasions, such as births, weddings,
[434] funerals, and the festivities surrounding the New Year, but increased income has resulted in the consumption of whiskey on many other occasions. Heavy drinking is still an
[275] activity engaged in largely by males, and occurs in extra-village locations such as hotels and bothans (see Chapter 6).

273 village locations such as hotels and bothans (see Chapter
[154] 6). Drinking situations provide an important opportunity for relatively uninhibited expression by males, and will be discussed further in Chapter 6.

522 The role of clown or "character" is well developed
156 in Hebridean townships. In an environment which encourages
154 quietly watchful and somewhat anxious, conformist behavior, the character is rude, raucous and outrageous, a bite of fire in cold waters. He represents a reversal of normal behavior. The villagers shake their heads, agree that he is impossible, but encourage him to continue, urge him on when he flags, and bring up his escapades for discussion during moments of boredom. There are usually several such characters in a village.

156 Reversal of low-profile and other "normal" behavior
154 is also allowed on particular occasions such as New Year's,
527 this time among all villagers. In the days of horses and
[522] carts, boys went around the village on New Year's night
[383] stealing carts and hiding them on the moor or down by the
• [574] shore; today they steal gates. Between Christmas and
[431] New Year's, groups of boys visit houses in their neighborhood, collecting tea, sugar, biscuits, or money to be used for a party in one of the houses. Such boys are called
796 balaich na bannagan, or boys of the bannag. In some
431 Gaelic-speaking areas, bannag refers to a gift that is
184

527 office or general store, preferring to divide the rest
178 between themselves for use at a later time. A 50-year-
431 old woman observed, "They don't appreciate the bannag like we used to. They get this kind of rich food all
527 the time." The practices of wearing costumes and speaking
178 the rhyme are disappearing. Children used to have the bannag until they left school at age 14 or 15; now only the younger children go. "Children grow up more quickly today."

527 New Year's is celebrated perhaps most intensively
562 by the men, who after seeing the New Year in by watching
273 a special New Year's program on television go visiting
• 574 neighbors and relatives with bottles of whiskey. The
[184] custom of "first-footing" on New Year's eve is found throughout Scotland; but in the Hebrides such visiting and heavy drinking may last from New Year's eve until the following Sunday. During this time, the woman of the house, who usually refrains from drinking and to some extent controls the drinking done by the males in her house, relaxes her attitude, and may even participate. The comment, "It's only once a year," is often heard.
[589] During this time, the shyest and most retiring bachelor becomes a Romeo; this is the only time of year he may be heard to mention the word marriage. For example, one bachelor in his 60's chooses a "bride" each New Year, and takes her with him on his all-night visiting.

with the decision which they know is to be made usually do not attend the meeting. Thus, apparent consensus is always maintained.

Changes in the character of the township as social boundary system are apparent in ceremonial occasions such as weddings and funerals, which will be discussed in the following pages.

1. Courtship and Marriage: Courtship occurred during the dark hours when the older members of a household had gone to bed. A great deal of courting was done in company. Because transportation was limited, groups of young people went together to dances; and on other nights, bands of young men would visit a house in which several girls were sleeping together, climb in through a window, and perhaps lie beside the girls, fully dressed, filling the dark with whispered jokes. Such a custom, a form of bundling, was called "night visiting" (ruith na h-oidhche); the male visitor was called caraid na h-oidhche, "companion of the night."

When couples began serious courting, they would meet outside at night, or the girl would let her bramar (sweetheart) into the house after the old people had gone to bed. A couple would never consider walking hand in hand along the road during the day. Boys and girls were seated separately in school, went around in separate

584 [834] groups on the sheilings or within the village as they were growing up, and even during courtship maintained a joking, somewhat rude interaction. "If he says he wouldn't touch her with a barge pole, he's obviously smitten." Someone considering the dangers of marrying an outsider[1] commented, "A devil you know is better than a devil you don't know."

584 178 [493] Now that facilities for transportation have increased, couples tend to pair off in cars rather than go in groups. They may even be seen together on a date in [535] town. Activities such as dances still begin late in the night, lasting from about 12:30 a.m. until early morning. The seriousness of a relationship is kept secret for as long as possible, but weddings today require long-term planning because wedding dinners are held in hotels rather than within the village. At an 574 584 earlier time, serious intentions were announced only a few weeks before the wedding, at a <u>reiteach</u> or dinner party which signified a betrothal. <u>Reiteach</u> also means "disentangling" or "reconciling," and was described by one person as a means of "pouring oil

---

[1]The term "outsider" usually connotes non-Gaelic-speaking, but may also refer to someone from outside the village.

172 "I was in the Navy during the last war. We were
156 in Norway, and got an invitation to visit the palace.
I didn't go. I was afraid I'd make a mess of things."

"This place has an inferiority complex. It's mainland-oriented; so you feel outlandish."

575 The new director of an association which promotes
197 the speaking of Gaelic is a Lowland Scot who learned
186 Gaelic when he was in England. He was working in England
[181] and, as a Scotsman, felt so much like a foreigner that he decided "to be a real foreigner"—so he studied Gaelic. Motives which prompted legislation protecting crofting also lie behind the development of organizations which attempt to protect and preserve the Gaelic language.

An Comunn Gaidhealach, the Highland Association
[175] which promotes the speaking of Gaelic, was founded in 1891 in a town on the mainland, and has always been urban-based. Eighty years passed before the association established its headquarters in Stornoway; but the headquarters were relegated to hindquarters when the director found that he needed to be on the mainland to exert pressure on influential organizations for aid and support.
[993] The organization is condemned by ministers on the island, who see it as an organization that sponsors light-hearted
[214] singing. The magazines and books which it publishes or sponsors are seldom read by the rural islanders. The

The
575 organization receives a large proportion of its funds
197 from the Scottish Education Department, whose statutory
186 duty is to foster the speaking of Gaelic in Gaelic-
[89] speaking areas. In 1970-71 a series of evening meetings were sponsored by An Comunn in Stornoway; but the serious meetings, such as readings of Gaelic poetry, were attended largely by schoolmasters.

Associations which sponsor Highland dancing and the opportunity to get together with other Gaelic speakers thrive in Glasgow, London, Toronto and Detroit, everywhere
[48] but in the Gaelic-speaking Highlands. Such associations serve important functions in situations of interaction between Gaelic speakers and members of the dominant society; they provide identity and self-defense against those who react to them as members of a lower-status minority group.

535 A girl who teaches Gaelic in Glasgow and comes home
186 to the island only for holidays never goes to the island
48 dances, but loves going to the dances sponsored by the Lewis and Harris Society in Glasgow. All the young people from the islands come, and dance away accumulated insults in a fiery sense of belonging.

464 A girl who worked in hotels on the mainland found
197 herself speaking Gaelic with her fellow workmates who
186 came from Lewis or other Gaelic-speaking areas, although
571

an enterprising radio firm in Stornoway; its customers receive 207
both BBC and Grampian Television programmes.

Some youth organisations are represented on the island. The 883
first troop of Boy Scouts was connected with the Stornoway 575
YMCA and was founded by forty boys in 1921. Founded (in 883
1912) on the island's close association with the sea was the Boys' 708
Brigade (Naval), later to become the Stornoway Naval Corps and 575
the Stornoway Boys' Naval Brigade. Its objects were to provide instruction in drilling, signalling, seamanship and first aid; and to foster a spirit of manliness and comradeship among its members. The founder was Canon H. Anderson Meaden, of the Episcopal Church in Stornoway (St Peter's). During the first war the boys acted as signallers at the Stornoway Battery.

But the provision of some organised recreational facilities for 529
young people on the island has long been a thorny question. After the first world war, the Rector of the Nicolson Institute, Stornoway, proposed that village halls be built for village education and recreation. This scheme was never fully realised—except at Sandwick, just outside Stornoway—mainly because of the strength of puritanical opposition. This attitude has been breaking down, [178]
however, and it is now generally realised that the wealth of any community is based on its youth. Most of the efforts to set afoot activities for young people began after the second war; the work was hard and challenging with not a few failures on the way; perseverance has won to the extent that there is now a full-time youth leader. Most of the cultural and recreational activities are to be found in Stornoway, with a full range of interests. Evening non-vocational classes during the winter are also widely attended for a variety of subjects.

In 1965, an excellent Youth Hostel was established at Stock- 485
inish, Harris, with the help of the Inverness-shire Education Department. In its first season it recorded between 600 and 700 visitors (1,070 bed-nights). Also involved in the establishment of the hostel was the Harris Society of Social Service; practical help [575]
was given by the 2nd Stornoway Boy Scouts, who made a wall map, cleared up grounds and shifted furniture. A group of English enthusiasts have in previous years arranged a hotel at Rhenigidale, Harris (see Chapter 9), which provides for some fifty to

162 his occupation matters very little. Unlike the Welsh,[35]
559 the Sristpanach does not particularly look up to the man
463 who prospers. Indeed, the people are more than likely to
183 attribute his success to dishonesty or find fault with his
556 character. I shall have more to say about this when we consider the topic of gossip.

463 At the same time, occupation is a factor in the
573 formation of cliques. The school teachers form one clique which has tended to become more and more exclusive in recent years. The shop keepers also have their small clique. Once a year they have a dance at the Royal Hotel. Within both social circles there are, of course, special groups
[561] of friends who associate regularly. Age grades provide another basis for clique formation. Clerks, shop assistants, and employees of the government are divided on this basis. Since it is government and, apparently, business and banking house policy to use theremote rural areas for a training ground and to make promotions, most of the newcomers and local residents who work for these agencies are young men.

[621] Neither occupation nor age-grades are exclusive factors in determining the social structure of Portree as they are for the crofters. If they were, I could not support the assertion that there is fluidity among the village population.

575 There are several clubs and fraternal organizations, such as a drama society, the Women's Rural Institute, An Comun

[35] Rees, op. cit., p. 127.

575 (a Gaelic group), the Masonic Order, the Eastern Ster, and a post of the British Legion, which have representatives
574 from all walks of life. But by far the most interesting
575 group is the village bridge club. If bridge clubs in America are status conscious, those in Britain are especially aware of "social" and "cultural" distinctions. In Portree such
574 differences matter very little. Like all of the above
575 mentioned organizations, the membership of the bridge club
167 is predominantly newcomers. It includes members of the gentry, teachers, shop keepers and shop assistants, office workers, and a mechanic. Once a week they come together for an evening of cards and a few drinks. In all formal organizations the roles of leadership are left to newcomers or the gentry. One young man, to give an extreme example, wondered one day why he spent so much time attending committee meetings. On reflection, he found that he was an officer in no less than eleven clubs. It is to the gentry, however, that we must turn to see the real expression of leadership.

The County Families

565 The landed gentry have been considered separately be-
189 cause they belong to the neighborhood in which they reside; to the trade-center village, where they spend much of their time either visiting each other or performing some social service; and to the community as a whole. Even more than belonging to Skye, they form a part of the national class system of Britain. They are the "county families." Next

125 members. That the Sgiathanach has not been influenced by the laxity of the newcomers in self-examination is indicated by the existence of 450 adherents. Further, the Free Church has only 21 members in a congregation of some 280, and the Free Presbyterian Church only 20 members in a congregation of 320.

The esoteric religious hierarchy established by the "Men" during the nineteenth century revivals continues to influence the lives of the people. From the small number of the "elect" are chosen the elders, the venerable guardians of behavior, and the deacons. The majority have been baptized but are in a fallen condition. Shall we stretch an analogy and ask is this not comparable to the social hierarchy of ceann-cinnidh (clan chief), daoin'-uaisle (tacksmen), and clanna (clansmen) of the past? This much is certain: a strong hierarchial sense must be numbered among the persistencies.

In our discussion of the Islanders' economy we noted two significant facts concerning the sodality of the old men of the neighborhoods. We saw that they have a deliberative function in discussing economic innovations before they pass down to the townships, and that they are able to block any innovation of which they disapprove through the requirement of complete unanimity in township affairs. We may also recall the statement, "If you can't respect an elder of the church, who can you respect?" We may now add they have judicial and authoritarian functions in the religious sphere of activity, and, through their status within the church, they ultimately control the patterns of social behavior.

Their deliberative, judicial, and authoritarian functions are identical with those found among the Catholic small farmers of Ireland.[9] Of course, it is by no means unique in human groups for the aged to attempt to maintain their accustomed habits and statuses while the youth endeavor to find acceptance for new ideas.[10] Nor is it unique for the younger members of the society to resent the restraints imposed by the older people to punish deviation from traditional behavior.[11] Culture phases, as Kroeber has pointed out, associated with age tend to correspond to changes taking place within the society, rather than reflect static lines of segregation, such as those which exist between classes.[12] If these assertions are valid, the success which the elderly, as a sodality, enjoy in barring the youth from achieving acceptance of novel patterns should be indicative of the importance of age controls on the Isle of Skye. In order to see how they exercise control and how successful they are, let us consider those events in the life cycle which Van Gennep has called rites of passage.[13]

Rites of Passage

Rites of Passage function in all societies to mark the

Religion has done more to keep the Gaelic language alive than any of the numerous outside agencies dedicated to the preservation of the language, such as An Comunn Gaidhealach, a national organization which sponsors a series of local, regional, and national programs in an attempt to maintain and stimulate an interest in the Highlands and their songs and stories. Except in Portree and at Dunvegan, church services are mostly conducted in Gaelic. The newcomer who wishes to attend church services in the crofting areas, and he had better, must either learn Gaelic or be content with the few words the minister may speak in English for his benefit if the minister is aware of the presence of someone who does not "have the Gaelic." Some might feel that this is rude since most Skyemen are bi-lingual, but the crofter seems to think quicker in his own tongue. Many crofters' children learn English only when they begin to attend school or pick it up from an older sibling who is going to school. Family worship is almost always in Gaelic, unless there is a visitor. We have already seen that the family worship at the time of death is in Gaelic or in Gaelic and English. Again we have a parallel with Wales, in that Welsh has been mainly preserved through religion.[19]

Making Gaelic the language of their religion has, however, led to several problems. It has weakened township solidarity on occasion. There are many isolated townships beyond the reach of a minister. In one of these remote

[19] Ibid., p. 129

is a sin but because of the excessive drinking and immorality which might result from a promiscuous gathering. Organized dances are, in general, not objectionable. Nevertheless, in spite of the attitudes of the people to these secular activities, the Church of Scotland crofter behaves in much the same way as his neighbor who adheres to another sect. The elders of the other sects have an influence over everyone in the neighborhood. Every man must ask himself, "What will my neighbors say?"

The Free Church and Free Presbyterian Church people condemn any and all social gatherings where songs, stories, or other diversions are admitted. When people visit, they are expected to remain circumspect in behavior. They may discuss their problems and gossip about their neighbors or the wicked newcomers. They may engage in cooperative or individual work. They may eat together in the home. They may not engage in such activities outside the home. Religion on Skye for the majority has centered attention on the home. Let us look at some of the activities which are condemned. There is the Woman's Rural Institute, an organized woman's club dedicated to stimulating home industries in rural areas and providing educational programs, especially demonstrations and lectures on domestic arts. One meeting, for example, at Uig, not far from Kilmuir, was addressed by a school teacher on the subject of Highland Folklore. He was followed by a knitting contest and tea. Youth Clubs and Young Farmers Clubs do not exist, except in Kilmuir where the Young Farmers Club is under the Crofters' Club, and, of course, in Portree. Village halls are dens of iniquity. While we were on Skye one was built

CONTINUED ON NEXT FICHE

stom is well established. Even war-time restrictions and 794
tioning had little effect on Communion attendance. Skye 796
iles in the United States and Canada sent food parcels 793
the ministers and their kinsmen to provide for their 574 ●
sitors. The minister takes in as many as he can. One [167]
nister, for example, not very far from Portree has a large
nse with seventeen rooms. It is customary for him to have [264]
enty-five or thirty people for lunch and again for high
a (the Skyeman's evening meal) on Friday and the Sabbath.
ny of his guests spend five days with him.

Some idea of the size of the gatherings may be gained 794
om the need for the Free Presbyterian Church in Portree 796
hold duplicate services. The church, I should think,
lds around 300. During the Communion Season, the con-
egation takes over the drill hall, normally used by the
rritorial Army for training and by the villagers for social
fairs, in addition to the kirk. In the drill hall services
e held in English; in the kirk, they are in Gaelic.

Such large gatherings of people require a means to
tablish meaningful contacts and create a feeling of belonging.
ursday is a fast day. All work stops. The people attend
rvices in the morning, at noon, and again in the evening.
eir minister, assisted by two visiting clergymen conducts
em in a dynamic, highly emotional appraisal of the coming
ent. All the ministers participate in the sermons, stressing [783]
e confession of sin and the need for humiliation. Many
inisters are known for their preaching ability, that is their

794 thanksgiving service. The visiting ministers, the "elect,"
796 and the adherents go their own separate ways. They have spent
five days in intense, emotional spiritual communion and they
carry away with them definite, vivid remembrances. Many of
them will meet again in a few weeks when they will exchange
[571] the roles of guests and hosts. The reciprocal nature in all
interpersonal activity on Skye is well developed. In many
ways, the Communion season parallels the Welsh Song Festivals.[16]

794 We noted earlier in our discussion of the Communion
796 season that there has been a decline in the number who attend
178 the Communions. I should like to add a few general consider-
ation to what I have already said on this point. Aside from
the influence of depopulation, there have been several influ-
ential factors in operation. The smaller attendance is
traceable to some extent to an almost imperceptible movement
by the youth away from the more conservative denominations.
The ever-increasing necessity of working for a wage, es-
pecially since most employment opportunities are in summer time
programs, is another cause. This factor is not, however,
important within the local kirk district because most ad-
herents and all the "elect" who work take a vacation in order
to attend. It does mean that visitors may only be able to
attend on the Sabbath.

178 The custom of visiting has almost disappeared in some
794 churches, including the Church of Scotland in Portree where
794 the fellowship meeting is no longer significant because the
369
574 ●

[16] Rees, op. cit., pp. 129-130.

"elect" are predominantly newcomers and the elders are either 178
members of the landed gentry or newcomers. I was rather 794
amazed one day when a Skyewoman told me, "the 'Wee-Frees' 796
and 'Seceders' are no better than the Mohammedans giving 574 ●
gifts to idols," when they sent food to the manse for the 369
minister's guests at the Communion. Over in Bracadale the [798]
custom is also losing its importance, except in the Free
Presbyterian Church, and the fellowship meeting has been
abandoned in the United Free Church because of the reluctance
of the members to engage in public displays, either at
Communions or at prayer meetings. The custom of visiting
has entirely disappeared in Sleat and Strath. One of the
ministers ascribed this to the isolation of the two parishes
from the rest of the island and from each other. Certainly
the Sgiathanach on the south end of the island seldom looks
to Portree and the northern crofter hardly ever goes to
Sleat, but this does not explain why people from the mainland
will go to Bracadale, by-passing Strath.

The vitality of religion can over-ride considerations 771
of family and friendship if a Sgiathanach deviates from the 626
accepted norm. We may recall the young girl who stole church
funds and was ostracized by her "people" and the whole com-
munity. Let us consider another example. Marriage vows, as 586
we know, are held to be sacred on Skye. Divorce is all but 771
unknown and separation is uncommon. To be precise there are 626
four known cases of separation. Nevertheless, if a husband
or wife were to break a taboo, it is expected that the offender
would be cast out. Forgiveness is not compatible with a

than Christianity is the prevailing practice in Glendale." 795 [798]
ttachment to a sect is all the more significant in the
ng neighborhoods because there is not one iota of differ-
n the Gaelic services in any church. The difference is
nal.

In the neighborhood the affiliates of the same church 571 794 795 796
een said to interact with their fellows more regularly
ith the remainder of the group. They come together on
bbath for a regular service and on Wednesday night
prayer meeting. On the Sabbath they come as families, [593]
d, wife and children and they sit together. Normally [562]
xes are segregated in public. Indeed, in the home [574]
ep to one side of the fire and women to the other when
are callers. They also leave in family groups. Their
ction is spiritual. There are no gatherings outside
urch either before or after the service to gossip,
s the stock, or even comment on the weather. They
ll know who was absent, but they will only greet their
s with a slight nod. The Wednesday night prayer
g is different. This is a group situation. Some come
and gossip on the way. Others get together before
ter the service for a chat. At these prayer meetings [554] [888]
ature of the "elect" again emerges. They offer the
s on behalf of the congregation. The prayers, it should [782]

inland villages and crofting areas. Ministers from 178
ighboring and even distant churches used to come to take 794
rt in conducting the services. There was no church to hold 796
many people, so the Communion was celebrated outside. Then,
course, the population was much larger and the majority
longed to one church, the Free Church.

The Communion Season is still marked by large gatherings 794
people at each church in turn. The "elect" from the 796
ighboring churches and the ministers from churches near and
r exchange visits. The adherents also participate in the
lebration of the Lord's Supper. From Thursday until 794
nday the homes of the people in the vicinity are open to 796
eir relatives and friends who have come to partake of the 574
crament or who find the highly emotional atmosphere and
egariousness stimulating. Some, especially the "elect"

People prefer to give money in exchange for car rides or other help, including peat-cutting, because "than you're independent." Friendships are still weak, relative to friendships in urban settings. Most information which is shared between individuals rapidly enters the pool of communal gossip. Although many persons emphasize the importance of mutual aid in defining a friend, some emphasize the ability to confide and keep secrets.

621
178
602
[585]
[576]

Today many of the younger villagers do not know their relatives to the extent that their elders did. In one family, a girl who was about to get married had to ask her brother, who was the only one of the siblings interested in kinship connections, whom to invite to the wedding. It is still useful to retain an inventory of one's relatives. "I have cousins in Glasgow and Australia that I've never seen, but if I ever go there I'll have a place to stay." With the increase in transportation and income, more islanders are taking brief trips away from the island. During these trips, they almost always stay with relatives.

602

It is frequently said that children are now "cheekier," less inclined to run errands and obey orders meekly, and that they prefer to watch television or read books by themselves to playing with each other.

599
621

child may come to spend nights or longer periods of time with them.

476
621
[576]

To some extent villagers are still dependent on each other for various kinds of help. It is considered extremely bad manners to refuse labor, a tool, or food to anyone who requests them. If someone refuses to aid another, people say, "What will he do when he needs help?" This attitude has made the island a paradise for the few salesmen who, in the last few prosperous years, have started to visit its communities; villagers find it difficult to say no to anyone who comes to their door with a request, including the request that they buy something.

[443]

621
574
844

A woman in childbirth was formerly attended by a local midwife, and kept in bed for two or three weeks. "Other women, both relatives and friends, came and stayed with them at night, fixing them warm tea and milk, whispering bhronag bochd (poor soul), how awful you look..." just as today the neighbors gather at times of illness and death. It is more difficult for neighbors to come to the bedsides of young mothers of today, who are all taken to the hospital in Stornoway to have their babies; but the neighbors manage to visit the hospital, which has no choice but to ignore its rule of only two visitors per bed at a time.

[178]

a while. It would be an insult not to take a drink with them; you musn't miss your round."

273
571
156
431

The usual practice when drinking with friends is for one person to buy the drinks; everyone drinks together, and then someone else buys the next round. To drink slowly is to indicate that you intend to miss your round. A relative who returns to the island for a holiday usually pays for more rounds than he receives, and may spend as much as L80 in a single week.

If a man wants more drink than his fellows, he has several choices. He may step up the pace of drinking by buying more rounds, which means that he is likely to pay a larger share than the others during the evening as they will be ready to quit before he is; or he may keep a bottle hidden outside the room, and disappear periodically for a private nip, after which he returns to the group.

273
571
156
178
434

As incomes have grown, excessive drinking, which was once confined to a small number of occasions, has also increased. In the days when money was scarce, people shared with others what they had. Elaborate and relatively lavish ceremonies in which all community members participated were possible because of the contribution in labor and goods of members of the community. The custom prevailing today is to use the added money not to purchase more goods and services to travel, or in other ways that might result in

173 his near kin. Again, much as in the medieval *gestes* of
621 France, fosterage of an heir by a clanswoman formed the
614 closest possible tie to at least one family of the people
829 from ancient to recent times. For it linked the heir by
sympathy—though not by equal obligation—to elders
[171] and playmates in childhood and his contemporaries in later life.

565 To re-state this 'contradiction' of equality and privilege, we have thus a hierarchy of 'class' imposed upon a 'classless' society. For the joint farms and the township were essentially classless. The two classes, the lord and the people, were primarily opposed, war having placed the conqueror above those who fed him. This state of things was not active 'class-war', for the armistice could endure indefinitely by means of the bargain made between the classes for some exchange of services; none the less, it was built upon class conquest.

175 That all should ultimately claim the lineage of their
565 chief was a remarkable solution to the hereditary opposition
614 of class. A man who knew the Islanders well, John Lane
Buchanan (1793), noted how in conditions of the utmost
622 poverty the poorest addressed each other as 'lady and
[576] gentleman', *bean-uasal* and *duine-uasal*, a courtesy not lost
today. And every clansman had a right to shake the hand
of his chief, as Edmund Burt observed in his vivid *Letters*
[577] *from the North* (written after 1721). Indeed the sense
of mutual obligation implicit in Gaelic society is well illustrated by the homely word *coir*, usually translated 'right'; it is equally used for right's correlative, duty—as when a Scots or Irish crofter may say "You've a right (a duty) to help your mother"—and for a 'right' (privilege) to shake the chief's hand. An English equivalent would be duty-privilege, or duty-right. Similarly, the same

175 Mackenzie. For all that, in 1900 a crofter said: "We called
613 the old proprietor Seaforth, but I believe his right name
621 was the Prince of Welsh". To him the Earls were royal!
[829] Freedom of intercourse is embodied in the language
to this day. With 'a stranger', a little spoken Gaelic
197 lessens 'strangeness' and quickens intimacy, because
Gaelic conveys essential human relationships as English
565 rarely can—even the English of the 'democratic' Low-
576 lands. For instance, a well-dressed stranger, though
young, is usually addressed in English as 'sir' by a senior crofter, and, just as in the South, without the expectation of 'sir' or 'ma'am' in return. In English, that is, respect is given to class. In Gaelic, age receives respect: it is the stranger, if the younger, who adopts the respectful 'you' (the second person plural, *sibh*), while the crofter, if the older, uses the friendly singular, 'thou' (*thu*). If they are of equal age, and neither is elderly, 'thou' would be
[562] used by both. Similarly, respect is given to womanhood; and an older woman who would say 'Sir' in English will say 'My dear' in Gaelic.[1]

614 It is not only by daily contacts that we may understand the relationship of people to chief, but by the height of feeling it may attain, and by the beauty of its expression.
[175] Among the finest of the later songs of praise to Gaelic clanship and its chiefs are those composed by two Island
[533] bards, a woman of Harris and a man of the Lews. Mary MacLeod, *Mairi Nighean Alasdair Ruaidh*, was a kinswoman of the MacLeods of Dunvegan and Harris, and a beloved

[123] [1] Calling on the sub-postmistress in a Highland place where I was known to be a friend of the laird, I was addressed as "Sir". But hardly had we passed to Gaelic when this woman, my elder and a person of culture, laughingly used an expression then strange to me. Halted, and suddenly shy at being forced to translate, she said at last, "When thou wast *a lump* [just a boy!] '*muair bha thu cnap*!" But rightly, she would have been slightly shocked had I said 'thou' to her.

world.

More than one crofter told me that one of the biggest changes on Skye in the last thirty or forty years was that thei neighbors are "less Christian," in the sense of being neighborl and helping each other, than they used to be. Once no one said, "I've finished my work," until everyone in the township had stacked his grain. "Colin is harvesting today and Murdo tomorrow; we'll go over and lend them a hand," was the expected attitude. Toward the end of the season, the whole township would be seen working on an old widow's croft. "Now when a man has cleared his land, he says, 'I'm finished,' and that's that." such a statement has to be followed by asking if they now forget about the sick and the aged. The answer is always the same: "When a person needs help, his neighbors will help out. Perhaps they can't do his corn, but they help by just leaving a few fish by the door or a pail of milk in his cottage In short, they continue to give mutual aid, but it is anonymous The Highlander never looks for thanks and never offers it. I remember our landlady complaining about an Eastcoaster in Portree whom she had helped by giving some outgrown children's clothes. The recipient had thanked her profusely. "You know, Paul," she said, "If anyone did that for me, I'd be too choked up to say anything."

Not all use the same colors to paint the scene. I was also told that the harvest was formerly a time of friendly rivalry. The gobhair-bhacaig, two sheaths of oats tied at right angles, used to be thrown on the unfinished fields within

FICHE

at Skeabost. A minister drove by one day and said to the 785
workmen, "Don't you know you're building a house for the Devil?" 795
One of the laborers, a Lowlander, replied, "It's a good thing 575
we have a place to keep him." The Order of the Eastern Star
and the Masons are condemned because, while they are religious,
they are secret orders. Even if the person's religion did not
stand in the way of his becoming a Mason, his distrust of
mystery probably would. As one young fellow said one night in
the bar when being chaffed about the Masons, "I'm not going
to join any secret organization until I know what the secret is."

Included among the objectionable activities by these two 785
churches are the traditional Highland Games, held each year 795
at Portree in August, probably about the time of the old Saint's 541
Fair. The day is a school holiday. Aside from New Years, it
is the big occasion of the year. People come in from all
over the Island. Few of the Skyemen actively take part in [526]
the contests of tossing the caber and throwing the stone, or
in the piping and dancing competitions, but they look forward
to the event. It gives them an opportunity to see their [571]
"friends" and join them in the pub for a dram. Although the [793]
ministers disapppprve, they lack the backing of the "elect," so
the games go on each year. I hasten to add that they have
lost much of their appeal in recent years, but I am told that
this is due to the fact that the clique who runs the Skye
Council of Social Service has, in an effort to attract tourists
early in the season, set up Skye Week in May. Included in
the Skye Week program are Highland Games. I might also add

man is no longer concerned with the necessity of having his 771
children baptized, the venerable old men, the family-head 554
elders, prolong their social control by sitting in judgment 183
on those who seek salvation. The strength of age controls 626
is indicated by the continued ability of the elders to resist [178]
all attempts to introduce secular innovations to the crofting
neighborhoods. Even in Portree the majority of the people
are under the watchful eyes of the old men.

Many of the meaningful patterns of interaction are 771
religious. The rites of passage function to augment social 182
control, restore disturbed equilibriums, and establish new 626
ascribed statuses. The rites of intensification, including
those associated with death, function to restore disturbed
patterns of interaction in the family, nuclear and extended,
and the larger social groups and to establish meaningful
relationships when large congregations gather for the
celebration of communion. Religion for the majority is not 771
merely dependent on attending church on the Sabbath and [782]
attending Wednesday night prayer meetings. Every day of
the week begins with a prayer and ends with family worship.
All social activity outside the home is ideally limited to [52]
the church, and the church is never used for mundane activity.
Only in Portree are there a number of social activities to [369]
tempt the people. Kilmuir has no more than a Crofters' [575]
Club for men, and Glendale has no social activities, unless
one would include the annual meeting of the share holders
in the farm.

including almost all with private flocks, the crofters continue 178
to cooperate. The church has been broken by schism, not once 182
but four times. On Skye, however, the schisms have had as 795
their purpose conservatism, not greater leniency as in Hilltown. 182
Moreover, the schisms have been solidifying factors. The
progressively more dynamic world denying sects, after a period
of communal strife, have given the people an emotional unity.
The crofters have become dependent on the trade-center village 182
and the wider national markets. Many must seek employment beyond
the island. The interests of the Sgiathanach are not outside
the neighborhood, except in so far as events from the outside
affect them and, especially, to the extent that ties of kinship
and religious brotherhood reach beyond the local group. We
are hardly talking about the same situation as Homans. As we
continue to explore this condition we may also ask has there
been a decline in the frequency of interaction in the internal
sphere of activity?

The old ceilidh has disappeared under clerical bann, but 182
it has been replaced by "going to have a crack," going to visit 571
and gossip with one's friends and "people." The people may [178]
no longer gather to hear the old men tell stories of clan battles.
They now discuss the latest local gossip and the news of the
outside world. The Islander has never been given to formal [575]
social organizations; they half distrust such orders as the
Masons and Eastern Star. Still there are chapters of both in
Portree. In the crofting neighborhoods face to face relation-
ships continue to preserve strong interpersonal sentiments. The [263]
postman's van and the grocer's trucks have relieved the people

173 "Then the tweeds got
243 going and the barley took too much trouble; so they had
285 no use for the mill."
324

173 A 60-year-old woman remembers, "They depended on the
262 potato and fished a lot. I was raised on oatcakes, barley
bannocks, and salt herring. There were no vans and no
school canteens when I was young; you had to carry your
[264] own 'piece' to school. We had porridge with fresh milk
for breakfast, oatcakes and butter for lunch. Dinner was
at 4:00, of potatoes and fish and milk. We had meat maybe
once a week. My father poached a lot. We ate the heads
[261] and the roe of the salmon fresh, and salted the rest."
Once among the cleanest, Hebridean teeth now vie with
164 British cities in extent of decay. It is not uncommon for
759 a child in his first year of school to have six teeth
pulled by the travelling dentist.

261 Various customs associated with food which exist today
292 reflect the days when fare was meager. Tea-drinking is
[171] omnipresent in Britain, but in the islands it has
272 special significance. The taking of tea constitutes
574 the denouement of a visit, and almost always occurs when
someone steps over someone else's threshold. To refuse
• [576] tea has some of the connotations of an insult; and to
take only tea, without food, is to have a <u>copan falamh</u>
(empty cup).

264 The only occasions on which it is customary to feed
574 someone an entire meal is at a work party, such as peat-
• 576 cutting. On such occasions the preparation of meals is
[461] done in an atmosphere of competition and mutual scrutiny,
[476] and the meals are often elaborate. At other times, the
requirements of etiquette can be minimally fulfilled by
giving foods which are still relatively abundant, but
which were much more abundant when the land was cultivated
[242] and cows kept. Such foods are barley bread, oatcakes,
264 clotted sour milk, cream and fresh butter. These foods
571 are usually offered to visitors along with tea, and in the
574 past this custom served to minimize the economic disparities
between villagers, to spread scarce resources. A similar
[737] function was served by the practice of giving part of
[431] each catch of fish to old widows and other villagers in
need of aid. Even though food is more abundant and diverse
today, the taking of tea, and especially food, during a
visit is still very important.

173 A 50-year-old man who "married into" a croft recalls,
[581] "I came from a family of ten children. Everyone had to
[428] leave, or marry a girl with a croft. Only the eldest son
could inherit the croft." There was little room for
423 romanticism in the fight for scarce land among the sons
581 of large crofter and non-crofter families. "The most

288 Questions about the state of
"the tweed" permeate all discussions, and often
511 constitute an initial greeting. "Have you got a
458 tweed in the loom? How many do you have? Did you
[521] see Stickey's tweed van going into Pairc? Did you
• [576] hear that Newalls has an order for about 800 pieces...?"

"The mills brought me two tweeds, and I got two in town myself. I stuck those two in the attic so that anyone who came in would be none the wiser," says one person in a whisper. Neighbors are in and out of each others' houses and loomsheds, observant and questioning, on the lookout for any indication that they have missed out on some transaction in the competition for scarce goods.

<u>D. Weaving as Strategy</u>

286 When weaving was done on a wooden hand loom, the
178 weaver required a longer period of apprenticeship.
402 Weaving was "more of an art," as some of the older
weavers remember it today. Not only was the shuttle
thrown back and forth by hand, but the lifting of
different threads in the warp was done by manipulating
288 four foot pedals in the correct order. Today, the
178 process of weaving is very much simplified: the weaver
402 pushes only two foot pedals, and simply keeps an eye on

121 of the township with the larger society, and examines
128 the effect of geographical and social marginality on
the boundedness of the township network. Chapter 6
discusses two important networks of social relations
within the township.

<u>B. Township as Social Boundary System</u>

632 The township constitutes a relatively firmly bounded
178 system, although its boundaries are weaker than formerly
621 when the township was relatively self-sufficient
[476] economically. Township members worked together in small
fishing crews, and families relied on each other for
help when members of the family were away from the island
"at the fishing."

621 Relatives were expected to give priority to helping
476 each other. According to one proverb, "A relative is
602 your best friend." First and second cousins were
[539] considered especially close, but knowledge of one's
[605] kinsmen extended to at least the fourth generation.

602 Ties of kinship became evident in ceremonies such as
• 576 funerals and weddings. One Gaelic proverb says, "You
585 know who your relatives are at weddings and funerals."
764 At weddings the onus was on the members of the bridal
[539] party to remember their relatives. "You have to sit
and calculate who is closely related, and all those

602 people will be doing the same. If they think they're
• 576 close enough to be invited, they'll be annoyed if you
585 don't include them." At funerals, relatives of the
764 deceased to about third cousins were expected to
participate.

621 When a population has lived in a small area for
602 generations, a dense network of kinship develops. This
476 fact, and the importance placed on mutual aid among
571 fellow villagers, fostered the feeling that the network
of township members, who ploughed, fished and tended
cattle and sheep together, was also a network of kinsmen.
"We're all the same people." "It's all one family here."
Occupational and kinship spheres of social activity
commingled. The importance of neighbors in contrast
[539] with relatives was reflected in such proverbs as, "A
neighbor close at hand is better than a relative in a
distant land."

621 The nuclear family did not, according to Cohen's
594 criteria, constitute a firmly bounded system. Then as
178 now, women preferred the company of their "own kind,"
[571] that is, the company of other women. The men worked
and spent periods of recreation with other men. Children
621 spent about as much time in the homes of grandparents,
596 uncles or fellow villagers as they did in their own
homes. A 60-year-old woman remembers that it was a

192 561 requirements of adulthood, and also old age, are still boys and girls.

554 Status Equality within the Township. The ascription of status on the basis of age and sex has resulted in a straightforward [562] [561] system of status. The facts are simple. Men are the social superiors of women. Youth are socially inferior to their seni Men, or women, of a common age category are equals. We shall now examine a few interpersonal relationships to see how the [264] system operates. Unless a man and his wife are eating alone, women never eat with men. They wait until the men have finish 576 before taking their meal. When neighbors come to visit, the 562 594 man of the house does not rise for a woman. He does rise for a man and shakes him by the hand. The woman of the house, on the other hand, rises for both men and women. Furthermore, when a couple comes to call, the woman greets the man first. Only after he has been offered a chair does she greet the [858] [882] woman. Young people are seen but seldom heard. They do not speak unless addressed.

626 178 All societies allow some deviation from traditional norms of expected behavior. On Skye, as elsewhere, excessive deviation is censured. Neither increased opportunities for education nor the steady flow of Skye men and women to the four corners of the earth, accompanied by the slow returning trickle, have disturbed these fundamental values. Like the youth who leaves home to achieve upward mobility through outward mobility, the man who returns must conform to the traditional norms, which he learned as a child, or be regarded

793 while only the Church of Scotland ministers will assume role
554 in government, on the district council or the county council on the education committee, and similar bodies, they have not been given higher status than the ministers of other denominations, who firmly believe the function of the minister is only to correct the public servants when they err.

759 The doctor is coming to fill a status held by no other
554 person, except the county people, the landed gentry. Tra-
793 ditionally, they have ranked second only to the minister, but there is a marked trend to accord them more and more sta The doctors, of course, are less restricted in their social activities and can participate more fully in secular affairs than the ministers. They have a wider range of interaction, entering the homes of all regardless of sectarian difference In Glendale there is no question about the relative position of the minister and doctor, who lives in Dunvegan. In Kilmuir on the other hand, the doctor is vying with the ministers. He is always addressed by his title, but often, at least in indirect speech, he is Doctor (Ian) rather than Doctor MacLeod. Many of the doctors on Skye have begun to form a cleavage between their families and the crofters. The are sending their sons to private schools. The ministers' children attend the local schools.

875 The school teachers also enjoy high prestige status.
554 They are always addressed by their surname, prefixed by
576 mister, even by older men whom they call by their Christian names. One newcomer was especially struck by this careful

distinction. During the war when Skye had its own little 875 554 576
army, he came to know many of the old crofters quite well. Finally, he came to use personal names when speaking to them and asked to be called by his first name. The people explained that they might be older than he, but he was too important to be spoken to as anything other than mister.

The tradesmen and the shopkeepers in Glendale and 554 443
Kilmuir are not any different from any other man. They are not specialists. They are part-time crofters. We have to turn to Portree to see what status position they fill in the society of Skye. I might just add that they are on a first name basis with their neighbors, and, like the crofters, they are known beyond the neighborhood by their first name and township, such as Ian Borve or Murdo Stein.

To summarize, there is additional evidence for cultural 596 182
continuity in the structure of the neighborhood. The extended family, although very unstable and, therefore, somewhat amorphous, is still a reality in the minds of the people. It still has two functions which it must have had in the remote past: seeing that all are cared for and given a decent burial. The ascription of status noted for the township 554 182
carries over to the neighborhood, as does the underlying status equality and need for unanimous consent. Among the crofters leadership is still undeveloped. The old men can enforce [888]
conformity but they cannot lead. Although prestige ranking is developed, in the form of the achieved statuses of ministers, doctors, and teachers, it is significant that, except for the minister in Glendale, all holders of prestige status are

cannot be spiritually enlightened. The individual who is asked about the nature of his visitation is not judged on his ability to raise his family in the nurture of the church. He is rather judged on his preparation to carry on the tradition. He must be worthy of the respect due to one of his status. While old women are numbered among the "elect," their exclusion from any active role in the church has kept them socially inferior to the old men.

I wish I could give some examples of the nature of this "visitation;" however, Skye is a land where the direct question is not used. One can ask a direct question without offending, but the code of hospitality requires an either affirmative answer or the answer you think your guest expects. My circuitous promptings on this topic only succeeded in arousing concern for my soul.

Two groups escape from the control of the elders as it is exercised through acceptance of an individual into the "elect." As mentioned earlier, the newcomers to Skye have come from different backgrounds. Beyond the Highlands, the meaning of "Effectual Calling" has changed over the years. The youth attend a young communicants' class in which they are taught the meaning of church membership. Notestein, writing about the national character of the Scot, maintains that interest in "election" has disappeared.[14] Most of the members of the Church of Scotland in Portree would no doubt agree with him. One attempt has been made on Skye to hold a young communicants' class. It took place, of course, in the Church

[14] Notestein, op. cit., p. 153.

175 614 577 621 principle of duty-right or *coir*. Further, in so far as chief and people claimed unity as the children, the clan, of one ancestor, they had crystallised a fair ideal, realised by an exchange of services ('cuideachy'). Gaelic clanship was not without its Lowland counterpart in 'kindness' which linked those of one 'kind'—'kinsfolk' and neighbours—to their ferm-toun and parish, to one another, and to the laird. Tyranny and betrayal by chief and laird make one share the bitterness of grief once felt as competition for scarce land broke up 'kindness'. Yet the people's endeavour and attainment in the past give hope for the future.

175 614 621 622 All have heard of the hereditary Highland chief and many have read of the gentlemen-farmers, but too few have heard of team and crew, and township-parliament. It is time we learned not only of the aristocratic chief but of the chosen helmsman and the democratic constable. So long as the fallacy is repeated that the Highlanders "never co-operated, and could not act together except under the orders of a chief", so long will it be easy to add, "and they never will"! Historic truth may have much to teach [642] for the renewal of leadership for life together. And beyond the Highlands, the example of this aristo-democracy, at its worst and its best, may contribute to new concepts of community.

178 476 44 developed through the township Grazing Committees by the Scottish Agricultural Organisation Society and its associated Crofters' Agency. Lime and fertilisers were [654] purchased, and wool and other products sold, co-operatively. The co-operative marketing of lobsters, taking [228] advantage of fluctuating London prices, has led to the reconstruction of ponds for storage. By these and other [654] means, government assistance is utilised but not squandered; earlier initiative in agricultural organisation is reinforced; and communal tradition is revived, linked to personal responsibility through the crofters' lifelong knowledge of one another.

178 288 As to the future, all agreed that unless the Harris Tweed industry flourished, with work at reasonable wages, the villages would be abandoned by the young, perhaps with [829] no return such as hitherto on 'retirement'. Many young people are content with life in the townships, provided they can get a living there, though not all, for they are somewhat divided; and work elsewhere, even in the mills of Stornoway, is a counter-attraction.

178 592 538 Social life is undergoing changes which operate both for and against the retention of the young. On one hand, household interchange of conversation, song and story, the *ceilidh*, has declined. On the other hand, one found 178 771 that, as regards religious prohibitions, and in spite of the nervous tension expressed in 'Revivals', the young have won greater freedom. Near one village a Nissen hut, • 577 handed over to the Home Guard, was also used by young [535] people for monthly dances. When I asked a young crofter invalided from the Navy whether the Elders of the Kirk made no protest, he replied that they had, but had to give it up: "They see that we won't stand for it"! This would have been unthinkable during the First World War,

178 771 • 577 [346] 345 181 [535] or after it. After 1914–18, the Rector of the Nicolson Institute, Stornoway, proposed village halls for village education and recreation.[1] The scheme was never fully realised except in one township, Sandwick, near Stornoway, owing to the strength of puritanical opposition. In particular, dancing by young folk was condemned as "dancing upon the graves of their brothers". This attitude is breaking down; social standards, in becoming less repressive, may encourage young people to stay.

178 207 [204] Broadcasting—a factor of change everywhere—came to the townships as a revolution. Newspapers had already filtered in; but for the first time the Gaelic-speaking home was entered and dominated by an English-speaking voice. It has made itself heard there almost ceaselessly ever since—in broadcast talks, discussions, announcements 178 of news, entertainment, singing and prayers. Only the Sabbath imposes general silence. In the Scottish Home 207 Service great trouble has been taken to meet all tastes at 795 the highest level for each, from 'low-brow' to 'high-brow' and from Clydeside to the Isles. To a thoughtful, selective Island listener the new opportunity for imaginative human contacts and for initiation of all kinds is immense. And the purely Gaelic listener is not forgotten. He welcomes Gaelic song or story; and worship in Gaelic has reached many an elderly person's bedside.

178 207 [525] Yet few listeners select: much broadcasting is designed for those whose only picture-galleries are advertisement hoardings and whose only drama and music are to be found at "the Pictures". And through no fault of the B.B.C., the Sports News offers temptations for those in poverty to acquire wealth innocently through luck in a football pool,

178 311 232 233 • [578] "The cattle give too much trouble." A smaller scheme is grazed only by sheep. On the schemes where mixed grazing is practiced, a number of conflicts arise between those who have only sheep, and those who have cattle as well. To accommodate different demands, one township scheme was divided with a fence; cattle were put in for a month in one part, and then shifted to the second part. The sheep were then brought into the first half. All stock had to be removed from the scheme a month before the lambs were weaned, so that all worm eggs and other harmful elements in the dung of animals previously present would have time to die. What was once used for a single purpose by everyone now has to be divided.

[435] [578] "I paid one pound a head to put cattle on the reseeding," says a man named Iain. "Now I have to move them off already. Those sheep people want it for themselves. I won't use it if they're going to be like that. Next year I'll have the use of two crofts and my

[409] [242] apportionment. And now that I have my own tractor I can put a load of sand at the bottom of the croft to make the grazing better."

311 233 232 829 According to another person, who also keeps cattle on the reseeding, "Some people want to move their livestock on and off the schemes when it suits them, like Iai

241 288 183 233 The competition between the loom and the croft is evident in the few communal township practices which still exist. One of the rules of township organization is that all households must bring their sheep in from the moor on the same day. Other rules are that no one [231] should go out on the moor at any other time with a dog, and everyone who has sheep should go out on the day designated by the township grazings committee to collect them. The moor is extensive, and the sheep wander over a wide area. Only if a large number of men go out together and come in with their dogs like a wide net can the sheep be brought in with a minimum of effort over the stream-cut, uneven ground. Anyone who goes out alone disturbs the grazing animals and probably drives them farther away from the village.

233 183 These rules have strong ethical import and are much more than a set of procedural rules prescribed by the Crofters Commission. "There is a code of ethics which you learn as you grow up, as you go with your ●[578] elders out to the moor. You can fight with a man over a woman and make it up next week; but if you fight with a man over a sheep, you won't make it up for thirty [178] years." That these rules are weakening in importance is indicated by situations in which only two or three men have gone out in the early morning to bring in the

233 183 178 sheep. These men arrive back in the village hours later to find the road lined with the cars of men who have come to look for their own sheep among the flock but who had not bothered to spend the time collecting them. Many have gotten rid of their sheep to "concentrate on the weaving."

233 178 ●578 2. Sheep vs. Cattle: As mentioned in the section entitled "Changing Land Use" (cf. Chapter 2), a split has emerged between those who keep cattle, and those who keep only sheep. Cattle were once predominant, but the number of sheep has greatly increased. The conflict between raisers of sheep and of cattle extends beyond the use of the reseeding schemes (see Chapter 2).

Cattle are usually brought in from the reseedings or from the common grazing lands where they are tethered, and put on the unfenced, arable inner grazing land of the township at the same time that the sheep are brought in from the moor. In one township on the west side of Lewis, the cattle were released a few days before the fank,[1] which resulted in the formation of two groups, sheep-only people and sheep-and-cattle people, which opposed each other. At the fank held a few days later,

[1]The word "fank" refers to the process of bringing the sheep in from the moor, and to the wooden pen in which the sheep are gathered and claimed by their owners.

233 178 ●578 sheep were let out of the pens, and a fight broke out between the two groups of people.

241 657 578 175 [671] 3. Crofters vs. Non-crofters: Another division within the township has developed largely because of the attention paid by outside agencies to "crofting." The Crofters Act of 1886 defined crofters and gave them a protected, privileged status. In fact, very little distinction existed between non-crofters (sometimes called squatters and/or cottars) and crofters, and in some places, such as the Isle of Scalpay, non-crofters even out-numbered crofters. Both categories were linked to each other by bonds of kinship and mutual dependence. Non-crofters were in fact favored economically. They did not have to pay rent, but had the same opportunities to graze stock and plough land as did crofters. Many crofters themselves had buaile, units of land not recognized as part of the croft and not included in the land for which rent was paid but recognized as property by the villagers themselves to the extent that these bits of moorland passed down through families or could be given by one person to another. Even today, a young girl thinking of getting married says her future husband might build their house on her father's buaile, and a man may build a house on moorland "given" to him by his wife's aunt. Officially, a non-crofter had no "rights" to a house which he built on the common

241 175 423

241 178 423 829 the edge over non-crofters. "Squatters can do what they like, cut peats, put sheep and cattle on the co grazing, but this is a privilege, not a right."

The clerk of a grazings committee says, "When i comes to an argument between a crofter and a squatte the crofter always wins. A squatter has rights only with the grazing committee's permission. If one cro disagrees, the squatter is out."

241 423 ●578 A squatter muses bitterly, "I wanted crofting s because I wanted to get a Department of Agriculture grant to build a house. I work on the peat road; I to all the fanks. But at a township meeting, they d want me to get crofting status. They were afraid I would start grabbing peat banks or apportionments in the common grazing or something. There's your broth love for you."

311 654 4. Subsidies: In the section entitled "Changin Land Use" I suggested that the availability of subsi has encouraged a more specialized investment in agri activites.

654 829 241 The villagers are keenly aware of outside insti which give money. They speak to each other about fo which they receive from the Department of Agricultur and the Crofters Commission, in much the same way as they are curious about the number of tweeds which an

of the Free Church are "the Nee Frees." The Free 795
rians are the "Seceders" or, at least to some of
try, the "Split P's." Arguing about religion is [576]
red very bad taste. It is left to the ministers, 793
y do have their points of difference. One Free 795
erian minister, for example, told me that no one in 798
rch of Scotland, including the minister, was worthy
ive Communion. On many occasions during the year
nisters of the Free Church and Free Presbyterian
devote part of their sermon to a criticism of the
of Scotland, not to mention the avid hostility of all
n toward Catholics.
dherents of the several sects intermarry with no qualms 582
thout suffering any loss of status. By the time a 715
gets to be a member, marriage is no longer in his
Husband and wife continue to adhere to their respective 593
nations, those in which they were baptized. The children 715
lly, are baptized and raised in the church of their [251]
. Extended families are often divided religiously 596
sectarian lines. In one family one brother and his 715
ere Free Presbyterians, another brother and his wife
ree Church, a sister was Church of Scotland. The
s had been Free Church but became Free Presbyterians
turn of the Century. At least one cousin was United
hurch. This religious schism did not affect their
ion for one another. Once a week the sister went to
es with her Free Church sister-in-law. Periodically

asceticism is fundamental to the peoples' lives. A brief 785
discussion of the Sabbath will serve to conclude my discussion [196]
of religion and to indicate some additional difficulties which [128]
the Sgiathanach faces in his attempt to preserve his culture.

Sunday does not exist on Skye. There is the "Continental 796
Sunday" and the Sabbath. On any other day of the week, the [576]
greeting is, "It's a fine day," or, more often, "It's a wet
day." The Sabbath, however, is "no day to be speaking of [576]
days." Keeping the Sabbath is almost a fetish among the
people. It is a readily observable test of an individual's
religious capacity. All unnecessary work, all unnecessary
words, and all unnecessary thought is taboo. Only the
barest minimum of worldly activities are permissible. This
does not mean a day spent in idleness; the time should be
spent in public worship at the kirk, private spiritual con-
templation and family worship. The Skyeman's estimation of [183]
a newcomer may depend on his keeping the Sabbath. One man
was very surprised to learn how long a memory the people have
when a man deviates from the expected. A visitor asked a
crofter what kind of a man a certain newcomer to Kilmair
was, to which the crofter replied, "He's all right, except
six years ago he played the pipes on the Sabbath." Most
newcomers, including the few Catholics, respect the Sabbath.

No crofter would ever think of doing any work on this [461]
day beyond feeding his cattle as an act of mercy. After [231]
weeks of rain, the crop of oats or hay may be ready for 796
harvesting on the Sabbath, but he will not touch it. A man 241

577

577 ETHICS--abstract ethical ideals (e.g., truth, righteousness, justice); ideals of individual virtue (e.g., honesty, loyalty, industry, courage, temperance, tolerance, filial piety); notions of right and wrong; conception of conscience and character; incidence and causes of, and attitudes toward breaches of ethics (e.g., lying, cowardice, flouting of kinship obligations); conflicts between ideal values and practical considerations; etc. See also:

600 in the far north. "There were two fishing seasons.
175 For one season you went to Fraserburgh, Stronsay,
288 Lerwick and Peterhead; and then the winter fishing was
[221] in England, at Yarmouth, Scarborough and Loucester.

I remember in Yarmouth we didn't like the English
[262] bread, it was such a dull color. We liked the pure
white Scotch bread."

They lived in small huts, and the work was hard but
full of fun. Neighborhood girls used to go together,
bringing bedding and different items in large chests to
share in the housekeeping. Three girls worked together
in a crew, and there were as many as six sharing a room,
in double bunks. Some of the huts were so small that
there was barely enough room for the beds and the cup-
boards. At night the boys would come in off the boats.
"You were so tired from being up since early morning;
[577] but you were always able to dance. You were treated with
[178] respect; the youngsters today aren't so good." The
women who married non-islanders that they met at the
fishing were not likely to return.

175 When the weaving started on a large scale, the girls
288 were glad enough to have work at home, even though the
464 work was hard." But many continued their temporary
175 absences from the island, working in hotels or as
464
172
357

181 People prefer to give money
621 in exchange for car rides or other help, including peat-
178 cutting, because "than you're independent." Friendships
183 are still weak, relative to friendships in urban
829 settings. Most information which is shared between
572 individuals rapidly enters the pool of communal gossip.
621 Although many persons emphasize the importance of mutual
[369] aid in defining a friend, some emphasize the ability to
[521] confide and keep secrets.
[476]

Today many of the younger villagers do not know
621 their relatives to the extent that their elders did.
178 In one family, a girl who was about to get married had
602 to ask her brother, who was the only one of the siblings
[683] interested in kinship connections, whom to invite to the
[596] wedding. It is still useful to retain an inventory of
602 one's relatives. "I have cousins in Glasgow and
484 Australia that I've never seen, but if I ever go there
I'll have a place to stay." With the increase in
[178] transportation and income, more islanders are taking
brief trips away from the island. During these trips,
they almost always stay with relatives.

It is frequently said that children are now "cheekier,"
857 less inclined to run errands and obey orders meekly, and
572 that they prefer to watch television or read books by
822 themselves to playing with each other.
178

155 Lies are frequently told. "Every other sentence my
861 father says is a lie. If you believe half of what he
577 says, you're a fool. If you believe a quarter of what
[673] he says, you're getting near the truth. If you believe
an eighth of what he says, it's probably the wrong eighth."

156 Villagers engage with each other in constant, quiet
621 game-playing. They are dependent on each other for many
things, but try to minimize the control that others have
over them while improving their own positions. If someone
brings plants or shrubs as a gift, the response is likely
to be, "She was probably pruning her garden and needed to
get rid of the leftover garbage." Such negativism releases
the person from feeling obligated. (See Emmett 1964:
16-17, for a description of a similar situation in Wales.)
A man who is asked about his new tractor replies, "Its
faults will come out later." If he were to say it was
all right and then it broke down, he would have lost points.
In discussing the mental health of a villager recently
returned from Craig Dunain (a mental hospital near Inverness),
someone observed, "He's better than the doctor who let him
out." If another breakdown were to occur soon, someone
would be sure to comment, "And so-and-so said he looked
all right."

156 Such training allows little room for the development
572 of close friendships in which the individuals involved are

173 his near kin. Again, much as in the medieval *gestes* of
621 France, fosterage of an heir by a clanswoman formed the
614 closest possible tie to at least one family of the people
829 from ancient to recent times. For it linked the heir by
[171] sympathy—though not by equal obligation—to elders and playmates in childhood and his contemporaries in later life.

565 To re-state this 'contradiction' of equality and privilege, we have thus a hierarchy of 'class' imposed upon a 'classless' society. For the joint farms and the township were essentially classless. The two classes, the lord and the people, were primarily opposed, war having placed the conqueror above those who fed him. This state of things was not active 'class-war', for the armistice could endure indefinitely by means of the bargain made between the classes for some exchange of services; none the less, it was built upon class conquest.

175 That all should ultimately claim the lineage of their
565 chief was a remarkable solution to the hereditary opposition
614 of class. A man who knew the Islanders well, John Lane
622 Buchanan (1793), noted how in conditions of the utmost
[574] poverty the poorest addressed each other as 'lady and gentleman', *bean-uasal* and *duine-uasal*, a courtesy not lost today. And every clansman had a right to shake the hand of his chief, as Edmund Burt observed in his vivid *Letters*
• [577] *from the North* (written after 1721). Indeed the sense of mutual obligation implicit in Gaelic society is well illustrated by the homely word *coir*, usually translated 'right'; it is equally used for right's correlative, duty—as when a Scots or Irish crofter may say "You've a right (a duty) to help your mother"—and for a 'right' (privilege) to shake the chief's hand. An English equivalent would be duty-privilege, or duty-right. Similarly, the same

175 two singers, as in the portrayal of a chief, "blue-eyed and
533 with clustering, golden locks . . . and brown, ruddy
614 checked"; in descriptions of "his wisdom, prowess and
622 justice" or of his traits—his "joyous, fresh, and shamefast cheek", and as a friend to the poor seeking justice, and to men of learning, musicians and bards. In the halls of chiefs where ancient joys and traditions were maintained, the ideal of chiefship was essentially that of manhood. Nor is the chief's lady forgotten either by Mary or by older bards, though womanhood is a theme rather for lyrics and for sacred song.

Even at Dunvegan the stream of clan life was once interrupted in the lifetime of these two bards, as the *Clarsair* told in his satire on the anglicised seventeenth chief (1693–99), and as Mary hinted in her haunting 'Croon' or *Cronan*. Happily, the stream was renewed
[173] by this chief's successor. Tradition and song show that such renewal was primarily due to the strength of communal life among the 'people' which called out leadership from the chiefs, in justice, in war, and in the encouragement of the oral arts. High conduct from the chiefs was invoked
• [577] by the expectations of their people. More important still, it was the warmth of feeling among the people as a group, and their ties to one another, which lit their personal loyalty to a chief and called forth his loyal leadership in return.[1]

[1] Gaelic loyalty was burned away in the Jacobite Risings, but as the last Rising left the Island relatively unscathed, one may simply refer to two works: Andrew Cunningham's *The Loyal Clans*, 1932; and J. L. Campbell's *Highland Songs of the Forty-five*, 1933 (Gaelic and translation). The first work analyses the need for a personal relationship to Scottish kingship, felt so keenly by the clansmen. The second gives authentic evidence of the spirit of loyalty. (Both the sense and a hint of the rhythm, with several of the airs, are available for the English reader.)

I know of no explicit statement of the conclusion given above, for lack of the sociological approach attempted here; but it is surely implicit in the thought of many a Gael.

175 rents, and its end is in sight when these cease to provide
621 for the lord's desires.

(e) STORM AND GALLEY; BATTLEFIELD AND REGIMENT

174 The peaceful round of daily life formed the most
614 enduring test of the mutual loyalty uniting the commoners
• 577 of the clan, and linking chief to people. Yet the tensest ordeals came in hours of danger faced together, whether
[501] at sea in a small fishing boat or a many-oared galley, or in
[726] war in a clan company. The Gaels' own records must speak for them. Many a song of the Isles conveys the team-spirit of the crew though without describing its men.

174 And although Mary MacLeod's song of MacLeod's Galley
614 be irretrievably lost, there survives one epic poem portray-
501 ing the ship, the storm and, man by man, the crew who
538 warred against the waves and won. Alexander Macdonald's *Birlinn of Clanranald* is unmatched in Gaelic, and probably in English, verse for its portraits of the crew in action, from steersman to 'look-out'. The flowing metrical translation by Pattison with Hugh MacDiarmid's vivid prose helps to give the English reader some vision of a crew of Gaelic freemen at their best.[1]

174 The poem opens in slow traditional rhythm with "the
614 Blessing of the Ship", the arms and the crew. Then the
501 bard, speaking for the stately skipper, "incites the sixteen
539 oarsmen to row" out of the bay, and they row to a rousing
577 shanty, a *Jorram*. Next, in readiness for the voyage and
[113]

[1] Thomas Pattison, *The Gaelic Bards* (and ed.), 1890 (pp. 1–25); and Hugh MacDiarmid (Ed.), *The Golden Treasury of Scottish Poetry* (pp. 65–85), 1940. Cf. A. Macleod (Ed.), *Sar Orain: Three Gaelic Poems*, Glasgow, 1932. The different themes of its sections, each in its own metre, have been published separately, in *The Songs of the Hébrides*, and elsewhere.

174 with words of heartening but well-weighed praise, each
614 post with its duties is apportioned to the man best fitted
501 for it by his temper, strength and skill—or even by some
539 special weakness! First the steersman:
• 577 "Let this broad heavy hero sit at the helm, powerful and limber . . .
Light handed on a helm, watchful and wary, cautious yet quick . . ."

Then others "Put this great-fisted and shrewd man to grapple with the rigging. . . . Windwise, he'll work with him that holds the shrouds . . . a thick-set, broad and craggy champion . . . and with him that grips the sheet, a neat and handy fellow. Set at the prow our pilot, keen-eyed for the airts, and with a sure sight for each landmark like a guiding star. And set at the halyard this self-reliant seaman, tried and clear-headed, grimly alert. . . ." They put to sea, and as the sea roughens, the steersman cries, "Quick at my ear a man to watch for the rain-squalls! Choose me a fellow who's half-fearful, yet not a real coward . . . for he must be quick to shout when he sights a big sea bearing down on us. But let no other but himself be by me, lest there be babble and hubbub to bewilder us." Then, as the seas break over the open vessel:

"To bale her let this strong man rise, active and brave,
Who will not blanch or yield or tremble for the shouting wave. . . ."

Next, "Let two stout fellows, these thick-boned, rough and hairy chaps, haul on the ropes behind the sails, to raise or lower them as we're lowered or uplifted by the surging seas. . . ." And last, for fear one fail or be dashed overboard by a wave, six nimble men are picked to stand by,

174 ready to leap fore or aft: "Quick to move as the mountain
614 hare . . . or the hounds after him; quick to climb as a
501 squirrel in the spring-time". Then comes the stirring
539 evocation of the storm, testing each man's mettle and the
• 577 discipline of all, until at last, their ship battered and themselves bruised and weary but undaunted, the crew reach Islay and round the sheltering point of Carrickfergus. There, with thanks to the High King, they drop anchor, the *birlinn* rides in peace, and all find meat and drink and rest.

175 As at sea, so in war, loyalty could rise to heroism in
614 individuals and corps. Young men were attached to their
721 chiefs by chivalrous leadership in warfare, both before
203 1745 and later. The Highlanders' high character contrasted with that of most Regiments of the Line, too often disciplined with the lash while demoralised by debauchery. From Lewis the Islesmen went out to the Seaforth or the Ross-shire Highlanders. General David Stewart of Garth, historian of the Highland regiments and people, wrote of these two regiments that again and again their courage and coolness in battle were proved.[1]

175 Not less striking was the record of Gaels among civil
618 populations, whether in Britain, as in the 'Forty-five, or abroad. In Germany in 1761 and 1762 much was said of the Highlanders' kindness, "for the boors were much better treated by those savages than by the polished English and French". Similarly in the Low Countries in 1814 and 1815, they were *enfants de la famille* and "kind as well as brave". The mayor of Brussels declared that they "called forth the attachment and esteem of all", and the inhabitants requested him "to endeavour to detain the 78th (2nd battalion Ross-shire) regiment of Scotchmen in the town, and to prevent their being replaced by
[113] other troops".

[1] The Highlanders in Canada, as far as I know, do not have one can only cite examples. For instance, descendants of his neighbours in Strath Spey told me that my paternal grandfather, as a penniless lad speaking Gaelic and English (in which he was literate), enlisted in the Black Watch about 1829. He was known as a N.C.O. for his power of quiet, reasoning discipline. He thrice refused the offer of a commission, which was then given to others, of whom more than one rose to high command in the battalion.

175 Such are the mingled traditions of the Highland
701 regiments which served in so many wars, for right or for
[614] wrong. Of all the desperate alternatives before the Gael—famine at home, semi-slavery in the factory towns, death-stricken sea voyages, pioneering in the forested hills of Eastern North America, or war, it was this last which offered the men not only the trappings and glamour of clanship but continuing fellowship. In the regiment a Gael was among friends. Modern civilisation offered him no other life promising social continuity and the hope of a return to croft and township, "if death should spare him".

175 It would be wrong to suggest that only the gentry could
701 rise to command, for as English and literacy were acquired,
565 the sons of small tenants received commissions. British
554 military discipline has too often driven a breach between
[903] the men and the non-commissioned officers, spoiling the latter's fitness for higher leadership. But among Highlanders "the bond of faith and affection" led naturally to commissioned rank. For generations, historic precedent
[198] was carried on in living tradition.[1] Given education, the
[871] sons of Island crofters have risen to command on land and sea; but education came late.

CONCLUSION

175 Thus in the 'little commonwealths' of the farm-hamlets
621 grouped within the township, personal right and equal
631 shares were balanced by common duty, summed up in the principle of duty-right, or duty-
• 577 [illegible] examples. For instance, descendants of his neighbours in Strath Spey told me that my paternal grandfather, as a penniless lad speaking Gaelic and English (in which he was literate), enlisted in the Black Watch about 1829. He was known as a N.C.O. for his power of quiet, reasoning discipline. He thrice refused the offer of a commission, which was then given to others, of whom more than one rose to high command in the battalion.
614

264 The only occasions on which it is customary to feed
574 someone an entire meal is at a work party, such as peat-
576 cutting. On such occasions the preparation of meals is
[461] done in an atmosphere of competition and mutual scrutiny,
[492] and the meals are often elaborate. At other times, the
requirements of etiquette can be minimally fulfilled by
giving foods which are still relatively abundant, but
which were much more abundant when the land was cultivated
[262] and cows kept. Such foods are barley bread, oatcakes,
264 clotted sour milk, cream and fresh butter. These foods
571 are usually offered to visitors along with tea, and in the
574 past this custom served to minimize the economic disparities
between villagers, to spread scarce resources. A similar
[737] function was served by the practice of giving part of
[431] each catch of fish to old widows and other villagers in
need of aid. Even though food is more abundant and diverse
today, the taking of tea, and especially food, during a
visit is still very important.

193 A 50-year-old man who "married into" a croft recalls,
● [581] "I came from a family of ten children. Everyone had to
[428] leave, or marry a girl with a croft. Only the eldest son
could inherit the croft." There was little room for
423 romanticism in the fight for scarce land among the sons
581 of large crofter and non-crofter families. "The most

● 581 "The most
584 important thing about courting was the land. If a girl
423 was going to get a croft, she could have the pick of
anyone." Stories are told of broken alliances and the
interference of parents, all related to the inheritance
of the croft. For example, the father of a 70-year-old
woman living today deserted the beautiful girl to whom
he was engaged to marry a girl with a croft. "Never
mind beauty, just a bit of land." A man would hike
fourteen miles across the moor into town to bring back the
jug of beer required for the reiteach (the dinner party
announcing an intended marriage), only to find that the
girl was having a reiteach with someone else.

233 Cattle were much more important than sheep in the
early economic history of the Highlands. Scottish history
is full of stories of cattle thieves, and of "the drove,"
in which large herds were driven to Lowland markets. The
[789] most common examples of witchcraft concerned spells cast
on cows. Many Lewismen still remember market days on
Lewis, the day of the drove when cattle were herded into
Stornoway from all parts of the island; when children
were taken from school to help with the drive, and shop-
keepers put up extra stalls for the occasion.

Until as recently as ten years ago, a form of
transhumance was practiced on Lewis whereby the cattle

582

582 REGULATION OF MARRIAGE--minimum and average age at marriage for each sex; postponement of marriage (e.g., for economic reasons, to enable an elder sibling to marry first); marriage laws and regulations; physical and mental bars to marriage; endogamous and exogamous restrictions; primary marriage preference and practice (e.g., with a cross-cousin, hypergamy); explanations and rationalizations of marriage restrictions; tests of marriageability (e.g., of skill, prowess, fertility); etc. See also:

288 through alleys to rummage through the trash cans of
464 hospitals or other large institutions for food. The
167 occupational histories of the weavers support the
162 generalization made by an official of the Harris Tweed
Association that the younger weavers leave because
they do not like the weaving and they are replaced
mainly by older men who want to settle down after a
life at sea. (See Appendix A for several life histories
of weavers.)

E. Crofting as Strategy

241 Because of the relatively high income provided by
288 the Harris Tweed industry, those who remain within the
434 township have tended to emphasize weaving and neglect
the croft.

592 1. Croft as Place of Residence vs. Agricultural Unit:
Most of the 169 households consist of married couples with
● [582] their unmarried children. A tendency to marry rather
late in life and for children not to marry while their
parents are still living is evident in Table VI$\frac{1}{4}$ (Partial
List of Households According to Type of Household and
Age of Household Head).

Fourteen households of married couples and their
children (not included in Table VI$\frac{1}{4}$) include at least one
1/4 [This source as received did not contain this
table--Analyst]

621 The first thing that is said when for some reason
513 a woman is left alone in the house is, "Who's going to
858 go and sleep with her?" Often a child will be sent from
a neighboring family, not always relatives, to stay with
her at night. As in the past, it is not uncommon for
621 a childless elderly couple or single person alone on a
572 croft to take in a young, homeless couple, to whom they
888 may or may not be related. The young couple cares for
the old person or persons, and inherits the croft when
they die.

602 "Keeping up the relation" is the process by which
476 relatives sustain interaction and expectations of mutual
aid even though their relatedness becomes more distant
605 with succeeding generations. "I've got cousins in Ness
that I stay with at the Communions. They're getting on
into the third generation now." A cousin is a cousin
even to the 42nd degree (Williams 1963: 142), as long
as there is reason to sustain the relationship. "I know
we're related, but I can't quite place it." "We're a
bit related. I think she was a MacPhail before she
married." "I don't quite know how we're related, but
my mother and his mother considered it a close relation-
ship, and he has kept it up."

621 Every villager has a vast amount of information
626 about other villagers and their families, which may be
● 582

621 used on different occasions, for example, to discourage
626 deviant behavior or certain marital alliances. Any sign
• 582 of physical or emotional disability in someone planning
to get married invites an attempt by other villagers to
539 discourage an alliance. According to a Gaelic proverb,
"If you want to be praised, die; if you want to be
criticised, marry (Ma tha thu airson do mholadh, basaich;
621 ma tha thu airson do chaineadh, pos)." The villagers
626 consider not only the behavior of the person but of his
582 ancestors. The individual is perceived as belonging to
827 a family unit which through many generations has manifested
certain physical and behavioral traits. Traits of behavior
such as shyness, heavy drinking, stealing and tight-
fistedness are interpreted as hereditary traits. "It's in
the blood (Tha e anns an t'fhuil)." "It's in the people."
Particular occupations are also associated with families.
463 Stornoway, which is not so "urban" as to have a constant
turnover of population, contains many examples of
occupations passed down through generations.

632 In Chapter 3 I mentioned the development of several
578 groups in the crofting township which seem to be in conflict
with the township as a strongly bounded system. People
who keep only sheep have come to blows with those who keep
both sheep and cattle; and a distinction between crofters
and non-crofters may be seen. Many persons have preferred

827 Islanders themselves sometimes talk of a lowered
stamina and poorer health today than in the past. In-
178 breeding is widely held to account for this. Even if health
• 582 be really poorer, this explanation is untenable, since
marriage outside the village has greatly increased in the
166 last century. Everywhere there is movement along the
801 roads; a school placed half-way between two villages
fosters early acquaintance; immigrants trickle in from the
mainland, and emigrants occasionally marry beyond the
Island. Moreover, the people of certain villages were
transplanted in large numbers eighty years ago, as from
143 Valtos, Uig, northward to Shawbost. In any case, in-
breeding itself does not produce degeneration; for though
it may "fix" or bring out harmful tendencies where there
is already some poor or dangerous strain, it can also fix
good characteristics in a healthy population.[1]

178 All these changes were hastened and reinforced by two
199 new, revolutionary means. First, the physical mobility
166 suddenly brought to an area with no railway by the motor-
car, van and light lorry-bus; then, towards the end of the
inter-war years, the penetration of the Gaelic-speaking
home by the ceaseless voices of broadcasting.

[1] J. A. Thomson and P. Geddes, *Life: Outlines of General Biology*, 1931, vol. i, p. 473.

175 words are used for neighbourly help among crofters and
565 for services to the chief.[1]
614
622 Full freedom of choice in marriage prevailed among
the people, who honoured marriage and enjoined contin-
175 ence; but the position of the chief placed him apart from
• 582 the rest of the community. Now, the more egualitarian
the community, the more free are a couple to choose one
another on grounds of mutual affection, passion and
respect; the parents, too, are more likely to encourage or
support a suitor for their child because of character and
virility, rather than means.

175 The lads of the clan, chief and people, grew up together
565 in an isle or glen. But in manhood, while a labouring lad
582 sought a wife from the girl playmates of his childhood and
his fellow-workers at the peats, at the harvest, or in the
shielings, a chief's choice was confined to his own class.
In pre-feudal clanship, tanistry, *i.e.* the choice of a chief
among the higher kin, gave a wider choice for marriage
near home than feudal primogeniture, irrespective of the
wishes of the chief's kin except in extreme cases of unfit-
ness. In Scotland, tanistry prevailed even in the royal
line until the eleventh century. But with the dominance
of primogeniture, the young chief chose a bride outside
his own community for reasons other than those of human
feeling, honoured by Gaelic lyrical and religious tradition
and even by the Church.

As a result, the chieftain's son was granted a licence
forbidden to the rest, a temptation to maidens and a bad

192 [1] *Cuid* (cognate with *quota*) means a portion, lot or share, or what is one's
476 own (*e.f., gen. coducb*); and the associated verb (*cuidich*) means not simply
to share but actively to help. The apportioned lodging given to the chief
and his 'tail' of 'lads' was the 'cuideachy'—*cuid-oidhche*; while the
famous motto of the Seaforth Highlanders is Help the King!—*Cuidich an Righ!*

175 example to lads! Often of tall, fair stock, physically
565
• 582 superior from better feeding, accustomed to have his own
way, better taught, finely dressed, free and welcomed
wherever he went in the glen that fed and fostered him,
the young chief had favour on his side; moreover he was
protected from the vengeance of jealousy. A song in
praise of a young chief of Clan Leod boasts that "the girls
836 would give their snoods for Rory"! When she lost her
maiden snood to him, a girl would be excused, and her
'natural' child not dishonoured, but granted a share of
paternal affection and inheritance. After marriage, a chief's
175 lady made allowances for his past. But licence, once a
habit, is hard to check, and the Gael tell bitter tales of
837 jealous wives, married for policy, and their revenge upon
a rival. One gathers that where there were enough gentry
to meet, choose and inter-marry freely, as among the island
tacksmen, decency was better observed; but among land-
lords in the Highlands, as in other lands, local licence
was common down to the last century. Then, whereas a
Minister of the Established Church could hardly blame
his own Patron (or his son), a Free Church Minister could
speak out from the pulpit!

175 Of the legendary *jus primae noctis*, the 'law of the first
585 night' of Boece and other old historians by which a lord
had at one time the 'right' to rape the bride of any of his
serfs or tenants, there is no authentic record. Yet from
the primal right or wrong of conquest, some such 'law'
was forced upon the Gael, as upon other peoples. Boswell
records MacQuarrie of Ulva's belief that the custom of
paying him a sheep when a tenant married was followed in
lieu of such a right! Obligatory hospitality also lent itself
to abuse. In all relations of chief to people, there were
adjustments. In more complex society, poverty makes

166 that the movement of whole families is unusual, although a few have migrated to Stornoway,
particularly from the south. In this respect Uig, except to some extent the south, differs
from Park; only 15% of emigrants have gone to Stornoway, c.f. 32% from Park.

TABLE 51

The Destination of Emigrants, 1939 - 1959

Destination	Males (No.)	Females (No.) (1)	Total (No.) (%)	c.f. Park (%)

Overseas	28	19 (8)	47 (9)	(5)
All destinations	236	291 (208)	527 (100)	(100)

Note: (1) The figure in parenthesis under 'females' indicates those who become 'migrants' on marriage.

Main emigrants from Uig go mainly to Glasgow and other parts of the mainland (table 51). Since 1939 (in effect since 1945) only 12% have gone overseas; 16% have moved to Stornoway and a further 10% to other parts of Lewis. This is almost entirely a move-ment in search of work. Female emigrants from the parish are less widely dispersed: more went to other parts of Lewis and fewer overseas. There is a special factor in the case of female emigrants: Social intercourse between the different island districts is very active, despite the apparent lack of facilities; almost a third of the female emigrants from Uig became migrants on marriage into other Lewis parishes. Even if we discount such migration, more women than men migrated from Uig between 1939 and 1959. Weaving retains young men but not the young women.

Migration from a crofting district is a somewhat indeterminate process. Young people of both sexes go to Glasgow or elsewhere in search of work. For a while they maintain their island homes but, eventually, they set up homes of their own. Our criterion of 'migration', against 'working permanently away', was this setting up of a home. Thus the critical point is often marriage and it will be noted (table 51 and Appendices B(i) and D(i)) that a very large proportion of female emigrants appear to have emigrated on marriage; in the case of migration outwith Lewis this usually means that for some time previous to this becoming 'emigrants' they had seasonal or permanent employment away from home. Indeed, our enquiries showed that the great majority of young women who leave employment on the mainland eventually married and settled away from Lewis. Only a small minority returned, often giving up their employment in order to care for ageing
582 relatives. An island man may occasionally return with a mainland wife but cases of island girls bringing mainland men to settle in the island are rare indeed.

For the remainder of the population, as a general rule, it may
be said that a person's status depends on personal qualities 184
rather than on occupation. This is especially true of men who
take an active part in the church. In terms of interaction,
the social hierarchy is extremely fluid. People who elsewhere 536
in Britain would be "working" or "middle" class not infrequently
join with members of the "upper" class in both formal and in-
formal social groups.[22] This underlying equalitarian pattern 571
has always characterized the interpersonal relations of Skye's
society. There is, of course, cleavage between the upper 582
level of the society and the bulk of the population; inter-
marriage is impossible.

The social life of the village revolves around the new- 571
comers and the landed gentry. In addition to the social 184
circles based upon age, sex, kinship, and religion, the indi- 554
vidual belongs to several small groups of friends and, perhaps,
a few formally organized clubs. When the native-born take
part in the formal activities they do so as participants rather
than as organizers or directors. The necessary roles of leader- 571
ship are left to the newcomers or to the landed gentry. The
latter, in particular, are responsible for community affairs,
just as the chief and his kinsmen were formerly looked to as
the leaders of the people. Occasionally, an influential new- 828
comer gives them able assistance. The influence of the old
men is not as marked in the village as in the crofting communities

[22] Roy Lewis and Angus Maude, The English Middle Classes (London: Phoenix House, 1949), pp. 13-20, 67-110.

used on different occasions, for example, to discourage deviant behavior or certain marital alliances. Any sign of physical or emotional disability in someone planning to get married invites an attempt by other villagers to discourage an alliance. According to a Gaelic proverb, "If you want to be praised, die; if you want to be criticized, marry (Ma tha thu airson do mholadh, basaich; ma tha thu airson do chaineadh, pos)." The villagers consider not only the behavior of the person but of his ancestors. The individual is perceived as belonging to a family unit which through many generations has manifested certain physical and behavioral traits. Traits of behavior such as shyness, heavy drinking, stealing and tight-fistedness are interpreted as hereditary traits. "It's in the blood (Tha e anns an t'fhuil)." "It's in the people." Particular occupations are also associated with families. Stornoway, which is not so "urban" as to have a constant turnover of population, contains many examples of occupations passed down through generations.

In Chapter 3 I mentioned the development of several groups in the crofting township which seem to be in conflict with the township as a strongly bounded system. People who keep only sheep have come to blows with those who keep both sheep and cattle; and a distinction between crofters and non-crofters may be seen. Many persons have preferred

632 to neglect crofting and to concentrate on weaving. Those
578 who still participate in crofting activities may neglect their communal obligations, such as going out on the moor after sheep, and may prefer to harvest crops, cut peat or perform other agricultural activities independent of other villagers.

632 Despite these tendencies, certain criteria of firm
182 boundedness are still found in the township network. All
462 the adult males of the township, including non-crofters, are responsible for serving as officers in the township grazing committee. The committee draws up rules for the
[654] organization of communal crofting activities, and applies for grants from the Crofters Commission or Department of Agriculture, for example, to build a new township fence, plant trees as shelter belts for livestock, extend a peat road, or to fence and reseed areas of moorland in "township reseeding schemes" (see Chapter 2). All adult males of
[464] the township are expected to provide labor to implement such plans.

632 Township meetings, chaired by the clerk of the
571 grazing committee, are held twice a year. A vote is
666 taken when any decision is to be made. The vote is usually unanimous, as all discussion, argument and persuasion have occurred before the meeting, and those who disagree

197 Within the village there are no branches of An Comunn
178 Gaidhealach and few books written in Gaelic. Once a rural
166 family moves to Stornoway, children often refuse to speak
191 Gaelic, even though they understand it, and parents tend
to speak only English to their children, believing this
will help them "get on." In the next generation, the
[871] language is lost. Village children attending school in
Stornoway often prefer talking to their Gaelic-speaking
[867] roommates in English. A young island woman, married and
living in Edinburgh, says she would like her baby son
to learn Gaelic but feels that if he had a mixture of the
two languages the other children would laugh at him.

197 English is the language of the larger society, the
191 language spoken in school and the language required in
most jobs and in dealing with most officials. In Gaelic-
197 speaking areas, the speaking of English connotes high
191 554 status. If an English speaker mispronounces Gaelic words,
626 he is quickly forgiven, praised for trying to learn such
578 a difficult language, and asked why he bothers with a
language that "isn't any use anyway." But if a Gaelic
speaker makes mistakes in English, he is teased mercilessly.
[551] Many nicknames derive from such mistakes; for example,
"Peter Squeak" got his name by mispronouncing the word
[524] "picturesque." People "win points" by competing with
each other in speaking English. "See how good you are in

197 English, no Gaelic allowed. I can beat you any time...."
191 One person observed, "People here make fun of each other
554 all the time. They're always trying to be superior, to
626 get one over the other person. Speaking English gives
578 you a feeling of superiority."
[524]

If a Gaelic speaker chooses to speak English in a village situation where there are no officials present or other cues which make English-speaking appropriate, this indicates that he considers himself a cut above everyone else. "I went to help Calum pull his tractor out of the mud, and Malina was there with her husband. She was speaking English. Oh, I says to myself, lady, you're not for this place. You don't belong to this village."

In evaluating whether or not a particular woman is "snobbish," villagers may decide, "She must be; whenever I've seen her in the post office, she never speaks any Gaelic."

197 The sanctions against speaking English when all
191 persons present speak Gaelic indicate the effect of inter-
554 action between a socially marginal group and the dominant
571 group. The effect is to increase the emphasis on uniform
184 behavior within the marginal group. The existence of a
578 higher social stratum has diminished social differentiatio
within the village setting. Individuals may move out of
that setting and adopt the language and other forms of

behavior characteristic of the dominant group; but for those that remain in the village, the language serves a unifying function, although its form is limited in diversity of elements.

Jokes are most humorous when told in Gaelic; and conversation is punctuated with Gaelic proverbs and old stories. There is a vast oral lore, expressed in Gaelic, of the village and generations of its members and their characteristics and escapades, a dense map of human events. All of these tales, proverbs and jokes have been told a thousand times, but retain their unifying function. When speaking of today's children who do not go to the sheiling, a man says sadly, "They won't have our memories; this place will mean less to them than it does to us." The moor is not an empty wasteland, but a map of memories. Thousands of place names are known, and behind every place name is a story. The major landmarks such as mountains, lochs and headlands tend to have Norse names, from the days when the Norsemen raided and settled along the island coasts; but the smaller hillocks and fields and bends in the stream have Gaelic names, for example, Sheiling of the One Night, Field of the Slaves, Slope of the Stone Boys, Hillock of William's Sheiling. To know these place names and their histories is to participate in a distinct community, which has been made even more distinct by contrast with the dominant society.

at which the youth can join together as a sodality; hence, they hardly ever have a chance to question the control of the "elect." Only once in recent years has the control of the old people been criticized. After World War II, the men who returned to the neighborhood wanted to erect a village hall. This threatened both family unity and the solidarity of the neighborhood. The young people were divided between the time honored obligation to honor their parents and their own desires for a fuller life. The parents were torn between religious beliefs and their affection for their children. The minister and his elders were faced with a situation which threatened the fundamental tenets of the faith and the continued ability of the religious expression to sanction the existing order. How strong are age controls? The youth did not get their village hall. Many of them left Skye for the Lowlands where social life is less restricted.

The difficulty is that until, say, forty years ago the traditional outlets were sufficient. Middle-aged people remember how the youth used to drop in on the old widow for a visit on an evening and then make their way off in couples for a bit of courting. Two World Wars and the continuing program of National Service, not to speak of the influence of the schools, have given the youth a new perspective. They have spent one or two years in an environment where recreational activities are considered not only innocent but also wholesome. The radio and magazines have contributed to the demands of the youth for amusements. As if this were not enough, there are

GE--general statements dealing with several specific aspects of mar-
larriage is a socially sanctioned relationship between a man and a
volving economic cooperation and residential and sexual cohabitation.
rally patterned norms of this relationship regularly specify who may
not enter into it, how it may be established and terminated, and what
ner may and may not do within it. As a relationship, marriage is to be
hed sharply from the family, the social group within which it is typi-
bedded.

three children, but this will only be for a few weeks in the spring and autumn. The large crofter, who has only recently appeared, is the only one who can use one or two helping hands all through the year.

One may logically ask, what if the thought that they are not needed never occurs to the children and they resolve the conflict of individual expression and subservience to the father and the group? The answer is an ever increasing number have at least one more important decision to make. As the boys grow into young men, they must decide whether or not they will remain bachelors, which remaining with the parents means, or found their own families of procreation. Girls must similarly decide between spinsterhood and marriage. There is no pattern on Skye, like that found in Ireland,[12] for turning over the croft to a son, much less a daughter, while the parents are still alive. Some, of course, marry after their parents die, but often it is too late for them to have children. The township of Bornesketaig, for example, has not celebrated a birth in years; there simply are no children and none to come. Other men and women feel it is too late for marriage when they get possession of the croft. I doubt that there is a single township on Skye which does not have at least one bachelor or spinster. Totescore has earned fame as being a township of bachelors. Commonly, a brother and sister live together on the croft.

---

[12] Arensberg, op. cit., pp. 72-79, 85; Arensberg and Kimball, Family and Community in Ireland, pp. 123-144. There are, of course, many comparisons which could be made with the Irish small farmer, but most of them would apply to peasants everywhere.

247

I hardly need to add after our discussion of the islanders' 582 427
conomy that the chances of a young couple finding a vacant
roft are slim. It may be of interest to indicate just how slim
hey really are. In 1953-54, in 82 townships, which I visited,
here were only eight vacancies. Six of these were no larger
han cottars' gardens. There were no vacant holdings in Kilmuir
r Glendale. I am not talking about derelict crofts in the
ands of absentees. Moreover, if the individual decides that 464
orking in Portree is better than leaving the island, his 582 362
rospects are no better. The County Council had sixty-six units
n a public housing scheme under construction, in 1953, in
ddition to fifty-six completed since the end of World War II.
here were three applicants for each apartment. The county
anitary engineer, who was responsible for allocating the a-
artments, began to think half the population of Portree was
ying, and the other half was dead. In order to get priority,
he people were claiming disabilities, "some of them with names
s long as your arm." Many of the people, especially young
eople, regard winning out in the competition as an indication
f status. But we are getting away from the croft. We still
ave to consider how a person gets possession of the croft.

As we know, the crofter has the right to bequeath his 427 428
roft to a member of his family; however, he seldom bothers
o exercise his right. Here is another example of their
ncomplete adaptation to the higher socio-cultural level. The
and and the house have very little monetary value. Usually,
he man who leaves a will has been talked into it by an
fficer of the Department of Agriculture. He, then, assigns

his croft to his eldest son. Some reformers feel that the youngest son or daughter who has stayed at home to care for his parents is cheated. When there is no will, the State steps in and assigns the croft to the widow, the eldest son, or the child who has remained behind.

The growth of the welfare state has had its influence in determining this pattern. On the one hand, there are payments to unmarried children who remain at home to look after their parents. On the other hand, there are the old age pensions. While the pension has made the transition of the old couple from active crofters and parents to grandparents easier for the Irish small farmer,[13] on Skye the coming of the pension saw the end of the old pattern of the oldest son returning, with his wife, to care for his parents and raise his own family. With a pension the old couple had little need to work the croft. The children were not needed, and not infrequently the old people enjoyed their independence and their freedom from turning the house over to a woman whose ideas and beliefs conflicted with their own. The common desire of parents today is that one of their children will stay on to take over or return after they are gone. Naturally, no one likes to see his children far from home, but what can they do?

Aside from the difficulties of inheriting a croft or finding a vacant holding, it has become increasingly difficult for a young man to find a wife. Most of the crofters' daughters

[13] Arensberg, op. cit., pp. 85-86; Arensberg and Kimball, op. cit., p. 125.

feel that marriage should offer them something better than they can attain on their own. In particular, the young woman has very little desire to marry a small crofter, because she knows full well that her husband may have to leave most of the work to her. Summing up all the social and economic determinants influencing marriage, we find two trends: (1) there are fewer and fewer marriages at a later and later age, and (2) more and more girls are marrying Lowlanders and Englishmen.

With respect to the first trend, a random sampling of 270 males above the age of twenty revealed only three married men under thirty, out of sixty-four, and sixteen married men between thirty and thirty-five, out of thirty-four. The postponement of marriage is also marked for females. Of the 1550 married women on Skye, in 1951, 149 were under thirty, out of 641, and 140 were between thirty and thirty-five, out of 210.[14]

Regarding the second trend, I found the Sgiathanach to be philosophical about having his womenfolk marry Sassanach men. "It's a turning of the tables, you know," I was told. "Up until the end of the Great War (World War I), our boys brought back wives from all over. We even had a French girl here in Kilmuir." I do know one Austrian woman who married a man from Glendale. In view of these difficulties there is one further question to be asked concerning the youth of Skye, what becomes of the young men and women who leave?

[14] Census of Scotland: Inverness, 1951.

601 dà peathar, and iar-ghaichean na peathar 's a' thràthar.

Within the group which the Sgiathanach calls his "family," we find that husband is fear, and wife is bean. Their children are mac and nighean. Marriage, of course, extends the circle of relatives. Both members of the married pair refer to their spouse's "people" as athair-céile for father-in-law, màthair-céile for mother-in-law, bràthair-céile for brother-in-law, and piuthar-céile for sister-in-law. Céile means mate's, in these cases. This leaves us with two classificatory terms which ignore sex. A grandchild is ogha, and a son-in-law or daughter-in-law is cliamhain.[21]

601 Although this nomenclature is correlated with expected
602 patterns of ideal behavior, in reality, as I have said, the
178 system has broken down under the impact of economic forces.
591 With neo-local residence the township has come to be occupied by what the Sgiathanach calls "friends" rather than "people." Not uncommonly, brothers and sisters take up residence after marriage not only in different townships but also in distant
605 neighborhoods. The sharing of work, then, mainly involves
582 cousins. Unlike Ireland,[22] there is no strong taboo against
[179] marrying a cousin. Cousins marry "to keep the money in the family," and remote cousins were apparently preferred

[21] Although Arensberg and Kimball look upon the Irish System as essentially similar to that of northern and western Europe and the United States, excepting minor variations (op. cit., p.97), I was struck by the dissimilarity of the kinship system of the Sgiathanach to that of the United States. The underlying principles are, of course, the same, but the ramifications set the two apart; see, e.g., Talcott Parsons, "The Kinship System of the Contemporary United States," American Anthropologist, Vol. XLV, No. 1 (Mar., 1943), pp.22-38; and David M. Schneider and George C. Homans, "Kinship Terminology and the American Kinship System," American Anthropologist, Vol. LVII, No. 6 (Dec., 1955), pp. 1194-1208.

[22] Arensberg and Kimball, op. cit., pp. 83-86.

605 spouses not too long ago.[23] Perhaps, more than any other
582 factor, it is the tendency of the aged parents to hold on
427 to the croft until they die that is strangling the kinship
593 system. Still the extended family is a strong mutual aid
602 group. Anyone with a recognized degree of kinship is
596 entitled to hospitality. When the exiles return to visit
602 the Misty Isle, they always try to make the rounds of their
574 kinsmen. This is more than a question of not becoming an economic burden on a favorite aunt; they do not want to be guilty of slighting anyone. There is reciprocity here.
[103] In return for food and shelter, the visitor freely gives his kinsman all the news he has gathered about the activities of their distant kin. He acts like a roving reporter, cementing the solidarity of an otherwise fragmented group.

602 The expression given to the degree of consanguinity and
769 affinity is revealed most completely at a funeral. As one of the two occasions on which the extended family comes together, the other being a wedding, it reveals a host of significant traits. The first thing I noticed was that although the inavailability of land and the illegality of subdivision enforces neo-local post marital residence, burial is ideally patrilocal. On more than one occasion the steamer came in at night with a body which had been shipped home from Glasgow or
602 Edinburgh for interment in the deceased's neighborhood. This
593 also means that the husband and wife remain integral members of their respective families. The founding of a family of

[23] Norman MacLeod, Reminisences of a Highland Parish, p. 196

he ball in a few words, I would say, it is a marriage
arket.

Social distance and class endogamy can also be demon-
trated by a negative approach to the question. Within recent
ears there have been a few cases of marriage across the
ocial cleavage line. The results, as we shall see, show a
trong drive for social exclusiveness. One of the county
ople married a daughter of the "new rich." Her father was
crofter's son who made a fortune as a whiskey distiller
d exporter, especially during the days of prohibition in
e United States. His fortune made, he returned to Skye
d purchased part of the old Clan MacLeod lands. Although
nd ownership is a prerequisite for being included among
e upper stratum, neither land nor wealth guarantees
ceptance for a man from the croft. No one received the
rriage of his daughter happily. The villagers and crofters
id it was a marriage of necessity. The young aristocrat's
rents' reaction is at least partially reflected by the fact
t it was one of those very rare Skye marriages which end
divorce. Until his remarriage in 1954, he was the only
vorced man on Skye. In the second case, a crofter married
o a county family. His wife was the daughter of one of
most prominent ministers of the Church of Scotland in
present century. Although the minister was himself the
of a school master, his high prestige status had led to
acceptance by the "first family of Skye," and his second
riage was into this family. Some of the crofters and

565 562 villagers say he married above his station. His daughter, they believe, married below her station. Be that as it may, he disowned his daughter. He never spoke to her again. The third case involved the marriage of one of the poor, but nevertheless accepted, gentry and a crofter's daughter. He has fared differently. Rather than cast him out, his mother refused to recognize the marriage. He was forbidden to bring his wife home. To this day he continues to divide his time between his estate and his "town house," where he keeps his wife. Further, this man, who I have been told should have become chief of Clan Ranald, is no longer of the county people.

565 554 Among the distinctive features which overtly characterize the county people is their ascribed status and role of leadership. Indeed, this is their most important function. As the tacksmen were once the counselors of their subtenants, so today the landed gentry must fill this role which the 874 Sgiathanach from the croft will not assume. Even if a Skyeman here and there feels that the local proprietors would like nothing better than to have all the people behave like serfs, bowing and scraping before them, he expects the proprietors 565 554 623 to get things done. In Portree the local gentry form the village council. During the war when they were on active duty, there was no village council. The Skye District Council, which replaced the old parish councils and which, acting as an agent for the County Council, is the only administrative body on the island, reveals a similar membership. In any of

people of the Free Church are "the Wee Frees." The Free 795
Presbyterians are the "Seceders" or, at least to some of
the gentry, the "Split P's." Arguing about religion is 576
considered very bad taste. It is left to the ministers, 793
and they do have their points of difference. One Free 795
Presbyterian minister, for example, told me that no one in 798
the Church of Scotland, including the minister, was worthy
to receive Communion. On many occasions during the year
the ministers of the Free Church and Free Presbyterian
Church devote part of their sermon to a criticism of the
Church of Scotland, not to mention the avid hostility of all
Skyemen toward Catholics.

Adherents of the several sects intermarry with no qualms 582
and without suffering any loss of status. By the time a 795
person gets to be a member, marriage is no longer in his
mind. Husband and wife continue to adhere to their respective 593
denominations, those in which they were baptized. The children 795
naturally, are baptized and raised in the church of their 851
father. Extended families are often divided religiously 596
along sectarian lines. In one family one brother and his 795
wife were Free Presbyterians, another brother and his wife
were Free Church, a sister was Church of Scotland. The
parents had been Free Church but became Free Presbyterians
at the turn of the Century. At least one cousin was United
Free Church. This religious schism did not affect their
affection for one another. Once a week the sister went to
have tea with her Free Church sister-in-law. Periodically

acceptance of the potato, a much more productive and dependable 161
subsistence item than grain on Skye, made it possible for more 175
people to live on less land. The introduction of a new industry 178 241
kelping, provided many with employment and freed them from com- 464
plete dependence on a subsistence economy. Vaccination reduced 757
the mortality rate, especially among infants whose chances of 165
reaching maturity and procreating were thus enhanced. Another 511
important factor was the Skyeman's share in the general pros-
perity of British agriculturalists during the early years of
the Industrial Revolution and during the Napoleonic Wars. An 423
especially important factor was the practice of subdividing 592
the land which made early marriage possible, in particular after
the installation of the crofting system. Finally, but by no 161
means least significant, there was the persistence of many 175
typical features of the culture in the days of the clan. The 178
sentimental ties of kinship and attachment to the soil had 182
remained.

The population decrease, partially a result of the Skyeman's 161
involvement in the process of commercialization, was primarily 175
a result of a failure to fully adjust to the higher, more 178
heterogeneous socio-economic level. By the end of the second 184
period of the modern epoch, 1845, the people had become hostages
to the potato and their own fertility. When the potato failed
them, they had nothing to fall back upon, except the generosity
of their landlords. The cattle and kelp markets had collapsed
at the end of the Wars, and the subdivided land could not
produce sufficient grain. The belief of many that the pop-
ulation had over-run the limited local resources was confirmed.

The growth of the population ended with a prolonged famine. 161
The proprietors, finding that the people's only justification 731
for crowding the estates and looking to their landlords for 427
help were some nebulous customary usages, facilitated the
decline by disregarding custom and throwing as much land into
sheep farming as was possible. While evictions were not new, 427
only after the famine did they result in an absolute reduction
in numbers. The Sgiathanach, fettered by a lack of capital 182
and an inability to break with the past, could not make the
final adjustment required by the process of commercialization,
specialization. In addition to emigration, the Clearences 167
and general economic hardship forced a postponement of 582
marriage. There was neither land nor regular employment to 464
provide a livelihood.

Later in the nineteenth century new influences began 161
to play a role in the continuing decline of the population. 167
Following the passage of the Crofters' Act, the nature of 178
emigration changed. Seasonal migration became negligible. 427
The provisions of the Act, and ensuing legislation, made it 671
possible for a man to remain away during his active years and
return to the parental croft to spend his old age. The ex- 871
tention of education not only equipped the youth for life in
the larger society but also created demands for objectives
which could not be attained at home under the existing order.
Thus, as in the period of population growth, the persistence of 161
many features of the old traditional culture, and the renewed 167
importance of others, were features of no little consequence. 182

584

584 ARRANGING A MARRIAGE--marriage preliminaries; courtship (e.g., opportunities, methods); initiation of negotiations (e.g., by youth, by girl, by parents of either); conduct of negotiations (e.g., by parents, through a go-between); marriage brokers; proposal of marriage. methods and consequences of rejection; requirement of consent (e.g., of youth, of girl, of parents, of chief); betrothal (e.g., conceptualization, announcement, ceremonial, symbols, duration); status and behavior of betrothed persons; infant betrothal (e.g., prevalence, procedure, nullification); breaking an engagement (e.g., reasons, procedure, consequences); adjustment to death of betrothed (e.g., substitution of a sibling); etc. See also:

Sex status . . . . . 662 Sexual overtures 836
Contractual relationships . . . . . 678 Adolescent activities 883

581 "The most
584 important thing about courting was the land. If a girl
423 was going to get a croft, she could have the pick of anyone." Stories are told of broken alliances and the interference of parents, all related to the inheritance of the croft. For example, the father of a 70-year-old woman living today deserted the beautiful girl to whom he was engaged to marry a girl with a croft. "Never mind beauty, just a bit of land." A man would hike fourteen miles across the moor into town to bring back the jug of beer required for the reiteach (the dinner party announcing an intended marriage), only to find that the girl was having a reiteach with someone else.

233 Cattle were much more important than sheep in the early economic history of the Highlands. Scottish history is full of stories of cattle thieves, and of "the drove," [789] in which large herds were driven to Lowland markets. The most common examples of witchcraft concerned spells cast on cows. Many Lewismen still remember market days on Lewis, the day of the drove when cattle were herded into Stornoway from all parts of the island; when children were taken from school to help with the drive, and shopkeepers put up extra stalls for the occasion.

Until as recently as ten years ago, a form of transhumance was practiced on Lewis whereby the cattle

632 with the decision which they know is to be made usually
571 do not attend the meeting. Thus, apparent consensus is
666 always maintained.

632 Changes in the character of the township as social
178 boundary system are apparent in ceremonial occasions such as weddings and funerals, which will be discussed in the following pages.

584 1. Courtship and Marriage: Courtship occurred during the dark hours when the older members of a household had gone to bed. A great deal of courting was done in [504] company. Because transportation was limited, groups of young people went together to dances; and on other nights, bands of young men would visit a house in which several girls were sleeping together, climb in through a window, and perhaps lie beside the girls, fully dressed, filling the dark with whispered jokes. Such a custom, a form of bundling, was called "night visiting" (ruith na h-oidhche); the male visitor was called caraid na h-oidhche, "companion of the night."

When couples began serious courting, they would meet outside at night, or the girl would let her bramar (sweetheart) into the house after the old people had gone [834] to bed. A couple would never consider walking hand in hand along the road during the day. Boys and girls were seated separately in school, went around in separate

584 groups on the sheilings or within the village as they
[837] were growing up, and even during courtship maintained a joking, somewhat rude interaction. "If he says he wouldn't touch her with a barge pole, he's obviously smitten." Someone considering the dangers of marryin an outsider[1] commented, "A devil you know is better t a devil you don't know."

584 Now that facilities for transportation have incr
178 couples tend to pair off in cars rather than go in
[493] groups. They may even be seen together on a date in town. Activities such as dances still begin late in [535] the night, lasting from about 12:30 a.m. until early morning. The seriousness of a relationship is kept secret for as long as possible, but weddings today require long-term planning because wedding dinners ar held in hotels rather than within the village. At an
574 earlier time, serious intentions were announced only
584 few weeks before the wedding, at a reiteach or dinner party which signified a betrothal. Reiteach also means "disentangling" or "reconciling," and was described by one person as a means of "pouring oil

[1]The term "outsider" usually connotes non-Gaelic speaking, but may also refer to someone from outside the village.

on troubled waters," or bringing the two families together.[2]

The most important of the ceremonies surrounding marriage was not the church service (posadh) but the wedding dinner and dance following the church service (banais, from bean meaning "woman" or "wife," and feis meaning "feast").

"House weddings," as they were called, were held in the home of the bride. For several weeks beforehand, neighbors and relatives brought gifts to the bride's house, where they were displayed in a room set aside for them along with the dresses to be worn by the bride and

---

[2] Morag Macleod of the School of Scottish Studies describes a custom still existing on the Isle of Scalpay off the Isle of Harris, called reiteach mor (big reiteach), in contrast with the reiteach bheag (small reiteach) or simple dinner party which existed until fairly recently on mainland Harris. The reiteach mor is a dramatic event involving a humorous exchange between male speakers for "the groom's side," and male spokesmen for "the bride's side." The bride is hidden, and the groom's men ask for the bride indirectly. They desire a sheep, perhaps, or a length of tweed. The desired object constitutes a theme which is developed in humorous give-and-take between the two sides, as various females are brought out one by one by the bride's people, from the most undesirable old maid to the bridesmaid and finally to the bride. Until the bride finally appears, the groom's spokesmen must find something wrong with each female presented, along the lines of the chosen theme. The sheep's fleece is not curly enough, and so on. The bride sits at the table after she appears, is given a glass of whiskey which she sips and then passes to her fiance, and the performance is over.

out and celebrate. There's no other way to express myself."

"Now that Ruaridh has stopped drinking, he's not very interesting to talk to. He's very dull these days. He doesn't say a thing."

During the Communions, a sense of excitement and holiday permeates the village. Among the converted members of the Free Church, this feeling is expressed in vigorous participation in long church services and meetings in the homes of the converted. In the rest of the village, the unconverted men don their best suits and head for the hotel, or the bothan opens earlier in the week than usual. All special occasions such as fank days or the arrival of relatives generate excitement, which is most often expressed, among the unconverted men, by drinking.

A man may propose to a woman, and the next day "forget" this rash action with impunity. When a man has been drinking, he is more likely than on other occasions to be openly affectionate to a woman, or to express strong feelings of friendship to his fellows. "It's the only time when you're really happy. You can sing, tell your life story. It's the only time when people are really friendly. But it's a false friendship, because when you meet someone the next day, he's not the same person. He's distant, cold. You feel depressed. You want to recreate the situation, so you start drinking again."

The fact that crofting townships are loca
land is one reason that the larger so

as the days lengthened during Christmastide, old style, it may be called " The Rune of the World's Light ".

The world, ere came the Son of God,
was black, a bog forlorn:
Void of sun, moon or star,
void of body, heart or form.

'Twas Mary Mother lowly kneeled,
and gave the Inmost Being birth;
Darkness and tears were driven afar,
the guiding star rose over earth.

Light on the land, the deep illumed
from sullen pool to ocean stream;
Grief was laid and joy was raised,
with praise and hail and harping free.

Light on the hills, light on the plains,
light o'er grey-green sea and firth;
Light o'er all the world as one,
the hour God's Son came down to earth.

(D) THE CYCLE OF LIFE

The stages in life's sequence are marked by noble runes, of baptism, initiation in adolescence, betrothal and marriage, childbirth, and of confession and consolation in trials throughout life and, at its close, of farewell. As might be fitting, the benedictions were given by either man or woman: to a child by a parent or elder; to the young and strong by the wise; and by lovers to one another. And in the past, especially in trial, the ' soul-friend ' ministered —*an anam-chara*, a neighbour chosen from lifelong friendships for steadfastness and understanding.

At birth a babe was baptized; and in the name of Father, Son and Holy Spirit the nurse placed three drops

people, although life in crowded quarters and daily concern with the rearing of animals make for a frankness not readily understood by strangers in Victorian times. The standard of morality in the Isles is high, and the rate of illegitimacy low. A courting custom, once common through the northern and western coasts of Britain, as in Norway and New England, was ' bundling ', a preliminary to marriage, or bed-fellowship (*leapachas*). This is noted with disarming frankness by various writers.[1] After the ceremonial and festivities of the betrothal, *reiteach*, a young man was allowed to sleep beside his betrothed; but the marriage ceremony was to precede, not follow, consummation. At wedding festivities, sweethearts found their way to the barn and took their rest together on the straw. In the shielings, too, courtship was given some freedom: trust is a necessity where there could not be total restraint.

To what extent marriage sometimes took place or may still occur after consummation and the expectation of a first child, only one with close local knowledge could say. ' Hand-fasting ', marriage made binding only by the conception of a first child, was an ancient custom. Two things must be remembered. First, the strength of parental benediction and authority, backed by a community in which all knew one another from childhood, gave binding force to betrothal and its obligations; and ceremonies such as that of the kertching effectually replaced legal and ecclesiastical marriage when there was neither registrar, minister nor priest. Secondly, marriages blest with children tend to be happy ones. Fulfilling the cycle of life, children also provided the support to old age needed among peasants living on the edge of poverty.

175 565 582 example to lads! Often of tall, fair stock, physically superior from better feeding, accustomed to have his own way, better taught, finely dressed, free and welcomed wherever he went in the glen that fed and fostered him, the young chief had favour on his side; moreover he was protected from the vengeance of jealousy. A song in praise of a young chief of Clan Leod boasts that "the girls [836] would give their snoods for Rory"! When she lost her maiden snood to him, a girl would be excused, and her 'natural' child not dishonoured, but granted a share of paternal affection and inheritance. After marriage, a chief's 175 lady made allowances for his past. But licence, once a habit, is hard to check, and the Gael tell bitter tales of 837 jealous wives, married for policy, and their revenge upon a rival. One gathers that where there were enough gentry to meet, choose and inter-marry freely, as among the Island tacksmen, decency was better observed; but among landlords in the Highlands, as in other lands, local licence was common down to the last century. Then, whereas a Minister of the Established Church could hardly blame his own Patron (or his son), a Free Church Minister could speak out from the pulpit!

175 Of the legendary *jus primae noctis*, the 'law of the first ● 585 night' of Boece and other old historians by which a lord had at one time the 'right' to rape the bride of any of his serfs or tenants, there is no authentic record. Yet from the primal right or wrong of conquest, some such 'law' was forced upon the Gael, as upon other peoples. Boswell records MacQuarrie of Ulva's belief that the custom of paying him a sheep when a tenant married was followed in lieu of such a right! Obligatory hospitality also lent itself to abuse. In all relations of chief to people, there were adjustments. In more complex society, poverty makes

175 ● 585 womanhood a prey to prostitution. The licence of a chief among young women was preferable to this; but evils were inherent in the fact of lordship.

(c) TWO ISLAND BARDS: MARY MACLEOD AND THE BLIND HARPER

175 While in Lewis the continuity of clanship was sorely 613 shaken by the fall of the chiefs, the Torquil-MacLeods, 621 in Harris it was maintained in the family of the Norman-MacLeods of Dunvegan in Skye. The family of Dunvegan is famed for chivalry and gentleness, not only in the songs of the past but in the speech of Skyemen to the present day. Harris did not suffer the bloodshed endured in Lewis from the death of Torquil until after the accession of MacKenzie in 1611; and Harris was not involved, like Lewis, in the troubles of 1715. MacLeod of Dunvegan retained Harris until the end of the eighteenth century, when it was purchased by a cadet of the family who had made his fortune in the East; and it only passed out of MacLeod hands half a century later. Hence it is that while in Lewis there is still talk of the 'give and take' between later laird and people, [533] in Harris there is more. In "the hereditary Hall of MacLeod" of Dunvegan, two Island bards gave birth to immortal song. Together, the tales of Lewis and the songs of Harris and Skye give us an authentic record of clanship in fact and feeling, linked with community today.

[628] In spite of the break in continuity, ease and warmth of feeling could spring up between a MacKenzie of Seaforth and the Lewismen, though Seaforth was a peer of the realm, and of a mainland name, not a MacLeod by direct descent. Playful rhyming, chaffing contests between titled laird and small tenant, are recorded by A. Carmichael and W. C.

COMMUNITY FROM PAST TO PRESENT PT. II

539 And so, after every good wish for days, years and life,
867 the Invocation closes: "Peter has come and Paul" . . .
869 the Disciples and the Archangels. . . . Jesus the mild and the Spirit of guidance have come,

And the King of kings has come on the helm,
To bestow on thee their affection and their love,
A bhaireadh duit-se graidh us ruin.

The ideal of choice maidenliness which this Invocation portrays, culminates in the thought of the loveliness that
867 was Christ. It rises, too, to stirring virility: "the island
[539] at sea, the fortress on land", or "the step of the steed on the plain". Yet when all is said, it is a womanly image which prevails: after the fortress comes the well in the desert, and after the charger's step, the gracious calm of a floating swan. It is all the more significant that the Invocation was addressed both 'to boys and girls' in one isle, and 'to youths and maidens' in another. Not simply was boyhood taught to honour girlhood: ideal womanhood was invoked to raise manhood itself to fullness.

885 Upon marriage, the husband replaced the maiden's
[292] snood or *stiom* that bound her uncovered hair by the wifely kerchief, *am breid*. Folded diagonally, its three-cornered
• [585] shape came to symbolise the Trinity, in benediction on
[539] the bride's head.[1] A poem to a bride, "now beginning her dual course", commences, "A thousand hails to thee
[538] likeness. The short second stanza given stands out alone: the poem, having attained its climax by a rhythm sustaining the upward, sonorous
[192] movement, is hushed by its few simple words. In *From the Hebridi*, Mrs. Kennedy-Fraser rearranged one or two of these lovely stanzas, as one of her 'lyrics with refrain'. *Cf.* A. Geddes, *The Songs of Craig and Ben*, vol. ii, 1935.

[1] The kertch is spoken of in many songs, in which a lover hopes to place it on his young love's head, or a husband praises its whiteness as worn by his wife. When first I knew the Lews, the kertch was still commonly worn
[198] under the more recent Lowland mutch, and either framed a young face, or an old one, charmingly. The two have not quite vanished, though memories of what the kertch once symbolised are hard to find.

CH. VIII RELIGION AND SOCIAL CUSTOMS

181 people, although life in crowded quarters and daily con-
cern with the rearing of animals make for a frankness not
183 readily understood by strangers in Victorian times. The
848 standard of morality in the Isles is high, and the rate of illegitimacy low. A courting custom, once common
584 through the northern and western coasts of Britain, as in Norway and New England, was 'bundling', a preliminary to marriage, or bed-fellowship (*leapachas*). This is noted
[836] with disarming frankness by various writers.[1] After the ceremonial and festivities of the betrothal, *reiteach*, a young man was allowed to sleep beside his betrothed; but the marriage ceremony was to precede, not follow, consummation. At wedding festivities, sweethearts found their way to the barn and took their rest together on the straw. In the shielings, too, courtship was given some freedom: trust is a necessity where there could not be total restraint.

• 585 To what extent marriage sometimes took place or may still occur after consummation and the expectation of a first child, only one with close local knowledge could say. 'Hand-fasting', marriage made binding only by the conception of a first child, was an ancient custom. Two things must be remembered. First, the strength of parental benediction and authority, backed by a community in which all knew one another from childhood, gave binding force to betrothal and its obligations; and ceremonies such as that of the kertching effectually replaced legal and ecclesiastical marriage when there was neither registrar, minister nor priest. Secondly, marriages blest with children tend to be happy ones. Fulfilling the cycle of life, children also provided the support to old age needed among peasants living on the edge of poverty.

[113] [1] W. A. Smith, *Lewiana*; and Brand Report, 1902.

175 wealth, rose above the indigent crofters and cottars.
177
427 These changes had a pronounced effect on the culture and
123 the population. Economic hardship and evictions prompted
354 emigration, forced many men and women to seek seasonal work
167 away from home, and led to a reduction in the marriage rate.
464
• 585 Crofting which had already become part-time agriculture now
241 was a spare-time pursuit. The Sgiathanach was dependent on
511 money, on the wider economy, for the satisfaction of most
241 of his needs. The croft was providing no more than a few
242 potatoes for the table and some oats for the cattle, the
731 crofter's only export. Still, no landless working force
464
146 appeared. Portree had grown and there was a woolen mill, but there does not seem to have been any marked movement into the village by the crofters.

175 While much of what was meaningful to the people was being
178 lost, the religious Revival continued. The conservatism of the
182 "Men" became an official policy of a new church. The emotional
186 approach of the ministers and the "Men," who were now elders
715
781 in the church, and the emotionalism of the large outdoor
771 meetings functioned to restore the social disequilibrium.
793

Although the extended family, township, and nuclear family suffered from instability, the people found intelligible roles within the religious sphere of activity. Their religion was reinforcing their way of life. The abhorrence of much of the old culture was accompanied by a strengthening of many traits which reaffirmed the desirable status values. The culture found a new focus in congregational religion and was able to maintain a continuity while the content changed.

the child. Consequently, the sacrament is normally administere
without even the formality of a kirk session examination. The
ministers of the other churches assert that non-church-going,
drunken fathers whom the kirk session has refused have gone to
the Church of Scotland and have secured the sacrament for their
children after pretending to mend their ways. They have then
gone back to their former habits. It may be so, but at least
one man in Portree was very surprised to find that the Church
of Scotland can require a severe examination.

At baptism the child is formally introduced into the 851
folds of his father's church. His mother and father stand 744
before the minister and are admonished to bring up the child
in the nurture and admonition of God, to the best of their
ability.

Marriage is not a sacrament in Scotland, and, therefore, 58
does not provoke any strong resentment beyond a feeling that [173
the Church of Scotland should not have the exclusive right
to proclaim the banns of marriage. It is the one time in 585
the life of a woman when she is the center of attention and 562
has complete control over the situation. She decides where 744
she will be married and what minister will preside. Church
affiliation seems to make little difference. At least, the
wedding of a daughter of a strict Free Presbyterian family
in the Church of Scotland did not give the people any cause
to gossip. Although a wedding is no more than a legal formality,
the vows made at marriage are sacred. It would not strike
Americans as being particularly significant to omit the promise
to obey from the ceremony; Americans are said to have an

dung from the byre, the peats from the moor, and the oats
the fields. When the land had been turned by *caschrom*,
yoked themselves to a harrow. The crofters, in Kilmuir, as
where, lost the right to the rivers for fish, to the moors
game, and to the coast for sea weed. The land became ex-
ted from over tillage. They had clung tenaciously to the
methods. Even if they could have obtained credit and could
broken with the ways of their forefathers, the fear of
renting would have deterred them.

A degree of preciseness can be given to this general
ure by comparing the arable acreage and stocking of Skye
1810, the year graziers first appeared, and 1870. In 1810,
00 acres were listed as arable, either cultivated or
eptible to it; there were 18,000 cattle and 40,000 sheep.[66]
870 no more than 8,383 acres were considered as arable;
were only 9,341 cattle, but there were 136,077 sheep.
agnitude of this change can be emphasized by adding the
that there were less than 14,000 sheep on the Island at
turn of the century.[67]

The end of the shieling life brought an end to the
itional season for courting. Destitution forced a post-
nent of marriage and an absolute reduction in the number of
iages. As a natural consequence the birth rate declined.
he decade 1861-1870 the birth rate of Skye stood at 26.1
pared with 24.9 for Scotland.

66 James MacDonald, op. cit., pp. 748, 754.

There must be enough interaction between the rela-
tively small number of people of similar standing within
the local group and beyond if the consanguinial and affinal
basis of the class is to be maintained, and they are not
to lose their identity as a group apart. They must not only
interact with other county families, but the county families
must be endogamous. Once a year the county families of Skye
are given this needed opportunity to reaffirm their solidarity,
to cement their relationship with the upper class of British
society, and to arrange suitable matches for their sons and
daughters. A Skye County Ball is held in November. The
"county people" come from near and far to attend the affair,
one of a series of local balls held throughout the nation.
If anyone has any doubts about his acceptance among the holders
of highest status, he receives his simple but explicit
answer at this time. He must be invited to the ball. For
three days and two nights the festivities continue. High
society has come to Skye and has brought with it its caterers
from Edinburgh. The local people say the "Ya-ya's" have
taken over Portree.

On the first night of the ball, the young people are
escorted from the homes of the Skye aristocracy, who act
as hosts, or the more fashionable hotels to the Skye Gathering
Hall by their parents. During the dance and the supper which
follows, suitable introductions are arranged for their sons
and daughters. On the second night of the ball, the young
people appear in couples. If I were asked to characterize

585 NUPTIALS--wedding (e.g., preferred time and place, ceremonial, persons attending and officiating); symbolic rites; means of assuring publicity and legality (e.g., banns, licenses); civil and ecclesiastical weddings; variations dependent upon status; associated property transactions (e.g., transfer of gifts, of bride-price); homecoming of bridal couple; consummation (e.g., immediate or deferred, private or public); defloration rites (e.g., jus primae noctis); concern for virginity of bride (e.g., exhibiting tokens); postwedding events (e.g., honeymoon, exchange of visits); status and activities of newly married persons; etc. See also:
marital sexuality . . . . . 85 Residence in marriage 591

of the township with the larger society, and examines
the effect of geographical and social marginality on
the boundedness of the township network. Chapter 6
discusses two important networks of social relations
within the township.

B. Township as Social Boundary System

The township constitutes a relatively firmly bounded
system, although its boundaries are weaker than formerly
when the township was relatively self-sufficient
economically. Township members worked together in small
fishing crews, and families relied on each other for
help when members of the family were away from the island
"at the fishing."

Relatives were expected to give priority to helping
each other. According to one proverb, "A relative is
your best friend." First and second cousins were
considered especially close, but knowledge of one's
kinsmen extended to at least the fourth generation.
Ties of kinship became evident in ceremonies such as
funerals and weddings. One Gaelic proverb says, "You
know who your relatives are at weddings and funerals."
At weddings the onus was on the members of the bridal
party to remember their relatives. "You have to sit
and calculate who is closely related, and all those

people will be doing the same. If they think they're
close enough to be invited, they'll be annoyed if you
don't include them." At funerals, relatives of the
deceased to about third cousins were expected to
participate.

When a population has lived in a small area for
generations, a dense network of kinship develops. This
fact, and the importance placed on mutual aid among
fellow villagers, fostered the feeling that the network
of township members, who ploughed, fished and tended
cattle and sheep together, was also a network of kinsmen.
"We're all the same people." "It's all one family here."
Occupational and kinship spheres of social activity
commingled. The importance of neighbors in contrast
with relatives was reflected in such proverbs as, "A
neighbor close at hand is better than a relative in a
distant land."

The nuclear family did not, according to Cohen's
criteria, constitute a firmly bounded system. Then as
now, women preferred the company of their "own kind,"
that is, the company of other women. The men worked
and spent periods of recreation with other men. Children
spent about as much time in the homes of grandparents,
uncles or fellow villagers as they did in their own
homes. A 60-year-old woman remembers that it was a

People prefer to give money
in exchange for car rides or other help, including peat-
cutting, because "than you're independent." Friendships
are still weak, relative to friendships in urban
settings. Most information which is shared between
individuals rapidly enters the pool of communal gossip.
Although many persons emphasize the importance of mutual
aid in defining a friend, some emphasize the ability to
confide and keep secrets.

Today many of the younger villagers do not know
their relatives to the extent that their elders did.
In one family, a girl who was about to get married had
to ask her brother, who was the only one of the siblings
interested in kinship connections, whom to invite to the
wedding. It is still useful to retain an inventory of
one's relatives. "I have cousins in Glasgow and
Australia that I've never seen, but if I ever go there
I'll have a place to stay." With the increase in
transportation and income, more islanders are taking
brief trips away from the island. During these trips,
they almost always stay with relatives.

It is frequently said that children are now "cheekie
less inclined to run errands and obey orders meekly, and
that they prefer to watch television or read books by
themselves to playing with each other.

574 on troubled waters," or bringing the two families
584 together.[2]

• 585 The most important of the ceremonies surrounding marriage was not the church service (posadh) but the wedding dinner and dance following the church service (bannais, from bean meaning "woman" or "wife," and feis meaning "feast").

"House weddings," as they were called, were held
[431] in the home of the bride. For several weeks beforehand, neighbors and relatives brought gifts to the bride's house, where they were displayed in a room set aside for them along with the dresses to be worn by the bride and

[2] Morag Macleod of the School of Scottish Studies
574 describes a custom still existing on the Isle of
584 Scalpay off the Isle of Harris, called reitseach mor
784 (bhig reitseach), in contrast with the reitseach bheag (small reitseach) or simple dinner party which existed until fairly recently on mainland Harris. The reitseach mor is a dramatic event involving a humorous exchange between male speakers for "the groom's side," and male spokesmen for "the bride's side." The bride is hidden, and the groom's men ask for the bride indirectly. They desire a sheep, perhaps, or a length of tweed. The desired object constitutes a theme which is developed in humorous give-and-take between the two sides, as various females are brought out one by one by the bride's people, from the most undesirable old maid to the bridesmaid and finally to the bride. Until the bride finally appears, the groom's spokesmen must find something wrong with each female presented, along the lines of the chosen theme. The sheep's fleece is not curly enough, and so on. The bride sits at the table after she appears, is given a glass of whiskey which she sips and then passes to her fiance, and the performance is over.

• 585 bridesmaid(s). The house was filled each night with
[435] visitors bringing new gifts or coming to see the latest additions. Enough presents were given during this
[203] time to set up a household. Invitations to the wedding were issued verbally, by persons going around to each
[602] house. Anyone could come to the church ceremony, which was relatively informal and jovial, but only the "closest" relatives were invited to the sumptuous wedding dinner which followed the service: the bride and groom, their parents, aunts and uncles, first cousins and usually second cousins. Many more were invited to the wedding supper which started after the dinner, at about 10:00 p.m., and continued throughout the night.

Three main nights were distinguished, although
535 preparations and festivities might go on for weeks. The
252 first night was the night before the wedding, when women of the village brought hundreds of chickens, which they plucked and cooked. Meat, usually mutton, was also cooked and sliced. Butter was rolled into balls. Neighbors brought milk and other provisions and assisted in the baking for a week beforehand.

535 On the second night, hundreds of villagers ate the
535 chickens and mutton prepared for the wedding supper,
533 and danced to the music of a piper or other musicians.
[273] Many young boys had their first taste of beer or whiskey on these occasions.

• 585 on these occasions. At some point during the night the bride and groom were prepared for their wedding night together. The bride's female companions undressed her, prepared her for bed, and put her into the bed with a hot water bottle. She shared some sherry with them, and they went out, whereupon the groom was brought in by his male companions. After much joking the couple were left together.

[574] On the third night, a dinner was given for the older persons who had not been able to come to the "big" wedding.

[273] For some time after the wedding, the married couple
[431] visited relatives and neighbors who had been unable to come to the wedding, taking a bottle of whiskey with them.

535 House weddings declined in number during the war when
178 food was rationed, and as more persons changed from the
[342] "black house" to the less easily cleaned and more elaborately furnished "white house." Most weddings are
[485] now held in hotels, and consist of a single wedding dinner and dance; they are often held on Thursdays, the day of the bannais in the past. The emphasis on community participation still exists: even though the practice of holding hotel weddings has limited the number of guests, an effort is made to invite someone from each household in the neighborhood. In part to avoid disappointing the

• 585 In part to avoid disappointing the
178 vast number of relatives who by custom must be invited
[602] but for whom there is now not enough room, many weddings are held away from the island in places such as Inverness
[431] and Glasgow. Gifts are still given in great numbers and displayed, despite the decrease in numbers attending the wedding dinner and the feeling that only those who are invited to the wedding should give presents. The
[202] custom still exists of neighborhoods or entire villages placing flags outside their homes on the day of a villager's wedding (except when the wedding is held away from the island); isolated flags within a village signify that the household is related to someone in a neighboring village who is getting married. And when the wedding car has picked up the bride and is leaving for the hotel in town, the road is often littered with barrels and other barriers.

Couples now often leave the wedding dinner and dance and go to undisclosed destinations for their honeymoon. But when they return to the community they must undergo a simple rite of passage that gives sanction to their new social status. On the first Sunday following their return, they are expected to come to church with the other members of the bridal party, a process called kirkadh (a slightly Gaelicised rendition of Scottish "kirking").

• 585 For some weeks after returning, the couple goes visiting
178 with a bottle. The scope of visits seems to have narrowed to close relatives unable to attend the wedding, and sometimes the custom is referred to as old-fashioned.
[431] The bride usually mails pieces of bridal cake to
[205] relatives who were unable to attend the wedding.

758 2. Death: At a time of illness or injury, an
574 individual may see persons he has not seen for years. The house is filled with a constant flow of visitors, and the visitors recount every detail of a sick person's
[763] pallor and movement. The room is usually occupied by visitors when a person breathes his last.

763 In the past, work ceased in every house in the
461 surrounding neighborhood when a person died. This no
[178] longer occurs. (The story is told of a weaver who called
[288] a mill in Stornoway to say that he could not finish an urgent tweed because there had been a death in the village, and was told, "You keep on weaving till the
[535] weaver dies.") However, dances in the village are
[444] cancelled, and the bothan (an isolated hut in which liquor is sold illegally) may close. Outdoor work, such as peat-cutting, which would be widely seen is avoided.

763 Word of the death spreads throughout the village and
[203] beyond within a few hours. From an immense, accumulated inventory, memories of the deceased are brought out,

273 Excise taxes were first levied on whiskey in 1814,
175 and stills of less than 500-gallon capacity were prohibited.
251 Local, illegal distillation continued for a long time
[259] after 1814, and throughout the Highlands and Islands tales are told of "the excise man" and how he was outwitted.
273 The Island of Pabbay in the Sound of Harris was evacuated
175 in 1843, supposedly because of illegal distillation that
[48] was being carried on there. The ruins of old distilling houses are found throughout Shawbost. Villagers say that these were used in the time of their grandfather or great-grandfather to distill whiskey for occasions such as weddings.

In Shawbost, until recent times whiskey was associated
[527] mainly with special ceremonial occasions: the birth of
[846] a child, weddings, and wakes. When a baby was born, the father went into town for whiskey to be given to visitors coming to see the baby. Having whiskey at a funeral was
764 so important that many a widow sold her cow to provide
273 it, so that people would not say it was a bad funeral. A custom of sitting up all night in the house of the deceased has stopped, probably in part because a prayer meeting lasting from midnight until 2 a.m. was introduced with the intention, according to one minister, of preventing the wake from becoming too joyful an occasion. Whiskey
273 was abundant at New Year's, and at weddings. "The dance
175
• [520]
[585]

273 [at a wedding] would be held in the barn, with sheets
175 lining the walls so that if a man staggered against the
• 585 wall he wouldn't dirty himself. There were four and one-half gallons jugs of beer and a few bottles of whiskey. Sometimes someone would spew on the floor. People got drunk on very little, because they didn't have it so often."

273 Occasionally the word went out that someone had
175 brought a jug of beer from town, and the men gathered in someone's barn or weaving shed, usually on a Saturday night.

"The war changed that. When you were at sea, you
273 lived from day to day. There was no tomorrow." "When
175 my brother was away at sea, most of the money he earned
[824] was saved for him, and when he got back we gave it to him to do whatever he liked with it. The men would go off to town drinking. They had money, and they had nothing else to do; and they had learned to drink during the war. Maybe if the TV had been around then they wouldn't have started that kind of drinking."

175 1. Bothans: Because most parishes in Lewis were
276 "dry," that is, no licensed purveyors were allowed, a
273 journey of many miles had to be made to purchase beer and
[671] whiskey in Stornoway. Around 1930, Nessmen (many of whom were sailors) began to bring back from town several kegs

lity of the sexes. On Skye, where women are the social
ector of sex, its omission is curious. The ministers have
n the promise of the ceremony out because, as one said, "The
may be a rogue, irresponsible, making it impossible for
woman to obey." She nevertheless promises to be "loving,
ful, and dutiful."

Election, as a passage rite, marks the attainment of the
t of the elderly. We already know that to become one of
"elect" the individual, man or woman, must not only
rience a soul-saving change but also manifest steadfast
mmity to the ideals of behavior which have religious
val. These ideals are the habits and statuses which
old people are striving to maintain. Thus, religion
ficiates the status of the venerable old people. Their
rpretation of "Effectual Calling" functions to provide
elders, the most eminent of the "elect" with an additional
n to exercise their judicial and authoritarian roles.
e can be no rapid conversion. Whether or not the
mary period of three years imposed by the "Men" in the
ntry is still enforced I do not know. The person who
ves he has experienced a saving change, "a visitation
the Holy Spirit," is examined by the minister and his
rs. Like the father who is seeking baptism for his child,
an old man or woman is judged on his knowledge of the
s and the Shorter Catechism and on his conformity to the
ecious life. No one can experience a saving change unless
e known, by observation, to have lived an upright life.
erson who continues to pursue his own mundane pleasures

586

586 TERMINATION OF MARRIAGE--methods (e.g., desertion, separation, annulment, divorce); prevalence of each; reasons (e.g., cruelty, infidelity, barrenness, sterility); initiative and rights of each sex; procedure; residence requirements; allocation of children (e.g., to mother, to father, to parent least at fault, division by age or sex); property arrangements (e.g., return of bride-price, alimony); subsequent relations of divorced spouses; social attitudes toward separation and divorce; etc. See also:

Dependency	136	Barrenness and sterility	541

COMMUNICATIONS

632 secondary school, the 'Nicolson', has had since its inception a
871 formidable academic record. Back in 1907 work from the school
was included in the examination set for an International Eis-
648 bition held in Christchurch, New Zealand; this was appropriate
1471 because emigrants from the west Highlands, notably from Harris
and Lewis, were among the pioneers of New Zealand education
a century ago. In 1957 new extensions were opened, costing about
£300,000 and making the school the largest of its kind in the
Highlands area. It is co-educational, its primary and junior
secondary departments taking only Stornoway children and its
senior secondary department catering for those from both Stornoway and rural Lewis. Many board out in the town during the week, returning home at weekends.

In providing social facilities, the town has placed itself in the
632 position of an agent for those things deemed necessary for life,
565 and is a middle-ground between the rural repression of the Free
771 Church and the city abandon of the mainland, with resulting
183 dilemma. The public houses, the cinema, youth clubs, dances and
1349 juke boxes are all in direct opposition to the preaching of the Free
1184 Church. The result is tension between the town's desire to act as
host for tourists and its wish to fulfil its duty on a religious
565 plane; to instance this, the Stornoway Sabbath is less strict than
the Lewis Sabbath. In keeping with the rest of Lewis, social
592 standards are extremely high. Home is the centre of life, as it
626 always was; the sense of community and communal responsibility
1474 is there. Discipline is practisedby unheard of, and the incidence of
crime, as such, is extremely low.

the ball in a few words, I would say, it is a marriage
market.

565 Social distance and class endogamy can also be demon-
648 strated by a negative approach to the question. Within recent
years there have been a few cases of marriage across the
social cleavage line. The results, as we shall see, show a
strong drive for social exclusiveness. One of the county
PresbyMarried a daughter of the "new rich." Her father was
a crofter's son who made a fortune as a whisky distiller
and exporter, especially during days of prohibition in
the United States. His fortune made, he returned to Skye
and purchased part of the old Clan MacLeod lands. Although
land ownership is a prerequisite for being included among
the upper stratum, neither land nor wealth guarantees
acceptance for a man from the croft. No one received the
marriage of his daughter happily. The villagers and crofters
565 said it was a marriage of necessity. The young aristocrat's
parents' reaction is at least partially reflected by the fact
that it was one of those very rare Skye marriages which end
in divorce. Until his demarriage in 1-54, he was the only
divorced man on Skye. In the second case, a crofter married
into a county family. His wife was the daughter of one of
the most prominent ministers of the Church of Scotland in
the present century. Although the minister was himself the
son of a school master, his high prestige status had led to
his acceptance by the "first family of Skye," and his second
marriage was into this family. Some of the crofters and

"elect" are predominantly newcomers and the elders are either
177 members of the landed gentry or newcomers. I was rather
amused one day when a Shyewman told me, "the 'Tee-Tees'
578 and 'Gentees' are no better than the Nobnamedes giving
579 gifts to idols," when they sent food to the manse for the
minister's guests at the Communion. Over in Breadale the
custom is also losing its importance, except in the Free
PresbyterianChurch, and the fellowship meeting has been
abandoned in the United Free Church because of the reluctance
of the members to engage in public displays, either at
Communions or at prayer meetings. The custom of visiting
has entirely disappeared in Sleat and Strath. One of the
ministers ascribed this to the isolation of the two parishes
from the rest of the island and from each other. Certainly
the Kilchoagach on the south end of the island seldom leaves
to Portree and the northern crofter hardly ever goes to
Sleat, but this does not explain why people from the mainland
will go to Breadale, by-passing Strath.

The vitality of religion can over-ride considerations
of family and friendship; if a Kilchoagach marries outside
accepted norms. We may recall the young girl who stole church
funds and was ostracized by her "people" and the whole com-
munity. Let us consider another example. Marriage vows, as
we know, are held to be sacred on Skye. Divorce is all but
unknown and separation is uncommon. To be precise there are
four known cases of separation. Nevertheless, if a husband
or wife vows to love a lover, it is expected that the offender
would be cast out. Forlyveness is not compatible with a

belief in a God who punishes iniquity "unto the third and
591 fourth generation."

In one family the wife transgressed by committing
484 adultery, albeit a rare sin. Her husband was one of the
626 "elect" and a deacon in the Free Church. Fully aware of
the fact that his wife had remained away from Skye until
after her child was born, he took her back. He was older
than she and devoted to her. The story could not be covered
up on Skye, where the elders have their thumbs on the pulse
of the congregation. The elders summoned him before the
kirk session. After he admitted he knew all the details and
the fact that his sister-in-law had taken the child, they
declared him to be excommunicate. The control of the elders
is still characterized by austerity and severity toward the
godly and ungodly alike. What hope has a Kilchoagach once
771 he has been eternally denied salvation? Perhaps, someday
774 he will again receive a visitation from the Holy Spirit
and experience a saving change. Although no longer entitled
to the benefits of the church, he continues to attend, as an
adherent. One may ask, what was the reaction of the people
to this punishment? A few Church of Scotland people, feel
that the elders might have tempered their decision. As one
said, "They thought only of Moses on Mount Sinai and forgot
Jesus on Calvary." Most of the people, however, including
all in the Free Church and Free Presbyterian Church, either
approved the action taken or, at least, would not question
the judgment of the elders.

589 CELIBACY--prevalence of bachelors and spinsters; reasons for celibacy; status and activities of unmarried, widowed, and divorced children; etc. See also:

Religious celibate	78	Chastity	231
Care of widows	136	Premarital sexlessness	485
Mourning	165		

592 unmarried sibling. Eleven households consist only of
siblings who have never married, men and women who in
1971 were 45 years old or older. Two widows live with
589 their unmarried siblings. Sixteen widows or widowers
live alone, and sixteen unmarried persons live alone.

The large number of households occupied by single,
241 elderly people reflects the use of the croft as a place
423 of residence rather than as an agricultural unit, a
477 view of the croft that was given legal expression in
486 1966 by the Miscellaneous Provisions Act. Before 1966,
592 the croft went automatically to the eldest son if a
crofter died intestate. Since 1966, the rights of
different claimants must be considered and tenancy by
a new person must be confirmed. District and county
councillors argued for this change, saying that a widow
was often left on the croft and her security endangered
because the eldest son was usually far away from the
island, in Canada or some other country. In other words,
rather than an agricultural unit which should naturally
be taken over and worked by the male head of the house-
hold, the croft is seen as a place of residence for
the infirm and for the aged, and especially for the aged
female.

The Crofters Commission has suggested that elderly
people be allowed to rent small plots of land on which

527 office or general store, preferring to divide the rent
178 between themselves for use at a later time. A 50-year-
431 old woman observed, "They don't appreciate the bannag
like we used to." They get this kind of rich food all
527 the time." The practices of wearing costumes and speaking
178 the rhyme are disappearing. Children used to have the
bannag until they left school at age 14 or 15; now only
the younger children go. "Children grow up more quickly
today."

509 New Year's is celebrated perhaps most intensively
529 by the men, who after seeing the New Year in by watching
213 a special New Year's program on television go visiting
574 neighbors and relatives with bottles of whiskey. The
194 custom of "First-footing" on New Year's eve is found
throughout Scotland; but in the Hebrides such visiting
and heavy drinking may last from New Year's eve until
the Following Sunday. During this time, the woman of the
house, who usually refrains from drinking and to some
extent controls the drinking done by the males in her
house, relaxes her attitude, and may even participate.
The comment, "It's only once a year," is often heard.
589 During this time, the shyest and most retiring bachelor
becomes a Romeo; this is the only time of year he may
be heard to mention the word marriage. For example, one
bachelor in his 60's chooses a "Bride" each New Year, and
takes her with him on his all-night visiting.

into tiny squares. The ministers and the elders partake first. A final hymn is full of rejoicing, and the minister then exhorts the communicants to return to the world and give witness and to live exemplary lives.

The evening service on Sunday is evangelical, intended for non-believers. After this service the communicants conduct a brief prayer meeting to give thanks.

On Monday, the minister again tells the communicants to go out into the world and declare publically their experiences of the preceding week and to demonstrate in everything they do and say that they are believers. In the past, only a morning service was given, and there was had a long journey ahead of them to return home; but now that cars are available,a similar evening service is also conducted.

2. The Process of Conversion: The process of conversion may be slow or sudden, but conversion is most common at middle age and young women. One informant wryly observed, "Only recently women were allowed to have souls. But from the time of the Communion until, mostly women are going to heaven." Many of the women taking Communion are dressed from head to foot in black, a color which indicates their widowed status.

The first sign that a person is "following" (leanmail) the church is that he begins to attend the weekly prayer

three children, but this will only be for a few weeks in the spring and autumn. The large crofters, who has only recently appeared, is the only one who can use one or two helping hands all through the year.

One may logically ask, what if the thought that they are being forced to leave the crofts and their resulting conflict of individual expression and subservience to the father and the group? The answer is an ever increasing number have at least one more important decision to make. As the boys grow into young men, they must decide whether or not they will remain bachelors, which remaining with the parents means, of course, no further family of procreation. Girls must similarly decide between spinsterhood and marriage. There is no pat:on on Skye, but there is found in Ireland,[20] for instance, that the crofts have sufficient land for a daughter, while the parents are still alive. Some, of course, marry after their parents die, but often it is too late for them to have children. In Barnesville, for example, the average, has not celebrated a birth in years; there simply are no children and none to come. Other men and women feel it is too late for marriage when they get possession of the croft. I doubt that there is a single township on Skye which does not have at least one bachelor or spinster. Tolerance has earned fame as being a township of nonbachelors. Commonly, a brother and sister live together on the croft.

[20] Arensberg and Kimball, op. cit., pp. 70-75; Eric Arensberg and Kimball, Family and Community in Ireland, (Harvard University Press, 1968), pp. 79-84. There are, of course, many communities which could be made with the Irish small farmer, but the Irish case will would apply to peasants everywhere.

591

the Fourth degree of relationship. Although the extended family is not usually corporate, more than a few people have been a century or two ago, it is still very real to the Highlands. Here, perhaps, the township and their historical antecedents were patrilineal in their ethos. Of course, and the question of the availability of land and the legality of subdivision were of small importance. For the right system of land use enforces non-local post-marital residence, thus at a great distance from the parents, and very often among that the younger generation must join the constant outmoce movement of the population. Then, the extended family is seldom, if ever, found intact. Indeed, the only times its members come together as a group is at a funeral or a wedding. In these occasions the entire family participates emphatically present, and the fact that the individual always remains a member of his or her family clan is revealed. It is, then, a live reality.

In structure the extended family includes all males and females not to, and including, third cousins. The kinship terminology is descriptive. Excepting grandchildren, all relatives are distinguished by sex and generation. Members of the parental generation and ascending are the parents or collateral kin and are distinguished by their relationship to the individual's parents. Members of the grandparental and great-grandparental generations are their lineal descendants are similarly distinguished. The same descriptive technique extends to kinsmen of the first and second descending generations.

soon became apparent. There was a leveling of the social hierarchy. The former joint-tenants, subtenants, and cotters had become crofters. Whatever socio-economic distinctions had once marred the clansmen, all were now more or less equal in status. The cotters seem to have temporarily disappeared.[22] The proprietors were absent, and the tacksmen were almost gone. Indeed, the indignant withdrawal of the tacksman has contributed to the circumstances which made the abolition of rundig possible.

Although the crofts were small and the roots were high, the people were able to satisfy most of their domestic needs by combining cultivation, stock breeding, and fishing. They could also make enough from the growing trade and, in certain areas, helping to pay the rent from the income from the crafts the crofters were considered more than adequate. Early marriage and subdivision of the crofts became common practice.[23] When a crofter died, his land was divided among his sons, leaving his father's land and build a house. The proprietors may have explicitly encouraged the practice of early marriage and subdivision. These, one could be gently prodded into leaving or commercial fishing not only produced a valuable export but also paid for the privilege of working in the form of high rents. While a generation three and four landless families were living on crofts originally intended for one. When subdivision was at last forbidden, about 1840, the crofter simply took his

[22] See Macfarlane, The Macfarlane and Murray Lairds of Auchleek (Edinburgh: Oliver and Boyd, 1968), pp. 20-21, 25-26, and Gray, (Edinburgh, Mac. Ed. 1957), pp. 20-21.

[23] Mac. pp. 225, 236, 279, 272-273, 277, 305, 314, 345.

married sons into the house. Family solidarity was strengthened as each cotta:e came to be the house of a three generation family group. Joint-tenant crofts, more large than a house, were bound together in a network of collateral and affinal relatives. Two of the underlying principles of the clan were reaffirmed. The father was the senior male member of the group of courses, and the strong, almost sentimental, attachment for the land was an expression of the sentimental tie of kinship. Economically, subdivision was saving the way for disaster. It formed a steadily increasing dependence on the potato; the people could not grow enough grain for household needs.

Commercialization soon brought a large contravention of land to a source of monetary revenue and the supplanting of customary usages by contractual relationships. For its fulfillment it requires the crofts to become individuals and development of a division of labor which allows specialization. Events in England and Lowland Scotland, could not have left the island untouched. The first wanton of the Industrial Revolution had been followed by a vigorous growth of urban centers. The mass movements of the rural population into these communities, as their rights to the land were disregarded and the people were driven off or made into wage laborers, were creating a new cultural pattern. The benefits of the home to the nation had the appearance of a mere trifle. Commercial fishing and villages should be advocated, planned, and fostered on Skye, the most populous of all the Hebrides. It was no less inevitable that villages should have limited attraction for the Highlands.

through alleys to rummage through the trash cans of hospitals or other large institutions for food. The occupational histories of the weavers support the contention that the ranks of the Harris Tweed Association that the younger weavers leave because they do not like the weaving and they are replaced mainly by older men who want to settle down after a life at sea. (See Appendix A for several life histories of weavers.)

B. Crofting as Survivor

Because of the relatively high income provided by the Harris Tweed industry, those who remain within the township have tended to emphasize weaving and neglect the crofts.

1. Croft as Place of Residence vs. Agricultural Unit: Most of the 159 households consist of married couples with their unmarried children. A newborn is merely rather late in life and for children not to marry while their parents are still living is evident in Table VI. Partial list of Households According to Type of Household and Year Established.

Fourteen households of married couples and their children (not included in Table VI) include at least one [illegible] (This statistic revealed did not contain this table--also yet)

unmarried sibling. Eleven households consist only of siblings who have never active crofters, but the township associated with Prospect, Ontario, and some who in 1971 were 45 years old or older. Two widows live with their unmarried siblings. Sixteen widows or widowers live with their married children. Seven widows live alone. The large number of households occupied by single, elderly people reflects the use of the croft as a place to live and as a place to work. Although an agricultural unit, a view of the croft that was given legal expression in 1964 by the Miscellaneous Provisions Act. Before 1964, the crofts were automatically passed on. Since, one of a crofter died intestate. Since 1964, the rights of different claimants must be considered and tenancy by a new person may be granted by the District and county councillors argued for this change, saying that a widow was often left on the croft and her security endangered because the eldest son was usually far away from the island, in Canada or some other country. In other words, rather than an agricultural unit which keep the money to be taken over and worked by the male head of the household, the croft is seen as a place of residence for a female who is a crofter only. The weaving didn't start until the 30's. He was wounded in the war. He got a pension and sold a cow or a few sheep each year. But I didn't

their houses are located, and that most of the land freed for use by more active crofters, but the land associated with Prospect, Ontario, and some who in plan extremely difficult to implement. "The-croft is your home, the only thing you have. You don't want it taken away, even if someone else is using it otherwise anyway. Our county councillor suggested amalgamating the unused crofts at a recent meeting. No one said anything, but no one wanna it."

Of the five households that have the use of vacant crofts each, one consists of a bachelor who uses the croft for grazing his number of sheep. A second household is composed of two brothers who had stayed at home to take care of their aged parents. One of these brothers recently married, after the last parent died. These two have long cattle and sheep, and both work in Stornoway.

A third household is headed by a married man who has recently sold most of his livestock in order to "concentrate on the weaving." His father, who died about year with a brace and cart in exchange for the use of grazing land on that his family never had to pay. His sheilings, died a few years ago. My father was a crofter only. The weaving didn't start until the 30's. He was wounded in the war. He got a pension and sold a cow or a few sheep each year. But I didn't

592
24
31 like to leave the loom for the time it took to look
288 after the sheep."

592 A fourth household consists of three unmarried
23 siblings in their 40's and 50's who recently sold th
24 cattle and now keep only sheep for their own consump
[233] They cultivate a small amount of oats and hay to fee
[246] the sheep during the winter. The brother who was la
[288] responsible for taking care of the livestock is now
[463] "concentrating on the loom," and his brother works i
the mill. Their sister, who used to work in hotels
[407] the mainland, now keeps house for them. Described a
[404] "self-contained family," they have a tractor and a d
freeze and take care of their peat and the harvestin
654 of crops by themselves. One of their crofts has bec
423 too waterlogged even for grazing and was sold recentl
to the son of a local crofter, not for agriculture bu
as a prerequisite for applying to the Department of
Agriculture for a housing grant. Only tenants of cro
can apply for such grants. As this particular croft
too wet to be cultivated or used as a house site, the
only motive which the new tenant has to become a crof
is to gain access to governmental subsidy.

592 The fifth household is composed of a retired cou
233 and their son and his wife and family. They have no
311 cattle, and use the crofts for grazing sheep.

621 The first thing that is said when for some reason
513 a woman is left alone in the house is, "Who's going to
858 go and sleep with her?" Often a child will be sent from
a neighboring family, not always relatives, to stay with
621 her at night. As in the past, it is not uncommon for
592 a childless elderly couple or single person alone on a
888 croft to take in a young, homeless couple, to whom they
may or may not be related. The young couple cares for
the old person or persons, and inherits the croft when
they die.

602 "Keeping up the relation" is the process by which
476 relatives sustain interaction and expectations of mutual
aid even though their relatedness becomes more distant
605 with succeeding generations. "I've got cousins in Ness
that I stay with at the Communions. They're getting on
into the third generation now." A cousin is a cousin
even to the 42nd degree (Williams 1963: 142), as long
as there is reason to sustain the relationship. "I know
we're related, but I can't quite place it." "We're a
bit related. I think she was a MacPhail before she
married." "I don't quite know how we're related, but
my mother and his mother considered it a close relation-
ship, and he has kept it up."

621 Every villager has a vast amount of information
626 about other villagers and their families, which may be
582

COMMUNICATIONS

632 secondary school, the 'Nicolson', has had since its inception a
871 formidable academic record. Back in 1907 work from the school
was included in the educational section of an International Ex-
(548) hibition held in Christchurch, New Zealand: this was appropriate
(167) because emigrants from the west Highlands, notably from Harris
and Lewis, were among the pioneers of New Zealand education
a century ago. In 1957 new extensions were opened, costing about
£300,000 and making the school the largest of its kind in the
Highlands area. It is co-educational, its primary and junior
secondary departments taking only Stornoway children and its
senior secondary department catering for those from both Storno-
way and rural Lewis. Many board out in the town during the
week, returning home at weekends.

In providing social facilities, the town has placed itself in the
632 position of an agent for those things deemed necessary for life,
368 and is a middle-ground between the rural repression of the Free
171 Church and the city abandon of the mainland, with resulting
183 dilemma. The public houses, the cinema, youth clubs, dances and
(363) juke boxes are all in direct opposition to the preaching of the Free
(184) Church. The result is tension between the town's desire to act as
a host for tourists and its wish to fulfil its duty on a religious
plane; to instance this, the Stornoway Sabbath is less strict than
the Lewis Sabbath. In keeping with the rest of Lewis, social
(392) standards are extremely high. Home is the centre of life, as it
(863) always was; the sense of community and communal responsibility
(694) is there. Divorce is practically unheard of, and the incidence of
crime, as such, is extremely low.

CH. VII SPIRITUAL LIFE OF COMMUNITY

(a) SACRAMENTS OF THE HEARTH AND THE PLAIDING

788 For shelter and life by the hearth there are noble runes.
592 The house with its household was blessed, when newly
364 built by a bridegroom's friends, yearly after its thatching,
or regularly at nightfall. The blessing was said by the
goodman in the presence of his family and helper-neigh-
bours, or intimately by either of the parents as they went
to rest (*Carmina*, Nos. 44, 45).

In the darkness of the 'black house' the fire was a
(364) centre of warmth and light, of life and union. "The
Blessing of the Living" (the Fire) was said by the house-
wife as she rekindled or, rather, uncovered the sleeping
788 embers when she rose. Those who, tired or in want,
592 have ever lit a fire in darkness may best feel, in her words,
354 how the glow without kindles the light within.
539

"I will kindle my fire today in presence of the angels . . .
Without malice . . . or fear . . . of any one under the
sun,
But the Holy Son of God to shield me."

And then (as the dim glow lightens and warms): "God,
kindle Thou in my heart within, A flame of love to my
neighbour, To my foe, to my friend, to my kindred all,
To the brave, to the knave, to the thrall. . . . From the
lowliest thing that liveth To the name that is highest of
all (*Gu ruig an t-Ainm is airde*)." In spirit this reaches
universality; its verse-form is purest poetry (*Carmina*,
No. 82).

For the covering, smothering or smoo'ring of the
embers at night, the following was said to me not long ago

COMMUNITY FROM PAST TO PRESENT PT. II

788 (in Gaelic) by a housewife in a Catholic isle, as our friend-
592 ship matured. It had been said nightly at her fire by her
364 father-in-law until his death (not long before), which had
539 come after that of his wife. "I smoo'r the fire tonight,
As Mary's Son smoo'red. Be it well with house and fire;
Be it well with all our household. Who are on this floor?
Peter and Paul. Who are on watch tonight? Light-white
Mary and her Son. Thus God's voice taught, And the
Angel spoke: The Angel at my house door, Until the clear
day come tomorrow. Amen." As this variant shows,
memory still lives in the Isles.[1]

788 In these runes, the key to the words "as Mary's Son
592 and as Mary did, in their day" is the example of filial duty,
776 of wifely and motherly care. In spite of lapses to 'Mario-
(779) latry' during periods of decadence in the Roman Church,
the virtual banishment of Christ's mother from Protestant-
ism has led to a loss deeper than Presbyterian Scotland has
yet realised. Her name was a daily reminder, both of a
woman's part in the spiritual life of the home, and of a son's
self-discipline and affection: in a word, of mutual love.

For wool, the sheep were blessed, as in the "Clipping
788 Blessing". There were blessings of the loom and of
230 warping and weaving; and after neighbourly fulling or
786 'waulking' of the finished web, came its consecration.
(461) As the work was solitary and communal in turn, so the
127 prayer. Carmichael's own fine prose translations should be
538 studied (*Carmina*, vol. i, Nos. 108-113; cf. vol. iv, pp.
88-99). Yet, those being available, we quote rhythmic
(113)

[1] Cf. Rev. Allan Macdonald, *Comh-chruinneachadh*, p. 107; *Carmina* (Nos. 84-87, 324-326); and M. Kennedy-Fraser, *Songs of the Hebrides*, vol. ii, p. 31. Sacred love is not to be picked up lightly by a stranger. It was only upon the second of my prolonged stays under her hospitable roof that this good woman would admit and impart her knowledge, treasured in the secret places of her heart.

COMMUNITY FROM PAST TO PRESENT PT. II

198 developed through the township Grazing Committees by
476 the Scottish Agricultural Organisation Society and its
44 associated Crofters' Agency. Lime and fertilisers were
purchased, and wool and other products sold, co-oper-
(654) atively. The co-operative marketing of lobsters, taking
(228) advantage of fluctuating London prices, has led to the
reconstruction of ponds for storage. By these and other
(654) means, government assistance is utilised but not squan-
dered; earlier initiative in agricultural organisation is
reinforced; and communal tradition is revived, linked
to personal responsibility through the crofters' lifelong
knowledge of one another.

198 As to the future, all agreed that unless the Harris Tweed
288 industry flourished, with work at reasonable wages, the
villages would be abandoned by the young, perhaps with
(824) no return such as hitherto on 'retirement'. Many young
people are content with life in the townships, provided
they can get a living there, though not all, for they are
somewhat divided; and work elsewhere, even in the mills
of Stornoway, is a counter-attraction.

198 Social life is undergoing changes which operate both
592 for and against the retention of the young. On one hand,
538 household interchange of conversation, song and story,
the *ceilidh*, has declined. On the other hand, one found
198 that, as regards religious prohibitions, and in spite of the
771 nervous tension expressed in 'Revivals', the young have
577 won greater freedom. Near one village a Nissen hut,
(535) handed over to the Home Guard, was also used by young
people for monthly dances. When I asked a young crofter
invalided from the Navy whether the Elders of the Kirk
made no protest, he replied that they had, but had to give
it up: "They see that we won't stand for it"! This
would have been unthinkable during the First World War,

Social Organization

592 The Croft. Ideally, the croft is the home of a nuclear
(574) family. Social instability and economic limitations, how-
ever, have given rise to a situation in which the ideal is
becoming progressively harder to attain. In fact, crofts
which once were occupied by a three generation family group,
that is, by grandparents, parents and children, are now
inhabited by an aging bachelor, a spinster, or an unwed
brother and sister. Others are the homes of an old widow or
widower and, perhaps, one or two of their children who are
well beyond marriageable age.

574 As an irremovable social entity, the nuclear family
has been surrounded by the universally recognized functions
of sexual gratification, economic cooperation, reproduction,
and education. In addition, important functions of a religious
and a social character have been given to it. The members
share the work of the croft, have a higher rate of inter-
action than any other social group, and, in most homes,
worship together seven days a week. Within the family, the
father is the source of all authority. He directs the labor
of his wife and children, determines their patterns of inter-
action outside the home, and leads them in family worship.
The family's economic well-being and spiritual welfare are
his responsibilities.

574 Learning the essential tasks necessary to the crofting
(592) of life by imitation and informal guidance, sons move
in the sphere of their father and daughters in the sphere of

593

593 FAMILY RELATIONSHIPS--patterns of behavior between spouses, between parents and children, between siblings; rights, privileges, and powers of husband, wife, father, mother, son, daughter, brother, and sister; family law; emotional attachments, evidence of ambivalence, etc. See also:

288 the automatic shuttle; all other processes have been
178 built into the design of the Hattersley loom (cf.
402 Thomson 1969). In other words, weaving does not entail
288 very specialised skills and is not difficult to learn.
443 A sailor can come home and learn to weave in a short
period of time, or pick up the trade again with ease
after having been absent from the loom for a long time.
(571) Neighbors substitute for each other when someone is ill
if a tweed is "urgent." Wives help their husbands, and
(573) young boys their fathers and uncles. Such low-level
specialization and substitutability are complementary
to crofting activities and the maintenance of neighbor-
hood ties, and may be seen to favor continuance of the
occupation of weaving.

874 The Lewis Castle College in Stornoway, established
226 as a technical college in 1953 in a building that was
(467) formerly the home of Sir James Matheson, offers training
courses in weaving for adults which last for ten weeks
and qualify a person for membership in the Weavers
(872) Union (cf. Stornoway Gazette, March 16, 1968). The
college also sends weaving instructors to all the public
schools on the island to instruct young boys in the
554 rudiments of weaving. The Highlands and Islands
286 Development Board have in the past offered loans and
288 grants with which to purchase looms, and government aid
has protected the mills.

Despite these aids and incentives, parents do not encourage their children to weave. The weavers themselves describe the job as dull, offering no security and no possibilities for advancement.

Referring to her young son, a mother says, "By the time he's old enough to weave, the tweeds will have failed." Another mother says, "I want him to learn some trade, if he's intelligent enough. I don't want him to stay here. The tweeds are so uncertain." "There's no future in it," says the father of another young boy, "I definitely wouldn't want him to be a weaver. It would be good if he went in for engineering."

The histories of the weavers reveal many examples of shifting occupations. Weaving often alternates with work in the local mill, which is also relatively unspecialised. The Shawbost mill must tolerate this unstable labor force, as labor is difficult to find. Eldest sons tend to leave the island for more stable, permanent jobs, leaving the croft and the loom to their younger siblings. Table V[2] shows the number of male weavers in each age group.

The fact that Shawbost has the same age structure as the rest of rural Lewis (see Table II),[3] and less unemployment signifies that weaving has not served as an adequate incentive to keep young people on the island.

[3] [See p. xi—Analyst]
[2] [See p.xiii—Analyst]

Lies are frequently told. "Every other sentence my father says is a lie. If you believe half of what he says, you're a fool. If you believe a quarter of what he says, you're getting near the truth. If you believe an eighth of what he says, it's probably the wrong eighth."

Villagers engage with each other in constant, quiet game-playing. They are dependent on each other for many things, but try to minimise the control that others have over them while improving their own positions. If someone brings plants or shrubs as a gift, the response is likely to be, "She was probably pruning her garden and needed to get rid of the leftover garbage." Such negativism releases the person from feeling obligated. (See Emmett 1964: 16-17, for a description of a similar situation in Wales.) A man who is asked about his new tractor replies, "Its faults will come out later." If he were to say it was all right and then it broke down, he would have lost points. In discussing the mental health of a villager recently returned from Craig Dunain (a mental hospital near Inverness), someone observed, "He's better than the doctor who let him out." If another breakdown were to occur soon, someone would be sure to comment, "And so-and-so said he looked all right."

Such training allows little room for the development of close friendships in which the individuals involved are

the children might not receive proper religious instruction.

"Family worship" is considered an important part of daily life. Prayers should be said before meals and teas, and the head of the household should read passages from the Bible to the assembled members of the household every morning and evening. The practice of "reading the books" prevails in households headed by older men, but is less common among families headed by younger men.

2. The Clique of the Converted: The second network within the religious sphere is a special religious in-group, the clique of the converted (*curamach*). This clique constitutes a relatively strongly bounded system which to some extent competes with the township boundary system. Owen (Rees 1960) has noted that as persons become more involved with religion in the Protestant Hebrides, they tend to remove themselves from community life.

Intense involvement with the church sometimes conflicts with township activities since people may attend Communions at times when a fank is planned, leaving the work to be done by others. When elders of the church are present at activities, such as fanks, which are otherwise usually boisterous and full of humor, behavior tends to be "properly" restrained.

the township; and to each were allotted the rights of the common grazing and the fishing grounds. For more than a century the croft has been held individually, though in the townships the common grazing is still held in common. Beyond these 'homely' limits lie wider horizons, in the past those of seafaring and of droving or the chase, and today of fishing and gilleing at home, or of ocean journeys, urban occupations or colonisation.

In the Lowland regions each symbol represents 100 holdings. For (A), mixed and dairy farming, the particular type of symbol shows the average number of workers employed on a farm-holding in each county. On each farm the employed workers form what may be called the 'Labour-Team'. A team may be 'small', 'medium' or 'large'. The Scottish averages of these three types (indicated in the inset key to the map) are roughly three, five and seven workers per team. Four 'casual' workers are counted as equivalent to one 'permanent' worker, but farmers' wives are excluded. Under (B), for the same Lowland counties and areas, full-time small-holdings are shown separately. The Scottish average of less than one full-time worker employed, most often a son or daughter of the small-holder, is typical of all the counties.

As to the relative importance of the different classes of farms and small-holdings in Scotland, true agricultural land-holders number 68,000, of which fully one-third hold part-time holdings (like the Island crofters); one-third 'full-time farms', and rather fewer (one-fifth) hold 'full-time small-holdings'. The remainder accounts for other types of less importance. The farms predominate in terms of improved land, full-time employment, and of course of production. As to area, farms cover 80 per cent of agricultural land. The farmers employ nearly 90,000 workers,

[2] [refer to map p. 16 - analyst]

weaving and fishing, the fall in population would probably be small, if any, in 1941. This fall in the total figure was not so much a decrease in the number of families as in the number per family. The Island was only then following the restriction of population begun half a century before in the rest of Protestant Britain, though the causes, social and economic, are very dissimilar. Actually, little did occur to change either the rural situation or that of Stornoway, until the outbreak of war in 1939.

Since 1931 there had been no real decrease: Lewis is a land of house-building, not of ruin and abandonment; of increase of holdings, not diminution, and even of agricultural improvement. No doubt 'artificial' causes were at work: first, loans, grants and unemployment insurance and assistance—once known as 'the dole'—and, secondly, the money sent to elderly parents and dependants at home by young folk in Glasgow or abroad, or savings brought back by the young people themselves. Yet there is some fishing and agriculture still. Above all, 'hand-weaving' has grown, even if this be partly 'artificial'. Recently it was not only the elders who had returned to the Island, but men and women in the prime of life, so that the question of resources, livelihood and population in Lewis needs to be re-examined afresh.

The emigration which took place from 1949 to 1951 followed directly upon the losses and the unemployment in the Island's Harris tweed industry. This crisis resulted from the imposition in 1949 of a Purchase Tax on hand-woven Harris tweed of 666 per cent. If the tax had been maintained and no adequate adjustment made, the effects on population would have been far-reaching.

FAMILY, FARM GROUP AND TOWNSHIP: THE CONTINUING COMMUNITY AND ITS SOCIAL ECONOMY TO 1815

INTRODUCTION (TO CHAPTERS V AND VI)

THE family, the 'conjoint' or 'farm group' of four or five families, and the larger group clustered in a glen or along a shoreland, are, in ascending order, the three concentric units whose mutual relationships we must visualise to understand the past. Enduring elements of life in family and neighbourhood today, with their own special qualities and limitations, can only be understood in terms of past needs and the relationships they evoked.

Having seen their relationships in family, team and township, we can next turn to the reciprocal relations of the people to their chief or lord, whose position dominates European, indeed world, history and prehistory. Here our concern must be the meaning of 'clanship' to the chiefs, the joint farm-groups (or 'small tenantry') and, latterly, the tacksmen placed above them.

We may find, throughout this study, that features and functions which at first sight seem peculiar to the Island are really local variants, more perfectly crystallised, of forms which we know existed at earlier periods in Scotland and in much of northern and western Britain. In the Isles,

to bleed or to set bones, while some elderly woman woul serve as physician and midwife. Spiritual consolatio and renewal too could be found, even in the absence monk or nun, or of priest, minister or catechist. Enoug here, that with agriculture and fishing, most crafts, exc metal-work, were practised in every family. The 'rang of skills' was therefore wider and richer in latent art tha might be supposed from those needed on a little croft today Hence the importance of understanding the roles of hus bandman and housewife, of "the man and the woman o the house".

Their labours through the annual rhythm of the season might be classed as the man and endurance fo the women (Fig. 9). Man's muscular strength and free dom of limb rouse him to efforts demanded by the thru and lift of peat-cutting, digging in stony soil, or pushin the foot-plough, step by step obliquely down a rocky slope In the past an archer's chase of stag, wolf or boar demande all a man's effort, and courage too, as fishing still does i the stormy north-western seas. With this facing of dange there came a gaiety that sparkled like the crest of a breakin wave. Women's work demanded by its unceasing activit a cheerful endurance, whether at labour on the croft, a corn-grinding, butter-making and peat-carrying, or card ing, spinning and weaving; and with every task of day o season came the constant tending of cattle, of menfolk an children.

This allotment of seasonal tasks and skills is neatly pu in the proverb, "A man's cow won't yield milk, nor a woman's horse ploughing" (*Cha bhi bainn' aig ba fir, 'sa bhi treabhadh 'an each mnatha*). Yet women have always taken a share of work on the croft—too heavy a share when the men were much away—and the habit o

764 the deceased or the remaining family assist in preparing
574 endless cups of tea, using the provisions that are brought by the visitors. The newcomers enter, exchange greetings, memories, sighs and moral judgements in rapid whispers. "Oich, oich... that should teach us, we're all going to go. That's how it was meant to be. It makes you wonder why we live at all, well, well." They recall other deaths. "That was a bad death. His liver was bad, and he turned yellow, then all black...."
[152] They weep, circumspectly observe the appearance of the
[197] room and its occupants, and speak only in Gaelic, the language of hearth and heart.

764 The minister usually attends a prayer meeting which
793 is held in the tigh fhaire around midnight of the night before the funeral, but his presence is not necessary. The prayer meeting may be conducted by the elders. The elders may also hold the service which precedes the burial. The minister may walk for a short distance in the funeral procession or speak a brief few words at the graveside, but his role in the community drama is minimal.

764 At least one person from all households within the
62 village is expected to go to the tigh fhaire of someone
592 who has died within the village, "to show respect." The male head of the household is expected to attend the

764 funeral procession in which the coffin is carried for
[62] about half a mile from the house to the waiting hearse.
[592] Over 100 men usually walk in these processions. The more well-known the person or unexpected the death, the larger the procession is likely to be. Relatives
[602] of the deceased walk at the head of the procession, at the head and foot of the coffin, while other villagers take turns carrying the bier. The pallbearers serve in relays. Eight men carry the coffin, four on each side, and are replaced frequently by pairs of men who assume the rear positions. The two who have been displaced at the head of the coffin stand outside the line, facing outward, until the procession has filed past them, whereupon they join the end of the procession.

764 In the past, coffins were carried for miles from
178 the house to the cemetery. The procession rested period-
293 ically, and the men usually carried an earthenware jug of whiskey (piggy uisge beatha) "to ward off the cold." The custom of giving a glass of whiskey to men as they left the house to carry the coffin was still recently followed in Skye; and in some areas a funeral is still evaluated by the amount of whiskey available for consumption ("That was a good funeral"). Tales are told of coffins buried without bodies.

871 791 793 178 the children might not receive proper religious instruction.

"Family worship" is considered an important part 771 782 593 of daily life. Prayers should be said before meals and teas, and the head of the household should read passages from the Bible to the assembled members of the household every morning and evening. The practice of [178] "reading the books" prevails in households headed by • [592] older men, but is less common among families headed by younger men.

794 632 621 3. The Clique of the Converted: The second network within the religious sphere is a special religious in-group, the clique of the converted (curamach). This clique constitutes a relatively strongly bounded system which to some extent competes with the township boundary system. Owen (Rees 1960) has noted that as persons become more involved with religion in the Protestant Hebrides, they tend to remove themselves from community life.

Intense involvement with the church sometimes conflicts with township activities since people may attend Communions at times when a fank is planned, leaving the work to be done by others. When elders of the church are present at activities, such as fanks, which are otherwise usually boisterous and full of humor, behavior tends to be "properly" restrained.

The insurance company * 159 paid him L600, and the pubs let him drink half of that [745] before he even got the money. The house, in which he continues to live, stands as it was left by the fire, with walls blackened, blistered and bare.

Uilleam Glen

Uilleam, named after the owner of a fishing boat on which he used to serve as a crew member, is the 70- • [592] year-old head of a croft household. He came from a family of four sons and two daughters. He was not the eldest son but he was his father's favorite. Before his father died he built the house in which he presently stays so that he would have some claim to the croft. The eldest brother was sailing, and upon his return he married a girl with a croft. Uilleam Glen made his living from the croft--he had a reputation for being good with livestock--and from occasional wage labor in Stornoway; he also followed the fishing.

Another brother of Uilleam Glen married into another croft in Shawbost, after serving in World War I as a sailor, and a sister married a boy from a neighboring [167] village. The youngest brother, Murdo, emigrated to the United States with the second sister, and they lived and worked together in Detroit until the depression drove them home again. They then lived with Uilleam Glen, who had

59 married a neighboring girl only shortly before they returned, and all of them started weaving. Murdo and his sister had lived together for many years and were quite close. Her marriage at the age of 55 surprised and dismayed the family. Murdo, still a bachelor, lives on in the house.

12) Uilleam Glen had six children. His eldest son, Iain Uilleam Glen, spent a brief period in the navy during the war, but since then has not left the island. He lives with his father, weaves, and is largely responsible for maintaining the croft. They keep cattle, and a number of sheep. Several years ago Iain reseeded a buaile which his grandfather had before him, which he uses to graze cattle. When he was in his early 30's, to everyone's surprise he married a woman ten years older than himself, who gave him a son. The only other member of the household is the youngest son of the family, Calum Uilleam Glen, who weaves and earns money during the summer by hauling peat, hay, and corn. Calum once took a six-month course in carpentry sponsored by the Labor Exchange, but has never used his trade. Two sisters are married on the island. Another brother jumped ship in Australia, married, and has never returned home.

Uilleam Glen's fourth son, Padruig Uilleam Glen, spent a number of years in a sanitorium with lung problems, and

F. The Decline in Self-Sufficiency

Until the second world war, when weavers began to earn larger sums of money for their weaving, the township was relatively self-sufficient. The land was more thoroughly cultivated, and the village boasted a number of local specialists. These specializations were linked with particular family lines. Certain families were blacksmiths; others were undertakers, joiners, cobblers, or midwives. As generations succeed one another, occupations were not thrown open in the competitive, individualistic way of the mobile city. Certain occupations were seen to be "naturally" linked with particular families. Sometimes it was said that people of a particular family (which might include quite a number of collateral lines) had hereditary characteristics which suited them for particular occupations.

"Taggy was an expert bone-setter. He wasn't a doct at all, but he could set bones better than any doctor. And he used to let blood, when people were dizzy with threatening strokes, or had pneumonia. It was in the people. He was a direct descendent, through his mother, of the Murrays of South Shawbost, the people who had the mill and were the blacksmiths for generations. He got that ability from them."

COMMUNITY FROM PAST TO PRESENT PT. II

175 Much of Britain and Europe until about 1500. A modern parallel may be found in Asiatic lands with the frequency of famines alternating with periods of recovery or, in others, the long-drawn misery of chronic under-nutrition and endemic disease. In modern Europe, only internecine war or civil war can now bring such extreme widespread misery. And as peace brings partial healing, so in the Island past, when good seasons returned after famines, the life of the family renewed itself.

The narrow margin of survival even in good seasons, the risks of the bread-winner's death and of his family's destitution, and the need of co-operation in so many tasks made the family too small, weak and precarious to stand alone. Even with relatively little division (or specialisation) of labour, and in spite of its apparent self-sufficiency, the family had perforce to link itself with wider circles of community life.

(b) JOINT LABOUR BY SMALL TEAMS: THE EVIDENCE OF TENURE IN 1716-26

175 Romantic is hidden among the rent-rolls of the Seaforth estates, all of which were forfeited when the last Earl of "King James VIII" in 1715. For of the rents withheld from the government until 1720, on the mainland at least the loyal clansmen paid a considerable portion to their exiled chief, styled 'Marquis' by 'King James'. But the

[1] The 'ups and downs' of a peasantry living on the margin of subsistence, which subject is so well-known to be noted in India, (1891-1941), where the subject is accordingly the most-studied one in Indian Economics. This wide problem was reviewed in a series of papers in 1948: "The Social and Psychological Significance of Variability in Regional Changes of Population", with examples taken from Indian villages. (A. Geddes, *Human Relations*, Vol. 2, n. (3)-(4), of *Eng. Rev.* 1948 and 1948; and *Eng. Journal*, 3, vol. of, 1947)

COMMUNITY FROM PAST TO PRESENT PT. II

175 ● 513 ... the ... family ... the ... family ... the ... family

married sons into the house. Family solidarity was strengthened
as each cottage came to be the home of a three generation family
group. Adjacent crofts, more likely than not, were bound to-
gether in a network of collateral and affinal relatives. Two
of the underlying principles of the clan were reaffirmed. The
father was the source of the means of subsistence, and the
strong, almost sentimental, attachment for the land was an
expression of the sentimental tie of kinship. Economically,
subdivision was paving the way for disaster. It forced a
steadily increasing dependence on the potato; the people
could not grow enough grain for household needs.

Commercialization meant more than the conversion of land
to a source of monetary revenue and the supplanting of customary
usages by contractual relationships. For its fulfillment it
requires the growth of villages and the development of a di-
vision of labor which allows specialization. Events in England
and Lowland Scotland, could not have left the island unbounded.
The first rumbles of the Industrial Revolution had been followed
by a vigorous growth of urban centers. The mass movements of
the rural population into these communities, as their rights
to the land were disregarded and the people were driven off
or made into wage laborers, were creating a new cultural
pattern. The benefits of the towns to the nation had the
appearance of being unlimited. It was inevitable that villages
should be advanced, planned, and fostered on Skye, the most
populous of all the Hebrides. It was no less inevitable that
villages should have limited attraction for the Sgiathanach.

Each man received a permanent, compact plot of arable in place
of his former concurrent right to a whole farm. The change, on
the surface, seems have been superficial. The grazings
remained common property and the arable land became common
property after the harvest. The significant fact is that
commercialization had not yet led to a disregard for the custom-
ary rights of the small tenant, except in a few isolated areas.

There were other effects of the change in tenure beyond
a leveling of the social hierarchy. By giving more people
a direct share in the land emigration was stopped. The practice
of subdividing the crofts among the children, as they married,
at once favored an increase in population and strengthened the
family of orientation, if not the extended family. At the same
time, it placed a greater dependence on the potato; the people
became hostages to the health of the potato and their own
fertility. In time progressive economic deterioration began.
The old subsistence economy had been weakened by subdivision
of the small plots, increasing dependence on external markets for
profits from the sale of cattle, and wages from helping or a
little fishing. When the markets broke, destitution and em-
migration reappeared. Finally, with a failure of the potato, the
economic structure collapsed. The population trends were
reversed. The people had remained unspecialized in a nation
of specialists.

The next stage in the process of commercialization, the
growth of a village and the extension of communications, had
little perceptible effect on the Sgiathanach. Villages were

The Income of a Small Croft. The small croft is regarded by
local agricultural experts as having a potential income of
£20 a year. In addition, it provides a house, potatoes, some
vegetables, milk, eggs, and the right to cut peat. Even if
not quite legal until June, 1954, it frequently supplies
mutton and, less often, beef for the family. The budget for
this type of holding in my sample reveals that even when
fully stocked and the ground tilled, the income may be negli-
gible. Let us look at the cash income and net profit for
1952 and 1953.

In 1952 the cash income for the croft was £8 13s. 11d.
The net profit, which takes into account depreciation and
stock valuation after sales was £2 1s. 11d. In 1953 the
cash income was £12 0s. 9d., and the net profit was £2 0s.
These figures include money from the sale of stock, government
subsidies and grants, and home grown produce eaten by
the family. Unfortunately, I do not know the number of hours
which were spent earning this meager return. The crofter's
wife said about 300 hours of her labor. To this we must add
seasonal cooperative labor.

This particular croft is rented by a middle-aged married
couple and a spinster sister of the wife. The man works full
time as truck driver, leaving most of the work on the croft
to his wife. The stock is two cows and followers and sixteen
to eighteen sheep. There are six acres of arable land, half
of it under hay and grass. The remainder is planted in oats,
potatoes, and turnips. The budget may not be typical. For

lambing season, the crofter and his family go out on the moor
to pasture their flock of sheep. The man uses a
"tusser," a two-bladed spade, to cut the peat. His wife or
his children follow behind, tossing the peats out of the ditch
and building small, loose stacks for drying. After the lambs
have been marked and the sheep dipped in June and the shearing
finished in July, the family returns to the home to carry
the peats to the nearest road, actually a beaten cart path,
in creels. They are then carted home and stacked near the door.
There is a growing tendency for both the part-time and spare-
time crofter to buy coal for peat. It is not because peat
is cheaper or he needs time for other pressing chores. His
auxiliary occupation will not permit his devoting the necessary
time to this long and arduous task. He is caught between the
traditional economic patterns and the money economy of which
he has become a part.

The year for our part-time crofter, as for all active
crofters ends in November. By then the oat and hay harvest has
been stacked by the house and the potatoes and turnips stored
in the ground, the wool shipped off to market, the surplus
sheep and cattle have gone to market, and the rams are on the
hill. Now follows a period of enforced idleness, broken by
feeding the cattle. As we have seen many go away to find
employment, leaving the care of the croft to their wives who
have shared the work of crofting in addition to their own
womanly responsibilities. We must turn to the spare-time
crofter to discover just how heavy the burden of labor may
depend upon the women of Skye.

depend upon the women of Skye.

The Spare-time Crofter. Under this type we must include not
only the elderly, married man who tends to become a full-
time wage earner; but also the old, pensioned, married and
unmarried men and women who are no longer able to perform
the necessary chores. For the latter, whether they have a
small or medium-sized croft, the croft becomes a means of
living within a pension rather than a potential source of
livelihood. For the former, the croft becomes a means of
living supplement.

When the crofter goes out to work, he either tends to
neglect the croft or expects his wife to manage it. Oc-
casionally, the husband will help with the ploughing or the
harvest in the evening, but he never lends his wife a helping
hand in her domestic duties. The only men on the island that
I know who helped their wives with the dishes or the care of
the children, except disciplinary measures, were a minister
from the Outer Isles and several Lowlanders in Portree. Since
very few crofters have plumbing, the wife must fetch water
from a well and dispose of waste in the nearest stream. If
there is to be a supply of peats, she must cut them. If
there are cattle and sheep, she looks after them. Lambing
may be left to the township shepherd if the crofters can afford
one, and shearing is usually left to the men of the township.
An exceptional spinster or widow may shear, but it is indeed
an unusual married woman who will break with the traditional

division of labor. During the summer, she will milk the cows,
and in the winter she will see that they are fed. If there is
to be a harvest in the autumn, she will care for the crops.

Some women, in particular the older ones, plough with
the reaschram, the foot plough. Other women use a small power
driven plough or contract with the Department of Agriculture
to have the ploughing done. The Department will also provide
the men and machinery to harrow, cultivate, spread lime and
manure, sow hay, cut and bind oats, dig potatoes, and thresh
grain. By utilizing these services, if they can be afforded,
the small crofter can free himself or, at least his wife,
from many arduous tasks. The need for cooperation of the family
and neighbors is thereby reduced. Although traditional mutual
aid is being replaced by cash payment for labor, it is not the
labor of a landless working class which commercialization often
creates, but rather state provided services. Significantly,
most Department employees are newcomers. The Skye man who
works for the Department is a better worker away from the island.
Since few are able to pay for these services, the wife digs the
potatoes, and once women use the scythe to reap hay and oats.
The scythe, it will be remembered is really a man's tool.
Frequently, the break with tradition is revealed by the return of
a son from the mainland or the sea. Running the household and
working the croft is not all once woman do. They also take in
summer visitors, by the day or week, and provide teas for travellers.

In summary, it may be said that crofting is anything but
an easy life with ample rewards. We have seen how meager the

alternating generations and being felt as an obligation to
perpetuate family names, these various practices serve to
limit confusion among a people who share rather few surnames.
I never know a child who had been named for his parents.

The relationship of father and child is formally es-
tablished at baptism. As we shall see in the following chapter,
the mother takes little or no part in arranging for the sacra-
ment. The spiritual welfare of the children is the father's
concern. He is also the disciplinarian, but in the pre-school
years discipline is lax. Both parents freely indulge the child,
and they spend a great deal of time with him. The belt, an
ever-present, ever-threatened means of punishment, only appears
when the child assumes the rights and duties which he will
exercise as long as he remains on his parents' croft.

When he begins school at five or, in remote townships,
at six, the rights and duties determined by age and sex begin
to emerge in perspective. Actually, the child has already
begun to make a pretense, playfully imitating his or her father
or mother, at assuming his role, but the influence of the
sex category is not marked. A small boy may fetch some peat
for the fire or some water for the dishes. Once he starts
school, he is no longer exposed to the women's chores. As soon
as he is able to carry a pail he may feed the children; then
he only feeds the calves. His first real task is tending the
cattle, bringing them down from the hill and driving them out
after the milking. As time goes on, he learns how to plant
and dig potatoes, cut turf, harvest hay and oats, and at last
how to shear sheep.

Island. Being taught about the larger world beyond, most
children begin to show exasperation with the croft and the
duties it imposes. At first they become reluctant to do their
chores after school hours or on holidays, or unable to earn
the strong authority of their fathers, they do the work
grudgingly. This is especially true of lads who are planning
to go to a university. While many boys take an interest in
the stock and lies to plough, if there is a tractor, they
frequently complain about the slow pace, the boredom of the
long winters, the restrictions on their time, and the weather-
above all, the weather. Girls are no less unhappy. In
particular, the girl who has been left behind by her older
brothers and sisters to care for the parents will feel that
such a life leaves much to be desired. She learns of an-
other, entirely different life in school, and she hears her
siblings tell of this new life when they return for a visit.
Naturally, she begins to think digging potatoes is beneath
her dignity. The most frequently heard complaint is, "You
can't dress out here." The underlying conflict for both boys
and girls in their teens seems to be one between a desire for
adventure or opportunities for individual choice and the
routine, circumspect behavior expected of them.

Added to this desire is the realization that they may
not really be needed at home. The small crofter with a piece
of land hardly larger than a German laborer's garden can handle
all the necessary chores by himself or, at periods of peak
activity, with the concentration of his wife and his neighbors.
A medium sized croft may provide work for one, two, or even

593 three children, but this will only be for a few weeks in the
582 spring and autumn. The large crofter, who has only recently appeared, is the only one who can use one or two helping hands all through the year.

589 One may logically ask, what if the thought that they are
582 not needed never occurs to the children and they resolve the conflict of individual expression and subservience to the father and the group? The answer is an ever increasing number have at least one more important decision to make. As the boys grow into young men, they must decide whether or not they will remain bachelors, which remaining with the parents means, or found their own families of procreation. Girls must similarly decide between spinsterhood and marriage. There is no pattern on Skye, like that found in Ireland,[12] for turning over the croft to a son, much less a daughter, while the parents are still alive. Some, of course, marry after their parents die, but often it is too late for them to have children. The township of Bornesketaig, for example, has not celebrated a birth in years; there simply are no children and none to come. Other men and women feel it is too late for marriage when they get possession of the croft. I doubt that there is a single township on Skye which does not have at least one bachelor or spinster. Totescore has earned fame as being a township of bachelors. Commonly, a brother and sister live together on the croft.

---

[12] Arensberg, op. cit., pp. 72-79, 85; Arensberg and Kimball, Family and Community in Ireland, pp. 123-144. There are, of course, many comparisons which could be made with the Irish small farmer, but most of them would apply to peasants everywhere.

his croft to his eldest son. Some reformers feel that the youngest son or daughter who has stayed at home to care for his parents is cheated. When there is no will, the State steps in and assigns the croft to the widow, the eldest son, or the child who has remained behind.

The growth of the welfare state has had its influence in determining this pattern. On the one hand, there are payments to unmarried children who remain at home to look after their parents. On the other hand, there are the old age pensions. While the pension has made the transition of the old couple from active crofters and parents to grandparents easier for the Irish small farmer,[13] on Skye the coming of the pension saw the end of the old pattern of the oldest son returning, with his wife, to care for his parents and raise his own family. With a pension the old couple had little need to work the croft. The children were not needed, and not infrequently the old people enjoyed their independence and their freedom from turning the house over to a woman whose ideas and beliefs conflicted with their own. The common desire of parents today is that one of their children will stay on to take over or return after they are gone. Naturally, no one likes to see his children far from home, but what can they do?

Aside from the difficulties of inheriting a croft or finding a vacant holding, it has become increasingly difficult for a young man to find a wife. Most of the crofters' daughters

[13] Arensberg, op. cit., pp. 85-86; Arensberg and Kimball, op. cit., p. 125.

the social superiors of women. The aged are the social superiors of the youth and young adults. The father determines how his wife and children will behave as long as they remain under his control. The old man, or man, determine what changes will be accepted or rejected. There is no way to question their decisions, unless one leaves the croft. Still, at the bottom, there is equality. No man can step forward as a leader. We are now in a position to look at the larger social grouping, the neighborhood.

Kith and Kin within the Neighborhood

During the days of the clan, the residents of the neighborhood were bound together by real and fictitious ties of consanguinity and affinity, which were reinforced by the strong attachment to the soil and propinquity. Only the fictitious bonds have been forgotten. Like the township, the neighborhood consists of an aggregate of conjugal families whose inter-personal relationships are reinforced by a complicated network of kinship. Once, perhaps as late as 100 years ago, the neighborhood was a highly cooperative social unit. Then the local mills were in use and the church had not been broken by schism, the people must have had a more definite focus for their common interests. In more remote times, it was a defensive entity. Today the neighborhood is no longer a cooperative unit. On the analogy of the old horse plough and the [illegible], cooperation is essential to the township but superfluous to this larger group. That the neighborhoods have not lost the potential for concerted action in times of crisis is attested by the uprisings

spouses not too long ago.[23] Perhaps, more than any other factor, it is the tendency of the aged parents to hold on to the croft until they die that is strangling the kinship system. Still the extended family is a strong mutual aid group. Anyone with a recognized degree of kinship is entitled to hospitality. When the exiles return to visit the Misty Isle, they always try to make the rounds of their kinsmen. This is more than a question of not becoming an economic burden on a favorite aunt; they do not want to be guilty of slighting anyone. There is reciprocity here. In return for food and shelter, the visitor freely gives his kinsman all the news he has gathered about the activities of their distant kin. He acts like a roving reporter, cementing the solidarity of an otherwise fragmented group.

The expression given to the degree of consanguinity and affinity is revealed most completely at a funeral. As one of the two occasions on which the extended family comes together, the other being a wedding, it reveals a host of significant traits. The first thing I noticed was that although the inavailability of land and the illegality of subdivision enforces neo-local post marital residence, burial is ideally patrilocal. On more than one occasion the steamer came in at night with a body which had been shipped home from Glasgow or Edinburgh for interment in the deceased's neighborhood. This also means that the husband and wife remain integral members of their respective families. The founding of a family of

[23] Morern MacLeod, Reminiscences of a Highland Parish, p. 196

procreation does not absolve the individuals from their obligations to their "people."

Although the wake and the post-interment feast have been given up under religious censure, and the ministers refuse to consecrate burial, the method of burial is fundamentally the same as it was before the Reformation. At the time of interment the coffin is carried out of the house by the closest relatives. Ideally, for a man this means his father walks in front of the coffin, his oldest son (over fifteen) walks behind, and his brothers and uncles (paternal) carry the body. For a married woman the ideal is to have her husband walk in front, her father behind, and her brothers and uncles carry. When a child dies, his father walks in front; his oldest brother walks behind, and the father's brothers for a boy and the mother's brothers for a girl are the carriers. Outward mobility, as well as infirmity and death, has had its influence. The nearest male relative not only walks in front of his deceased kinsman but also takes charge of the funeral. A few cases of who has filled this function will indicate how the situation is handled when the ideal cannot be fulfilled. For a man this role normally passes first to his oldest son and then to his brother. I have seen a grandson take charge, and at one very atypical funeral, a brother-in-law. He was the nearest surviving male relative who could be contacted in time.

Arrangements for the burial of a widow are made by her son or brother. There was, however, one widow, a woman from the Outer Isles, who was returned to her native island for burial

by a second cousin. The striking thing to realize here is that the nearest surviving relative always knows his obligation and is ready to fulfill it, without question. Fatherless children are buried by either their paternal or maternal uncle. I have not forgotten the existence of women. The simple fact is, women play no part as mourners. Indeed, the rare woman who goes to the grave becomes the subject of lasting gossip.

Fundamentally, the system of kinship is patrilineal. Linguistically, the terms for relatives may be bilateral, and inheritance of possessions other than the name may be matters of small importance, but the patrilineal emphasis remains. The Sgiathanach lives in a man's world. I shall explore this male dominance further in the following chapter. At present, I want to briefly discuss two additional cliques.

Religious and Age-Grade Cliques. Like the members of any society, the Sgiathanach associates most frequently with those who share his interests and attitudes. It is natural, then, for his associates, other than his kinsmen, to be people who attend his church and people of his own age group. We need not explore the nature of these cliques at this time; but we should have some understanding of their function. The religious clique is primarily a mutual aid group. There is reason to believe that this particular group has lost much of its importance of late, with the coming of the welfare state. Many feel that the government pays people to look after the aged and infirm. As far as doing a favor for someone is concerned, few of the same kirk, other than close friends,

The Role of Religion on the Croft

As the prestige of the old people and the control of the family-head elders over the social activities of the people has persisted with religious sanction, the status of the father within the nuclear family has been reinforced by the religious expression of his role. As we know, the older inter-family patterns of economic cooperation have been disturbed by the changes stemming from the process of commercialization. This has not disturbed the position of the father as the source of authority and discipline. He continues to play a basic role in establishing the tone of interaction within the home, the township, neighborhood, and community. He decides who will do the work and when. He determines in what social activities his wife and children will participate, always, of course, ultimately guided by the venerable old men. His status is confirmed at baptism, when he is judged, and it is commonly reaffirmed every day in the home. For the majority of crofters, though by no means all of any sect, the day begins with the saying of grace before breakfast and the returning of thanks after breakfast. The same pattern is repeated at the taking of any food, including a cup of tea. The form of grace may be used to cast light on the religious outlook of the Sgiathanach: "Gracious God, we have sinned against Thee, and are unworthy of Thy mercy; pardon our sins, and bless these mercies for our use, and help us to eat and drink to Thy glory, for Christ's sake. Amen."

In many homes breakfast is followed by family worship. The father begins with a blessing, a prayer on behalf of his family, and then leads the family in the singing of a few verses of psalm. Next he reads from Scripture, sometimes to the visitor because his Bible is not an English version, and comments on the meaning of the passage. He concludes with a prayer. If the morning worship has been omitted, he holds an evening service. Some crofters have family worship both morning and night. When the father is away, his wife or his eldest son conducts the worship. Religious devotion on Skye, then, is more than Sabbath church attendance and attendance at weekly prayer meetings.

The Role of Religion in Township, Neighborhood, and Village

I did not attempt to devise a socio-metric scale to determine the affiliation of members and adherents of the several churches in either Glendale, Kilmuir or Portree. The former disunity and conflicts which divided families, both nuclear and consanguineal, townships, neighborhoods, and the village stemmed from abandonment of traditional religious affiliation rather than from attachment to an established sect which happened to differ from the denomination of one's kinsman or neighbor. Today sectarian hostility is no longer prevalent among the people. The Sgiathanach only chaffs his neighbor in friendly sally and repartee, about his only slightly different sectarian views. They refer to each other's sect by nicknames. The Church of Scotland is the "Established Church." The

people of the Free Church are "the Free Frees." The Free 795
Presbyterians are the "Seceders" or, at least to some of
the gentry, the "Split P's." Arguing about religion is [574]
considered very bad taste. It is left to the ministers, 793
and they do have their points of difference. One Free 795
Presbyterian minister, for example, told me that no one in 798
the Church of Scotland, including the minister, was worthy
to receive Communion. On many occasions during the year
the ministers of the Free Church and Free Presbyterian
Church devote part of their sermon to a criticism of the
Church of Scotland, not to mention the evid hostility of all
Skyemen toward Catholics.

Adherents of the several sects intermarry with no qualms 582
and without suffering any loss of status. By the time a 795
person gets to be a member, marriage is no longer in his
mind. Husband and wife continue to adhere to their respective 593
denominations, those in which they were baptized. The children 795
naturally, are baptized and raised in the church of their [589]
father. Extended families are often divided religiously 596
along sectarian lines. In one family one brother and his 795
wife were Free Presbyterians, another brother and his wife
were Free Church, a sister was Church of Scotland. The
parents had been Free Church but became Free Presbyterians
at the turn of the Century. At least one cousin was United
Free Church. This religious schism did not affect their
affection for one another. Once a week the sister went to
have tea with her Free Church sister-in-law. Periodically

rather than Christianity is the prevailing practice in Glenisle.795
This attachment to a sect is all the more significant in the 796
crofting neighborhoods because there is not one iota of difference in the Gaelic services in any church. The difference is
doctrinal.

In the neighborhood the affiliates of the same church 571
have been said to interact with their fellows more regularly 795
than with the remainder of the group. They come together on 796
the Sabbath for a regular service and on Wednesday night
for a prayer meeting. On the Sabbath they come as families,
husband, wife and children and they sit together. Normally 593 ●
the sexes are segregated in public. Indeed, in the home 562
men keep to one side of the fire and women to the other when 596
there are callers. They also leave in family groups. Their
interaction is spiritual. There are no gatherings outside
the church either before or after the service to gossip,
discuss the stock, or even comment on the weather. They
will all know who was absent, but they will only greet their
fellows with a slight nod. The Wednesday night prayer
meeting is different. This is a group situation. Some come
by bus and gossip on the way. Others get together before
and after the service for a chat. At these prayer meetings 554
the stature of the "elect" again emerges. They offer the 596
prayers on behalf of the congregation. The prayers, it should 797
be noted, are extempore. No form is followed. The basis for
them are passages from Scripture and interpretations of the
passages.

control of the "elect" crofters. They, are the "elect," 794
and their status is independent of the control of the venera- 565
ble old men. 626
559

Summary

Whereas the culture of the Gziathanach was oriented 771
around the clan system in the remote past and was intelli- [178]
gible only by an awareness of the all-pervasive influence
of the clan, today congregational religion provides the
focus for the culture. If we are to understand the Gziathanach [121]
we must fathom his religion, that is, the interpretation
which he has given to Calvinism. Moreover, this highly 182
integrated and systematized aspect of his culture has pro- 771
vided the means for preserving cultural continuity. Economics
and social organization aid us in recognizing how cultural
continuity has been maintained. Religion puts at our finger
tips the how and the why.

The basic status values have held good because religion 771
has sanctioned them. The old men of the neighborhood have 554
been successful in sustaining their statuses and habits 182
through their position in the esoteric religious hierarchy. 626
By holding the father responsible for the spiritual welfare 593 ●
of his family, and judging a man's spiritual enlightenment
on his remuneration of mundane pleasures as well as his
knowledge of religious tenets, the elders exercise judicial
and authoritarian functions. At the same time, the status
of the father within the family is strengthened. After a

sanctioned the qualities which had given the people their 178
characteristic strength of character. 182
771

The churches of Skye made conservatism an official
policy in 1843, and in 1892 reaffirmed this policy. For well
over 100 years religion has had a strength and vitality which
has enabled the Skyeman to pass through times of extreme
distress, not to mention chronic economic deficiencies. Among 182
the most important religious sanctions are those which reinforce 554
the status values of the culture. The father's status in the 771
nuclear family was reaffirmed at a time when his socio-economic 593 ●
importance was declining. He has been held responsible for
the spiritual welfare of his wife and children. The prestige 182
of the old men, the family-head elders, and their control over 554
the neighborhood group was similarly bolstered by making them 771
the judges of a man's spiritual enlightenment. Spiritual 626
enlightenment is weighed on a scale which will not balance
unless a person's religious knowledge is matched by conformity
to the ways the old men think a man should behave. Again we 182
are not dealing with a completely negative attitude. In the 771
place of frivolous amusements, religion has offered highly [182]
emotional, spiritual patterns of behavior. Religion has pre- [197]
served the Gaelic language by using it in formal worship and
within the home for family worship. In these and other ways
religion has indeed enabled the culture to achieve a reorientation and maintain its continuity.

Now similar Skye is to the Old Order Amish in this respect.[3]

602 people will be doing the same. If they think they're
505 close enough to be invited, they'll be annoyed if you.
595 don't include them." At funerals, relatives of the
764 deceased to about third cousins were expected to
participate.

When a population has lived in a small area for
621 generations, a dense network of kinship develops. This
602 fact, and the importance placed on mutual aid among
616 fellow villagers, fostered the feeling that the network
571 of township members, who ploughed, fished and tended
cattle and sheep together, was also a network of kinsmen.
"We're all the same people." "It's all one family here."
Occupational and kinship spheres of social activity
commingled. The importance of neighbors in contrast
[539] with relatives was reflected in such proverbs as, "A
neighbor close at hand is better than a relative in a
distant land."

The nuclear family did not, according to Cohen's
● 621 criteria, constitute a firmly bounded system. Then as
596 now, women preferred the company of their "own kind,"
[178] that is, the company of other women. The men worked
[571] and spent periods of recreation with other men. Children
621 spent about as much time in the homes of grandparents,
596 uncles or fellow villagers as they did in their own
○○○ homes. A 60-year-old woman remembers that it was a

#159 himself. If he had a drink he might come out. When the
weaving started, he took that up; and he tilled the
croft, kept cattle and all that; but socially he was a
misfit. It was a terrible tragedy, the Zolaire."

[402] When the Bodach Beag returned from the United States,
he bought a Hattersley loom to replace the old wooden loom
with which his brother had been weaving. They worked the
croft together. The Bodach Beag knew he would get the
croft. He married soon after he returned, and for the
next forty years never left the island. His wife took a
six-month course in poultry-keeping and milking, and they
concentrated on cattle rather than sheep. His wife sold
fresh butter to the mobile vans.

#159 Their family grew and dispersed. The eldest son
● 594 attended the secondary school in Stornoway, emigrated to
(147) Rhodesia and married an English girl who was working there
as a nurse. They had to return when economic earthquakes
shook Rhodesia and he lost his job. He stayed at home for
a year and built a new house on the croft; and then,
unexpectedly, he started work to complete the necessary
exams to enter a university and become a teacher.

[166] The youngest son became an engineer, married a Glasgow
Highlander whose parents came from Lewis, and settled in
Glasgow. Their sister married a tradesman on the mainland.
The third son, unmarried but engaged to a local girl, works
in the local tweed mill and lives at home with his parents.

592 594 The Croft. Ideally, the croft is the home of a nuclear family. Social instability and economic limitations, however, have given rise to a situation in which the ideal is becoming progressively harder to attain. In fact, crofts which once were occupied by a three generation family group, that is, by grandparents, parents and children, are now inhabited by an aging bachelor, a spinster, or an unwed brother and sister. Others are the homes of an old widow or widower and, perhaps, one or two of their children who are well beyond marriageable age.

594 As an irremovable social entity, the nuclear family has been surrounded by the universally recognized functions of sexual gratification, economic cooperation, reproduction, and education. In addition, important functions of a religious and a social character have been given to it. The members share the work of the croft, have a higher rate of interaction than any other social group, and, in most homes, worship together seven days a week. Within the family, the father is the source of all authority. He directs the labor of his wife and children, determines their patterns of interaction outside the home, and leads them in family worship. The family's economic well-being and spiritual welfare are his responsibilities.

594 562 Learning the essential tasks necessary to the crofting way of life by imitation and informal guidance, sons move in the sphere of their father and daughters in the sphere of

their mother. While the father is the disciplinarian, both 594 562 children are expected to respect the wishes of their mother, except that a boy can never be asked to do the work of a woman. At the same time, however, in the absence of a boy, a girl will take his place in the division of labor. The high status of the male and the subservient position of the female has persisted over the centuries. Always, male and female relationships are reciprocal and complimentary.

The patterns of interaction and the statuses and roles 594 which are manifest within the nuclear family on Skye are much the same as those described for the Irish small farmers.[15] The main difference is the occupation of the Irish farm by a three generation family group. Comparable family structures arefound in the United States among the old Order Amish and, apparently, among the mountain people of the Southern Appalachians, many of whom are descendants of Scottish and Irish migrants.[16] Under Le Play's classification, the Skyeman's family is the famille-souche or stem family.[17] Although strongly patriarchial, the family on Skye has been weakened by economic limitations. At the same time, the Sgiathanach, as a member of both a nuclear and an extended family, has not lost his attachment to the land, to his kinsmen, or

and Kimball, op. cit., pp. 63, 161-231.

behavior which have given the individual and the culture their ability to continue in spite of social instability and acute economic hardship. In many respects, the Skyemen's religion is strikingly similar to that of the Welshmen.[23]

The status of the father within the nuclear family has been maintained, despite changing economic roles which might have led to a loss of prestige, by his religious sanction. The aged men of the community, in particular the elders, the elected lay kirk officers, have been able to continue to exercise stringent control over their families and neighbors. In a negative way, the socially inferior status of the women has been maintained by debarring them from active roles in the church. In religious activity the people find meaningful patterns of interaction. The small congregations, rarely over 300 people, give the Skyemen a sense of belonging. In the home the practice of daily worship intensifies family interaction. Above all, at the semi-annual communion celebrations, highly emotional meetings which partake much of revivalism, the people find solidarity. As each church in turn celebrates the Lord's Supper, the people from the neighboring churches of the same sect come to share one to five days of worshipping together and renewing their ties of friendship. At the daily church services the people meet and hear visiting ministers of their sect and the eminent Men, members of the elect, from other parts of the island. The identical pattern is found in Wales where the intense patterns of interaction center around the singing festivals.[24]

[23] Rees, op. cit., pp. 114-130.

[24] Ibid., pp. 129-130.

compared with 34.9 for Scotland. The death rate among Skyemen, however, was 17.4 compared with 22.0 for Scots in general. But Scotland had a net emigration rate of only 3.6 while the Skyemen were leaving at a rate of 16.5. In this decade no fewer than 3,115 left Skye.

By the end of the third period an additional influence of the process of commercialization had become apparent. The social hierarchy was modified in the direction of greater socio-economic differentiation.[68] At the time of the "Forty-five" Skye was inhabited by the families of three clan chiefs, 139 tacksmen, 517 joint-tenants, 1031 subtenants, and 444 servants. There were now 10 landlords. The tacksmen had been replaced by 29 graziers and 12 small farmers. The joint-tenants, subtenants, and servants had become 2043 crofters and 1227 cottars. In the past there may have been one innkeeper, at Portree, and a few millers; now there were 32 innkeepers, millers, and merchants.

The changes which we have been considering could not have left the patterns of interaction undisturbed. Cooperation among the members of the township would have been unnecessary. Since all were affected by prolonged destitution, mutual aid must have been severely curtailed. The extended family was broken by emigration. The nuclear family was seldom intact for more than part of the year. It seems the majority of the able-bodied men were travelling to the east coast each spring to find

Skye

he general term for third cousins is anns na dubh-oghaichean literally, in the black grandchildship), "in the state of being reat-great-grandchildren." When two fourth cousins are found nd they are asked what they are to one another, almost inveri-bly the reply is caraid (a friend). Again when working out r checking family structure and terminology, I was always told fter getting the term for third cousin, "There's not much point n going any further." It is important to remember that caraid s the usual designation for all relatives beyond the immediate uclear family.

One of the striking facts about the extended family of he Sgiathanach is that the terminology is almost completely escriptive and predominately denotive. It provides a classic xample of what Lowie has called bifurcate collateral terminolo-y.[19] In addition to collaterality and bifurcation, the main rinciples on which the system is ordered are generation and ex.[20] Affinal relatives, excepting the immediate families of he spouses, their "people," are excluded. Only on the second scending and second descending generations is the sex of erson through whom the relationship exists ignored, and only on he second descending generation is sex ignored.

In the Gaelic, the members of the group which the giathanach calls his "people" are athair, màthair, bràthair, and

piuthar; that is, father, mother, brother, and sister. He calls his father's brothers bràthair athar and his father's sisters piuthar athar. His mother's brothers and sisters are bràthair màthar and piuthar màthar. Grandaprents, as I pointed out, are addressed by classificatory terms. Grandfather is seanair (old father), and grandmother, seanmhair (old mother).

Turning to the more remote relatives, we find that a nephew is mac bràthar or mac peathar. In other words, brother's son or sister's son. Similarly, a niece is nighean bràthar or nighean peathar. The extent to which the descriptive principle is carried is most clearly shown by the terms for cousins. Long ago, I was told, there were classificatory terms for cousins, but they have disappeared. Today when an individual speaks about these collateral relatives, he must employ an ascending order of circumlocution. The general term for first cousins is anns na h-oghaichean (in the state of being grandchildren). Specifically, a first cousin is clann an dà bhràthar (children of the two brothers), clann an dà pheathar (children of the two sisters), or clann na peathar 's a' bhràthar (children of the sister and brother). Second cousins can be referred to as anns na h-iar-oghaichean (in the state of being great-grandchildren), but again there are denotive terms: oghaichean an dà bhrathar, oghaichean an dà pheathar, and oghaichean na peathar 's a' bhràthar. For third cousins, we have noted that the general term is anns na dubh-oghaichean. Specifically, the terms for third cousins are: iar-oghaichean an dà bhràthar, iar-oghaichean an

602 576 585 764 people will be doing the same. If they think they're close enough to be invited, they'll be annoyed if you don't include them." At funerals, relatives of the deceased to about third cousins were expected to participate.

621 602 476 571 When a population has lived in a small area for generations, a dense network of kinship develops. This fact, and the importance placed on mutual aid among fellow villagers, fostered the feeling that the network of township members, who ploughed, fished and tended cattle and sheep together, was also a network of kinsmen. "We're all the same people." "It's all one family here." Occupational and kinship spheres of social activity commingled. The importance of neighbors in contrast [539] with relatives was reflected in such proverbs as, "A neighbor close at hand is better than a relative in a distant land."

621 594 [178] [571] The nuclear family did not, according to Cohen's criteria, constitute a firmly bounded system. Then as now, women preferred the company of their "own kind," that is, the company of other women. The men worked and spent periods of recreation with other men. Children 621 596 spent about as much time in the homes of grandparents, uncles or fellow villagers as they did in their own homes. A 60-year-old woman remembers that it was a

the fourth degree of relationship. Although the extended family is now rather amorphous compared to what it must have been a century or two ago, it is still very real to the Sgiathanach. Once, perhaps, the townships and their historic antecedents were patrilocal settlements. Then, of course, the question of the availibility of land and the legality of subdivision were of small importance. Now the rigid system of land use enforces neo-local post-marital residence, often at a great distance from the parents, and very often means that the younger generation must join the constant outward movement of the population. Thus, the extended family is seldom, if ever, found intact. Indeed, the only times its members come together as a group is at a funeral or a wedding. On these occasions the strong patrilineal emphasis becomes apparent, and the fact that the individual always remains a member of his or her family group is revealed. It is, then, a stem family.

621 571 602 596 [591] [175] [591] [127]

In structure the extended family includes all males and females out to, and including, third cousins. The kinship terminology is descriptive. Excepting grandchildren, all relatives are distinguished by sex and generation. Members of the parental generation and lineal descendents of the parents collateral kin are distinguished by their relationship to the individual's parents. Members of the grandparental and great-grandparental generations and their lineal descendents are similarly distinguished. The same descriptive technique extends to kinsmen of the first and second descending generations.

596 601

her brothers and their wives came to visit, and at New Years they came by with their bottle of wine, whiskey being a man's drink, to toast the New Year.

Excepting Glendale, where church membership and affiliation is synonymous with the neighborhood, the township may contain affiliates of two or three churches. One small township contains two Free Church families, two Free Presbyterian families, and one Church of Scotland family. As in any township, they visit one another and cooperate in handling the sheep flocks. Further, the Church of Scotland family often gets out the truck on the Sabbath and drives everyone to Church. This is one of those isolated townships far off the beaten track. Although I certainly agree that people who meet together at a church and pray together get to know each other better because of their religious unity, in this township the families have come to know each other better because they go off to their respective churches together. There is a firm, basic belief among the people that no one should be slighted, even by a minister, because he has differing religious sympathies. Were this not so, think of the position in which I would have found myself. One Free Presbyterian family put it this way, "Who can tell which church is the right one since they all claim to be on top of the pole? Maybe they all are and everyone will get to his final resting place." The "all" was later qualified to exclude Catholics. One of the gentry told me an amusing story on this point. One day during the

597

597 ADOPTION--extent to which children are adopted or exchanged; motives and procedure; status of adopted children; reciprocal relations of adoptive parents and adopted children; relations between adoptive siblings; special types of adoption (e.g., adoption of adults, posthumous adoption; ceremonial adoption); etc. See also:

Fosterage 853
Status of children 858

Despite these tendencies, an individual is still enmeshed in familial and village ties. Villagers walk in and out of each others' houses without knocking; only a "stranger" knocks. Goods such as tape recorders, binoculars and books are passed around the village; people even borrow each others' reading glasses.

Children are "borrowed" as well. They are loaned out to relatives and neighbors to run errands, or may even live with them. They are scolded as often by a neighbor or other villager as by a parent. A child might be told, "When someone (any adult) tells you to do something, you do it, no matter who that person is." The parents of one household are criticized for taking their children's side against other children and other parents. "He's teaching his children not to mix with others. One child is as good as another. They may be good one day, but they're likely to be bad the next." A child or adult who enjoys spending time by himself is still considered extremely odd. An important criterion by which someone's mental health or general personality is evaluated is whether or not he "mixes" well. It is fairly common for childless households to "adopt" a child of neighbors or relatives; that is, the child spends a great deal of time with them. They may go to the child's house to put him to bed at night, or the

599 621 child may come to spend nights or longer periods of time with them.

476 621 [576] To some extent villagers are still dependent on each other for various kinds of help. It is considered extremely bad manners to refuse labor, a tool, or food to anyone who requests them. If someone refuses to aid another, people say, "What will he do when he needs [443] help?" This attitude has made the island a paradise for the few salesmen who, in the last few prosperous years, have started to visit its communities; villagers find it difficult to say no to anyone who comes to their door with a request, including the request that they buy something.

621 574 844 A woman in childbirth was formerly attended by a local midwife, and kept in bed for two or three weeks. "Other women, both relatives and friends, came and stayed with them at night, fixing them warm tea and milk, whispering bhronag bochd (poor soul), how awful you look..." just as today the neighbors gather at times of illness and death. It is more difficult for neighbors to come [178] [743] to the bedsides of young mothers of today, who are all taken to the hospital in Stornoway to have their babies; but the neighbors manage to visit the hospital, which has no choice but to ignore its rule of only two visitors per bed at a time.

601 KINSHIP TERMINOLOGY--lists and application of kinship terms; genealogical kinship charts; use of kinship terms relative to personal names and teknonymy; differentiation of vocative and referential forms; morphological typology (e.g., elementary, derivative, and descriptive terms); number of elementary terms; incidence of denotative and classificatory terms; classificatory distinctions observed and overridden (e.g., generation, sex, affinity, collaterality, bifurcation, polarity, relative age, speaker's sex, decedence); classification of avuncular and nepotic terms (e.g., bifurcate collateral, bifurcate merging, lineal, generation); classification of cousin terminology (e.g., Eskimo, Hawaiian, Iroquois, Crow, Sudanese, Omaha); correlation between terminology and patterns of behavior; historical and functional interpretations of kinship systems; etc. See also:

Dynastic genealogies . . . . . 173 Personal names and teknonymy. 551
Linguistic relationships 197

the fourth degree of relationship. Although the extended family is now rather amorphous compared to what it must have been a century or two ago, it is still very real to the Sgiathanach. Once, perhaps, the townships and their histori antecedents were patrilocal settlements. Then, of course, the question of the availibility of land and the legality of subdivision were of small importance. Now the rigid system of land use enforces neo-local post-marital residence, often at a great distance from the parents, and very often means that the younger generation must join the constant outward movement of the population. Thus, the extended family is seldom, if ever, found intact. Indeed, the only times its members come together as a group is at a funeral or a weddin On these occasions the strong patrilineal emphasis becomes a parent, and the fact that the individual always remains a member of his or her family group is revealed. It is, then, stem family.

In structure the extended family includes all males an females out to, and including, third cousins. The kinship terminology is descriptive. Excepting grandchildren, all relatives are distinguished by sex and generation. Members the parental generation and lineal descendents of the parent collateral kin are distinguished by their relationship to the individual's parents. Members of the grandparental and great-grandparental generations and their lineal descendents are similarly distinguished. The same descriptive technique extends to kinsmen of the first and second descending generatio

distinction. During the war when Skye had its own little army, he came to know many of the old crofters quite well. Finally, he came to use personal names when speaking to them and asked to be called by his first name. The people explained that they might be older than he, but he was too important to be spoken to as anything other than mister.

The tradesmen and the shopkeepers in Glendale and Kilmuir are not any different from any other man. They are not specialists. They are part-time crofters. We have to turn to Portree to see what status position they fill in the society of Skye. I might just add that they are on a first name basis with their neighbors, and, like the crofters, they are known beyond the neighborhood by their first name and township, such as Ian Borve or Murdo Stein.

To summarize, there is additional evidence for cultural continuity in the structure of the neighborhood. The extended family, although very unstable and, therefore, somewhat amorphous, is still a reality in the minds of the people. It still has two functions which it must have had in the remote past: seeing that all are cared for and given a decent burial. The ascription of status noted for the township carries over to the neighborho d, as does the underlying status equality and need for unanimous consent. Among the crofters leadership is still undeveloped. The old men can enforce conformity but they cannot lead. Although prestige ranking is developed, in the form of the achieved statuses of ministers, doctors, and teachers, it is significant that, except for the minister in Glendale, all holders of prestige status are

a question about a certain man I was told: "I can't help you on that. Whenever I go into a shop or meet them on the street, they change their conversation." Another told me I should ask the doctor, "He's the one who really knows their problems."

Summary

The society of the Sgiathanach reveals additional evidence for cultural continuity. In family structure, both nuclear and extended, the patrilineal emphasis has been preserved. Even though both suffer from chronic instability and the extended family has become rather amorphous, kinship remains an important regulator of interpersonal relationships. It involves obligations and privileges which few take lightly. Within the social units based on territory, the township and neighborhood, status continues to be ascribed on the basis of age, sex, and kinship. Women have remained socially inferior to the men. As the father controls his family, the old men of the township and neighborhood exercise a power over their juniors to force conformity to traditional ways. Fundamentally, all of the same age and sex are equals. This status equality underlies the entire social structure. There is no room for a leader. When essential, the newcomer, normally the teacher or minister, and the landed gentry are expected to assume the role of leadership. In the village the emphasis on ascribed status for the Sgiathanach is also important. The majority of achieved statuses are left to be filled by newcomers. In the community, as a whole, beyond the polarity of the landed gentry and the

good to say about him." Death is one of the two occasions for an extended family gathering. Indeed, a man's prestige is best seen at his funeral. Without exaggeration, death is the most significant event of living. It is constantly visualized and discussed. "Second Sight," the ability to foresee future events, is mainly concerned with the death of one's "people" and friends. Since the ministers have been striving to wipe out this belief, it is difficult to get the people to talk about it, except in retrospect. Still most of the people, including many of the newcomers, and not a few of the ministers, continue to believe that some old people,--they are always old men and women,--are afflicted with this power. There was an old man in one township who would not go out at dusk for fear of seeing a funeral, and there was an old woman who foretold her daughter's death. Lights seen in strange places also tell of death. Even the sophisticated Sgiathanach who has been born and mised in Portree sometimes forgets himself. A current story on the island tells of a "ghost bus." The headlights suddenly appear behind a driver on the Sligihan road. For the newcomers this is a fanciful tale, but for several of the natives it has a meaning, death.

All plans are prefixed with the phrase "if spared." "If spared, we'll shear the sheep on Thursday." "If spared, I'll go down to see my brother soon." Many of the newcomers are made to feel very uneasy by this habit, which is as much a form of speech as greeting people with, "It's wet," or, "It's cold." When a Sgiathanach asks to have something done

people of the Free Church are "the Wee Frees." The Free Presbyterians are the "Seceders" or, at least to some of the gentry, the "Split P's." Arguing about religion is considered very bad taste. It is left to the ministers, and they do have their points of difference. One Free Presbyterian minister, for example, told me that no one in the Church of Scotland, including the minister, was worthy to receive Communion. On many occasions during the year the ministers of the Free Church and Free Presbyterian Church devote part of their sermon to a criticism of the Church of Scotland, not to mention the avid hostility of all Skyemen toward Catholics.

Adherents of the several sects intermarry with no qualms and without suffering any loss of status. By the time a person gets to be a member, marriage is no longer in his mind. Husband and wife continue to adhere to their respective denominations, those in which they were baptized. The children naturally, are baptized and raised in the church of their father. Extended families are often divided religiously along sectarian lines. In one family one brother and his wife were Free Presbyterians, another brother and his wife were Free Church, a sister was Church of Scotland. The parents had been Free Church but became Free Presbyterians at the turn of the Century. At least one cousin was United Free Church. This religious schism did not affect their affection for one another. Once a week the sister went to have tea with her Free Church sister-in-law. Periodically

his own family of procreation or ceases to be an integral member of the social units. Many features of these relationships will persist throughout his life.

The Sgiathanach treats the event of birth as something in which man is only the agent of a higher power. This fact was brought home to me one night during a discussion of the declining size of families. The question of subsidies to encourage larger families was broached. Although all take advantage of government grants for their stock and care of the land, this form of subsidy was unanimously rejected. As one man said, this would place man in the unthinkable position of a creator. Only the essential arrangements for the care of the mother and her expected child are made before birth. There are no "showers." "Showers," said one woman, "how can you tell if the child will be a boy or girl, or even live?" Today most women go to the maternity hospital at Uig for the delivery, but a few prefer to remain at home under the care of their mothers. To expect that the father's mother would take charge, even under the clan system, would be carrying the patriarchial emphasis too far. Within a few days, the obligations of the parents, their relations, and the people of the township become apparent. One by one the individuals and couples make their way to the cottage to welcome the child. This individual visiting is a modified survival of the old custom of "kirking," a group offering of thanks, at the church, for a safe mother and a healthy child, followed by a dance and feast at home. The parents are obliged to provide a dram of whiskey so that all the visitors can toast the child.

by leaving, for if he fails to conform to the traditional norms and patterns of behavior, he will be locked upon as an eccentric This fact has continuity through all periods of Skye's history.

We have already seen how the age and sex structure of the population has changed in response to social and economic conditions and how this change has influenced the ascription of statuses within the crofters' division of labor. Briefly, there has been a contraction of the number of opportunities for ascribing status. This had made it necessary for some men to perform tasks once the exclusive domain of women and for women to participate in activities which formerly were the responsibility of their men folk. Older people must now function in ways which once were the responsibilities of the youth and young adults. These changes, however, have been accompanied by persistencies, in particular a continuity of basic status values. I think this will become clear through a discussion of the family structure. We shall begin with the nuclear family.

The Nuclear Family. Since my interest is in status, I shall adopt the unorthodox procedure of considering the nuclear family in terms of the changing status of the individual members from birth to maturity. This will give us a dynamic picture of family life. At birth the individual's relationships within the crofting family and, to a lesser degree, within the township are established. Like those of his parents, who now have the ascribed statuses of mother and father, his relationships will remain unchanged until he marries and founds

compared with 34.9 for Scotland. The death rate among Skyemen, however, was 17.4 compared with 22.0 for Scots in general. But Scotland had a net emigration rate of 3.6 while the Skyemen were leaving at a rate of 16.5. In this decade no fewer than 3,115 left Skye.

By the end of the third period an additional influence of the process of commercialization had become apparent. The social hierarchy was modified in the direction of greater socio-economic differentiation.[68] At the time of the "Forty-five" Skye was inhabited by the families of three clan chiefs, 139 tacksmen, 517 joint-tenants, 1031 subtenants, and 444 servants. There were now 10 landlords. The tacksmen had been replaced by 29 graziers and 12 small farmers. The joint-tenants, subtenants, and servants had become 2043 crofters and 1227 cottars. In the past there may have been one innkeeper, at Portree, and a few millers; now there were 32 innkeepers, millers, and merchants.

The changes which we have been considering could not have left the patterns of interaction undisturbed. Cooperation among the members of the township would have been unnecessary. Since all were affected by prolonged destitution, mutual aid must have been severely curtailed. The extended family was broken by emigration. The nuclear family was seldom intact for more than part of the year. It seems the majority of the able-bodied men were travelling to the east coast each spring to find

574 group. Anyone with a recognized degree of kinship is entitled to hospitality. When the exiles return to visit the Misty Isle, they always try to make the rounds of their kinsmen. This is more than a question of not becoming an economic burden on a favorite aunt; they do not want to be guilty of slighting anyone. There is reciprocity here.
[203] In return for food and shelter, the visitor freely gives his kinsman all the news he has gathered about the activities of their distant kin. He acts like a roving reporter, cementing the solidarity of an otherwise fragmented group.

602 The expression given to the degree of consanguinity and
769 affinity is revealed most completely at a funeral. As one of the two occasions on which the extended family comes together, the other being a wedding, it reveals a host of significant traits. The first thing I noticed was that although the inavailability of land and the illegality of subdivision enforces neo-local post marital residence, burial is ideally patrilocal. On more than one occasion the steamer came in at night with a body which had been shipped home from Glasgow or
602 Edinburgh for interment in the deceased's neighborhood. This
593 also means that the husband and wife remain integral members of their respective families. The founding of a family of

patrilineal family group whose members, in theory, were able to trace their descent from the founder of the clan, the sourc of the clan's patronymic. The membership was expanded by including descendants of members of the derbfine beyond the thir descending generation. Thus, the size of the clan grew in proportion to the natural proliferation of the descendants. Numerical strength was further augmented by the inclusion of dependents. Small groups attached themselves to powerful clan by a contract of man-rent. The senior member of a derbfine accepted the adopted chief as the superior of himself, his son and brothers, and their heirs and agreed to obey the chief in all lawful duties, excepting those conflicting with the obligations of kinship.[24] The clan was further recruited by th adoption of broken men, individuals cut loose from their own clan for punishment, and, on occasion, native men, the former inhabitants of newly acquired territory.

Large clans contained a number of septs. The sept was essentially a small clan within a clan. The distinguishing feature being that the nucleus of kin were related to the common ancestor through a younger son of the founder or one of the younger son's lineal descendants rather than in the direct line of descent. In addition to the patronymic, the sept bore a territorial title. Some septs became strong enough numerically to acquire their own territory and rank as independent clans. Others, due to the loss of territory or the need for

iterally, in the black grandchildship), "in the state of being
eat-great-grandchildren." When two fourth cousins are found
d they are asked what they are to one another, almost invari-
ly the reply is caraid (a friend). Again when working out
checking family structure and terminology, I was always told
ter getting the term for third cousin, "There's not much point
going any further." It is important to remember that caraid
the usual designation for all relatives beyond the immediate
clear family.

One of the striking facts about the extended family of
e Sgiathanach is that the terminology is almost completely
scriptive and predominately denotive. It provides a classic
ample of what Lowie has called bifurcate collateral terminolo-
.[19] In addition to collaterality and bifurcation, the main
inciples on which the system is ordered are generation and
x.[20] Affinal relatives, excepting the immediate families of
e spouses, their "people," are excluded. Only on the second
cending and second descending generations is the sex of
rson through whom the relationship exists ignored, and only on
e second descending generation is sex ignored.

In the Gaelic, the members of the group which the
iathanach calls his "people" are athair, màthair, bràthair, and

Within the group which the Sgiathanach calls his "family," we find that husband is fear, and wife is bean. Their children are mac and nighean. Marriage, of course, extends the circle of relatives. Both members of the married pair refer to their spouse's "people" as athair-céile for father-in-law, màthair-céile for mother-in-law, bràthair-céile for brother-in-law, and piuthar-céile for sister-in-law. Céile means mate's, in these cases. This leaves us with two classificatory terms which ignore sex. A grandchild is ogha, and a son-in-law or daughter-in-law is cliamhain.[21]

Although this nomenclature is correlated with expected patterns of ideal behavior, in reality, as I have said, the system has broken down under the impact of economic forces. With neo-local residence the township has come to be occupied by what the Sgiathanach calls "friends" rather than "people." Not uncommonly, brothers and sisters take up residence after marriage not only in different townships but also in distant neighborhoods. The sharing of work, then, mainly involves cousins. Unlike Ireland,[22] there is no strong taboo against marrying a cousin. Cousins marry "to keep the money in the family," and remote cousins were apparently preferred

---

[21] Although Arensberg and Kimball look upon the Irish System as essentially similar to that of northern and western Europe and the United States, excepting minor variations (op. cit., p.97), I was struck by the dissimilarity of the Kinship system of the Sgiathanach to that of the United States. The underlying principles are, of course, the same, but the ramifications set the two apart; see, e.g., Talcott Parsons, "The Kinship System of the Contemporary United States," American Anthropologist, Vol. XLV, No. 1 (Mar., 1943), pp.22-38; and David M. Schneider and George C. Homans, "Kinship Terminology and the American Kinship System," American Anthropologist, Vol. LVII, No. 6 (Dec., 1955), pp. 1194-1208.

[22] Arensberg and Kimball, op. cit., pp. 83-86.

by a second cousin. The striking thing to realize here is that the nearest surviving relative always knows his obligation and is ready to fulfill it, without question. Fatherless children are buried by either their paternal or maternal uncle. I have not forgotten the existence of women. The simple fact is, women play no part as mourners. Indeed, the rare woman who goes to the grave becomes the subject of lasting gossip.

Fundamentally, the system of kinship is patrilineal. Linguistically, the terms for relatives may be bilateral, and inheritance of possessions other than the name may be matters of small importance, but the patrilineal emphasis remains. The Sgiathanach lives in a man's world. I shall explore this male dominance further in the following chapter. At present, I want to briefly discuss two additional cliques.

Religious and Age-Grade Cliques. Like the members of any society, the Sgiathanach associates most frequently with those who share his interests and attitudes. It is natural, then, for his associates, other than his kinsmen, to be people who attend his church and people of his own age group. We need not explore the nature of these cliques at this time; but we should have some understanding of their function. The religious clique is primarily a mutual aid group. There is reason to believe that this particular group has lost much of its importance of late, with the coming of the welfare state. Many feel that the government pays people to look after the aged and infirm. As far as doing a favor for someone is concerned, few of the same kirk, other than close friends,

602

602 KIN RELATIONSHIPS--conception of kinship; cultural definition of kinship statuses; kinship symbolism and its extensions (e.g., to kings, to gods); interpenetration of kinship with other aspects of culture (e.g., nepotism); analyses of patterned kinship behavior; incidence and interpretations of stereotyped patterns (e.g., joking, respect, avoidance); categories of kin not classifiable elsewhere (e.g., patrikin and matrikin, general affinal relatives) and relationships among them; etc. Data on relationships between specific secondary and tertiary relatives will be found in separate categories. rotation to the weavers who are registered with them.

Other factors also hinder equal distribution of tweeds. Personal considerations enter; for example, the managers of the Shawbost mills feel a responsibility for the weavers in their own village, who are usually kinsmen. Exclusive distribution to local weavers is rationalized by saying that the tweeds must be done urgently; hence they are distributed only to the weavers who are known to do tweeds quickly.

The major factor hindering equal distribution of tweeds is the expense which derives from the decentralization of weavers, that is, the cost of petrol and upkeep of the vans, which is born by the mills. Before World War II, the weavers rather than the mills were responsible for transporting the tweeds, by cart and horse at first, and then by motorized transport.

During this period, independent entrepreneurs carried tweeds in vans and buses at four shillings each, a practice which stimulated the development of public transportation. Although the number of passengers using such vans and buses for public transport fluctuated, the income derived from the cartage of tweeds was in itself large enough to be profitable and to maintain the enterprises. An efficient service existed, despite the

element, the weaver, is essential to its production. In 1960 weavers receiving tweed yarns from the mills totalled about 1,500 persons, a number which held for about three years and then started dropping at a rate of about 100 a year. In 1971 the number of weavers was less than 1,000, and trends of change appeared to presage a continued dwindling of numbers. It is estimated that emigration increased during 1970-71. Men have returned to the sea, have gone to Glasgow as laborers, or have taken advantage of training courses offered by the Labor Exchange, courses that will eventually remove them from the island setting.

The instability of the industry and the fluctuation in amount of weaving work available at any given time has created an environment in which personal ties and individual maneuvering rather than a widespread adherence to impersonal rules such as equal distribution are emphasized. Strategies which involve the mobilization of kinship and neighborhood ties and involve an emphasis on personal relationships rather than the depersonalization usually associated with industry are made possible by economic factors such as the dependence of decentralized weavers on centralized mills. The watchfulness and consciousness of one's neighbors so characteristic of village life prevail. Questions about the state of

of the township with the larger society, and examines the effect of geographical and social marginality on the boundedness of the township network. Chapter 6 discusses two important networks of social relations within the township.

B. Township as Social Boundary System

The township constitutes a relatively firmly bounded system, although its boundaries are weaker than formerly when the township was relatively self-sufficient economically. Township members worked together in small fishing crews, and families relied on each other for help when members of the family were away from the island "at the fishing."

Relatives were expected to give priority to helping each other. According to one proverb, "A relative is your best friend." First and second cousins were considered especially close, but knowledge of one's kinsmen extended to at least the fourth generation. Ties of kinship became evident in ceremonies such as funerals and weddings. One Gaelic proverb says, "You know who your relatives are at weddings and funerals." At weddings the onus was on the members of the bridal party to remember their relatives. "You have to sit and calculate who is closely related, and all those

people will be doing the same. If they think they're close enough to be invited, they'll be annoyed if you don't include them." At funerals, relatives of the deceased to about third cousins were expected to participate.

When a population has lived in a small area for generations, a dense network of kinship develops. This fact, and the importance placed on mutual aid among fellow villagers, fostered the feeling that the network of township members, who ploughed, fished and tended cattle and sheep together, was also a network of kinsmen. "We're all the same people." "It's all one family here." Occupational and kinship spheres of social activity commingled. The importance of neighbors in contrast with relatives was reflected in such proverbs as, "A neighbor close at hand is better than a relative in a distant land."

The nuclear family did not, according to Cohen's criteria, constitute a firmly bounded system. Then as now, women preferred the company of their "own kind," that is, the company of other women. The men worked and spent periods of recreation with other men. Children spent about as much time in the homes of grandparents, uncles or fellow villagers as they did in their own homes. A 60-year-old woman remembers that it was a

A 60-year-old woman remembers that it was a
621 common practice, when she was young, for children from
571 large families to live for as long as six weeks with
476 other families who were relatively better off. They
would help harvest the hay or the potatoes or bring
in the peat in return for food, lodging and perhaps
some clothing. "They usually ate better than they did
at home." The children were not necessarily relatives
of the families with whom they boarded.

621 Strong friendship, that is, the kind of friendship
572 associated with mobile urban life in which persons
confide in each other and share secrets and build up
an individual relationship based on extensive knowledge
[602] of one another, was nonexistent. A "friend" was a
relative, or someone who gave aid when it was needed.

621 Today it is sometimes said, "It used to be that
178 your relatives were your best friends; now your best
572 friends are better than your relatives." An old man
181 will meet another on the road and say, "I used to see
[602] more of you when you needed me." Neighbors used to
[231] share sheep that were killed; now households kill and
[251] consume their own sheep, and freeze the meat which they
cannot use immediately. Groups that walked out together
[464] to the peat to finish the job in a single day are being
replaced by individual family units that can motor out
000 and do the job in stages. People prefer to give money

181
621 People prefer to give money
178 in exchange for car rides or other help, including peat-
437 cutting, because "than you're independent." Friendships
829 are still weak, relative to friendships in urban
572 settings. Most information which is shared between
621 individuals rapidly enters the pool of communal gossip.
[369] Although many persons emphasize the importance of mutual
[521] aid in defining a friend, some emphasize the ability to
[476] confide and keep secrets.

621 Today many of the younger villagers do not know
178 their relatives to the extent that their elders did.
602 In one family, a girl who was about to get married had
[685] to ask her brother, who was the only one of the siblings
[576] interested in kinship connections, whom to invite to the
wedding. It is still useful to retain an inventory of
602 one's relatives. "I have cousins in Glasgow and
484 Australia that I've never seen, but if I ever go there
I'll have a place to stay." With the increase in
[178] transportation and income, more islanders are taking
brief trips away from the island. During these trips,
they almost always stay with relatives.

857 It is frequently said that children are now "cheek
577 less inclined to run errands and obey orders meekly, an
829 that they prefer to watch television or read books by
178 themselves to playing with each other.

621 513 858 The first thing that is said when for some reason a woman is left alone in the house is, "Who's going to go and sleep with her?" Often a child will be sent from a neighboring family, not always relatives, to stay with her at night. As in the past, it is not uncommon for 621 592 888 a childless elderly couple or single person alone on a croft to take in a young, homeless couple, to whom they may or may not be related. The young couple cares for the old person or persons, and inherits the croft when they die.

602 476 "Keeping up the relation" is the process by which relatives sustain interaction and expectations of mutual aid even though their relatedness becomes more distant 605 with succeeding generations. "I've got cousins in Ness that I stay with at the Communions. They're getting on into the third generation now." A cousin is a cousin even to the 42nd degree (Williams 1963: 142), as long as there is reason to sustain the relationship. "I know we're related, but I can't quite place it." "We're a bit related. I think she was a MacPhail before she married." "I don't quite know how we're related, but my mother and his mother considered it a close relationship, and he has kept it up."

621 626 582 Every villager has a vast amount of information about other villagers and their families, which may be

585 [43] bridesmaid(s). The house was filled each night with visitors bringing new gifts or coming to see the latest additions. Enough presents were given during this [203] time to set up a household. Invitations to the wedding were issued verbally, by persons going around to each [602] house. Anyone could come to the church ceremony, which was relatively informal and jovial, but only the "closest" relatives were invited to the sumptuous wedding dinner which followed the service: the bride and groom, their parents, aunts and uncles, first cousins and usually second cousins. Many more were invited to the wedding supper which started after the dinner, at about 10:00 p.m., and continued throughout the night.

Three main nights were distinguished, although 585 preparations and festivities might go on for weeks. The 252 first night was the night before the wedding, when women of the village brought hundreds of chickens, which they plucked and cooked. Meat, usually mutton, was also cooked and sliced. Butter was rolled into balls. Neighbors brought milk and other provisions and assisted in the baking for a week beforehand.

585 On the second night, hundreds of villagers ate the [535] chickens and mutton prepared for the wedding supper, [533] and danced to the music of a piper or other musicians. [273] Many young boys had their first taste of beer or whiskey on these occasions.

his parents, brothers, and sisters; and his "friends," his more remote kinsmen.[17]

The Extended Family. I regret to say that I am unable to present a complete picture of the functioning of the extended family. In view of what I have already said about instability in the nuclear family, it should not surprise the reader to learn that I could not uncover even the approximation of an extended family. Too many absent relatives thwarted my investigation. I do not, however, regard this omission as a serious handicap. After all, we know almost nothing about the rights and responsibilities of the individual members of the derbfine during the clan days.

The important fact for my study of cultural continuity is that the derbfine is still a reality in the minds of the people.[18] The fact that the extended family today is as much a four generation group as the derbfine was brought home to me early in the study by a casual remark by an officer of the Department of Agriculture. "I don't understand these people," he said, "they'll tell you they're not related to someone, and then you find out they're fourth cousins." What this means is the people commonly distinguish only near cousins (first cousins) and cousins (second and third cousins) in English. It always took a great deal of persuasion to get a person to say a "friend" was a distant cousin.

This distinction is drawn even finer in the Gaelic.

585 178 [602] [431] [202]

In part to avoid disappointing the vast number of relatives who by custom must be invited but for whom there is now not enough room, many weddings are held away from the island in places such as Inverness and Glasgow. Gifts are still given in great numbers and displayed, despite the decrease in numbers attending the wedding dinner and the feeling that only those who are invited to the wedding should give presents. The custom still exists of neighborhoods or entire villages placing flags outside their homes on the day of a villager's wedding (except when the wedding is held away from the island); isolated flags within a village signify that the household is related to someone in a neighboring village who is getting married. And when the wedding car has picked up the bride and is leaving for the hotel in town, the road is often littered with barrels and other barriers.

Couples now often leave the wedding dinner and dance and go to undisclosed destinations for their honeymoon. But when they return to the community they must undergo a simple rite of passage that gives sanction to their new social status. On the first Sunday following their return, they are expected to come to church with the other members of the bridal party, a process called kirkadh (a slightly Gaelicized rendition of Scottish "kirking").

committee, a legal requirement, these individuals lack 621
authority. They are figureheads whose primary function is 632
to advise the government of the decisions reached by all the 554
crofters who share in the grazing and to regulate the use of 624
the land by self-imposed rights. In townships where the sheep are owned as club stock the clerk serves to distribute the profits from the sale of stock, and he may also keep a tally of the individuals who are entitled to payment for labor in townships where money has replaced customary reciprocity. In any cooperative venture beyond the family level, there is no one who can step forward to act as a foreman. The assumption of this role would upset the basic status equality of the crofters, unless the person wishes to be regarded as an eccentric.

The Crofting Neighborhood. The crofting neighborhood con- 621
sists of an aggregate of individuals and nuclear families 632
who dwell in several townships, standing in close spatial 571
proximity. It is, therefore, natural that the ties of common residence and kinship should continue to operate. The important distinguishing features between the township and the larger social entity are two: (1) cooperation in agricultural and pastoral activities is replaced by mutual aid, and (2) there is a greater wealth of formal and informal interpersonal activities in which the people associate.

There are invariably established social circles within 621
which the individuals habitually move. One always consists 571
of the individual's kinsmen, "his people," his family of 602
orientation, and "his close friends," all other relatives within the fourth degree of relationship.

absence of terms for in-laws, these relatives are simply 596
ed to as the husband's or wife's kin. Hence, structurally, 601
tended family on Skye is comparable to the Irish system,[19]
bviously, is dissimilar to our bilateral family structure.[20]
Because the extended family is so very unstable, it is 596
ult to describe it functionally. There was a time when
ople were divided into three communities of fate, the
s of which were bound together by the bonds of real and
ious kinship. Today individuals whose remote ancestors
together in defense of their homes may not have seen
brothers in many years. The material I gathered allows
wo generalizations. Any member of the extended family
ays free to call upon his kinsmen for help or, at least,
ality in need; and the closest surviving relatives always
heir obligations and are ready to fulfill them. Thus,
mily is a mutual aid group. The primary responsibilities
kin are to see that all have food, shelter, and a proper
.

There are additional social circles in the crofting 561
ity. The youth, young adults, and the aged are divided 888
ge grades. Of these, the age grade of the old men is 626
ally important. They control the economic progress of
land by their deliberative function concerning any
tion in the crofting system. Whether it is a suggested

rotection were absorbed. Clan strength was also reinforced
y the existence of dependent clans. Unlike the septs, de-
endent clans retained their indentity and their territory,
hile entering into a security pact.

Once the clan system was established, there were few
ndividuals without allegiance to some chief. The individual's
tatus and protection depended on clan membership. An individual
ho could not name his chief had no dignity. Thus, under the
aw of Arms of Scotland the clan is described as an aggregate of
amilies actually descended, or accepting themselves as descended,
rom a common ancestor.[25]

he Clan Chief. At the head of the clan stood the ceann-cinnidh
literally the head of the kin), the living representative of
he common ancestor and the group. While giving the clan
oherence and endurance, he served as the military leader,
rotector, lawgiver, arbitor, judge, and administrator of the
ommunity of fate. His power and position, backed by a resolute
ody of supporters, was almost independent of royal authority.
e did not, however, enjoy absolute power. The obligation to
onsult the leading men of the clan on communal affairs tempered
is rule. He was a patriarch who governed by custom and general
onsent. Always, in a general sense, he was the father of his
eople. His government rested on reciprocal relations. The
hief and the clan brotherhood mutually owed and received
evotion. Right or wrong the clansmen were sheltered and
efended in quarrels by their chief.

additional elements of kinship. While the feudal customs of 175*
charter, resignation, regrant, and wadsett, a mortgage of the 602
land on security of the rental, secured the possessions of the 614
central derbfine by law, extra-legal tribal custom secured them 618
by force. The general will of the clan backed the chief as a patriarch; the laws of the kingdom supported him as crown vassal.

Each chief was surrounded by hereditary officers of dignity whose number was a mark of the individual's status. These included pipers, marshalls, stewards, standard bearers, and armed retainers. There was also a seannachie (bard), who kept the pedigree of the clan, deduced descent of clan members, and preserved clan traditions. Some chiefs had a breitheamh (judge), but more often the chief, who had hereditary jurisdiction, and some of his principle men, including a baron-bailey, sat in judgement. According to a minister of Kilmuir parish,[37] the customs and new statutes were reduced to writing around 1670 and proclaimed annually at the church doors. Although the chief lacked the jurisdiction of a feudal baron, the government was loath to disturb his tribal jurisdiction, which depended on the cooperation of the clan, because the crown recognized the stability of the tribal tie and the impossibility of integrating the remote islanders with the national system of justice.

In return for their services the officers of dignity were given a grant of land, and they were free to call upon the

ovided the framework within which the functions of the tribal
ader and the spirit of the clan brotherhood could be preserved
d extended. The family possessions could be secured by law
d the clan system could be stabilized. At the same time, how-
er, the tribal tie remained paramount in the local system.
e general will of the clan backed the chief as the patriarch,
d kinship, however unreal, conflicted with the obligations
mere tenantry.

The chief was the living representative of the common
cestor of the group. He gave the clan coherence and endurance;
s leadership was almost independent of royal authority.
cked by a resolute body of supporters, he governed by custom
d general consent. His jurisdiction flowed from his patriarchial
sition and depended on the recognition and cooperation of
e clan. To secure his position and maintain the belief in
mmon kinship, the chief planted his collateral and lineal
scendants on the land. These men, either cadets of the clan
tacksmen, held their land by lease. They were the local
presentatives of the central family. Their most important
nction was bridging the cleavage which ran through the clan
forming a ministry to the chief and supporting his dignity
d by being the councilors of the people. The gradual subsidence
the members of the central derbfine through the tacksmen
o the body of the clan reinforced the belief in kinship.
e belief was further strengthened by the custom of fosterage,
e custom of giving a son to one of the clan to be raised and
ucated. The clansmen were the embodiment of the clan system.
y were given land as joint-tenants of the chief or as subtenants

of the tacksmen. Here was the essence of the clan system, the common tie of territory and kinship. The land was not the mere means of subsistence, it was the ancestral home.

The clan was strongly patrilineal. The father of the individual family stood to his children as the senior member of the derbfine to his kinsmen, the tacksmen to his followers, and the chief to the body of the clan. The fundamental underlying principle was mutual, reciprocal devotion. The system was equalitarian. Although the chief was the landowner, and the tacksmen received their land on lease, for which they owed the chief the duties of service and a rent just as their tenants owed the tacksmen, the land had no commercial value. Rent was an ill defined and secondary consideration. The dignity of the clan depended on the number of supporters, who could be maintained on the land under the system of land use.

Economic Activities

The principles of land use and tenure on the Isle of Skye up to the early years of the eighteenth century were similar to those prevailing all over Scotland.[59] The land was used under a system of runrig agriculture. The word runrig appears to be a modification of the Gaelic reinn-ruith, a parallel or running division. The bulk of the population, as tenants of the land

Handley, Scottish Farming in the Eighteenth Century (London: Faber and Faber, Ltd., 1953), pp. 54-73, 91-100.

the social superiors of women. The aged are the social superiors of the youth and young adults. The father determines how his wife and children will behave as long as they remain under his control. The old man, or men, determine what changes will be accepted or rejected. There is no way to question their decisions, unless one leaves the croft. Still, at the bottom, there is equality. No man can step forward as a leader. We are now in a position to look at the larger social grouping, the neighborhood.

Kith and Kin within the Neighborhood

During the days of the clan, the residents of the neighborhood were bound together by real and fictitious ties of consanguinity and affinity, which were reinforced by the strong attachment to the soil and propinquity. Only the fictitious bonds have been forgotten. Like the township, the neighborhood consists of an aggregate of conjugal families whose inter-personal relationships are reinforced by a complicated network of kinship. Once, perhaps as late as 100 years ago, the neighborhood was a highly cooperative social unit. When the local mills were in use and the church had not been broken by schism, the people must have had a more definite focus for their common interests. In more remote times, it was a defensive entity. Today the neighborhood is no longer a cooperative unit. On the analogy of the old horse plough and the caschrom, cooperation is essential to the township but superfluous to this larger group. That the neighborhoods have not lost the potential for concerted action in times of crisis is attested by the uprisings

during the "Clearances."

Strong in-group feeling is manifested not only in a belief that people of other neighborhoods are not quite as good somehow, but also by the tendency to withhold social acceptance. There is, for example, a family of newcomers in Kilmuir. One day when they were being discussed one old crofter remarked, "Well, when they have been here as long as Jock over there, they will be just like one of us." It turned out that Jock's family had come to Kilmuir three generations ago. More than once I was reminded of the story of the Yorkshire man who moved from one village to another. He persisted in calling everybody a foreigner, and when asked why, he replied, "I've lived here sixty years, and they still call me a foreigner." The newcomer to Skye is known only by his nationality. The few Polish war refugees are "the Poles." The man from England is "the Englishman" or, in Gaelic, Sassanach, a term also applied to Lowlanders. They have no real place in the scheme of things.

Within the neighborhood, there are invariably established social circles within which the people habitually move. These cliques take several forms on Skye,[16] as in most cultures, and cross cut each other as well as the townships. The most important clique consists of "my people and friends" the individual's kinsmen. The Sgiathanach carefully distinguishes between his "family," his wife and children; his "people,"

[16] Although I consider "clique" to be an unfortunate choice of terms, because it has unfavorable connotations in the lay mind, it has been introduced into the vocabulary of the social sciences; see, e.g., Stewart, Area Research, pp. 40, 49; Murdock, op. cit., p. 88; Loomis and Beegle, op. cit., p. 139.

his parents, brothers, and sisters; and his "friends," his more remote kinsmen.[17]

The Extended Family. I regret to say that I am unable to present a complete picture of the functioning of the extended family. In view of what I have already said about instability in the nuclear family, it should not surprise the reader to learn that I could not uncover even the approximation of an extended family. Too many absent relatives thwarted my investigation. I do not, however, regard this omission as a serious handicap. After all, we know almost nothing about the rights and responsibilities of the individual members of the derbfine during the clan days.

The important fact for my study of cultural continuity is that the derbfine is still a reality in the minds of the people.[18] The fact that the extended family today is as much a four generation group as the derbfine was brought home to me early in the study by a casual remark by an officer of the Department of Agriculture. "I don't understand these people," he said, "they'll tell you they're not related to someone, and then you find out they're fourth cousins." What this means is the people commonly distinguish only near cousins (first cousins) and cousins (second and third cousins) in English. It always took a great deal of persuasion to get a person to say a "friend" was a distant cousin.

This distinction is drawn even finer in the Gaelic.

[17] Cf. Arensberg and Kimball, op. cit., pp. 79-80

[18] Cf. Ibid., pp. 79-90.

601 The general term for third cousins is anns na dubh-ghaichean
602 (literally, in the black grandchildship), "in the state of being great-great-grandchildren." When two fourth cousins are found and they are asked what they are to one another, almost invariably the reply is caraid (a friend). Again when working out or checking family structure and terminology, I was always told after getting the term for third cousin, "There's not much point in going any further." It is important to remember that caraid is the usual designation for all relatives beyond the immediate nuclear family.

601 One of the striking facts about the extended family of the Sgiathanach is that the terminology is almost completely descriptive and predominately denotive. It provides a classic example of what Lowie has called bifurcate collateral terminology.[19] In addition to collateralty and bifurcation, the main principles on which the system is ordered are generation and sex.[20] Affinal relatives, excepting the immediate families of the spouses, their "people," are excluded. Only on the second ascending and second descending generations is the sex of the person through whom the relationship exists ignored, and only on the second descending generation is sex ignored.

594 601 In the Gaelic, the members of the group which the Sgiathanach calls his "people" are athair, màthair, bràthair, and

[19] Robert H. Lowie, "A Note on Relationship Terminologies," American Anthropologist, Vol. XXX, No. 2 (June, 1928), pp. 265-266.

[20] For a critique of these principles, see Murdock, op. cit., pp. 91-112.

601 dà peathar, and iar-ghaichean na peathar 's a' bhràthar.

Within the group which the Sgiathanach calls his "family," we find that husband is fear, and wife is bean. Their children are mac and nighean. Marriage, of course, extends the circle of relatives. Both members of the married pair refer to their spouse's "people" as athair-céile for father-in-law, màthair-céile for mother-in-law, bràthair-céile for brother-in-law, and piuthar-céile for sister-in-law. Céile means mate's, in these cases. This leaves us with two classificatory terms which ignore sex. A grandchild is ogha, and a son-in-law or daughter-in-law is cliarhain.[21]

601 Although this nomenclature is correlated with expected
602 patterns of ideal behavior, in reality, as I have said, the
178 system has broken down under the impact of economic forces.
591 With neo-local residence the township has come to be occupied by what the Sgiathanach calls "friends" rather than "people." Not uncommonly, brothers and sisters take up residence after marriage not only in different townships but also in distant
605 neighborhoods. The sharing of work, then, mainly involves
592 cousins. Unlike Ireland,[22] there is no strong taboo against
178 marrying a cousin. Cousins marry "to keep the money in the family," and remote cousins were apparently preferred

[21] Although Arensberg and Kimball look upon the Irish System as essentially similar to that of northern and western Europe and the United States, excepting minor variations (op. cit., p.97), I was struck by the dissimilarity of the kinship system of the Sgiathanach to that of the United States. The underlying principles are, of course, the same, but the ramifications set the two apart; see, e.g., Talcott Parsons, "The Kinship System of the Contemporary United States," American Anthropologist, Vol. XLV, No. 1 (Jan., 1943), pp.22-38; and David M. Schneider and George C. Homans, "Kinship Terminology and the American Kinship System," American Anthropologist, Vol. LVII, No. 6 (Dec., 1955), pp. 1194-1208.

[22] Arensberg and Kimball, op. cit., pp. 83-86.

605 592 spouses not too long ago.[23] Perhaps, more than any other
427 factor, it is the tendency of the aged parents to hold on
593 602 to the croft until they die that is strangling the kinship
576 system. Still the extended family is a strong mutual aid
602 group. Anyone with a recognized degree of kinship is
574 entitled to hospitality. When the exiles return to visit the Misty Isle, they always try to make the rounds of their kinsmen. This is more than a question of not becoming an economic burden on a favorite aunt; they do not want to be guilty of slighting anyone. There is reciprocity here.
[202] In return for food and shelter, the visitor freely gives his kinsman all the news he has gathered about the activities of their distant kin. He acts like a roving reporter, cementing the solidarity of an otherwise fragmented group.

602 The expression given to the degree of consanguinity and
764 affinity is revealed most completely at a funeral. As one of the two occasions on which the extended family comes together, the other being a wedding, it reveals a host of significant traits. The first thing I noticed was that although the inavailability of land and the illegality of subdivision enforces neo-local post marital residence, burial is ideally patrilocal. On more than one occasion the steamer came in at night with a body which had been shipped home from Glasgow or
602 Edinburgh for interment in the deceased's neighborhood. This
593 also means that the husband and wife remain integral members of their respective families. The founding of a family of

[23] Norman MacLeod, Reminiscences of a Highland Parish, p. 196

procreation does not absolve the individuals from their obli- 602
gations to their "people." 593

Although the wake and the post-interment feast have been 583
given up under religious censure, and the ministers refuse to 764
consecrate burial, the method of burial is fundamentally the 178
same as it was before the Reformation. At the time of interment the coffin is carried out of the house by the closest relatives. Ideally, for a man this means his father walks in front of the [604]
coffin, his oldest son (over fifteen) walks behind, and his brothers and uncles (paternal) carry the body. For a married woman the ideal is to have her husband walk in front, her father behind, and her brothers and uncles carry. When a child [604]
dies, his father walks in front; his oldest brother walks behind, and the father's brothers for a boy and the mother's brothers for a girl are the carriers. Outward mobility, as well as infirmity and death, has had its influence. The nearest male relative not only walks in front of his deceased kinsman but also takes charge of the funeral. A few cases of who has filled this function will indicate how the situation is handled when the ideal cannot be fulfilled. For a man this role normally passes first to his oldest son and then to his brother. I have [607]
seen a grandson take charge, and at one very atypical funeral, a brother-in-law. He was the nearest surviving male relative who could be contacted in time.

Arrangements for the burial of a widow are made by her son or brother. There was, however, one widow, a woman from the Outer Isles, who was returned to her native island for burial

the local representatives of the nuclear derbfine. they were 175*
the leading men of the clan in each district. Although they 602 ●
were appointed by the chief, their recognition depended on the 614 618
willingness of the clansmen to form a following rather than on title or a right of succession. This following determined how many men the chief could bring into battle and how many officers of dignity he could support from their contributions.

The most important function of this group, all of whom could trace descent within the central family, was their bridging the cleavage which ran through all clans. They formed a ministry to the chief and were the councilors of the clansmen. The bond with the former was proven kinship, with the latter, a sense of kinship. They were the mainstay of the system. When the chiefs fell into debt, a frequent occurrence, the tacksmen came to their aid by pledging themselves to preserve the family and the estates, to reduce the debt.[44] They were also the local merchants, an important function in an area with only semi-annual markets and sparse money.[45]

The Clansmen. The clanna (literally the children) included all within the jurisdiction of the clan chief. Their relationship was real or fictitious kinship, tenancy, or contract. To the Lowlanders and the English, their relationship seemed to be a

* 175 186 the Scottish kings against the demands of the English Parliament would have restricted English influence to a negligible role until the final Highland uprising was crushed in 1745.

Social and Political Organization

*175 ● 602 614 618 The characteristic unit of the social and political organization of the Isle of Skye during the Feudal period of Scottish history was the clan. All who have theorized about the clan agree that it was a social, political and economic entity. There is, however, no simple, universally accented interpretation of the nature of the clan. Unfortunately, interest in its structure and function is late. Many assertions suffer from the prejudices and sympathies of the authors toward the Highlands at the time of the eighteenth century rebellions or the nineteenth century land clearances. Lacking Scottish sources, historians turned to the Irish codes of law and imposed them on the clan system without asking whether or not four centuries of Norse domination might have resulted in at least a partial assimilation of the old Celtic tribal organization with the Norse political organization. Nor has allowance always been made for internal development during the five centuries in which the clan was the distinctive organizational unit. Today historians are almost apologetic about the Highland clan system. The subject has become the province of amateur antiquarians.

Anthropologists apparently look upon the clan as a social unit hardly worthy of comment. As far as I know,

*175 Morgan stands alone in believing the clan to have been a true
602 gens in organization and spirit.[15] He saw in it the typical
614
618 features of gentile society, vitality of gens life over the members in moulding individual character, feuds and blood revenge, localization by clans, common use of the land, fidelity to the chief and each other, and descent in the male line. Rivers viewed the clan as more nearly a tribe.[16] Piddington denies the Highland clan the status of a true clan because, although patrilineal, it has never been shown to have been exogamous.[17] I have no doubt that most anthropologists would agree with Piddington on similar grounds. Linton has recently compared the Polynesian tribe with the Highland clan.[18] He seemed to share River's view, saying the clan was localized by territory and was normally endogamous.

The Clans of Skye

Although some historians, probably reasoning from pre-Roman Gallic organization, believe the clan was inherent in the Celtic tribal system,[19] most date the origin of the Highland

servile and abject obedience approaching despotism.[46] Still, 175*
the early travelers never ceased to be astonished at the 602
familiarity with which the chiefs treated their people, aghast 614
at the chief's partaking of the people's diversions, and astounded 618
that the chief would shake them by the hand whenever he met them.[47] At the bottom, the system was equalitarian. Every man had the right to address his chief and call upon him for support in times of adversity.

The clansmen were continuously recruited by natural increase, adoption, and the gradual subsidence of the younger members of the nuclear derbfine into the body of the clan. The downward mobility of the remote collateral relatives of the chief was of paramount importance. It reinforced the belief in kinship of the clansmen and the chief. The feeling of kinship was further reinforced by the institution of fosterage, a practice common to pre-Feudal Scotland, Ireland, and Wales.[48] Under fosterage children were exchanged between families of equal status or the son, often the heir, of the chief or tacksman was given to one of the clan to be raised and educated. Fosterage served to form mutual alliances between families and clans, to ensure the loyalty of the people for their chief, strengthen the attachment of the chief for his followers, and bind the

members of the clan to each other.[49] Strong attachments were formed between the foster brothers. Often the foster brother later acted as the henchman of the future chief.[50]

The clansmen were given land as joint-tenants of the chief or as subtenants or cotters of the tacksmen and joint tenants. In return for the land, the subtenants owed their superior the duties of cain, a fixed payment in kind, conveth, a contribution of food for the maintainence of the chief and his retinue, feacht, an obligation to follow the chief in offensive war, and sluagad, an obligation to attend the chief for defense.[51] These burdens were shared by tribal Scotland and Ireland.[52] When a chief gave a farm to a tenant, whether for one or more years, it was customary to give the tenant a stick of wood and some straw.[53] This was immediately returned to the master. Both parties were then obliged to fulfil their respective conditions as if they had signed a lease or deed. There were additional duties on the land.[54] Upon the death of

ess to George I, Concerning
" in Burt, op. cit., Vol. II,

It is by no means insignificant that despite a large degree of 175X
Norse influence in political and economic life, there is only 602
a little vague evidence of a linguistic nature for Norse influence 614
on family life.[57] There are very few words pertaining to the 618
family which can be traced to a Norse derivation. In battle the clansmen stood by extended families, brothers and their sons fighting together. The importance of the derbfine as a social unit can be judged from the following statement: in an argument between two men, if one were to swear by the father of his adversary, it was a great indignity; but if one were to cast a reflection on the father and the grandfather of the other man, the next word would be accompanied by a blow.[58] He would have been named after his grandfather for the clanna used genealogical strings.

Summary. The clan was a composite organization. From the old tribal organization it took the derbfine, four generation extended family, the territorial tie of the group, and the mutual, reciprocal obligations of service, support, and defence. Under the Norse, collateral descent as a system of inheritance of the title and land of the tribe disappeared but the tribal principle of gavelkind, by which the land was divided among the members of the derbfine who in turn divided the land among their real and fictitious kinsmen, persisted. Scottish nonmanorial feudalism

absence or incapacity. The senior cadets also acted as tutors of the heir to the chiefship, and if the heir succeeded while a minor, as guardians. The cadets bore the surname of the clan and/or a territorial title, for example, MacLeod of Talisker or simply Talisker.

175* 602 614 618

The Gentry of the Clan. The next lower level in the hierarchy consisted of the daoin'-uaisle (literally the high people). The chief established his younger brothers, sons, and other near relatives, those within the derbfine, on the land. They held farms by what amounted to be leases for a term of lives. At first the leases were typically for three lifetimes, but by the seventeenth century they had been reduced to the individual's life plus a number of years to begin on the decease of the holder in favor of his son.[41] At the expiration of the lease, a nearer relative was commonly favored with the farm. The former holder either sought a military career abroad, in Holland or France, or extorted a living by gentle begging.[42] Some obtained land on wadsett, a mortgage contract under which the lender of money received possession of the land until the debt was repaid.[43] Most of his descendants passed into the body of the clan.

The gentry, also known as tacksmen (leaseholders), were

lowing the interment, the bereaved family provides the [273]
rners with a dram of whiskey. Does the minister take a [793]
m? I can only give the reader the answer I received after
funeral. One fellow said, "I guess nobody saw him take his
p, but if he didn't I'd be surprised." On the following day
e returns to normal. The equilibrium of interaction has
n restored.

There is another aspect to the prayer meetings. They 796
are no longer held in the Church of Scotland in Portree. 795
The ministers of the other sects say this is an indication 794
of the low degree of spiritual enlightenment among that 369
congregation. Further, Wednesday night is picture night in
the village. The newcomers taunt the devout with, "off to
the pictures?"

It is at these Wednesday night meetings that the people 554
get to know one another. They participate in the worship 57
through the eminent "Men," who in a society such as Skye 776
where almost everybody is related on one side of the family 794
or the other by some bond of consanguinity or affinity, are [602]
the "people" or "friends" of the worshippers. This custom of
offering extempore prayers not only augments the prestige of
the "elect" but it intensifies the unity of the group and
makes them secure in the knowledge that they belong. This
feeling of unity and the sense of belonging is further
strengthened in some churches by setting aside a day of
humiliation. Services are held during which the congregation [782]
as a group beseech God for forgiveness for the poor spiritual
condition of the world. In their minds the God of this world
is surely the Prince of Darkness.

But for the interaction of the members of the several 794
sects, the control of the "elect" would not be as strong as 795
it is. The elders of one kirk cannot exercise any direct 626
control over the adherents of another sect. Through what
agency could they express their judicial and authoritarian

Fatherless children are buried by either their paternal or maternal uncle. I have not forgotten the existence of women. The simple fact is, women play no part as mourners. Indeed, the rare woman who goes to the grave becomes the subject of lasting gossip.

Fundamentally, the system of kinship is patrilineal. Linguistically, the terms for relatives may be bilateral, and inheritance of possessions other than the name may be matters of small importance, but the patrilineal emphasis remains. The Sgiathanach lives in a man's world. I shall explore this male dominance further in the following chapter. At present, I want to briefly discuss two additional cliques.

Religious and Age-Grade Cliques. Like the members of any society, the Sgiathanach associates most frequently with those who share his interests and attitudes. It is natural, then, for his associates, other than his kinsmen, to be people who attend his church and people of his own age group. We need not explore the nature of these cliques at this time; but we should have some understanding of their function. The religious clique is primarily a mutual aid group. There is reason to believe that this particular group has lost much of its importance of late, with the coming of the welfare state. Many feel that the government pays people to look after the aged and infirm. As far as doing a favor for someone is concerned, few of the same kirk, other than close friends,

Avunculocal residence 601

One of his apprentices was his sister's son, who built another smithy not far away. "This was the center of gossip. People gathered there while he shoed horses that came from Barvas to Carloway."

A number of shops were established in Shawbost that sold clothing, cooking ware and groceries. At one time they numbered six altogether. These shops also ran the first buses between the village and Stornoway. Gradually these businesses disappeared because of competition with larger companies. Mobile grocery vans and butcher shops and bakers began coming in the late 50's, and gradually took over the trade in large parts of the island, undercutting the local businesses. Income from weaving had already weakened self-sufficiency derived from the intensive use of land and sea and also weakened the formerly heavy reliance on local ties and mutual aid. Today an army of town-dwelling entrepreneurs and employees constitute a major proportion of the traffic on the island roads. Grocers, fish dealers, bakers, sellers of soft drinks, garbage collectors, insurance salesmen, mobile banks, coal dealers and others extend goods and services from centralized sources to a market which has money to pay for them. The island's participation in this extensive market system is affected by its marginality to the

piuthar; that is, father, mother, brother, and sister. He calls his father's brothers bràthair athar and his father's sisters piuthar athar. His mother's brothers and sisters are bràthair màthar and piuthar màthar. Grandaprents, as I pointed out, are addressed by classificatory terms. Grandfather is seanair (old father), and grandmother, seanmhair (old mother).

Turning to the more remote relatives, we find that a nephew is mac bràthar or mac peathar. In other words, brother's son or sister's son. Similarly, a niece is nighean bràthar or nighean peathar. The extent to which the descriptive principle is carried is most clearly shown by the terms for cousins. Long ago, I was told, there were classificatory terms for cousins, but they have disappeared. Today when an individual speaks about these collateral relatives, he must employ an ascending order of circumlocution. The general term for first cousins is anns na h-oghaichean (in the state of being grandchildren). Specifically, a first cousin is clann an dà bhràthar (children of the two brothers), clann an dà pheathar (children of the two sisters), or clann na peathar 's a' bhràthar (children of the sister and brother). Second cousins can be referred to as anns na h-iar-oghaichean (in the state of being great-grandchildren), but again there are denotive terms: oghaichean an dà bhrathar, oghaichean an dà pheathar, and oghaichean na peathar 's a' bhràthar. For third cousins, we have noted that the general term is anns na dubh-oghaichean. Specifically, the terms for third cousins are: iar-oghaichean an dà bhràthar, iar-oghaichean an

procreation does not absolve the individuals from their obli- 602 513
gations to their "people."

Although the wake and the post-interment feast have been 593
given up under religious censure, and the ministers refuse to 764 178
consecrate burial, the method of burial is fundamentally the
same as it was before the Reformation. At the time of interment
the coffin is carried out of the house by the closest relatives.
Ideally, for a man this means his father walks in front of the 604
coffin, his oldest son (over fifteen) walks behind, and his
brothers and uncles (paternal) carry the body. For a married
woman the ideal is to have her husband walk in front, her
father behind, and her brothers and uncles carry. When a child 604
dies, his father walks in front; his oldest brother walks behind,
and the father's brothers for a boy and the mother's brothers
for a girl are the carriers. Outward mobility, as well as
infirmity and death, has had its influence. The nearest male
relative not only walks in front of his deceased kinsman but
also takes charge of the funeral. A few cases of who has filled
this function will indicate how the situation is handled when
the ideal cannot be fulfilled. For a man this role normally
passes first to his oldest son and then to his brother. I have 607
seen a grandson take charge, and at one very atypical funeral,
a brother-in-law. He was the nearest surviving male relative
who could be contacted in time.

Arrangements for the burial of a widow are made by her
son or brother. There was, however, one widow, a woman from
the Outer Isles, who was returned to her native island for burial

609

609 BEHAVIOR TOWARD NONRELATIVES--cultural definition of nonrelatives; relationships and associated behavior defined by absence of kinship ties; behavior toward strangers and aliens; etc. See also:

767 his family must maintain the payments. Many persons who have settled in cities on the British mainland or abroad are not concerned with retaining membership in the Association, but members of their family who remain within the village usually continue to pay their dues for them. Even if in death, the "exiles" eventually return to home and community.

764 423 Families buy cemetery plots for as many as six to eight persons. The deceased is buried in an area designated as belonging to his family. He is not buried alone but beside his parents and their unmarried siblings if he is unmarried, or with his spouse. "I wouldn't like the idea of being cremated. I want to be buried with my family." Even though a woman is buried beside her husband, her maiden name is placed on the coffin. Often neighbors have plots near each other.

A special part of the cemetery is reserved for 609 strangers. A "man from out" remains an outsider, even in death.

611

611 RULE OF DESCENT--unilinear rules (e.g., matrilineal, patrilineal); am descent (i.e., in each successive generation descent is traced through eit parent); bilateral descent (i.e., absence of unilinear emphasis); double ((i.e., concurrent matrilineal and patrilineal descent); anomalous rules (linked descent); special exceptions (e.g., ambil-anak or matrilineal des one generation in default of direct male heirs); degree of correspondence gence between the rule of descent and the recognition of kinship; evidenc former or recent transitions in the rule of descent; etc. See also:

121 of the township with the larger society, and examines
128 the effect of geographical and social marginality on
the boundedness of the township network. Chapter 6
discusses two important networks of social relations
within the township.

B. Township as Social Boundary System

632 The township constitutes a relatively firmly bounded
178 system, although its boundaries are weaker than formerly
621 when the township was relatively self-sufficient
[476] economically. Township members worked together in small
fishing crews, and families relied on each other for
help when members of the family were away from the island
"at the fishing."

621 Relatives were expected to give priority to helping
476 each other. According to one proverb, "A relative is
602 your best friend." First and second cousins were
[539] considered especially close, but knowledge of one's
[605] kinsmen extended to at least the fourth generation.

602 Ties of kinship became evident in ceremonies such as
576 funerals and weddings. One Gaelic proverb says, "You
585 know who your relatives are at weddings and funerals."
764 At weddings the onus was on the members of the bridal
[539] party to remember their relatives. "You have to sit
and calculate who is closely related, and all those

621 The first thing that is said when for some reason
513 a woman is left alone in the house is, "Who's going to
858 go and sleep with her?" Often a child will be sent from
a neighboring family, not always relatives, to stay with
621 her at night. As in the past, it is not uncommon for
592 a childless elderly couple or single person alone on a
888 croft to take in a young, homeless couple, to whom they
may or may not be related. The young couple cares for
the old person or persons, and inherits the croft when
they die.

602 "Keeping up the relation" is the process by which
476 relatives sustain interaction and expectations of mutual
aid even though their relatedness becomes more distant
605 with succeeding generations. "I've got cousins in Ness
that I stay with at the Communions. They're getting on
into the third generation now." A cousin is a cousin
even to the 42nd degree (Williams 1963: 142), as long
as there is reason to sustain the relationship. "I know
we're related, but I can't quite place it." "We're a
bit related. I think she was a MacPhail before she
married." "I don't quite know how we're related, but
my mother and his mother considered it a close relation-
ship, and he has kept it up."

621 Every villager has a vast amount of information
626 about other villagers and their families, which may be
582

601 dà peathar, and iar-ghaisheap na peathar 's a' phràthair.

Within the group which the Sgiathanach calls his "family," we find that husband is fear, and wife is bean. Their children are mac and nighean. Marriage, of course, extends the circle of relatives. Both members of the married pair refer to their spouse's "people" as athair-céile for father-in-law, màthair-céile for mother-in-law, bràthair-céile for brother-in-law, and piuthar-céile for sister-in-law. Céile means mate's, in these cases. This leaves us with two classificatory terms which ignore sex. A grandchild is ogha, and a son-in-law or daughter-in-law is cliarhain.[21]

601 Although this nomenclature is correlated with expected
602 patterns of ideal behavior, in reality, as I have said, the
178 system has broken down under the impact of economic forces.
511 With neo-local residence the township has come to be occupied
by what the Sgiathanach calls "friends" rather than "people."
Not uncommonly, brothers and sisters take up residence after
marriage not only in different townships but also in distant
605 neighborhoods. The sharing of work, then, mainly involves
582 cousins. Unlike Ireland,[22] there is no strong taboo against
476 marrying a cousin. Cousins marry "to keep the money in
the family," and remote cousins were apparently preferred

[21] Although Arensberg and Kimball look upon the Irish System as essentially similar to that of northern and western Europe and the United States, excepting minor variations (op. cit., p.97), I was struck by the dissimilarity of the kinship system of the Sgiathanach to that of the United States. The underlying principles are, of course, the same, but the ramifications set the two apart; see, e.g., Talcott Parsons, "The Kinship System of the Contemporary United States," American Anthropologist, Vol. XLV, No. 1 (Mar., 1943), pp.22-38; and David M. Schneider and George C. Homans, "Kinship Terminology and the American Kinship System," American Anthropologist, Vol. LVII, No. 6 (Dec., 1955), pp. 1194-1208.

[22] Arensberg and Kimball, op. cit., pp. 83-86.

605 spouses not too long ago.[23] Perhaps, more than any other
582
427 factor, it is the tendency of the aged parents to hold on
593 to the croft until they die that is strangling the kinship
602
system. Still the extended family is a strong mutual aid
576
602 group. Anyone with a recognized degree of kinship is
574 entitled to hospitality. When the exiles return to visit
the Misty Isle, they always try to make the rounds of their
kinsmen. This is more than a question of not becoming an
economic burden on a favorite aunt; they do not want to
be guilty of slighting anyone. There is reciprocity here.
In return for food and shelter, the visitor freely gives
his kinsman all the news he has gathered about the activities
of their distant kin. He acts like a roving reporter, cementing
the solidarity of an otherwise fragmented group.

602 The expression given to the degree of consanguinity and
769 affinity is revealed most completely at a funeral. As one
of the two occasions on which the extended family comes to-
gether, the other being a wedding, it reveals a host of sig-
nificant traits. The first thing I noticed was that although
the inavailability of land and the illegality of subdivision
enforces neo-local post marital residence, burial is ideally
patrilocal. On more than one occasion the steamer came in at
night with a body which had been shipped home from Glasgow or
602 Edinburgh for interment in the deceased's neighborhood. This
593 also means that the husband and wife remain integral members
of their respective families. The founding of a family of

piuthar; that is, father, mother, brother, and sister. He calls his father's brothers bràthair athar and his father's sisters piuthar athar. His mother's brothers and sisters are bràthair màthar and piuthar màthar. Grandaprents, as I pointed out, are addressed by classificatory terms. Grandfather is seanair (old father), and grandmother, seanmhair (old mother).

Turning to the more remote relatives, we find that a nephew is mac bràthar or mac peathar. In other words, brother's son or sister's son. Similarly, a niece is nighean bràthar or nighean peathar. The extent to which the descriptive principle is carried is most clearly shown by the terms for cousins. Long ago, I was told, there were classificatory terms for cousins, but they have disappeared. Today when an individual speaks about these collateral relatives, he must employ an ascending order of circumlocution. The general term for first cousins is anns na h-oghaichean (in the state of being grandchildren). Specifically, a first cousin is clann an dà bhràthar (children of the two brothers), clann an dà pheathar (children of the two sisters), or clann na peathar 's a' bhràthar (children of the sister and brother). Second cousins can be referred to as anns na h-iar-oghaichean (in the state of being great-grandchildren), but again there are denotive terms: oghaichean an dà bhrathar, oghaichean an dà pheathar, and oghaichean na peathar 's a' bhràthar. For third cousins, we have noted that the general term is anns na dubh-oghaichean. Specifically, the terms for third cousins are: iar-oghaichean an dà bhràthar, iar-oghaichean an

175 585 womanhood a prey to prostitution. The licence of a chief among young women was preferable to this; but evils were inherent in the fact of lordship.

(c) TWO ISLAND BARDS: MARY MACLEOD AND THE BLIND HARPER

175 • 613 621 While in Lewis the continuity of clanship was sorely shaken by the fall of the chiefs, the Torquil-MacLeods, in Harris it was maintained in the family of the Norman-MacLeods of Dunvegan in Skye. The family of Dunvegan is famed for chivalry and gentleness, not only in the songs of the past but in the speech of Skyemen to the present day. Harris did not suffer the bloodshed endured in Lewis from the death of Torquil until after the accession of MacKenzie in 1611; and Harris was not involved, like Lewis, in the troubles of 1715. MacLeod of Dunvegan retained Harris until the end of the eighteenth century, when it was purchased by a cadet of the family who had made his fortune in the East; and it only passed out of MacLeod hands half a century later. Hence it is that while in Lewis there is still talk of the 'give and take' between later laird and people, [533] in Harris there is more. In "the hereditary Hall of MacLeod" of Dunvegan, two Island bards gave birth to immortal song. Together, the tales of Lewis and the songs of Harris and Skye give us an authentic record of clanship in fact and feeling, linked with community today.

[628] In spite of the break in continuity, ease and warmth of feeling could spring up between a MacKenzie of Seaforth and the Lewismen, though Seaforth was a peer of the realm, and of a mainland name, not a MacLeod by direct descent. Playful rhyming, chaffing contests between titled laird and small tenant, are recorded by A. Carmichael and W. C.

241 century as an attempt to reform the previous system
427 of run-rig; but it is usually identified with the
175 definition given it by the Crofters Holdings (Scotland)
671 Act of 1886, as a form of land tenure to which many protections accrue. The Act defined crofts and crofting areas in Scotland, and assured the crofter of security of tenure, hereditary succession and fair rent. The legislature which followed on the heels of this act, which is sometimes referred to as the Magna Carta of the Highlands (Day 1918: 190), is mountainous. The flow stems from two perhaps incompatible aims: the desire to provide security for the landholder, and to enhance agricultural productivity. The difficulty of developing the land as an efficient agricultural unit has always existed in an area characterized by a wet climate, unproductive soil, and smallness of holdings in heavily populated areas, and was one of the factors that prompted agricultural reform in the 18th century.

FIRE AND SWORD

Recorded history begins with the Icelandic sagas. In 1098 Magnus 175*
Bareleg plundered Lewis and devastated the island with both fire and sword. A skald named Bjorr Cripplehand, who accompanied Magnus on the expedition, reported that 'Fire played in the fig-trees of Liodhus; it mounted up to heaven. Far and wide the people were driven to flight. The fire gushed out of the houses.' The *Irish Annals* tell us that Skye was pillaged by the Norse in 794, and no doubt Lewis did not escape their attentions, then or earlier. Towards the end of the ninth century a stream of Norse 175*
folk left their homes to start the work of colonisation. Iceland, 648
the Faroes, the Orkneys, the Shetlands and the Hebrides soon 167
became thriving communities in which the earlier native population were as thralls, serving ruthless masters.

By about AD 1000, the island, with others as far south as Man, was in the sure and steady grip of men of Scandinavian or semi-Scandinavian origin, who were destined to become premier clans such as Clan Donald. It was not until the Battle of Largs in 1263 that this grip was loosened. In 1266 the Western Isles were ceded by Norway to Scotland, following which event the Gaelic people and their former Norse masters were soon to be merged in the marriage bed. As for the common language, it was [197]
the Celtic elements which took over after, one supposes, some generations of suppression. The result in any case was a highly individual people, strong in character, and resilient enough to take the rough times with the smooth.

In the thirteenth century, Harris was in the possession of the 175*
MacLeods of Harris, and Lewis belonged to three powerful clans: 614 ●
the Morisons in Ness, the MacAulays in Uig, and the MacLeods [551]
of Lewis in the remainder of the island. Other smaller clans were the MacIvers, the MacRaes, and the Nicolsons. The Harris MacLeods were allied by kinship to the Lewis MacLeods, though the relationship was to become quite distant—and their destiny more fortunate. History from this time is one of disputes, internecine warfare, murders, and similar crises deemed to be of the highest importance by the clans, both inside the island and between the islanders and strangers. An enormous amount of blood was spilled

HISTORY

*175 [614] in the following two centuries as clan rivalry, with its claims and counter-claims for territorial and other rights, was predominant. Generally, what could not be taken by intermarriage was snatched by fiercer means.

Though these times generated a tradition of extraordinary richness, one must wonder what would have been the result had more attention been spared for the development of the island. Progress was retarded. The lawlessness was not worse than that endemic on much of the Scottish and English mainland or in Europe, but the island was of course more cut off from the gradual infiltration of civilising agencies and influences; at some times in its history it was found to be more than a century behind even the rest of Scotland.

MOVEMENTS TOWARD CIVILISATION

*175 657 614 And what was the Scots Government in Edinburgh doing about the Western Isles? In the Middle Ages, the answer is very little. It had enough troubles of its own without endeavouring to police the clan warfare in that remote part of the kingdom; in any case the islands of the west were difficult to get to and probably best left alone. This attitude did not hold indefinitely. Once the semblance of peaceful conditions was established throughout the Scottish mainland, attention was duly focused further afield. In 1506 Stornoway Castle was beseiged and captured by the Earl of Huntly—the first time cannon and gunpowder were used in the Western Isles, and the first of a number of punitive expeditions arranged to bring the unruly clans to heel.

*175 657 614 643 One of the leaders of disorder at this time was Roderic MacLeod of Lewis, and it was to parley with him that no less a person than James V decided to visit the island. In 1540 James, with devastating swiftness, determined to quell these fighting chiefs once and for all, arrived to examine conditions on the spot. Titles to land were closely looked at and the equivalent of our 'small print' read carefully. All the chiefs who owned anything in the islands were forced to accompany the King on his tour of inspection. No doubt this close contact resulted in James becoming as fluent in the Gaelic language as his father had been in his time.

MOVEMENTS TOWARDS CIVILISATION

For Gaelic was still spoken in most parts of Scotland, and it was the language which the chiefs themselves understood to the last fine shade. James's visit was followed by a period of unusual calm, ensured by the detention of hostages; in Lewis, the brew of trouble had been turned down to a simmer. 175* 657 614 643

After the death of the chief of the Lewis MacLeods, Roderic, however, rival dynastic claims turned up the heat again. Newcomers appeared on the scene: the MacKenzies of Kintail. Carefully they manipulated the events of history, indeed twisted them, until with the Crown on their side they had established beyond doubt that they were legally entitled to Lewis. In many ways, Lewis was fortunate in its new proprietor, Kenneth MacKenzie, Lord Kintail. Both he and his successor, Colin, the first Earl of Seaforth, were enlightened men, of different calibre from those they had displaced. They were in close contact with the immediate outside world, the emerging Scotland; and they were familiar with the amenities which that world offered. They were also aware of the needs of a community little removed from the early phases of cultural progress. In particular Seaforth, a man of ability and foresight, recognised, as did others before him, that the prosperity of the island had to be based on fish. He was also aware of the value of strong connections with Church and education. The Lewis historian, W. C. MacKenzie, writes: 175* (614)

> At the end of the seventeenth century, the picture we have of Lewis is that of a people pursuing their avocations in peace, but not in plenty. The Seaforths had been extravagant, and the people had to pay for their extravagances; they were politicians, and the people had to pay for their politics. Yet, it is clear that, besides establishing orderly Government in the island, they had done a good deal to rescue the people from the slough of ignorance and incivility in which they found themselves immersed. But in the sphere of economics their policy apparently was of little service to the community.

Under the Seaforths, Lewis became involved in external affairs. During the times of the Covenanting troubles, it sent a contingent to the Battle of Auldearn, where the Covenanters were defeated by Montrose. At the Battle of Worcester, one of the two leaders of the thousand MacLeods taking part in that 'stiff fight' was 175* 648

CHAPTER IV

THE EVOLUTION OF ECONOMY AND SOCIETY IN THE ISLAND ENVIRONMENT

829 FROM the first approach we saw that while the 'Outer' Hebrides may seem to strangers a distant *Ultima Thule*, the Islesmen may regard their home as lying at the core of our country and its life: of ancient ways, be they foolish or wise; and of deeply rooted faiths, be they superstition or truth. The purpose in this Part is to view the essential phases in the occupation of the land and coasts, and in the development of the people's means of subsistence, 'work ways', society and spiritual life. We shall find enduring traits, important at the present time, and which affect the future. Distance over sea and moor is still significant, as every Islesman knows; and position affected the peopling of the Island, its races and their long-continued customs. It must be asked whether sites first chosen upon the Island are still significant with regard to land-use and to sea-fishing. Did the types of class and community, the bonds of co-operation and kinship formed, correspond to needs we can still understand? Can we enter into the life of our forebears in black house and township, the thought-world of mingled fact, myth and religion, in which they carried on their work on land and sea?

Before the Scots, 1946.

144 little sign of Norse blood, can hold their own as fishers with
172 the men of Ness.

174 Third, it is still commonly stated not only that the "great majority" under the clan system were "without
174 any legal status", but that their tenure "depended on the
[613] good will of the chief or tacksman".[1]

As the last lawbooks of the Gael were taken from Lewis
174 by its first mainland lord in 1611—never to be heard of
675 again—it may well be that, as recognised in the Northern Isles, so in the Western Isles, peasant tenure was perma-
[175] nent according to regional law. In practice, mere 'good-will' is so uncertain a quantity that if this statement had been true, it is hardly credible that communities could have remained so stably rooted as their race-types show them to be. Evictions of groups or individuals at the whim of chief or tacksman would have broken down their
[178] homogeneity of race. In the Lowlands, where eviction had become so frequent by 1500 and insecurity for the
[184] mass of the country people has prevailed ever since, such localisations of race would be unthinkable and do not exist except in certain fishing communities who possess a pride, almost a caste-code, of their own: the Newhaven fishers within Edinburgh remain apart, with a dialect and a dress of their own. Great stability of tenure—in fact as in customary claim—is shown by the racial homogeneity of Gaelic communities.

174 Lastly, it is common to state that the nobility and gentry of a countryside constitute its 'old' or 'original' families. It is true that some land-owning families seem 'old' compared to recent purchasers—successively the merchants and lawyers, venturers and planters of the

[113] [1] From a representative report on the Highlands and Islands, that of the Scottish Economic Committee, 1938 (Historical Preface, p. 9).

But the last MacLeods of Lewis, torn by family dissensions, fell fighting before the power of King James VI (and I), who backed the 'capitalist' fishery enterprise of 'the Fife Adventurers'. Although these were routed by the Islanders, a Highland lord and chief, MacKenzie of Kintail, received Lewis from the Crown in 1611, taking his title from Loch Seaforth, near which he had built his Lewis hunting-lodge. Except for a period of forfeiture after 1715, the Seaforth family held the Island until its purchase by a wealthy and beneficent tea merchant, Matheson, in 1844. From Seaforth's tenure and the Papers of the Forfeited Estates are left records of ancient life and of the introduction of changes, temporal and spiritual. These are reviewed in the next five chapters. Chapter X brings the Island story to the year 1953, and its prospects.

CHAPTER V

FAMILY, FARM GROUP AND TOWNSHIP: THE CONTINUING COMMUNITY AND ITS SOCIAL ECONOMY TO 1815

INTRODUCTION (TO CHAPTERS V AND VI)

THE family, the 'conjoint' or 'farm group' of four or five families, and the larger group clustered in a glen or along a shoreland, are, in ascending order, the three concentric units whose mutual relationships we must visualise to understand the past. Enduring elements of life in family and neighbourhood today, with their own special qualities and limitations, can only be understood in terms of past needs and the relationships they evoked.

Having seen their relationships in family, team and township, we can next turn to the reciprocal relations of the people to their chief or lord, whose position dominates European, indeed world, history and prehistory. Here our concern must be the meaning of 'clanship' to the chiefs, the joint farm-groups (or 'small tenantry') and, latterly, the tacksmen placed above them.

We may find, throughout this study, that features and functions which at first sight seem peculiar to the Island are really local variants, more perfectly crystallised, of forms which we know existed at earlier periods in Scotland and in much of northern and western Britain. In the Isles,

much of Britain and Europe until about 1700. A n
parallel may be found in Asiatic lands with the free
of famines alternating with periods of recovery or, in
the long-drawn misery of chronic under-nutritio
endemic disease. In modern Europe, only intern
or civil war can now bring such extreme widespread
And as peace brings partial healing, so in the Islan
when good seasons returned after famines, the life
family renewed itself.[1]

The narrow margin of survival even in good s
the risks of the bread-winner's death and of his fa
destitution, and the need of co-operation in so many
made the family too small, weak and precarious a
stand alone. Even with relatively little divisio
specialisation) of labour, and in spite of its apparen
sufficiency, the family had perforce to link itself with
circles of community life.

(B) JOINT LABOUR BY SMALL TEAMS: T
EVIDENCE OF TENURE IN 1715-26

Romance is hidden among the rent-rolls of the Se
estates, all of which were forfeited when the Earl r
'King James VIII' in 1715. For of the rents wi
from the government until 1720, on the mainland a
the loyal clansmen paid a considerable portion to
exiled chief, styled 'Marquis' by 'King James'. B

[1] The 'ups and downs' of a peasantry living on the margin of
ence and subject to severe disease can be studied in India, 18
where the 'net' or mean change has to be correlated with the 'vari
This wide problem was reviewed in a series of papers to 1948; "Th
and Psychological Significance of Variability in Regional Cha
Population", with examples taken from Indian villages. (A.
Human Relations, Vol. 1, 2, 1947–48; cf. *Geog. Rev.* 1942 and 194
Geog. Journal, 3, vol. 98, 1941).

175 241 427 436 might be thought) in cured fish. Here is a sample Deposition from Borve (W. Lewis), a township then composed of five hamlet-farms, or 'pennylands', with their share of outrun, peats and fishing grounds over the whole and known as Five-Penny Borve.

> Donald McGillimichaell, William McHomas, Gillichallum McCoilog, and John McConnell in five penny land of Borrow and Parish of Cladach afor[d] MAKE OATH severally that neither of them has any Tack of their possessions, But that each of them pay yearly to ye above Mr. Zachary McAuly for behoof of ye Countes (of Seaforth) for[d] Nyne Pounds Scots (*i.e.* 15/- sterling), Two Bolls one Lipie meall, Fifteen pound weight of Butter, and three-fourths of a mutton. Depone they and each of them are someqt in arrear but know not the Particullars, and this is ye truth as they and each of them shall answer to God, and depone they can't write.
>
> (Signed) DAVID BETHUNE
> (Sheriff Substitute of Ross).

175 241 427 451 [642] [643] The only point on which these good fellows must have had to face qualms in 'answering to God' was their lapse of memory as to 'Particullars of arrears'! None of the 222 small tenants could remember this! Although the Chamberlain or Factor, Zachary MacAulay, denied it, he may have exhorted or compelled payment of rent in order to forward it to the exiled 'Marquis'. Mainland rents were actually despatched to France from Leith in broad daylight under an armed guard of clansmen! At the same time, neither MacAulay nor the joint tenants were of Clan Kenneth, the MacKenzies. MacAulay himself was a man of high character—and a poet too—and not one to collect rents in order to embezzle them. His affirmation has the ring of truth, with little alloy. To the Government Commissioners he wrote that what made it impossible for Lewis peasant-fishers to have paid rent in full during civil war,

175 241 427 451 and still more to pay arrears, was "the rugged Hag, Poverty, that would resist both King and Government". We may guess that MacAulay passed a hint to the tenantry that (in a good Gaelic idiom) they had better 'disremember' details of arrears: and this they did.

175 551 613 [178] [241] [226] Of the four names on the deposition quoted, one or two may have been surnames, others the patronymics of kinsmen. As is still the custom, clansmen knew one another by names of many kinds. Stature or colour was used to distinguish a big John from a little one, a fair from a dark, or a pale from a swarthy; occupations such as smith or caird (artificer, not necessarily travelling tinker as now) were used, and also mere nicknames. Of the eighty-one crofters or fisher-burghers in Stornoway, fourteen were MacKenzies; and other mainland surnames, such as Fraser and Gunn, Matheson and MacLennan, also showed their descent from the immigrants brought in when MacKenzie of Kintail founded the burgh to encourage fisheries after 1611. Each held a single holding, usually rented at two shillings sterling.

175 241 427 631 To conclude, rentals about 1715 show (1) the characteristic equalitarian grouping of small peasants as fellow-workers in the hamlet-farms still held directly from the superior, Seaforth; (2) the eighty-one small burghers of Stornoway; and (3) tacksmen, responsible for the larger part of the Island rent, but under whom we know that the labouring peasantry, though without the local independence of the others, also continued to dwell and to work together. The tacksmen were to pass away, as many of them had originally come, at the desire of a mainland lord, and the lord, in his turn, was to leave; but the small peasantry of immemorial stock still hold and work their land.

second cousin. The striking thing to realize here is that nearest surviving relative always knows his obligation and eady to fulfill it, without question. Fatherless children buried by either their paternal or maternal uncle. I have forgotten the existence of women. The simple fact is, n play no part as mourners. Indeed, the rare woman who goes he grave becomes the subject of lasting gossip.

Fundamentally, the system of kinship is patrilineal. uistically, the terms for relatives may be bilateral, and ritance of possessions other than the name may be matters mall importance, but the patrilineal emphasis remains. Sgiathanach lives in a man's world. I shall explore this dominance further in the following chapter. At present, nt to briefly discuss two additional cliques.

gious and Age-Grade Cliques. Like the members of any ety, the Sgiathanach associates most frequently with those share his interests and attitudes. It is natural, then, his associates, other than his kinsmen, to be people who nd his church and people of his own age group. We need explore the nature of these cliques at this time; but hould have some understanding of their function. The gious clique is primarily a mutual aid group. There is on to believe that this particular group has lost much ts importance of late, with the coming of the welfare e. Many feel that the government pays people to look r the aged and infirm. As far as doing a favor for someone oncerned, few of the same kirk, other than close friends,

613

613 LINEAGES--presence of unilinear kin groups consisting of persons who can trace actual descent from a common ancestor; affiliation (e.g., matrilineal, patrilineal); regulation of marriage (e.g., exogamy, agamy, endogamy); distinguishing characteristics (e.g., names, insignia, totemism, food taboos); traditions; organization; headship and succession; prerogatives and obligations of members (e.g., mutual aid, blood vengeance); solidarity and group responsibility; common property; relationship to extended families and clans; unilinear kin groups intermediate between lineages and sibs; relations between lineages (e.g., subsibs); etc. See also:

aborigines in India—lovable people when unspoiled by tyranny, caste or industrial exploitation, as I can testify.[1] Yet Gomme, like many since, leaves the reader with an impression which must be re-examined: that the Islesfolk are the representatives of a backward race who have clung to predominantly superstitious, pre-Christian customs and beliefs. As a people, the Gael received and welcomed Christianity in one of its earliest historic forms, and maintained its spirit through poverty and famine. To this inheritance we shall turn in Chapter VII, when the rhythm of life and its changes have been followed out in the following chapters.

To begin with, the briefest outline of historic sequence is all that can be recapitulated, the Island annals having been recorded in the excellent Brand Report (1902), and by W. C. Mackenzie (1903 to 1937). Politically and strategically, the age of clanship may be thought of as a period of struggle between the Islands and the Mainland to the south or east. The long-drawn conflict of Clan Campbell of Argyll with Clan Donald—whose Chief was the Lord of the Isles of which Islay and Skye were the two dominant, western keys, and Lewis and Harris the northern outposts—offers a parallel to the conflict of MacKenzie of Kintail with the last MacLeods of Lewis. Obscurity veils the early origins of the Island clans, with their mingled Norse and Gaelic lineage, but chronicles are more reliable by the time of forfeiture of the lordship of the Isles to the Crown in 1493. The MacLeods of Dunvegan, chiefs in north-west Skye, continued to hold Harris until late in the eighteenth century, and they maintained an indirect connection until the nineteenth.

For a number of years it had been the practice for a considerable proportion of the older schoolboys during their attendance at the Secondary School to put in their training with the local body of Territorials—the Ross Mountain Battery. At the School Prize-giving of 1914, these boys attended in their uniform to be ready to go off the same evening by steamer en route for the annual training camp. Before the School re-opened, the Territorial Force was mobilised, and for some of these lads there intervened four long years of toil, of fighting, and of sickness overseas, before they ever saw their homes again.

Later (1938), the unit became the 203rd (Ross) Battery of the 51st (West Highland) Anti-tank Regiment. It was whilst fighting as an anti-tank battery that, with other units of the 51st Division, the men were taken prisoner at St Valery in 1940. Today, after more changes, the battery is the oldest in 540 LAA Regt RA, TA (the Lovat Scouts). In 1960 the Ross Battery received the Freedom of the Burgh of Stornoway in recognition of a century of voluntary service to the community and the nation.

LAND USE AND CROFTING

The history of land use and the crofting system in the Highlands and Islands (see Chapter 5) is full of difficulties. In the older days of the clan system, before the rot set in, though the clan members belonged to the chief, they also belonged to the land and the land to them. In such a climate, the agricultural system, for it was such then, was in a reasonably healthy state; the land was worked to the full. Good land was available for the support of the clan, and as often as not in good years there was ample produce, crops, and livestock, to send south to well-paying markets. That fertile lands abounded is indicated by the reports of visitors in various centuries. But times changed. The increase in population after the breakdown of the clan system by statutory legislation, and the policy of population placement carried out with a rigorous enthusiasm, planted seeds of discontent—in particular a hunger for land. The land was in any case becoming ever more inadequate to support those already on it.

The story of the agrarian troubles in the Highlands area is well

173 his near kin. Again, much as in the medieval *gestes* of
62 France, fosterage of an heir by a clanswoman formed the
• 614 closest possible tie to at least one family of the people
829 from ancient to recent times. For it linked the heir by
[171] sympathy—though not by equal obligation—to elders
and playmates in childhood and his contemporaries in later
life.

565 To re-state this 'contradiction' of equality and privi-
lege, we have thus a hierarchy of 'class' imposed upon
a 'classless' society. For the joint farms and the township
were essentially classless. The two classes, the lord and
the people, were primarily opposed, war having placed the
conqueror above those who fed him. This state of things
was not active 'class-war', for the armistice could endure
indefinitely by means of the bargain made between the
classes for some exchange of services; none the less, it
was built upon class conquest.

175 That all should ultimately claim the lineage of their
565 chief was a remarkable solution to the hereditary opposition
614 of class. A man who knew the Islanders well, John Lane
Buchanan (1793), noted how in conditions of the utmost
622 poverty the poorest addressed each other as 'lady and
[576] gentleman', *bean-uasal* and *duine-uasal*, a courtesy not lost
today. And every clansman had a right to shake the hand
[577] of his chief, as Edmund Burt observed in his vivid *Letters from the North* (written after 1721). Indeed the sense
of mutual obligation implicit in Gaelic society is well
illustrated by the homely word *coir*, usually translated
'right'; it is equally used for right's correlative, duty—as
when a Scots or Irish crofter may say "You've a right (a
duty) to help your mother"—and for a 'right' (privilege)
to shake the chief's hand. An English equivalent would
be duty-privilege, or duty-right. Similarly, the same

175 words are used for neighbourly help among crofters and
565 • 614 for services to the chief.[1]
622

Full freedom of choice in marriage prevailed among
the people, who honoured marriage and enjoined contin-
175 ence; but the position of the chief placed him apart from
582 the rest of the community. Now, the more equalitarian
the community, the more free are a couple to choose one
another on grounds of mutual affection, passion and
respect; the parents, too, are more likely to encourage or
support a suitor for their child because of character and
virility, rather than means.

175 The lads or glen. But in manhood, while a labouring lad
565 sought a wife from the girl playmates of his childhood and
582 his fellow-workers at the peats, at the harvest, or in the
shielings, a chief's choice was confined to his own class.
In pre-feudal clanship, tanistry, *i.e.* the choice of a chief
among the higher kin, gave a wider choice for marriage
near home than feudal primogeniture, irrespective of the
wishes of the chief's kin except in extreme cases of unfit-
ness. In Scotland, tanistry prevailed even in the royal
line until the eleventh century. But with the dominance
of primogeniture, the young chief chose a bride outside
his own community for reasons other than those of human
feeling, honoured by Gaelic lyrical and religious tradition
and even by the Church.

As a result, the chieftain's son was granted a licence
forbidden to the rest, a temptation to maidens and a bad

[192] [1] *Cuid* (cognate with quote) means a portion, lot or share, or what is one's
[476] own (*c.f., gen. cuidsh*); and the associated verb (*cuidigh*) means not simply
to share but actively to help. The apportioned lodging given to the chief
and his 'suit' of 'lads' was the 'cuidreachd'—*cuid-sdhoiche*; while the
famous motto of the Seaforth Highlanders is Help the King!—*Cuidich an Righ!*

175 Mackenzie. For all that, in 1900 a crofter said: "We called
615 the old proprietor Seaforth, but I believe his right name
621 was the Prince of Welsh". To him the Earls were royal!
[829] Freedom of intercourse is embodied in the language
to this day. With 'a stranger', a little spoken Gaelic
lessens 'strangeness' and quickens intimacy, because
197 Gaelic conveys essential human relationships as English
565 rarely can—even the English of the 'democratic' Low-
576 lands. For instance, a well-dressed stranger, though
young, is usually addressed in English as 'sir' by a senior
crofter, and, just as in the South, without the expectation
of 'sir' or 'ma'am' in return. In English, that is, respect
is given to class. In Gaelic, age receives respect: it is the
stranger, if the younger, who adopts the respectful 'you'
(the second person plural, *nibh*), while the crofter, if the
older, uses the friendly singular, 'thou' (*thu*). If they
are of equal age, and neither is elderly, 'thou' would be
[562] used by both. Similarly, respect is given to womanhood;
and an older woman who would say 'Sir' in English will
• 614 say 'My dear' in Gaelic.[1]

It is not only by daily contacts that we may understand
the relationship of people to chief, but by the height of
feeling it may attain, and by the beauty of its expression.
[175] Among the finest of the later songs of praise to Gaelic
[533] clanship and its chiefs are those composed by two Island
bards, a woman of Harris and a man of the Lews. Mary
MacLeod, *Mairi Nighean Alasdair Ruaidh*, was a kinswoman
[123] of the MacLeods of Dunvegan and Harris, and a beloved

[1] Calling on the sub-postmistress in a Highland place where I was
known to be a friend of the laird, I was addressed as "Sir". But hardly
had we passed to Gaelic when this woman, my elder and a person of culture,
laughingly used an expression then strange to me. Halted, and suddenly
shy at being forced to translate, she said at last, "When thou wast a *laoigh*
[just a boy] I *smacht* like the *crop*!" But rightly, she would have been
slightly shocked had I said 'thou' to her.

175 nurse in the family. Born about 1615 in Rodel (south-east
533 Harris), she composed her last elegy (to Sir Norman
• [614] MacLeod of Island Berneray, Harris) in 1705; she may
even have composed her last great song (on the birth of
the nineteenth chief) a year later.[1] Towards the end of
the century (between 1664 and 1693), Mary's younger
contemporary, Rory Morison was bard at Dunvegan, being
known as the Blind Harper, *An Clarsair Dall*. A Lewis-
man, Rory could not have found adequate patronage as a
bard in that Island, the chiefs of Lewis having passed
away. Morison is stated to have been a descendant of
the Gaelic judges or *brieves* of Ness and the son of a
minister, and he was to have entered the Church along
with two brothers, later ministers. But smallpox blinded
him, and he turned to oral, not to written 'literature',
perhaps to our ultimate gain.[2]

Here then were two bards, man and woman, whose
fame is growing, rather than waning, in our own day.
While Mary was illiterate, however rich in lore, Rory, with
his clerical home and family tradition of Gaelic jurisprud-
ence, must have begun to read Latin and English, perhaps
Greek, and also Gaelic, though not reaching Hebrew (as
his brothers would) before he was struck blind. Mary, so
far as is known, was the first to compose what may be called
'court' song in simple words and in the 'strophic' verse-
form of rhythm and assonance enjoyed by all Gaels, Scots
and Irish, since her time. Lacking the learning of the
dying school of classical bards, Mary is more personal
[614] than they, "a lyrist not less than panegyrist"; and she is
more spontaneous. The same seems true of Rory. Yet
[622] the themes of the classical bards were renewed by these
[113]

[1] James Carmichael Watson, *Gaelic Songs of Mary MacLeod*, 1934.
[2] John Mackenzie, *Sar Obair: Beauties of Gaelic Poetry*, 1877.

175 two singers, as in the portrayal of a chief, "blue-eyed and
533 with clustering, golden locks . . . and brown, ruddy
• 614 cheeked"; in descriptions of "his wisdom, prowess and
622 justice" or of his traits—his "joyous, fresh, and shame-
fast cheek", and as a friend to the poor seeking justice,
and to men of learning, musicians and bards. In the halls
of chiefs where ancient joys and traditions were main-
tained, the ideal of chiefship was essentially that of man-
hood. Nor is the chief's lady forgotten either by Mary
or by older bards, though womanhood is a theme rather
for lyrics and for sacred song.

Even at Dunvegan the stream of clan life was once
interrupted in the lifetime of these two bards, as the
Clarsair told in his satire on the anglicised seventeenth
chief (1693–99), and as Mary hinted in her haunting
'Croon' or *Cronan*. Happily, the stream was renewed
[173] by this chief's successor. Tradition and song show that
such renewal was primarily due to the strength of com-
munal life among the 'people' which called out leadership
from the chiefs, in justice, in war, and in the encouragement
of the oral arts. High conduct from the chiefs was invoked
[577] by the expectations of their people. More important still,
it was the warmth of feeling among the people as a group,
and their ties to one another, which lit their personal loyalty
to a chief and called forth his loyal leadership in return.[1]

[1] Gaelic loyalty was burned away in the Jacobite Risings, but as the last
Rising left the Island relatively unscathed, one may simply refer to two
works: Audrey Cunningham's *The Loyal Clans*, 1932; and J. L. Campbell's
Highland Songs of the Forty-five, 1933 (Gaelic and translation). The first
work analyses the need for a personal relationship to Scottish kingship, felt
so keenly by the clansmen. The second gives authentic evidence of the
spirit of loyalty, in the sense and a tune of the rhythm, with several of
the airs, are available for the English reader.)

I know of no explicit statement of the conclusion given above, for lack
of the sociological approach attempted here; but it is surely implicit in
the thought of many a Gael.

(9) TACKSMEN AND SUBTENANTRY, FACTOR AND LORD: 1611–1800

175 We saw that in the Rent-roll of Lewis in 1718 the first
42 sixty-four entries, signed personally, recorded comparatively large holdings (tacks), the annual rentals of which were
• 614 from £3 16 8 to over £10, the occupant of one (or more)
621 of which would be styled Tacksman or 'Man of the Farm-
town' (*Fear Baile*). While one or two tacks were shared,
a few tacksmen may have held more than one tack—though
one cannot be sure, owing to the recurrence of the same
[551] Christian names in each clan. It is striking that half the
tacks—though mostly small ones—were held by men of
undoubted mainland names, of which there were twenty-
two MacKenzies, four MacLennans and three Mathesons.
[166] These were doubtless the descendants of gentlemen from
the mainland who in 1611 had helped to win and hold the
[551] Island for MacKenzie of Kintail, later Lord Seaforth. Of
native Lewis names the principal are MacAulay, Morison
and perhaps MacIver.[1] Only three small tacks were held
by MacLeods, who may have been of Island stock. Lochs
and Eye on the east coast had largely been granted in tack
to the new-comers; on the south-west and west coast
MacAulays and MacIvers held much of Uig and a few
farms in Cladach; but more of Cladach and most of Ness
(in the north) were still held by joint tenants. Stornoway
was held by burghers, of whom perhaps two-thirds bore
mainland names. The peasantry remained as unnamed
subtenants on these holdings, of which the total rents show
[114]

[1] The writers of the Brand Report (1902) assumed that MacIver is a
native name. This would seem to be borne out by its frequency as a sur-
name today, in contrast to MacKenzie, Matheson or MacLennan; though
W. C. Mackenzie (1919, p. 98) thought the MacIver tacksmen arrived with
Seaforth.

175 they were composed of at least one to four or five hamlet-
42 farms. The tacksmen also had cottars for service.
• 614 In Lewis a special reason, the accession of Sea-
621 forth, had led to the granting of many tacks to his own
clansmen and to natives. Elsewhere in the Highlands the
175 procedure is noteworthy during the sixteenth, seventeenth
427 and eighteenth centuries, for the collection of rents from
614 the peasantry by means of large tenants had financial
184 advantages for the greater landlords (I. F. Grant, 1930).
The tacksman's continuation as tenant depended on his
[166] paying regularly; for the lease was not a hereditary grant.
A tack could also provide for a lord's younger sons or
[565] immediate relations, such as formed the gentry of the clan.
Along with smaller lairds, these furnished the cadres of
officers who led the clan regiments down to the 'Forty-
five, and later the Highland Regiments of the line and
the Fencibles down to Waterloo. Like MacKenzie, other
great chiefs such as Argyle or Breadalbane leased tacks
when they acquired the status of peers and took possession of
fresh lands with Royal support, after vain resistance from
native chiefs and their followers. In Lewis, the fiscal
status of tacksmen was applied both to MacKenzie's sup-
porters from the mainland and to those with ancient roots
in the west of the Island. The latter may have thought a
mere lease a poor substitute for hereditary tenure, though
a legal compromise necessary if their possession was to be
[166] continued. The lack of permanent tenure ultimately led
to the departure of their descendants.

175 From the families of these tacksmen have sprung most
621 of those of Lewis birth or descent who achieved fame
614 before the twentieth century. Of the MacAulays, we saw
55b Zacharias was Chamberlain during and after the 'Fifteen.
[468] Thomas Babington Macaulay came of the same line, as

175 did another Zacharias, closer than Thomas to the Lewis
551 tree, who worked nobly with Wilberforce for the emanci-
• 614 pation of the slaves.[1] Still another connection was a
621 Canadian emigrant, grandfather of the late T. B. Macaulay,
[668] LL.D. Alexander Mackenzie, the explorer of the Mac-
kenzie River, was a descendant of Lewis tacksmen.
MacIvers and Morisons also distinguished themselves.
[178] But the sons and daughters of crofters had to await the
[871] provision of education in English before they could rise
in trade, learning or war; hence few Lewismen of the
greatest Lewis name, MacLeod, achieved eminence until
the twentieth century.

175 As for the peasantry, the interposition of a new or
551 enlarged class of tenantry between themselves and the
545 superior must have meant that they had to labour on the
472 tacksman's home farm, and no doubt pay more in produce
or cash. Hence the Gaelic saying that if the position of
the small (joint) tenants was bad, that of the subtenants
was worse, "The Evil One Sister itself." Surviving the long
fight with the Fife Adventurers, hardship may have been
greatest where mainland tacksmen were placed above the
joint tenants; but even under MacAulays and MacIvers
rents may have been raised and some of the joint freedom
lost which was still enjoyed in Ness. Whatever adjust-
ments had been made in an earlier period had to be re-made
with the beginning of Seaforth's new order.

In the following generations, contradictory accounts of
lairds, factors and tacksmen are given by contemporary
observers. Certain of these insisted that, given the poverty
of the lands as a whole, the chiefs and landlords, factors
and tacksmen, were the saviours of their people. Yet even
among those who supported authority in general, there was

[1] Charles Booth, *Zachary Macaulay*, 1934.

621 rents, and its end is in sight when these cease to provide
622 for the lord's desires.

(o) STORM AND GALLEY; BATTLEFIELD AND REGIMENT

174 The peaceful round of daily life formed the most
• 614 enduring test of the mutual loyalty uniting the commoners
577 of the clan, and linking chief to people. Yet the tenant
[601] ordeals came in hours of danger faced together, whether
[726] at sea in a small fishing boat or a many-oared galley, or in
war in a clan company. The Gaels' own records must
speak for them. Many a song of the Islea conveys the
team-spirit of the crew though without describing its men.
And although Mary MacLeod's song of MacLeod's Galley
be irretrievably lost, there survives one epic poem portray-
ing the ship, the storm and, man by man, the crew who
warred against the waves and won. Alexander Mac-
donald's *Birlinn of Clanranald* is unmatched in Gaelic,
and probably in English, verse for its portraits of the crew
in action, from steersman to 'look-out'. The flowing
metrical translation by Pattison with Hugh MacDiarmid's
vivid prose helps to give the English reader some vision of
a crew of Gaelic freemen at their best.[1]

174 The poem opens in slow traditional rhythm with "the
614 Blessing of the Ship", the arms and the crew. Then the
501 bard, speaking for the stately skipper, "incites the sixteen
539 oarsmen to row" out of the bay, and they row to a rousing
577 shanty, a *Iorram*. Next, in readiness for the voyage and

[1] Thomas Pattison, *The Gaelic Bards* (2nd ed.), 1890 (pp. 1-18); and Hugh MacDiarmid (Ed.), *The Golden Treasury of Scottish Poetry* (pp. 6-8), 1940. Cf. A. Macleod (Ed.), *Sar Orain: Tiree Gaelic Poems*, Glasgow, 1932. The different themes of its sections, each in its own metre, have been published separately, in *The Songs of the Hebrides*, and elsewhere.

174 with words of heartening but well-weighed praise, each
• 614 poet with its duties is apportioned to the man best fitted
501 for it by his temper, strength and skill—or even by some
539 special weakness! First the steersman:
577

"Let this broad heavy hero sit at the helm, powerful and limber . . .
Light handed on a helm, watchful and wary, cautious yet quick . . ."

Then others "Put this great-fisted and shrewd man to grapple with the rigging. . . . Windwise, he'll work with him that holds the shrouds . . . a thick-set, broad and craggy champion . . . and with him that grips the sheet, a neat and handy fellow. Set at the prow our pilot, keen-eyed for the airts, and with a sure sight for each landmark like a guiding star. And set at the halyard this self-reliant seaman, tried and clear-headed, grimly alert. . . ." They put to sea, and as the sea roughens, the steersman cries, "Quick at my ear a man to watch for the rain-squalls! Choose me a fellow who's half-fearful, yet not a real coward . . . for he must be quick to shout when he sights a big sea bearing down on us. But let no other but himself be by me, lest there be babble and hubbub to bewilder us." Then, as the seas break over the open vessel:

"To bale her let this strong man rise, active and brave,
Who will not blanch or yield or tremble for the shouting wave. . . ."

Next, "Let two stout fellows, these thick-boned, rough and hairy chaps, haul on the ropes behind the sails, to raise or lower them as we're lowered or uplifted by the surging seas. . . ." And last, for fear one fail or be dashed over-board by a wave, six nimble men are picked to stand by,

174 ready to leap fore or aft: "Quick to move as the mountain
• 614 hare . . . or the hounds after him; quick to climb as a
501 squirrel in the spring-time". Then comes the stirring
539 evocation of the storm, testing each man's mettle and the
577 discipline of all, until at last, their ship battered and them-
selves bruised and weary but undaunted, the crew reach
Islay and round the sheltering point of Carrickfergus.
There, with thanks to the High King, they drop anchor,
the *birlinn* rides in peace, and all find meat and drink
and rest.

175 As at sea, so in war, loyalty could rise to heroism in
614 individuals and corps. Young men were attached to their
721 chiefs by chivalrous leadership in warfare, both before
703 1745 and later. The Highlanders' high character con-
trasted with that of most Regiments of the Line, too often
disciplined with the lash while demoralised by debauchery.
From 1745 the Lewismen went out to the Seaforth or the
Ross-shire Highlanders. General David Stewart of Garth,
historian of the Highland regiments and people, wrote of
these two regiments that again and again their courage and
coolness in battle were proved.[1]

175 Not less striking was the record of Gaels among civil
646 populations, whether in Britain, as in the 'Forty-five, or
abroad. In Germany in 1761 and 1762 much was said of
the Highlanders' kindness, "for the boors were much better
treated by those savages than by the polished English and
French". Similarly in the Low Countries in 1814 and
1815, they were *enfants de la famille* and "kind as well as
brave". The mayor of Brussels declared that they "called
forth the attachment and esteem of all"; and the inhabitants
requested him "to endeavour to detain the 78th (2nd
battalion Ross-shire) regiment of Scotchmen in the town,
[113] and to prevent their being replaced by
other troops".

175 private naturally addressed him in Gaelic by his Christian
703 name, and writes of him with the warmth and respect due
[551] to an elderly relation. Something of this mutual regard
remains; and young Englishmen of education have told
me of their highland admiration for the character and
best traditional type of 'Regular' Scottish, and particularly
Highland, non-commissioned officer, before and during the
two world wars.

175 Such bravery and character abroad led Stewart to the
821 conviction that their foundation must be the character
of the peasantry at home. He held that the Highlanders'
home life demanded support, and having served with the
Sutherland-fencibles he felt a high character grief and anger
at the clearances of the Sutherland estates by an English
[721] proprietor. When Stewart remarked that a few deaths
"mattered little when compared to the nation's renown, for
them to India—although his fortune and title would have
allowed him ease at home, or the purchase of higher
military rank. His death on the long voyage contributed
to the men's "prostration of mind which made them
succumb more easily to the effects of disease", scurvy, of
which 230 out of 1100 died before reaching Madras,
and others soon after. As we have told, the survivors
fought with disciplined courage.

175 To a chief, recruitment was financially important, for
702 he, and not only the recruiter, received a handsome bounty.
614 Simultaneously it provided him with a commission with-
out the cost of purchase—previous training and promotion
being considered unnecessary. The clansmen knew these
facts of bounty and command, and generally responded to
an appeal. When Stewart of Garth was recruiting for the
Ross-shire Regiment, a band of young Lewismen joined it
for half the bounty offered by a Lowland regiment!

175 Such are the mingled traditions of the Highland
701 regiments which served in so many wars, for right or for
• [614] wrong. Of all the departure asterisks before the Gael
ancestor, they had crystallised a fair ideal, realised by
exchange of services ('cuideachy'). Gaelic clanship
not without its Lowland counterpart in 'kindness' whic
linked those of one 'kind'—kinafolk' and neighbours
to their ferm-toun and parish, to one another, and to
laird. Tyranny and betrayal by chief and laird make on
share the bitterness of grief once felt as competition
scarce land broke up 'kindness'. Yet the people's endeav
our and attainment in the past give hope for the future.

All have heard of the hereditary Highland chief and
175 many have read of the gentlemen-farmers, but few
614 have heard of team and crew, and township-parliament
621 It is time we learned not only of the aristocratic chief
622 of the chosen helmsman and the democratic constable. So
long as the fallacy is repeated that the Highlanders "neve
co-operated, and could not act together except under the
orders of a chief", so long will it be easy to add, "
they never will"! Historic truth may have much to teach
[642] for the renewal of leadership for life together. And beyond
the Highlands, the example of this aristo-democracy, at its
worst and its best, may contribute to new concepts of
community.

CONCLUSION

175 Thus in the 'little commonwealths' of the farm-hamlets
621 grouped within the township, personal right and equal
631 shares were balanced by common duty, summed up in the
570 principle of duty-right or *coir*. Yet not one only one
614 examples. For instance, descendants of his neighbours in Steeth Spey told me that my grandfather, as a pensioner had speaking Gaelic and English (in which he was literate), enlisted in the Black Watch about 1840. He was known as a N.C.O. for his power of quiet, reasoning discipline. He thrice refused the offer of a commission, which was then given to others, of whom more than one rose to high command in the battalion.

Lewis and Harris

9 A HARRIS VIGNETTE

181 [133] LIKE a Siamese twin, Harris is joined to Lewis in eternal geographical union. The junction is at the body, however; the head of each island part has always been clear to develop its own characteristic. Thus, Harris has a quite separate personality which has risen above the common factors it has with Lewis. Both have the same historical origin: the Clan Leoid. This clan comprised two leading tribes, the Siol Torquil (MacLeods of Lewis) and the Siol Tormod (MacLeods of Harris). Tradition has accorded to them a common progenitor, Leod; though by the time history in the Western Isles was old enough for the recorder's pen the two tribes, or families, were distinct and independent of each other. Malcolm, son of Tormod MacLeod, head of Siol Tormod, had a charter from David II for the lands of Glenelg, on the Scottish mainland, which he and his successors held from the Crown. Also included in his possessions were Skye and Harris, which came to his family after the forfeiture of the Lords of the Isles in 1493. The MacLeods of Harris have, rather strangely, their clan seat at Dunvegan on Skye, and are more commonly known as the MacLeods of Dunvegan or Skye, though 'of Harris' is their correct title.

• 614 * 175 [173]

The MacLeods were, by and large, good proprietors. They held much fertile land and the clan was reasonably wealthy. Tenants' rents were paid mostly in Scots money and, to a lesser extent, in such farm produce as oats, barley, cheese, butter, wedders and marts, and in labour services. When times were hard for the tenants their rents were often 'eased' by the chief in the hope that subsequent years might prove more fruitful and that the eased rents would be paid in time. In 1705, a bad year, MacLeod actually cancelled 'eases' owing by the Harris tenants, as a gesture to them. In 1712, when some disaster had visited the St Kildans (the islands belonged to MacLeod), their chief provided them with a new boat and the islanders were allowed a two-year delay in payment of their rents to help the recovery of the community.

Lewis and Harris

Lands were not allowed to become waste; in 1710, a Roderick Campbell in North Uist was paid to come north and settle in the island of Ensay, Sound of Harris. 614 • 175 * 427

It is significant that much of MacLeod's rents was paid in money rather than produce, for it emphasises the great value of the cattle trade in the Highlands, in which Harris played a not insignificant part—that is, compared with neighbouring Lewis. It was sound economy for the Highlands, and far in advance of the theories of the so-called 'improvers' of a later age. The rents of the MacLeod estates were collected by chamberlains, and part of the work of Malcolm Campbell, the chamberlain for Harris at the beginning of the eighteenth century, was the ferrying of Harris cattle to Skye. In Rodel, MacLeod had a 'keeping house', which probably consisted of rooms for the chief while in Harris; there was also a brew-house. [231]

To introduce more efficient communications and to interconnect all the small Hebridean islands of the estate, a boat was purchased for a Lauchlan MacLean in 1705; he was empowered to maintain a regular ferry between Harris and Skye. This also operated between the mainland of Harris and the populated islands in the Sound, such as Berneray, Ensay, Killegray and Pabbay. In religion the estate was Presbyterian, and MacLeod had the burden of providing both suitable residences for the ministers and the communion elements. As mentioned earlier, the Rev Aulay MacAulay, the great-grandfather of Lord MacAulay, the English writer, was once minister in Harris. 614 175* 505 [795]

The first half of the nineteenth century saw great changes in the ownership of the various islands comprising the Outer Hebrides. MacLeod of Harris retained Harris until the end of the eighteenth century, when it was purchased by a cadet of the family, a son of Sir Norman MacLeod of Berneray, for £15,000. This son, Captain MacLeod, who had made a fortune in the Far East and ploughed some of it back into his native soil, was the man who introduced fishing as an industry to the Harris people. In 1834 the Harris estate passed to the Earl of Dunmore for £60,000. Dunmore sold north Harris to Sir Edward Scott in 1868 for £155,000. In 1919, Lord Leverhulme bought south Harris and St Kilda for £36,000. 614 175* 423 [228]

CHAPTER VI

CLANSHIP: PEOPLE, CHIEF AND TACKSMEN

(A) COMMUNAL EQUALITY AND LORDLY PRIVILEGE

175 THE equalitarian customs of hamlet and township
632 astonish many to whom the crofting villages are
642 unknown and whose picture of the Gaelic past is
631 derived from tales of the 'Forty-five. The widespread historic fact of lordship over a subject peasantry has obscured that of peasant-neighbourhood, more ancient, it would seem, and, in the Isles, still more enduring. The very existence of 'rural democracies' such as those just described has been doubted by certain scholars on the theoretic ground that they would be humanly unwork-
• (614) able! Yet it is none the less true that the peasants as clansfolk gave loyalty to their chief. The fervent loyalty given to the exiled kinsmen-kings, the Stewarts, was a scarlet thread interwoven—or entangled—in the homespun
[533] web of community, of clanship. Wherever the Gaelic is spoken, the Jacobite songs are sung with passion, and their echo has gone round the world.

[171] So in the life of the Gael, without doubt—and in varying degree throughout Britain and the rest of Europe—we have to envisage a composite, perhaps a contradictory, state of things, in which communal equality is overlaid by

173 from the old chiefs' families, as in the genealogies of
622 MacDonald of the Isles and the MacLeods. A special
631 feature contrasting with English history is that claims to
[177] differences of descent, instead of being maintained—as
[171] between the Saxon and the conqueror of Norman blood—were fused. Even when the ancestor of the chief was alien to the locality, the people and the chiefs ultimately claimed
173 to be of one and the same descent. Neighbourhood
621 softened the impositions of the hunting herdsman upon his human herd, and the feeling of kinship brought reconciliation.

173 How far, then, can the family name, which proclaims
621 every 'son' and 'daughter' of Leod to be of the *clann*,
• 614 the 'children'[1] of the first Leod, really betoken a blood tie? Both the differences of race to be found in clanship
829 and the ties it formed are well brought out in a tale of Highland pride, still told with Highland laughter across
539 the Minch in Kintail. A French skipper (an importer of claret) touching at Kintail three hundred years ago, met a short, dark man and asked him of whose clan he was. "The Clan Rae," was the reply, "but we are of two kinds, the tall, fair MacRaes and" (a little pityingly) "the short, dark MacRaes." "And which are you?" "I," said the wee, black fellow, drawing himself up, "am one of the tall, fair MacRaes!" "Then God help the short, dark
173 MacRaes!" said the skipper. Even one link with the
621 blood of the chief—and that not necessarily legitimate—
614 was enough for a man to found a claim to kinship, not merely as a MacRae, but with the tall, fair chief through
829

[1] In Gaelic, as a man is called MacLeoid (son of Leod), so a woman is
[551] NicLeoid (daughter), and the clan, *Clann Leoid*. The absurd addition of 'son' to a woman's name (as in English surnames such as 'Johnson') is unthinkable in Gaelic, in which a woman would be named 'John's daughter', *NicIain*.

documented; and Harris and Lewis played out their part in the agitation for more land. Briefly, when the clan system was broken down, the clansman found himself freed of the obligation of service to the chief. The chief, on his side, found himself thrown to the economic dogs. Payments in kind were no currency; a house in London or in Edinburgh had to be paid for in cash, and a London hairdresser would hardly accept half a dozen eggs for his services. The effect of the Heritable Jurisdictions Act was like a butcher's chopper. With a stroke a social organisation was given notice to change overnight, with no period of transition allowed. The chiefs looked to the land for their money. In the old system, their prosperity had been largely measured in fighting men. Now the pressures of economics demanded increased rents from those who were being called tenants. Increased rents can, however, be paid only when the land's productivity rises. The agricultural changes percolating through the Lowlands of Scotland had not even begun to penetrate to the Highlands area. Many tenants found that, unable to pay the increased rent demands, they were ejected from the lands which, incidentally, they had held by traditional understanding—written deeds were rare. Emigration started, and the vacant lands went to sheep-farmers, well able to pay good money for the grazings.

Some chiefs did give their tenants time to change to new methods of land use, and were careful not to make a breach between agriculture and grazing. Their tenants in turn improved the land, changing in particular from the old run-rig system, whereby a man working a piece of ground one year had the same piece the following year only if the dice were thrown his way. But the class of farmers' tenants called crofters (who had no security of tenure) or cottars (a squatter type with no legal recognition) found themselves on the verge of starvation. The few acres of ground they had, or to which they had been removed, were quite unsuitable for intensive cultivation to produce even the basic necessities of life.

The picture of land use was that of a great black pot boiling furiously with a brew of which the final taste was quite uncertain. When the boiling was controlled, the land began to be parcelled out, a share to each family. This led to a rigid, almost monolithic,

[TEXT CONTINUED ON PAGE 55]

Morgan stands alone in believing the clan to have been a true gens in organization and spirit.[15] He saw in it the typical features of gentile society, vitality of gens life over the members in moulding individual character, feuds and blood revenge, localization by clans, common use of the land, fidelity to the chief and each other, and descent in the male line. Rivers viewed the clan as more nearly a tribe.[16] Piddington denies the Highland clan the status of a true clan because, although patrilineal, it has never been shown to have been exogamous.[17] I have no doubt that most anthropologists would agree with Piddington on similar grounds. Linton has recently compared the Polynesian tribe with the Highland clan.[18] He seemed to share Rivers's view, saying the clan was localized by territory and was normally endogamous.

The Clans of Skye

Although some historians, probably reasoning from pre-Roman Celtic organization, believe the clan was inherent in the Celtic tribal system,[19] most date the origin of the Highland

clan as not earlier than the reign of David I.[20] It appeared after the introduction of feudalism, and, as we shall see, it disintegrated as the feudal order decayed.

Had the tuath and mathscha persisted under the Norse, there was no room for them in a feudal polity.[21] On the other hand, there was no opportunity to assimilate the remote Highlands and, especially, the Islands with the Lowland half of the kingdom. For over four hundred years no king, Scottish or British, was able to secure an unfluctuating vassalage of the Highlanders. Whatever course events took, the mormaer, once chief of the mathscha, the toiseach, the old chief of the tuath, and the mnaer, a subordinate chieftain, were gone. In place of the tribal arrangement there appeared a host of distinct communities of fate. On the Isle of Skye the most important of these were the Siol Torcuil (MacLeods of Lewis), Siol Tormod (MacLeods of Dunvegan), Clann Finnon (MacKinnons), Clann Fingheil (Nicolsons), and Clann Hugain (MacDonalds of Skye).[22]

Clan Membership. The clan was a means of administration and security.[23] The nucleus was a derbfhine, a four generation

[23] See, e.g., Thomas Innes of Learney, The Tartans of the Clans and Families of Scotland (Edinburgh: T. and A. C. Johnston, 1938). This authoritative work was written by the Lord Lyon of Scotland, the custodian of Scottish heraldry. Other standard treatises consulted here: Frank Adam, The Clans, Septs and Septs of Ane Scotish Nyt Aance of Scotland (New ed.; Edinburgh: T. and A. C. Johnston, 1952); and W. G. Stoekmale, A Short History of the Scottish Highlands and Isles (Paisley: Alexander Gardner, 1906).

patrilineal family group whose members, in theory, were able to trace their descent from the founder of the clan, the source of the clan's patronymic. The membership was expanded by including descendants of members of the derbfhine beyond the third descending generation. Thus, the size of the clan grew in proportion to the natural proliferation of the descendants. Numerical strength was further augmented by the inclusion of dependents. Small groups attached themselves to powerful clans by a contract of man-rent. The senior member of a derbfhine accepted the adopted chief as the superior of himself, his sons and brothers, and their heirs and agreed to obey the chief in all lawful duties, excepting those conflicting with the obligations of kinship.[24] The clan was further recruited by the adoption of broken men, individuals cut loose from their own clan for punishment, and, on occasion, native men, the former inhabitants of newly acquired territory.

Large clans contained a number of septs. The sept was essentially a small clan within a clan. The distinguishing feature being that the nucleus of kin were related to the common ancestor through a younger son of the founder or one of the younger son's linesal descendants rather than in the direct line of descent. In addition to the patronymic, the sept bore a territorial title. Some septs became strong enough numerically to acquire their own territory and rank as independent clans. Others, due to the loss of territory or the need for

[24] Cf., e.g., Lachlan MacDonald, "Gleanings from Lord MacDonald's Charter Chest," Transactions of the Gaelic Society of Inverness, Vol. XIV (1889), pp. 63-72. Hereafter, I shall cite these transactions as TGSI.

protection were absorbed. Clan strength was also reinforced by the existence of dependent clans. Unlike the septs, dependent clans retained their identity and their territory, while entering into a security pact.

Once the clan system was established, there were few individuals without allegiance to some chief. The individual's status and protection depended on clan membership. An individual who could not name his chief had no dignity. Thus, under the Law of Arms of Scotland the clan is described as an aggregate of families actually descended, or accepting themselves as descended, from a common ancestor.[25]

The Clan Chief. At the head of the clan stood the ceann-cinnidh (literally the head of the kin), the living representative of the common ancestor and the group. While giving the clan coherence and endurance, he served as the military leader, protector, lawgiver, arbitor, judge, and administrator of the community of fate. His power and position, backed by a resolute body of supporters, was almost independent of royal authority. He did not, however, enjoy absolute power. The obligation to consult the leading men of the clan on communal affairs tempered his rule. He was a patriarch who governed by custom and general consent. Always, in a general sense, he was the father of his people. His government rested on reciprocal relations. The chief and the clan brotherhood mutually owed and received devotion. Right or wrong the clansmen were sheltered and defended in quarrels by their chief.

[25] Innes of Learney, op. cit., p. 25.

without fealty or service.[33] Under the attenuated feudalism which the Lords of the Isles introduced following the expulsion of the Norse, the chiefs relinquished their claims to absolute domain. After the Crown finally broke the Lords of the Isles, who had obtained possession of all the Western Isles and much of the mainland through matrimonial alliances with the Norse viceroys, and Scottish earls, as well as by armed conquest, almost all the Hebridean chiefs accepted charters from the Crown on service of ward and relief.[34] Those who failed to do so became tenants, forfeiting all claims to the land, because, under James VI, all Celtic usages inconsistent with the principles of the Crown were ignored.[35]

Nevertheless, the chiefs who accepted their feudal status continued to administer to the clan under the old tribal usages. Gavelkind tenure was not obliterated for the kinsmen of the nuclear derbfhine, who received an allotment of land from their ruling kinsman. As we shall see, the land had no commercial value, and, therefore, was freely given to all ready to accept tenure on condition of service. Feudalism and clanship reinforced each other.[36] Under both possession of the land depended on pedigree. While the king could alter the feudal pedigree by forfeiture and regrant, the clan chief's pedigree depended on the

additional elements of kinship. While the feudal customs of charter, resignation, regrant, and wadsett, a mortgage of the land on security of the rental, secured the possessions of the central derbfhine by law, extra-legal tribal custom secured them by force. The general will of the clan backed the chief as a patriarch; the laws of the kingdom supported him as crown vassal.

Each chief was surrounded by hereditary officers of dignity whose number was a mark of the individual's status. These included pipers, marshalls, stewards, standard bearers, and armed retainers. There was also a seannachie (bard), who kept the pedigree of the clan, deduced descent of clan members, and preserved clan traditions. Some chiefs had a breithemh (judge), but more often the chief, who had hereditary jurisdiction, and some of his principle men, including a baron-bailie, sat in judgement. According to a minister of Kilmuir parish,[37] the customs and new statutes were reduced to writing around 1670 and proclaimed annually at the church doors. Although the chief lacked the jurisdiction of a feudal baron, the government was loath to disturb his tribal jurisdiction, which depended on the cooperation of the clan, because the crown recognized the stability of the tribal tie and the impossibility of integrating the remote islanders with the national system of justice.

In return for their services the officers of dignity were given a grant of land, and they were free to call upon the

[37] J. G. MacKay, "Social Life in Skye from Legend and Story," SHR, Vol. XXIX (1919), pp. 260-290.

clansmen for food and lodging whenever their duties took them away from home. The decay of the dun system can, perhaps, best be seen in the disappearance of several of these offices and restrictions placed on others. By the seventeenth century, after failing in a scheme to integrate the Hebrides by the extirpation of the rude, barbarous, and uncivil peoples, the crown succeeded in forcing the chiefs to give up their bards, to assume full responsibility for the obedience of their followers to the laws of the kingdom, and to limit their armed retinue to a small personal bodyguard.[38] Clan warfare ceased and the chiefs henceforth gave unwavering support to the Stuart kings, at least against the English.

The Chiefs of the Clan. Below the chief of the larger clans ranked the ceann-tighe, (literally the head of the house). They were the brothers of the chief and stood in relation to the sept as the chief stood to the clan. In the MacDonalds of Sleat the eldest brother usually held the lands in North Uist.[39] In the MacLeods of Dunvegan the eldest brother received the farm of Talisker.[40] As senior cadets, the eldest brothers led the clan on marches and held the principle post of honor in battle. They served as stewards, collecting the revenues of the estate and fulfilling the duties of the chief during his

absence or incapacity. The senior cadets also acted as tutors of the heir to the chiefship, and if the heir succeeded while a minor, as guardians. The cadets bore the surname of the clan and/or a territorial title, for example, MacLeod of Talisker or simply Talisker.

The Gentry of the Clan. The next lower level in the hierarchy consisted of the daoin'-uaisle (literally the high people). The chief established his younger brothers, sons, and other near relatives, those within the derbfine, on the land. They held farms by what amounted to be leases for a term of lives. At first the leases were typically for three lifetimes, but by the seventeenth century they had been reduced to the individual's life plus a number of years to begin on the decease of the holder in favor of his son.[41] At the expiration of the lease, a nearer relative was commonly favored with the farm. The former holder either sought a military career abroad, in Holland or France, or extorted a living by gentle begging.[42] Some obtained land on wadsett, a mortgage contract under which the lender of money received possession of the land until the debt was repaid.[43] Most of his descendants passed into the body of the clan.

The gentry, also known as tacksmen (leaseholders), were

the local representatives of the nuclear derbfine. They were the leading men of the clan in each district. Although they were appointed by the chief, their recognition depended on the willingness of the clansmen to form a following rather than on title or a right of succession. This following determined how many men the chief could bring into battle and how many officers of dignity he could support from their contributions.

The most important function of this group, all of whom could trace descent within the central family, was their bridging the cleavage which ran through all clans. They formed a ministry to the chief and were the councilors of the clansmen. The bond with the former was proven kinship, with the latter, a sense of kinship. They were the mainstay of the system. When the chiefs fell into debt, a frequent occurrence, the tacksmen came to their aid by pledging themselves to preserve the family and the estates, to reduce the debt.[44] They were also the local merchants, an important function in an area with only semi-annual markets and sparse money.[45]

The Clansmen. The clanna (literally the children) included all within the jurisdiction of the clan chief. Their relationship was real or fictitious kinship, tenancy, or contract. To the Lowlanders and the English, their relationship seemed to be a

[44]Cf. Ibid, pp. 65, 73-74. See also MacLeod, The Book of Dunvegan, Vol. I, pp. 16-19.

[45]Gartmore, loc. cit.

servile and abject obedience approaching despotism.[46] Still, the early travelers never ceased to be astonished at the familiarity with which the chiefs treated their people, upset at the chief's partaking of the people's diversions, and astounded that the chief would shake them by the hand whenever he met them.[47] At the bottom, the system was equalitarian. Every man had the right to address his chief and call upon him for support in times of adversity.

The clansmen were continuously recruited by natural increase, adoption, and the gradual subsidence of the younger members of the nuclear derbfine into the body of the clan. The downward mobility of the remote collateral relatives of the chief was of paramount importance. It reinforced the belief in kinship of the clansmen and the chief. The feeling of kinship was further reinforced by the institution of fosterage, a practice common to pre-Feudal Scotland, Ireland, and Wales.[48] Under fosterage children were exchanged between families of equal status or the son, often the heir, of the chief or tacksman was given to one of the clan to be raised and educated. Fosterage served to form mutual alliances between families and clans, to ensure the loyalty of the people for their chief, strengthen the attachment of the chief for his followers, and bind the

[48]John Cameron, op. cit., pp. 62-68.

members of the clan to each other.[49] Strong attachments were formed between the foster brothers. Often the foster brother later acted as the henchman of the future chief.[50]

The clansmen were given land as joint-tenants of the chief or as subtenants or cottars of the tacksmen and joint tenants. In return for the land, the subtenants owed their superior the duties of cain, a fixed payment in kind, convaith, a contribution of food for the maintainence of the chief and his retinue, feasgh, an obligation to follow the chief in offensive war, and aluaraid, an obligation to attend the chief for defense.[51] These burdens were shared by tribal Scotland and Ireland.[52] When a chief gave a farm to a tenant, whether for one or more years, it was customary to give the tenant a stick of wood and some straw.[53] This was immediately returned to the master. Both parties were then obliged to fulfil their respective conditions as if they had signed a lease or deed. There were additional duties on the land.[54] Upon the death of

a tenant, the chief was entitled to the best horse or cow as payment for the continuation of the tenant's family on the land. The tenants were also required to give hospitality to the chief's bodyguard.

In this group, the clanna, was found the essence of the clan system and the basic principal of the territorial tie and the bond of affection of kinship by consanguinity and affinity. The soil was not the mere means of subsistence; it was the ancestral home. Much to the annoyance of the crown, the clansmen frequently emphasized the tribal tie.[55] When clan lands were declared forfeit, the clansmen continued to support their landless chief, even when placed under a feudal overlord. The belief in kinship conflicted with the obligations of mere tenantry. Thus, the MacLeods held Trotternish by charter, but the MacDonalds held it by tribal custom and manpower. As territorial power made inroads in the Highlands, some proprietors were able to bring out their tenants for national defense, but they could never be sure whether or not the people would suddenly throw over the claims of their feudal superior in favor of their landless chief, who could not be diverted of his hereditary privileges as a patriarch.

Not a great deal is known of the kinship system among the clansmen. Undoubtedly, the people were grouped into a derbfine organization. The senior member of the derbfine, I assume, had patriarchial authority over his kinsmen and represented them in clan affairs just as the flath had in the pre-Feudal period.[56]

CONTINUED ON NEXT FICHE

286 Make smooth and even the warp of my loom
288 And grant thy blessing, God, on me,
On all who here find shelter and room
539 And dwelling . . .

Thine arm be round each woman here
Who waulks this web of mine,
O aid her in her hour of need . . .

Keep the flock that we may win
Sweet and nourishing milk to drink
And wool to give, to weans and kin,
For wear!

Even now in Harris or the Lews, a brief good wish may be uttered—a "Health and strength to the wearers!" as the perspiring women end the waulking; but in the past the web was finally consecrated. Each of the family who was to wear a portion of it was named by the weaver herself, who led the consecration (*Carmina*, No. 113).

May the well-loved wearer of my web
Never be wounded . . .
May the sanctuary shield of the Lord be his. . . .

286 The significance of this gift of hard-won cloth can now
532 be seen, first for the family but next for the neighbourly
614 team. We can understand how each 'set' or pattern of
93] tartan stood for the spirit of the family and the group of
621] kin and homeland, the clan. We conceive what it meant
91] to the Gael when the tartan, with "the Highland dress . . . or any part of it whatsoever", was forbidden "to any man or boy" in the Highlands. Women were still allowed to wear it, it was true, but the dress ceased to be a symbol of community when its wear was confined to
714] one sex. As a single exception, the Highland dress was
75] retained for soldiers, but the militarisation of the tartan—though it seized upon one strand of clanship, that of

286 warfare—destroyed its intimate tie with the home, with
532 peace. The web the women had dyed, spun, woven and
614 waulked together ceased to be a sacrament when the tartan
714 was proscribed to men except when worn as a uniform with
[178] "England's cruel red".
[648] The framers of this law, which stood on the statute
175 book for over forty years, took full cognisance of what they
648 did. Appended to the Act of 1747 was an oath which
286 reversed every benediction said by the women at their
291 work: "I . . . do swear, as I shall answer to God at
782 the great day of judgment, I have not, nor shall have, any
641 gun, sword, pistol or arm whatever, and never use tartan, plaid or any part of the Highland garb; and if I do, may I be cursed in my undertaking, family and property—may I never see my wife and children, father, mother, relations—may I be killed in battle as a coward and be without Christian burial in a strange land, far from the graves of my forebears and kindred; may this come across me if I break my oath". This Act, as law and symbol, struck full at the sacramental life of family, neighbour-team and clan community, in which labour and prayer had been indissolubly bound.[1]

(c) WORSHIP, CONGREGATIONAL AND PERSONAL: THE BOOK AND THE WORD

178 Little remains of the tradition of worship in the tiny
771 oratories, chapels or 'temples' whose ruins stud the shores

[1] The collaboration of friends in Lewis may allow mention of the Gaelic
346 version of A. Geddes, *The Spirit of the Tartan, a Song Drama* (English
172 Version); *Souvenir Programme and Book of Songs* (Outlook Tower, Edinburgh, 1932). In this the spirit of this labour sequence embodied in its
[113] songs and runes is dramatised in its setting of custom and history. The Gaelic version was prepared by the generous labours of James Thomson, M.A., Bayble, and the late Duncan Macdonald, M.A., Sandwick, Lewis.

888 of the Old Testament made itself felt, as in Lewis-and-
771 Harris in the nineteenth century, this narrower patriarchal
562 example hardly affected thought.[1] Rooted in a wider form
[184] of family than a patriarchate, and reverencing a Holy Family
[773] and all fellowship, Gaelic society honoured age and parent-
[177] hood for their inheritance, and childhood and youth for
[175] their promise.

Such ideals of human relationship led to the veneration of the Saints of the Gospels and of later history, and also of those of legend, especially Bride. Dedications to Bride
773 or 'Bridget' are widespread from Wales to the Lews;
776 yet her memory has been all but lost in Britain, except in the Isles. Carmichael wrote that "Bride and her services" are dear to the hearts of the people. She is called "Bride of the white feet . . . of calmness . . . of the kine; woman-comrade . . . and woman-helper . . ." "I am in the keeping of my Saint Mary: My companion beloved is Bride" (*Carmina*, Nos. 70-71; 263-264). As joy, steadfastness and attainment are generally linked to one notable stage in the life of each 'holy companion', the example, aid and fellowship of each saint in turn was especially sought, at a corresponding stage or crisis of one's own life.

776 The Gael's veneration for saintly men and women was
171 shared by Catholic peasantry throughout Christendom;
174 but its special quality seems to have been closeness of

[1] Clanship has repeatedly been said to be 'patriarchal', as an ideal and
[614] a system. A different conclusion, that community is the root of clanship (even in its political forms), may come as a surprise. The English or Lowland reader has had access only to the writings of strangers such as Burt. Not knowing Gaelic, these derived their information from Highland speakers of English who, deliberately or unconsciously, were biased by ranking as
[621] chief or gentry, and not unnaturally explained their position as patriarchal. Thus strangers ignored the co-parental life of farm-groups and townships, economically humble but spiritually rich, as the root of a clan-community.

192 The circular, corbelled stone "beehive" huts, some still in good repair, are of uncertain date. The best preserved are on the Morsgail Deer Forest, in remote situations which make it almost certain that they were only occupied seasonally; those on the Garynahine common pasture are associated with assymmetrically ridged, curving, lazybeds. This, however, need not imply permanent occupation of the site, nor does it solve the problem of age; such lazy-beds are certainly old, possibly pre-potato (c. 1790 here) - but the huts do not decay with age and may be very much older.

175 422 228 Early in the eighteenth century the present area of the parish of Uig was held from the Seaforth clan chief by 26 tacksmen, whose names are recorded in the judicial-rental of 1718, (Fig. 4). They, presumably, had sub-tenants but of these there is no record. Elsewhere in Lewis the same rental records many small tenants holding direct off the chief but in Uig, apparently, the tacksman and sub-tenant system remained intact. Although we cannot be certain of their precise extent, the distribution of the tacks coincides fairly well with that of the better agricultural ground (Fig. 2).* Five of them cluster round Uig bay, four were in the Valtos-Reef area, and three around the strait of Little Bernera. All these districts have machair; together they accounted for three quarters of the meal and more than half the sheep and money rents. What is more, these rents represented 27% of the total rental of Lewis, whereas by 1887 Uig yielded only 17% of the rental and by 1901 the proportion was reduced to 14%. The relative decline of Uig is largely due to the growth of Stornoway; this shift in the centre of gravity of Lewis has tended to exaggerate the remoteness and isolation of Uig in the present century.

[241] [178] [369]

161 175 422 407 490 600 By the end of the eighteenth century the tacksmen seem to have disappeared; at any rate they are not mentioned in the remarkably detailed account of the parish given in the Old Statistical Account, 1792. Meanwhile the small tenants had multiplied: whereas in 1755 the old parish * had supported 1,312 persons, in 1792 the minister recorded 1,698. At this time there was neither plough nor cart in the parish. The minister was cultivating potatoes and his family were eating them

TABLE 3

AVERAGE STOCK HELD BY EACH FAMILY

162 178 233 422

	1792	1959
Cattle and calves	9.2	2.1
Sheep	13	37
Horses	1.8	-
Goats	0.8	-
No. of families	387	450

Note: the figures for both dates refer to the area of the old parish.

[632] * The old parish of Uig excluded the Loch Carloway district, from Kirivick north; this area lay in Lochs parish until 1891. Unless the old parish is specified figures quoted have been corrected to conform with the modern boundaries.

1. [See p. 2--Analyst]

The minister was cultivating potatoes and his family were eating them as an example to the crofters who were still reluctant to adopt the new crop. Some 70 boats were fishing; this was mainly in Loch Roag for they were small open boats greatly outnumbered in good herring seasons by boats from other parts of the kingdom. To encourage curing, particularly of white fish, the proprietor had set up two storehouses to supply salt; he, or his agents, were probably the only buyers - indeed John Knox, who visited Lewis about 1786, tells us that the estate factor held a monopoly for trading in cattle, dried fish and other products. The absolute power of the clan chieftain seems to have survived in Lewis until impending bankruptcy forced the sale of the estate in 1844. But it was kelp, more than fishing, that helped to support the people of Uig in the late eighteenth and early nineteenth centuries. Lewis made little kelp compared with the Uists, but the Loch Roag kelp was of particularly good quality and commanded more than the average price. Further, many people from Uig migrated seasonally to make kelp in Harris and Uist. Thus even at this time, the intrinsic resources of the parish appear to have been inadequate to support the population. In this connection it is worth noting the change in the average stock held by each family since 1792 as shown in table 3.

175 [243] 228 [251] 441 [614] 175 [232] [221] [233] 162 [178]

Clearance and Congestion.

175 228 Even after the end of the tremendous boom in kelp, brought about throughout the Hebrides by the Napoleonic wars, some production continued in Uig. In 1825, when the land rent of the old parish was £1,862, the proceeds of kelp, after deducting expenses, yielded £1,010 to the proprietor. Thereafter it failed. Meanwhile Seaforth was attempting industrial developments and agricultural improvements. The former included short-lived distilleries in Stornoway, the latter involved the removal of some small tenants in order to introduce mainland farmers. For these Uig was particularly attractive, the extensive mountain pasture offering good prospects for sheep graziers. The exact dates of the formation of the earliest farms are not remembered nor are they precisely recorded, but at least as early as 1826 Alexander Macrae of Kintail had the tack of Scalisclro, with the extensive grazings (now partly occupied by Bernera summer pastures) east of Little Loch Roag. About 1823 the small tenants of Mealasta and Breanish were deprived of Mealasta Island, which suggests that a sheep farmer was already installed in that district. About 1838 all the small tenants were cleared out of Mealasta, six families being put into Breanish; the remainder are said to have been sent to America.

175 233 166 427 [274]

175 427 In Bernera island, Kirkibost was cleared about 1822, having been lotted in individual crofts some years earlier. Thereafter Kirkibost formed part of the large farm of Linshader. Little Bernera, too, formed part of this farm. On the mainland, opposite Bernera, small tenants were cleared from the shores of Loch Roag (e.g. Stroma and Drovernish) in the early nineteenth century, and a tacksman was installed at west Earshader. Further east the small tenantry were cleared from Ceanhulavaig and Linshader.

175 By 1844 the kelp shores were almost valueless to the proprietor (though seaweed as fertilizer remained a vital necessity to the small cultivators, often working the same land year after year). In 1861 the Chamberlain of the Lews suggested to the Select Committee on Emigration that some 6,000 persons should emigrate because the land was inadequate to support them. In 1844, of necessity, Seaforth sold the island. The population of Lewis was then 17,000 (Uig 3,316); little did the Chamberlain imagine that in the following ten years it would increase by 16%, and that by the turn of the century would reach almost 30,000, (Uig 4,463 Figure 8).* [162]

1. [See p. 18--Analyst]

* 175 186 the Scottish kings against the demands of the English Parliament, would have restricted English influence to a negligible role until the final Highland uprising was crushed in 1745.

Social and Political Organization

* 175 602 614 618 The characteristic unit of the social and political organization of the Isle of Skye during the Feudal period of Scottish history was the clan. All who have theorized about the clan agree that it was a social, political and economic entity. There is, however, no simple, universally accented interpretation of the nature of the clan. Unfortunately, interest in its structure and function is late. Many assertions suffer from the prejudices and sympathies of the authors toward the Highlands at the time of the eighteenth century rebellions or the nineteenth century land clearances. Lacking Scottish sources, historians turned to the Irish codes of law and imposed them on the clan system without asking whether or not four centuries of Norse domination might have resulted in at least a partial assimilation of the old Celtic tribal organization with the Norse political organization. Nor has allowance always been made for internal development during the five centuries in which the clan was the distinctive organizational unit. Today historians are almost apologetic about the Highland clan system. The subject has become the province of amateur antiquarians.

Anthropologists apparently look upon the clan as a social unit hardly worthy of comment. As far as I know,

ONTINUED
FROM
PRECEDING
FICHE

It is by no means insignificant that despite a large degree of Norse influence in political and economic life, there is only a little vague evidence of a linguistic nature for Norse influence on family life.[57] There are very few words pertaining to the family which can be traced to a Norse derivation. In battle the clansmen stood by extended families, brothers and their sons fighting together. The importance of the *dorbhine* as a social unit can be judged from the following statement: in an argument between two men, if one were to swear by the father of his adversary, it was a great indignity; but if one were to cast a reflection on the father and the grandfather of the other man, the next word would be accompanied by a blow.[58] He would have been named after his grandfather for the *slanna* used genealogical strings.

175*
602
618
618

Summary. The clan was a composite organization. From the old tribal organization it took the *dorbhine*, four generation extended family, the territorial tie of the group, and the mutual, reciprocal obligations of service, support, and defence. Under the Norse, collateral descent as a system of inheritance of the title and land of the tribe disappeared but the tribal principle of *gavelkind*, by which the land was divided among the members of the *dorbhine* who in turn divided the land among their real and fictitious kinsmen, persisted. Scottish nonmanorial feudalism

[57] George Henderson, The Norse Influence on Celtic Scotland (Glasgow: James Maclehose and Sons, 1910), pp. 49, 131-133, 136-137, 185.

[58] Martin, op. cit., p. 179.

provided the framework within which the functions of the tribal leader and the spirit of the clan brotherhood could be preserved and extended. The family possessions could be secured by law and the clan system could be stabilized. At the same time, however, the tribal tie remained paramount in the local system. The general will of the clan backed the chief as the patriarch, and kinship, however unreal, conflicted with the obligations of mere tenantry.

175*
602
618
618

The chief was the living representative of the common ancestor of the group. He gave the clan coherence and endurance; his leadership was almost independent of royal authority. Backed by a resolute body of supporters, he governed by custom and general consent. His jurisdiction flowed from his patriarchial position and depended on the recognition and cooperation of the clan. To secure his position and maintain the belief in common kinship, the chief planted his collateral and lineal descendants on the land. These men, either cadets of the clan or tacksmen, held their land by lease. They were the local representatives of the central family. Their most important function was bridging the cleavage which ran through the clan by forming a ministry to the chief and supporting his dignity and by being the counsellors of the people. The gradual subsidence of the members of the central *dorbhine* through the tacksmen into the body of the clan reinforced the belief in kinship. The belief was further strengthened by the custom of fosterage, the custom of giving a son to one of the clan to be raised and educated. The clansmen were the embodiment of the clan system. They were given land as joint-tenants of the chief or as subtenants

of the tacksmen. Here was the essence of the clan system, the common tie of territory and kinship. The land was not the sole means of subsistence, it was the ancestral home.

175*
602
618
618

The clan was strongly patrilineal. The father of the individual family stood to his children as the senior member of the *dorbhine* to his kinsmen, the tacksmen to his followers, and the chief to the body of the clan. The fundamental underlying principle was mutual, reciprocal devotion. The system was equalitarian. Although the chief was the landowner, and the tacksmen received their land on lease, for which they owed the chief the duties of service and a rent just as their tenants owed the tacksmen, the land had no commercial value. Rent was an ill defined and secondary consideration. The dignity of the clan depended on the number of supporters, who could be maintained on the land under the system of land use.

Economic Activities

The principles of land use and tenure on the Isle of Skye up to the early years of the eighteenth century were similar to those prevailing all over Scotland.[59] The land was used under a system of runrig agriculture. The word runrig appears to be a modification of the Gaelic roinn-muith, a parallel or running division. The bulk of the population, as tenants of the land

sufficiently to make age controls an irresistible force, the prestige status of the small number of the "elect," those who had experienced a saving change, and, in particular, the elders gave them complete control over all social and religious activity. In a later chapter I shall have more to say about these facts. The important fact which I want to emphasize now is that the religious patterns provided a framework in which the culture could find continuity and through which the society could achieve a reintegration. The abhorrence of pagan-like customs resulted in a change of content, but there were positive results as well. Above all, there was a change in focus for the culture and society. The decadent belief in clan brotherhood was replaced by a sense of belonging to a known religious brotherhood.

Summary. The third period of the modern phase of Skye's culture history saw the culmination of the process of commercialization of the land. All the influences necessary for the conversion of the subsistence economy, albeit a much deteriorated economy, had begun to function. Sheep farming, on a commercial scale, formed the basis for the new economy.

233

167
184
34
42

Newcomers with the incentive and ability to introduce improved methods of land utilization were replacing the conservative and impoverished crofters and cottars. As the commercial farmers consolidated their holdings, the communal townships were being obliterated. The concept of individual possession of the land was replacing the customary rights of the small tenants, and a clearly defined social hierarchy, based on

559

Additional modifications have been found in the division of labor. Although no Skyeman has shown a disposition to assume responsibility for domestic work, unless he lives alone, the women of Skye are expected to function in roles which once were filled exclusively by men. Old men and women for many years now have continued to perform tasks which formerly were their duties as youths and young adults. These changes, like those we have previous, are partially traceable to an incomplete adjustment to the contractual, commercial world. This has led to striking alterations in the age structure of the population for it is the youth who forsake the island and the aged who yearn to return. Nevertheless, there have been no observable changes in the status system of the rural neighborhoods. Primitive democracy, distinguished from our form of democracy by the principle of unanimous consent rather than majority rule, continues to operate in the townships. The existence of such an institution implies a maximum of equality co-existing with a minimum of authority. The continued ability of the crofters to maintain primitive democracy in a nation like Great Britain is possible only because there is a high degree of social integration. The simple system of ranking, on the basis of age and sex, has persisted. Men are the social superiors of women; old men are the social superiors of their juniors. I believe we shall understand how continuity of status has been preserved if we turn to a consideration of the role of religion on the island.

[162]

[559]

[561]

[562]

If I am right in asserting that a belief in clan brotherhood was an all pervading cultural pattern in bygone days and

178
182
614

that the clan ceased to provide a focus for the culture almost two centuries ago, the reader may ask how can a culture without a focus find continuity, how can a culture without a central theme, something around which to orient itself, achieve integration? Religion provides the answer. Congregational religion has taken the place of the clan.

178
182
614

[771]

The acceptance of the new religious focus curtailed many traits and complexes characteristic of the old culture. This is why the older folktales, songs and superstitions, the festive celebrations held at times of birth, baptism, marriage, and death, the traditional social patterns of visiting, and all frivolous activities were abandoned or modified. In a time of acute distress the *Sgriatanach* turned to religion as a means of consolation. His religion required circumspect behavior. Perhaps, the sheer impossibility of supporting the traditional forms of social interaction had forced a change in cultural content when the religious leaders placed these forms under censure. I have suggested that religion did no more than sanction poverty. This much is certain: religion provided the means for the culture to maintain its continued distinctiveness. The Scots of the Presbyterian image of the days of Knox, of the times of the Covenanters, and the year of the Glorious Revolution continue to exert their influence on the *Sgriatanach*. While the ministers and the venerable old men of the laity stamped out all practices which they considered pagan or Catholic, as well as modifying the social aspect of the culture, the process was not completely negative. The religious expression

The Scottish kings against the demands of the English Parliament, 1754
would have restricted English influence to a negligible role 602
until the final Highland uprising was crushed in 1745. 618

Social and Political Organization

The characteristic unit of the social and political organ- 1754
ization of the Isle of Skye during the Feudal period of Scottish 602
history was the clan. All who have theorized about the clan 618
agree that it was a social, political and economic entity.
There is, however, no simple, universally accepted interpretation of the nature of the clan. Unfortunately, interest in its structure and function is late. Many assertions suffer from the prejudices and sympathies of the authors toward the Highlands at the time of the eighteenth century rebellions or the nineteenth century land clearances. Lacking Scottish sources, historians turned to the Irish codes of law and imposed them on the clan system without asking whether or not four centuries of Norse domination might have resulted in at least a partial assimilation of the old Celtic tribal organization with the Norse political organization. Nor has allowance always been made for internal development during the five centuries in which the clan was the distinctive organizational unit. Today historians are almost apologetic about the Highland clan system. The subject has become the province of amateur antiquarians.

Anthropologists apparently look upon the clan as a social unit hardly worthy of comment. As far as I know,

Morgan stands alone in believing the clan to have been a true 1754
gens in organization and spirit.[15] He saw in it the typical 602
features of gentile society, vitality of gens life over the 618
members in moulding individual character, feuds and blood revenge, localization by clans, common use of the land, fidelity to the chief and each other, and descent in the male line. Rivers viewed the clan as more nearly a tribe.[16] Piddington denies the Highland clan the status of a true clan because, although patrilineal, it has never been shown to have been exogamous.[17] I have no doubt that most anthropologists would agree with Piddington on similar grounds. Linton has recently compared the Polynesian tribe with the Highland clan.[18] It seemed to some Rivers's view, saying the clan was localized by territory and was normally endogamous.

The Clans of Skye

Although some historians, probably reasoning from pre-Norman Celtic organization, believe the clan was inherent in the Celtic tribal system,[19] most date the origin of the Highland

clan as not earlier than the reign of David I.[20] It appeared 1754
after the introduction of feudalism, and, as we shall see, it 602
disintegrated as the feudal order decayed. 618

Had the kinship and principle prevailed under the Norse, there was no room for them in a feudal polity.[21] On the other hand, there was no opportunity to assimilate the remote Highlands and, especially, the Islands with the Lowland half of the kingdom. For over four hundred years no king, Scottish or British, was able to secure an unflinching vassalage of the Highlanders. Whatever course events took, the mormaer, once chief of the earldom, the toiseach, the old chief of the kindh, and the mosr, a subordinate chieftain, were gone. In place of the tribal arrangement there appeared a host of distinct communities of fate. On the Isle of Skye the most important of these were the Siol Torquil (MacLeods of Lewis), Siol Tormod (MacLeods of Dunvegan), Clann Donald (MacKinnons), Clann Thorkill (Nicolsons), and Clann Uisgein (MacDonalds of Sleat).[22]

Clan Membership. The clan was a means of administration and security.[23] The nucleus was a derbfhin, a four generation

In the evolution of Scottish society, Scottish alliance treaties concluded were: Treaty Anent the Marches (1249); Treaty of Perth (1266); Band of Bot Kennaird and Lochindorb (1290-92); Treaty of Edinburgh (1357); Treaty of Ardtalnaig (1426); Treaty of Lochgarbh (1462); Treaty of Lochgilphead (1493); Treaty of Ardchattan (1501); Treaty of Ardchattan (1523); Bond of Kilchurn (1523); Bond of Ardchattan (1527); Bond of Ardchattan (1529); Bond of Ardchattan (1531); Bond of Ardchattan (1533); Bond of Ardchattan (1537); Bond of Ardchattan (1538); Bond of Ardchattan (1539); Bond of Ardchattan (1540); Bond of Ardchattan (1541); Bond of Ardchattan (1542); Bond of Ardchattan (1543); Bond of Ardchattan (1544); Bond of Ardchattan (1545); Bond of Ardchattan (1546); Bond of Ardchattan

clansmen for food and lodging whenever their duties took them away from home. The decay of the clan system can, perhaps, best be seen in the disappearance of several of these offices and restrictions placed on others. By the seventeenth century, after failing in a scheme to integrate the Hebrides by the extirpation of the rude, barbarous, and uncivil peoples, the crown succeeded in forcing the chiefs to give up their bards, to assume full responsibility for the obedience of their followers to the laws of the kingdom, and to limit their armed retinue to a small personal bodyguard.[38] Clan warfare ceased and the chiefs henceforth gave unwavering support to the Stuart kings, at least against the English.

The Cadets of the Clan. Below the chief of the larger clans ranked the ceann-tighe, (literally the head of the house). They were the brothers of the chief and stood in relation to the sept as the chief stood to the clan. In the MacDonalds of Sleat the eldest brother usually held the lands in North Uist.[39] In the MacLeods of Dunvegan the eldest brother received the farm of Talisker.[40] As senior cadets, the eldest brothers led the clan on marches and held the principle post of honor in battle. They served as stewards, collecting the revenues of the estate and fulfilling the duties of the chief during his

the local representatives of the nuclear derbfine. they were 175
the leading men of the clan in each district. Although they 602
were appointed by the chief, their recognition depended on the 614
willingness of the clansmen to form a following rather than 618
on title or a right of succession. This following determined how many men the chief could bring into battle and how many officers of dignity he could support from their contributions.

The most important function of this group, all of whom could trace descent within the central family, was their bridging the cleavage which ran through all clans. They formed a ministry to the chief and were the councilors of the clansmen. The bond with the former was proven kinship, with the latter, a sense of kinship. They were the mainstay of the system. When the chiefs fell into debt, a frequent occurrence, the tacksmen came to their aid by pledging themselves to preserve the family and the estates, to reduce the debt.[44] They were also the local merchants, an important function in an area with only semi-annual markets and sparse money.[45]

The Clansmen. The clanna (literally the children) included all within the jurisdiction of the clan chief. Their relationship was real or fictitious kinship, tenancy, or contract. To the Lowlanders and the English, their relationship seemed to be a

familiarity with which the chiefs treated their people, aghast at the chief's partaking of the people's diversions, and astou that the chief would shake them by the hand whenever he met them.[47] At the bottom, the system was equalitarian. Every man had the right to address his chief and call upon him for suppo in times of adversity.

The clansmen were continuously recruited by natural increase, adoption, and the gradual subsidence of the younger members of the nuclear derbfine into the body of the clan. The downward mobility of the remote collateral relatives of the chief was of paramount importance. It reinforced the belief in kinship of the clansmen and the chief. The feeling of kinship was further reinforced by the institution of fostera a practice common to pre-Feudal Scotland, Ireland, and Wales.[48] Under fosterage children were exchanged between families of equal status or the son, often the heir, of the chief or tacksm was given to one of the clan to be raised and educated. Fostera served to form mutual alliances between families and clans, to ensure the loyalty of the people for their chief, strengthen the attachment of the chief for his followers, and bind the

y no means insignificant that despite a large degree of 175*
nfluence in political and economic life, there is only 602
e vague evidence of a linguistic nature for Norse influence 614
ly life.[57] There are very few words pertaining to the 618
which can be traced to a Norse derivation. In battle the
n stood by extended families, brothers and their sons
z together. The importance of the derbfine as a social
n be judged from the following statement: in an argument
two men, if one were to swear by the father of his
ry, it was a great indignity; but if one were to cast a
ion on the father and the grandfather of the other man,
: word would be accompanied by a blow.[58] He would have
ed after his grandfather for the clanna used genealogical

The clan was a composite organization. From the old
rganization it took the derbfine, four generation
family, the territorial tie of the group, and the mutual,
al obligations of service, support, and defence. Under
e, collateral descent as a system of inheritance of the
d land of the tribe disappeared but the tribal principle
kind, by which the land was divided among the members
erbfine who in turn divided the land among their real
itious kinsmen, persisted. Scottish nonmanorial feudalism

George Henderson, The Norse Influence on Celtic Scotland

185.

Martin, op. cit., p. 179.

provided the framework within which the functions of the tribal 175*
leader and the spirit of the clan brotherhood could be preserved 602
and extended. The family possessions could be secured by law 614
and the clan system could be stabilized. At the same time, how- 618
ever, the tribal tie remained paramount in the local system.
The general will of the clan backed the chief as the patriarch,
and kinship, however unreal, conflicted with the obligations
of mere tenantry.

The chief was the living representative of the common
ancestor of the group. He gave the clan coherence and endurance;
his leadership was almost independent of royal authority.
Backed by a resolute body of supporters, he governed by custom
and general consent. His jurisdiction flowed from his patriarchial
position and depended on the recognition and cooperation of
the clan. To secure his position and maintain the belief in
common kinship, the chief planted his collateral and lineal
descendants on the land. These men, either cadets of the clan
or tacksmen, held their land by lease. They were the local
representatives of the central family. Their most important
function was bridging the cleavage which ran through the clan
by forming a ministry to the chief and supporting his dignity
and by being the councilors of the people. The gradual subsidence
of the members of the central derbfine through the tacksmen
into the body of the clan reinforced the belief in kinship.
The belief was further strengthened by the custom of fosterage,
the custom of giving a son to one of the clan to be raised and
educated. The clansmen were the embodiment of the clan system.
They were given land as joint-tenants of the chief or as subtenants

of the tacksmen. Here was the essence of the clan system, the 175*
common tie of territory and kinship. The land was not the mere 602
means of subsistence, it was the ancestral home. 614
618

The clan was strongly patrilineal. The father of the
individual family stood to his children as the senior member
of the derbfine to his kinsmen, the tacksmen to his followers,
and the chief to the body of the clan. The fundamental under-
lying principle was mutual, reciprocal devotion. The system
was equalitarian. Although the chief was the landowner, and
the tacksmen received their land on lease, for which they owed
the chief the duties of service and a rent just as their
tenants owed the tacksmen, the land had no commercial value.
Rent was an ill defined and secondary consideration. The dignity
of the clan depended on the number of supporters, who could
be maintained on the land under the system of land use.

Hundreds
103 of place names are known to the villagers
[193] which are not marked on any map. These place names constitute part of the oral tradition of a population which has lived in a confined geographical area for generations.

In most of Lewis, village and township coincide.
632 621 311 423 [363] The village of Shawbost is composed of two townships, South Shawbost in which the crofts splay outward like a fan from roads which curve over an uneven landscape, and North Shawbost which is composed of linear streets (see Map C), to which the crofts are perpendicular. Each township has its own common grazing land, and its own grazing committee. All of South Shawbost and part of North Shawbost belong to one private estate (which includes other townships to the southwest), and most of North Shawbost belongs to an estate which extends to Barvas. Beyond the fact that non-crofters in South Shawbost have found it easier to acquire crofting status, little difference between the two townships appears to be due to their belonging to different estates. As
[427] [529] elsewhere in crofting regions, the landlords of the two estates are concerned mainly with the sporting potential of their land.

632 The two townships are themselves divided into named neighborhoods (cf. Vallee 1955 for a discussion of "natural neighborhoods" in crofting areas).

288 463 [424] finished lengths of tweed. For a tweed to be classified as "Harris Tweed," it must be hand-woven by Outer Hebrideans in their own homes, but the weavers are
288 essentially employees of the mill. All the large Harris Tweed mills in Lewis, except the one in Shawbost, are located in Stornoway. A few smaller businesses, which design and market tweeds but have no elaborate machinery to process the tweed further, are scattered throughout the island.

621 162 [429] The village of Shawbost is composed of 169 households, of which 110 are headed by "crofters," persons recognized as legal tenants of a croft. Of the remaining 59
[361] households, 16 rent houses which were built and are maintained by the County (called "council houses"), 11 have erected houses on the crofts of relatives, and
463 241 32 have built homes on the common grazing lands. Non-crofters participate in the agricultural activities of the township. It would not be unusual, for example, for a non-crofter to serve as the clerk of a grazings committee.

342 166 In North Shawbost, one croft house and two non-croft houses are used only when the owner returns to Shawbost from the mainland for a holiday. The school-
[875] [193] master lives in a house adjoining the school, and the minister in a manse located between Shawbost and the neighboring village of Bragar.

463 One of his
322 apprentices was his sister's son, who built another
[374] [604] smithy not far away. "This was the center of gossip. People gathered there while he shoed horses that came
[521] from Barvas to Carloway."

444 A number of shops were established in Shawbost
178 that sold clothing, cooking ware and groceries. At
[494] one time they numbered six altogether. These shops also ran the first buses between the village and
[477] [443] Stornoway. Gradually these businesses disappeared because of competition with larger companies. Mobile grocery vans and butcher shops and bakers began coming in the late 50's, and gradually took over the trade in large parts of the island, undercutting the local busi-
178 43 571 621 nesses. Income from weaving had already weakened self-sufficiency derived from the intensive use of land and sea and also weakened the formerly heavy reliance on local ties and mutual aid. Today an army of town-
44 463 178 dwelling entrepreneurs and employees constitute a major proportion of the traffic on the island roads. Grocers,
[472] [484] fish dealers, bakers, sellers of soft drinks, garbage collectors, insurance salesmen, mobile banks, coal dealers and others extend goods and services from centralized sources to a market which has money to pay for them. The island's participation in this extensive market system is affected by its marginality to the

121 128 of the township with the larger society, and examines the effect of geographical and social marginality on the boundedness of the township network. Chapter 6 discusses two important networks of social relations within the township.

B. Township as Social Boundary System

632 178 621 The township constitutes a relatively firmly bounded system, although its boundaries are weaker than formerly when the township was relatively self-sufficient
[476] economically. Township members worked together in small fishing crews, and families relied on each other for help when members of the family were away from the island "at the fishing."

621 476 602 [539] [605] Relatives were expected to give priority to helping each other. According to one proverb, "A relative is your best friend." First and second cousins were considered especially close, but knowledge of one's kinsmen extended to at least the fourth generation.

602 576 585 764 [539] Ties of kinship became evident in ceremonies such as funerals and weddings. One Gaelic proverb says, "You know who your relatives are at weddings and funerals." At weddings the onus was on the members of the bridal party to remember their relatives. "You have to sit and calculate who is closely related, and all those

A 60-year-old woman remembers that it was a
621 common practice, when she was young, for children from
537 large families to live for as long as six weeks with
476 other families who were relatively better off. They
would help harvest the hay or the potatoes or bring
in the peat in return for food, lodging and perhaps
some clothing. "They usually ate better than they did
at home." The children were not necessarily relatives
of the families with whom they boarded.

Strong friendship, that is, the kind of friendship
621 associated with mobile urban life in which persons
578 confide in each other and share secrets and build up
an individual relationship based on extensive knowledge
[602] of one another, was nonexistent. A "friend" was a
relative, or someone who gave aid when it was needed.

Today it is sometimes said, "It used to be that
621 your relatives were your best friends; now your best
178 friends are better than your relatives." An old man
592 will meet another on the road and say, "I used to see
187 more of you when you needed me." Neighbors used to
[602] share sheep that were killed; now households kill and
[821] consume their own sheep, and freeze the meat which they
[851] cannot use immediately. Groups that walked out together
to the peat to finish the job in a single day are being
[464] replaced by individual family units that can motor out
000 and do the job in stages. People prefer to give money

181 People prefer to give money
• 621 in exchange for car rides or other help, including peat-
178 cutting, because "than you're independent." Friendships
187 are still weak, relative to friendships in urban
592 settings. Most information which is shared between
821 individuals rapidly enters the pool of communal gossip.
[369] Although many persons emphasize the importance of mutual
[521] aid in defining a friend, some emphasize the ability to
[476] confide and keep secrets.

621 Today many of the younger villagers do not know
178 their relatives to the extent that their elders did.
602 In one family, a girl who was about to get married had
[685] to ask her brother, who was the only one of the siblings
[596] interested in kinship connections, whom to invite to the
wedding. It is still useful to retain an inventory of
602 one's relatives. "I have cousins in Glasgow and
424 Australia that I've never seen, but if I ever go there
I'll have a place to stay." With the increase in
[178] transportation and income, more islanders are taking
brief trips away from the island. During these trips,
they almost always stay with relatives.

It is frequently said that children are now "cheekier,"
369 less inclined to run errands and obey orders meekly, and
570 that they prefer to watch television or read books by
821 themselves to playing with each other.
178

• 621 Despite these tendencies, an individual is still
571 enmeshed in familial and village ties. Villagers walk
in and out of each others' houses without knocking;
[426] only a "stranger" knocks. Goods such as tape recorders,
binoculars and books are passed around the village;
people even borrow each others' reading glasses.

Children are "borrowed" as well. They are loaned
858 out to relatives and neighbors to run errands, or may
865 even live with them. They are scolded as often by a
861 neighbor or other villager as by a parent. A child
621 might be told, "When someone (any adults) tells you to do
something, you do it, no matter who that person is."
The parents of one household are criticised for taking
their children's side against other children and other
parents. "He's teaching his children not to mix with
others. One child is as good as another. They may be
good one day, but they're likely to be bad the next."
A child or adult who enjoys spending time by himself is
[156] still considered extremely odd. An important criterion
by which someone's mental health or general personality
597 is evaluated is whether or not he "mixes" well. It is
621 fairly common for childless households to "adopt" a
child of neighbors or relatives; that is, the child
spends a great deal of time with them. They may go to
the child's house to put him to bed at night, or the

597 child may come to spend nights or longer periods of time
• 621 with them.

To some extent villagers are still dependent on
476 each other for various kinds of help. It is considered
621 extremely bad manners to refuse labor, a tool, or food
[576] to anyone who requests them. If someone refuses to aid
another, people say, "What will he do when he needs
[443] help?" This attitude has made the island a paradise
for the few salesmen who, in the last few prosperous
years, have started to visit its communities; villagers
find it difficult to say no to anyone who comes to their
door with a request, including the request that they
buy something.

621 A woman in childbirth was formerly attended by a
579 local midwife, and kept in bed for two or three weeks.
844 "Other women, both relatives and friends, came and stayed
with them at night, fixing them warm tea and milk,
whispering bhronag bochd (poor soul), how awful you look..."
Just as today the neighbors gather at times of illness
and death. It is more difficult for neighbors to come
to the bedsides of young mothers of today, who are all
[178] taken to the hospital in Stornoway to have their babies;
[743] but the neighbors manage to visit the hospital, which has
no choice but to ignore its rule of only two visitors
per bed at a time.

• 621 The first thing that is said when for some reason
513 a woman is left alone in the house is, "Who's going to
358 go and sleep with her?" Often a child will be sent from
a neighboring family, not always relatives, to stay with
621 her at night. As in the past, it is not uncommon for
572 a childless elderly couple or single person alone on a
888 croft to take in a young, homeless couple, to whom they
may or may not be related. The young couple cares for
the old person or persons, and inherits the croft when
they die.

602 "Keeping up the relation" is the process by which
476 relatives sustain interaction and expectations of mutual
aid even though their relatedness becomes more distant
605 with succeeding generations. "I've got cousins in Ness
that I stay with at the Communions. They're getting on
into the third generation now." A cousin is a cousin
even to the 42nd degree (Williams 1963: 142), as long
as there is reason to sustain the relationship. "I know
we're related, but I can't quite place it." "We're a
bit related. I think she was a MacPhail before she
married." "I don't quite know how we're related, but
my mother and his mother considered it a close relation-
ship, and he has kept it up."

621 Every villager has a vast amount of information
621 about other villagers and their families, which may be
582

• 621 used on different occasions, for example, to discourage
621 deviant behavior or certain marital alliances. Any sign
582 of physical or emotional disability in someone planning
to get married invites an attempt by other villagers to
discourage an alliance. According to a Gaelic proverb,
[539] "If you want to be praised, die; if you want to be
criticised, marry (Ma tha thu airson do mholadh, bamaich;
ma tha thu airson do chaineadh, pos)." The villagers
621 consider not only the behavior of the person but of his
626 ancestors. The individual is perceived as belonging to
582 a family unit which through many generations has manifested
821 certain physical and behavioral traits. Traits of behavior
such as shyness, heavy drinking, stealing and tight-
fistedness are interpreted as hereditary traits. "It's in
the blood (Tha e anns an t'fhuil)." "It's in the people."
Particular occupations are also associated with families.
[463] Stornoway, which is not so "urban" as to have a constant
turnover of population, contains many examples of
occupations passed down through generations.

632 In Chapter 3 I mentioned the development of several
578 groups in the crofting township which seem to be in conflict
with the township as a strongly bounded system. People
who keep only sheep have come to blows with those who keep
both sheep and cattle; and a distinction between crofters
and non-crofters may be seen. Many persons have preferred

764 the deceased or the remaining family assist in preparing
574 endless cups of tea, using the provisions that are
brought by the visitors. The newcomers enter, exchange
greetings, memories, sighs and moral judgements in
rapid whispers. "Oich, oich... that should teach us,
we're all going to go. That's how it was meant to be.
It makes you wonder why we live at all, well, well."
They recall other deaths. "That was a bad death. His
liver was bad, and he turned yellow, then all black...."
[152] They weep, circumspectly observe the appearance of the
[197] room and its occupants, and speak only in Gaelic, the
language of hearth and heart.

764 The minister usually attends a prayer meeting which
193 is held in the sigh fhaire around midnight of the night
before the funeral, but his presence is not necessary.
The prayer meeting may be conducted by the elders. The
elders may also hold the service which precedes the
burial. The minister may walk for a short distance in
the funeral procession or speak a brief few words at
the graveside, but his role in the community drama is
minimal.

764 At least one person from all households within the
• 621 village is expected to go to the sigh fhaire of someone
592 who has died within the village, "to show respect." The
male head of the household is expected to attend the

764 521 [519] funeral procession in which the coffin is carried for about half a mile from the house to the waiting hearse. Over 100 men usually walk in these processions. The more well-known the person or unexpected the death, the larger the procession is likely to be. Relatives [602] of the deceased walk at the head of the procession, at the head and foot of the coffin, while other villagers take turns carrying the bier. The pallbearers serve in relays. Eight men carry the coffin, four on each side, and are replaced frequently by pairs of men who assume the rear positions. The two who have been displaced at the head of the coffin stand outside the line, facing outward, until the procession has filed past them, whereupon they join the end of the procession.

764 178 273 In the past, coffins were carried for miles from the house to the cemetery. The procession rested periodically, and the men usually carried an earthenware jug of whiskey (piggy uisge beatha) "to ward off the cold." The custom of giving a glass of whiskey to men as they left the house to carry the coffin was still recently followed in Skye; and in some areas a funeral is still evaluated by the amount of whiskey available for consumption ("That was a good funeral"). Tales are told of coffins buried without bodies.

166 2. The Exiles: An important source which supplies this sense of contrast is the large number of persons settled away from the island, often in "ghettoes" or neighborhoods in cities in which village ties are main- [521] tained. It is said that gossip about Shawbost travels more quickly in the district called Partick Hill in 166 Glasgow than it does within Shawbost itself. It may be • 621 argued that the "exiles," with their Lewis and Harris Societies and pilgrimages back to the village during the holidays, do a great deal to sustain the strong boundedness of the village as a sociocultural system. They and non-Gaelic-speaking outsiders (the Eminent Person writing his inevitable book in the romantic solitude of an isolated manse) help to maintain a feeling of worthwhileness in a place rife with feelings of ambivalence and negative comparison with the larger society.

181 621 [195] Within the village, especially during the long, dark winter, complaints are often heard of the "sameness" of things. A common phrase, almost a greeting, is, "Anything fresh?"--implying that the usual mode of 621 20 929 existence is stale, sour, exhausted, and mucky with overuse. Although the villagers have access to the range of information available to all Britishers through forms of mass media such as newspapers, radios and television sets, very little of this information is considered relevant to village life, and thus is not attended to.

183 181 [521] The generally low level of stimulation derives in part from values which restrict opportunities for self-expression. People are ready to gossip, i.e., to partici- [626] pate vicariously in the escapades of others, but are less eager to act. Stories concerning mad-cap adventures of some villagers do not belie the existence of constraints [166] imposed on expressiveness. One of the major reasons given by young villagers for wanting to leave the island, and by emigrants for why they left, is that, "There is nothing to do. The place is dead."

156 181 183 • 621 In the everyday life of the village, a style of indirectness and restricted communication is encouraged. A man might be praised in an obituary by the phrase, "His voice was never heard in the community." The encouragement of a "low profile" of behavior is characteristic of communities in which people meet each other frequently and know they will continue to meet and ask things of each other for a long time to come. Indirectness avoids conflict arising from divergent expectations, and embarrassment from changes in plans.

155 861 A major feature of practices of child-rearing on the island is inconsistency, which develops a style of guarded watchfulness and hesitance to act or express oneself. Children are teased by being offered things which are then snatched away. Punishment is inconsistent.

155 861 577 [673] Lies are frequently told. "Every other sentence my father says is a lie. If you believe half of what he says, you're a fool. If you believe a quarter of what he says, you're getting near the truth. If you believe an eighth of what he says, it's probably the wrong eighth."

156 • 621 Villagers engage with each other in constant, quiet game-playing. They are dependent on each other for many things, but try to minimize the control that others have over them while improving their own positions. If someone brings plants or shrubs as a gift, the response is likely to be, "She was probably pruning her garden and needed to get rid of the leftover garbage." Such negativism releases the person from feeling obligated. (See Emmett 1964: 16-17, for a description of a similar situation in Wales.) A man who is asked about his new tractor replies, "Its faults will come out later." If he were to say it was all right and then it broke down, he would have lost points. In discussing the mental health of a villager recently returned from Craig Dunain (a mental hospital near Inverness), someone observed, "He's better than the doctor who let him out." If another breakdown were to occur soon, someone would be sure to comment, "And so-and-so said he looked all right."

156 572 Such training allows little room for the development of close friendships in which the individuals involved are

166 484 823 204 [533] The image of the island as spiritual home is fostered by The Stornoway Gazette, and by nostalgic songs, most of which were written by islanders who emigrated to Canada in the first quarter of the century.

632 241 The crofting township as a strongly bounded network continues to exist, although crofting as a socioeconomic pattern which evolved in a situation of limited social and geographical mobility, low cash reserves, and the restriction of a large population to a region of limited resources, is very different from crofting as defined by an office in Inverness. As far as the crofter is concerned, to be defined as a crofter by the Crofters Commission and other government agencies is to have access to resources which affect the environment in which he makes his choices.

241 288 The individual is faced with the semi-security of crofting and weaving, in contrast with the exciting but risk-laden opportunities offered by the dominant urban- [654] industrial mainland. Crofting and Harris Tweed have been protected by government legislation. Various subsidies [745] and loans are available. In times of unemployment, social security is available. Extremely important as contributers • 621 156 to boundedness are the non-economic incentives: the individual has a place in a human community; he is given

• 621 156 character traits just by virtue of his belonging to a particular family; he is protected from the "out" [570] world even though he may have broken its rules. The [574] village provides a colorful arena of recreation in the form of ceilidh, the character, and holidays such as New Year's.

781 194 A major system of order and meaning is provided by religion, and by the opportunity to belong to a tightly- [181] knit religious clique. Lewis is sometimes called Tir an a-moisgeul, Land of the Scriptures, in contrast with 571 the decadent outer world. The male drinking fraternity 223 [521] constitutes a second important group. And for everyone there is the cinema of their neighbors' activities, which are placed in a vast human calendar that includes the behavior of many generations.

121 From prehistory to the present day, these geographic
178 zones have played their parts as factors in evolution,
174 although the border-lines have changed at different historic
182 crises, and have been modified by economic and social
184 phase. At times the Hebrides have been more closely linked to Ulster or to Norway than to Central Scotland. In viewing these zones, we shall not find simultaneity in historic events, but comparability in stage and transition, even at differing periods. From the evolutionary point of view, the revealing character of Island life lies not only in static survivals, in what Sir Arthur Mitchell found in the Isles and vividly described as " the Past in the Present ". Island life is characterised still more by the dynamic strength of its continuity—notably of early or primitive Christianity—and also by the late occurrence of changes when, at last, they came.

18 The social consequences of these regional differences
• 621 in evolution are profound. In the ' Plain ', to the south-
174 east of the Severn-Tees line, large village communities
[423] with ' common fields ' prevailed, forming the later manor villages. To the north and west, the more varied, hillier
[192] lands encouraged the continuance of hamlets. These hamlets housed close-knit groups of families, often of no more than four or five to a dozen relations or ' friends '—
—in Scots even today (much as in Gaelic) the word
[462] ' friend ' frequently implies kinship. Each small group formed a team. Together the men ploughed their mingled
[476] rigs (or ridges) and herded their stock in common, and
[241] on the coast they rowed their boat as its crew. The women, too, did much together, as when they spun their
[286] yarn, and fulled or ' waulked ' the cloth that one of them
[423] had woven, helping by turn in childbirth and child-care. Usually several of these teams were linked in a larger

18 pastoral group, the germ (in the Hebrides) of the present
• 621 township with its common grazing. Hamlets and town-
174 ship formed circles of cultural and religious life in common.
[423] These ' sociable hamlets ', or ' little commonwealths ', as they were called by understanding writers on the Highlands, lived on in the Hebrides almost until a century ago. Features of their form and life have long been known, but their life has not yet been envisaged in its full dynamic significance.

127 The homesteads, informally grouped in these small
36 hamlets, have been mistakenly described as solitary or
174 ' dispersed ' by scholars accustomed to larger and more compact grouping. The mistake was made by geographers
[423] of the nineteenth century, such as Meitzen with reference to the hamlets of Brittany. Similarly, because of the
[476] small number composing a typical joint team, the vital fact of team-work and joint holding has frequently been overlooked; yet a fundamental mistake is made when such close-knit team-work and joint tenure are described as
174 ' individualistic '. Moreover, these teams were linked to-
621 gether in larger, more loosely bound pastoral communities
631 of township and district. In Scotland and elsewhere, it is true, such hamlets came historically to be split up in various
[241] ways, into smaller farms and scattered cottages. The larger link of common life was also superseded by the
[178] proprietor's estate. Indeed, the twofold revolution involved caused a fundamental regional cleavage within ' the North and West '.

[182] Partly as a result of their small size, the tenure of farm-
[184] hamlets was frequently informal. In northern England, the hamlets and their lands were not entered in Domesday
[178] Book; still less are early entries complete in Scotland. For this and other reasons, jurist and historian may fail

174 to notice the absorption or suppression of rights held in
• 621 common in ' the North and West ', together with the
631 abolition of the duties of fellow-workers to one another. Too frequently they have not troubled to enquire into the
178 former existence of common rights and fellowship duties,
184 the observances of which have so much to teach. Yet to judge from the completeness of the Hebridean evidence, and from wider evidence to be touched upon with reference to Norse and Lowland conditions, suppression caused a profound social and moral revolution.

178 Indeed, the profound character of that revolution makes
184 it hard to recognise the common origin of features which may differ greatly today. To choose four examples, the
[428] long succession from father to son, found from end to end
[166] of an Island township, contrasts with a restless movement of farm servants, and even tenant-farmers, all too common until 1939 in Lowland Scotland and parts of Northern
[181] England. The ideals held by fellow-workers in Gaelic tradition, of kindly and courteous co-operation, contrast with the avowals of rugged individualism made on many a farm even of the southern Highlands today, and certainly of
[291] the Scottish Lowlands and Northern England. Languages have changed as English has advanced during 1500 years: the Lewis crofters' children still speak Gaelic, but children in Stornoway ceased to do so forty or fifty years ago.
[771] And in the recorded religious life of Gaelic hamlets far from any priest (or later, minister), the part of revered men and women is very different from the part played in Calvinism by the Minister and the male Elders of the Kirk. All these four contrasts are due to revolutionary changes in home, work, language and religion. Such changes, of which all trace may be lost elsewhere, are traceable from the fullest evidence among the Gael.

184 Comparisons at the present day are most illuminating.
[791] In the Hebrides one may pass from Calvinist Lewis-and-Harris to Catholic Barra, through South Uist, where Presbyterian and Roman Catholic dwell, side by side, in mutual respect. Although their home life, economy and language are the same, the influence of a comparatively
[121] recent divergence in religion is marked. Such Island evidence, present and past, forces one to re-examine conclusions upon life in the Lowlands accepted until recently, and to seek for the truth upon earlier forms of life in common and for their meaning today throughout ' the North and West '.

175 Ancient elements of unity, and later ways in which
423 these were broken, adapted or remade, region by region,
427 are being unravelled. The Old Estate Plans, made at the outset of the agricultural revolution, show these immedi-
• 621 ately before the re-planning of fields and farms (*circa* 1750–90). These plans also reveal the existence of still
178 earlier types, not otherwise recognisable even on the spot.
[184] With their rentals (when available) they reveal the ways in which old joint farms were placed under a single tenant, as in Lothian, or were split up among several tenants, as in Ayrshire.[1] From such geographical data, both the economic and the deeper social aspects of rural life emerge with new clarity. Such data may be linked to Planning Surveys of land and rural life for tomorrow.

621 Now, although so fundamentally equalitarian within
427 themselves, these hamlet communities of the Gael were subjected to the overlordship of a chief or laird, either directly or through an intermediate gentleman-tenant, a
[174] ' tacksman '. History, with archaeology read in history's
[172]
[113]

[1] For Lothian, see Arthur Geddes (1938 and 1951); for Ayrshire, see J. H. G. Lebon, *Scot. Geog. Mag.*, Vols. 62, 1945 (pp. 7-13); 63, 1946 (pp. 100-110). Further references in Bibliography.

621 light, suggests that such lordship goes back to early con-
427 quests of self-supporting agricultural and pastoral com-
174 munities by well-armed raiders of many races, including
the Celtic-speaking swordsmen of the Iron Age. The last
[172] and most notable of these conquering raiders were the
Norsemen. Their influence was profound, whether, sailing
direct from the Scandinavian forest settlements and fjords,
they raided and settled as heathen Viking crews, or, at a
later stage, they invaded England from Normandy—that
fertile province which they had made theirs in fact and
name—under the panoply of civilisation and with Papal
benediction. A generation after the Conquest they com-
menced the penetration of Scotland.

183 The paradox of loyalty to one's fellows with loyalty
181 to a lord, of stoutly equalitarian thinking bound up with
fervid admiration for an aristocracy, is nowhere more
[614] marked than among the Gael. They sought to reconcile
these conflicting loyalties by claiming common ancestry for
chief and people, as the children (*clann*) of a hero of
history or myth. The years 1945-47, which marked a
centenary of the last of the desperate Jacobite Risings,
stood at the close of the latest of many wars in which fame
has been won for the symbol of clanship—the tartan, long
proscribed (by the Act of 1747) 'to every man and boy
in the Highlands'. At such a time, the Gaels' loyalty to
the death cannot be forgotten although old kings, old
[121] chiefs have gone. But its paradox must not only be re-
[182] membered but understood, from its roots in communal
life and environment through history. Not until this is
[184] done can important phases of our own time be under-
stood, such as the failure of Lord Leverhulme's seven
years' endeavour in Lewis; nor can the present oppor-
tunity of Highland renewal be grasped by the help of

121 And region by region, a fairer balance must be struck
185 between country and town. In Lewis, the part of Storno-
way town, with its population nearing 5000 (in 1951), is
[162] important. Its port, its fisheries, its spinning mills for the
[184] crofters' hand-loom weaving, its merchants' shops, and its
local, administrative and professional services, are essential
to the Island. Its economic and social evolution, too, are
[162] interesting. Stornoway's plans for the future are active
and ambitious, and these, it is realised, depend upon the
prosperity of the 19,000 crofting people of Lewis proper.

121 But the subject of this book is primarily rural. It is to
128 see with fresh eyes what, from our Harris mountain-top,
we viewed as a unit at the core of 'the North and West'.
After the island has been described in terms of its physical
and human geography (Part One), the endeavour (in Part
Two) will be to give a completer account than may yet
have been given of the nature of Gaelic community, with
[621] its temporal duties and its spiritual sanctions. The three
concentric circles of community are described: the family,
the farm team and boat's crew, and the larger township
groups. The relations of this threefold grouping of livelihood and society to Chiefs and Church are studied, and
followed out in later evolution, until today. Elsewhere
I have endeavoured to show how the Island can worthily
maintain itself, and thereby find a new freedom. The final
chapter returns to the broader aspects of society and region
touched on here.

If this intensive study of a single isle and community
can throw fresh light upon certain essential characters of
the less-understood region of the British Isles—that lying
outside the south-eastern 'Plain'—it may help to con-
121 tribute to more than economic reorientation. The significance of the Island life—not so much for the past, which

182 Let us begin with the economic and the social signi-
184 ficance of the Highlands and Isles with which we are
concerned. Economically the crofters' 'living space' is
311 the narrow interrupted belt of improved land (shown black)
[241] which is generally fronted by the sea and its inshore waters,
and is backed by the Crofters' Grazings (enclosed by line
[427] C on the map). Some 700 crofting townships or com-
[361] munities are found in Zetland, the North-west mainland
and the Western Isles, each with its Common Grazing;
the line C also encloses a small area devoted to other
grazings. Deer forests predominate on the eastern, main-
land, side of the line. On the remainder of the hill country
are to be found the hill-sheep farms, with other small farms
and small-holdings.

174 In the past the fishing crew at sea and the joint labour-
621 team on land formed the communal units contained within

(b) Per Full-time Small Holding
● 0·7 to 1·0 (0·85)

(The numbers in brackets are the averages for Scotland.)

174 the township; and to each were allotted the rights of the
226 common grazing and the fishing grounds. For more than
241 a century the croft has been held individually, though in
423 the townships the common grazing is still held in common.
621 Beyond these 'homely' limits lie wider horizons, in the
632 past those of seafaring and of droving or the chase, and
[178] today of fishing and gillieing at home, or of ocean journeys,
urban occupations or colonisation.

In the Lowland regions each symbol represents 100
182 holdings. For (A), 'mixed and dairy farming', the par-
184 ticular type of symbol shows the average number of workers
241 employed on a farm-holding in each county. On each
farm the employed workers form what may be called the
'Labour-Team'. A team may be 'small', 'medium' or
'large'. The Scottish averages of these three types (indi-
cated in the inset key to the map) are roughly three, five
and seven workers per team. Four 'casual' workers are
counted as equivalent to one 'permanent' worker, but
farmers' wives are excluded. Under (B), for the same
Lowland counties and areas, full-time small-holdings are
[593] shown separately. The Scottish average of less than one
full-time worker employed, most often a son or daughter
of the small-holder, is typical of all the counties.

241 As to the relative importance of the different classes of
[162] farms and small-holdings in Scotland, true agricultural
land-holders number 68,000, of which fully one-third hold
part-time holdings (like the Island crofters), one-third
'full-time farms', and rather fewer (one-fifth) hold 'full-
time small-holdings'. The remainder accounts for other
types of less importance. The farms predominate in terms
of improved land, full-time employment, and of course of
[311] production. As to area, farms cover 80 per cent of agri-
[464] cultural land. The farmers employ nearly 90,000 workers,
[162] [refer to map p. 16 .. analyst]

before 1883 but now serves as a school museum. When it closed, most of the members changed to the Free Church.

The present congregation includes many families from the neighboring village of Bragar, who come to church for the morning service and usually attend a prayer meeting in their own village in the evening. Once a month the minister gives an evening sermon in Bragar. The left side of the church, where most of the Bragar people sit, is called "the Bragar side."

Lay officers of the church, called elders and deacons, are elected by the communicants, those members of the congregation who have taken Communion. Both elders and deacons sit in special seats at the front of the church beneath the pulpit. Deacons, who are concerned with material matters such as collections and church property, sit in the "wee seats" slightly lower than the partitioned seats of the elders, the "big seats." The deacons meet in a deacons' court which the elders may attend. A meeting is held once a year at which the congregation is told matters such as how the church money was spent. Kirk sessions are limited to elders, who decide who will be baptised or take Communion.

Each street or neighborhood within the village has its own deacon and elder, to whom members of the street bring various matters that concern church organization, such as plans for baptism.

794 621 2. The Township as Religious Network: The religious sphere has two distinguishable social networks, one of which coincides in personnel with the village network. Most households within the village feel obligated to "make an appearance" during at least one of the two 796 851 Sunday services. Most children are sent to Sunday school, and all are baptised. In baptism, fathers stand with the children, promise to raise them in the church, and to set a good example for them. Baptism must precede Communion, the ceremony by which a person becomes a full member of the church. Baptism signifies membership in the community, the village-qua-congregation. "Somehow you're not really legal until you've been baptised." Some feel that the child's soul may be endangered if he should die without baptism, although this idea is discouraged by the church. [199] According to the Calvinistic ideas of predestination, the fate of one's soul has already been decided.

796 851 626 848 The pressure to have children baptised enables the village-as-congregation to exert social control over deviant individuals. If a child is conceived out of wedlock, the parents of the child (if they have gotten married) or the unwed mother alone must stand in front of the congregation and be lectured by the minister before the child may be baptised. A woman who has married a man known not to be the father of her child must also stand by herself. A

The 105 241 654 [311] [671] fact that crofting townships are located on marginal land is one reason that the larger society is not motivat to exploit the land. The Crofters Holding Act of 1886 and subsequent legislation ensured protection of and incentives for continued maintenance of crofting and the crofting township.

Protective government legislation, grants and loans for housing, subsidies for rearing livestock, relatively low taxes, and the economic protection provided by a socialistic government in times of crisis have helped to maintain a core of crofting families for many generations. 105 162 632 166 434 584 The predominance of older persons in the township is striking, but many of the younger people who have left the island to work on the mainland return frequently, contribute part of their salary to the remaining family members, and plan eventually to marry and settle down in the village or to retire there. Long-term residence of [621] kin-linked families in a small area has in itself contrib to the boundedness of the township network.

105 241 654 632 The policy of the government, through developmental agencies such as the Highlands and Islands Development Board, has been to support economic strategies that complement rather than interfere with the functioning of the crofting township with its small holdings and communal 000 practices. The Harris Tweed industry is lauded as an

105 The Harris Tweed industry is lauded as an
241 industry which is compatible with crofting. Because
188 weavers are self-employed, they can set their own schedule
632 of work and thus continue to participate in croft work
and fulfill various township obligations. The effects
[121] of this industry on the township as a social boundary
[434] system were investigated. The income available from
[463] weaving is unpredictable, which encourages the retention
of crofting practices and other patterns of behavior,
such as "occupational pluralism," that were found to be
[476] adaptive in the past. Such strategies also strengthen
[082] township boundaries; for example, they encourage mutual
[434] aid and communal township practices. But weaving also
[407] offers a high level of income; and some weavers, preferring
to spend most of their time weaving, have neglected
crofting, or have invested in tractors or other motorized
transport which enables them to harvest crops, cut peat
and perform other activities independent of other township
members.

105 The fundamentalist Free Church constitutes an important
•621 boundary-maintaining mechanism, serving to exclude various
795 external influences of the larger society from the township.
632 However, a smaller network of persons engaged in the
184 religious sphere of social activity, a subsystem within
105 the township system, also exists which has the appearance
794 of a firmly bounded system. These are members of the clique
621
632
184

105 of the converted, who occasionally neglect township and
794 neighborly duties in favor of religious activities. The
•621 increase in private transportation during the past 25 years
632 has facilitated the maintenance of closer ties within the
184 clique. The existence of such a strongly bounded subsystem
[444] is an example of a trend toward the weakening of the
township as a social boundary system, but this trend is
countered by other factors that strengthen or help preserve
the township as a bounded system.

105 People come and go from the township, but this appears
632 to maintain rather than weaken township boundaries because
621 behavior different from that prescribed within the township
166 can be performed outside it, and conformist behavior
184 reassumed upon reentry. Those unable to conform with
standards of behavior prescribed within the township are
not likely to return.

[528] Township members who have settled away from the island
come back periodically for recreation and a sense of
[829] belonging. They increase the value of the township and
its way of life in the eyes of the inhabitants, and provide
them with subject matter for conversation until the next
holiday season, when the exiles again return.

105 The boundedness of the township is thus a qualified
632 boundedness that, over the past 100 years and especially
621 since the second world war, has decreased in strength but
184 is nevertheless strong today.
[178]

105 is nevertheless strong today. The relatively strong
632 boundedness derives from a number of factors. Important
•621 among these are economic adaptations to modern conditions,
184 which consist in part of the retention in modified form
of traditional economic activities in response to various
constraints and incentives presented by larger British
society. Also important are institutionalized bonds of
affect, particularly of kinship and community, and ties
of religious affiliation and identification. These ties
continue to be functionally important in part because of
the geographical and social marginality of the crofting
township. This combination of factors has resulted in
the persistence of a relatively strongly bounded system
which retains distinctive features in an extensively
urbanized and industrialized nation.

B. Theoretical Considerations

121 In the United States, the concept of "peasant" has
provided the main conceptual tool by which rural communi-
ties which are structurally integrated with the larger
nation-state may be studied (cf. Foster 1967, Wolf 1966).
[632] The Scottish crofting township has some of the character-
[621] istics of a closed corporate peasant community (Wolf 1957),
but it is difficult to apply the word "peasant" to such a
000 community. Cultivation for subsistence is minimal, and in

AGRICULTURE AND FISHING

THE CROFTER

The pursuit of agricultural processes, their growth, development and improvement, to establish a foundation for a secure society has never been easy on the island. The unyielding nature of the base rock, Archaean gneiss, its hardness, its non-porous property, have all contributed to the resultant pattern and character of society which emerged. Though one is tempted to define crofting as an agricultural activity, it is also something much more intangible: a way of life. To quote the Napier Report on *The condition of the crofters and cottars in the Highlands and Islands of Scotland* (1884): 'Habit and local affection bear so great a sway in the actions of mankind, that Highlanders will be found who would rather be proprietors in the mountains of Skye, or the wastes of Lewis, than on the fertile plains of Manitoba.' 'There is the Island of Lewis, with poor, peaty soil covering the Archaean gneiss, but with a crowded, lively, vivid community,' said the Taylor commision in 1955 (Commission of Inquiry into Crofting Holdings).

The Highland crofter is the subject of an extensive literature. A special authority, the Crofters Commission, exists solely for the purpose of caring for his needs. He has special rights and privileges which are safeguarded by the Land Court. Crofters' unions have formed themselves into a strong federated wall for the system's defence.

Socially, the term 'crofter' means, on the island at any rate, a landholder who cultivates his own (arable) holding, his croft. He shares the common pastures with his fellow-crofters, each of whom has a right to carry a sum of so much stock, the 'souming'. These common pastures or grazings are a social link of some considerable significance, forming the basis for the crofting township, as distinct from the communities set up under the influence of some agricultural land use such as hamlet or village, where there are both small-holders and true farms, and the only communal land is the village green or common. For instance, outside the crofting counties area the main unit of Scots life in the country is the farm, with its tied cottages. Then come the full-time small-holdings important in the north-east and the southern Highlands.

7 THE PEOPLE

THOUGH there are a number of large island communities in the British Isles, Harris and Lewis have in particular retained their individual characteristics, mainly because the Minch has acted as a buffer against effective infiltration of alien influences. The relative insularity of the north-west Highlands has enhanced this isolation, to preserve what is probably one of the oldest forms of communal life in Britain. It has some unique characteristics which are evident even in these days of sophisticated civilisation. The basis of life, although today the individual is beginning to show face, is a communal spirit, based on team-work. Work undertaken with the willing help of others is easier, lighter and quicker done: livestock is easier handled in a large controlled flock; boats are best rowed with a crew. And the women, with the same inborn communal spirit, once spun yarn together; waulked or fulled the cloth together; and helped each other in childbirth, child-care and the deaths which affected the community.

Several of these teams eventually merged to form what is now called the crofting township. And, though a township may nowadays number 1,000 people, to keep, if not pull, together is still a priority if the social structure is not to fail. Townships have been called in the past, by understanding writers, 'sociable hamlets' and 'little commonwealths'. Though these are of long standing historically, they are still a dynamic form of social integration of the kind found elsewhere only in working-class districts of cities such as Glasgow and Manchester. This is not to say that one must be 'poor' in order to participate in such a society. In the material world, to be poor is to be without money; in a crofting society, lack of money, although this commodity has tended in recent years to assume for itself an out-of-proportion standing and status, does not necessarily mean destitution; for help to keep the body together is always to hand, though the donor may never be seen or known.

A HARRIS VIGNETTE

2,620 ft); grouped around this are the lesser peaks staring stark 631
and treeless to the skies. At the feet of these hills are the small 133
villages straggled along the shores of West Loch Tarbert. Much of this area is owned by the proprietors of Amhuinnsuidh Castle, a magnificent structure built by the Earl of Dunmore in the last century; the hills lying north of it are rich in red deer. The road [491]
past the castle trundles on until it peters out at the far-east village of Hushinish, beside a glorious scimitar-like curve of silver sand. Beyond Hushinish is the Island of Scarp.

The road along the shores of East Loch Tarbert ends at the 631
village of Kyles Scalpay which overlooks Scalpay island. The [491]
Bays of Harris hold in their crevices the scattered groups of houses [361]
here and there, where an inlet of the rocky coast affords some [133]
anchorage and where a patch of ground is suitable for cultivation. Tortuous, winding footpaths have been gradually replaced by [487]
narrow roads connecting the townships. Lack of sufficient re- [161]
munerative employment has led to considerable depopulation. [162]
Fifty years ago the population of the area was just over 5,400; it is now about 2,900.

The south of Harris is better known for its association with Lord Leverhulme. Obbe, later Leverburgh, became the centre of his schemes. He built a large pier, huge kippering sheds, houses for the workers, roads and lighthouses, and blasted away underwater rocks which hindered free navigation. The bulk of this work was complete in 1924, but when he died (in 1925) his successors, in the cold light of economics, decided to close down the embryo industry and realise its assets. The harbour works had cost £250,000; they were sold for £5,000 to a demolition company. Leverhulme's memorials are still to be seen. The west coast of Harris is now becoming known for the long stretches of shell sand and the green machar-land beside it, a true delight for the tourist seeking isolation.

Tarbert is the central village in Harris, with a population of 631
about 400. It is a thriving community, nestling at the foot of 621
Beinn an Teanga and at the head of the sheltered anchorage of East Loch Tarbert—sheltered from the prevailing south-westerly winds and from the Atlantic storms. The car ferries give direct [505]
contact with the Scottish mainland, via Skye, and Tarbert also

A HARRIS VIGNETTE

has direct or indirect communication with Glasgow, Stornoway and North Uist. In summer a thrice-daily bus runs to Stornoway, and once a day a bus makes the round trip of East and West Harris. The township, linear in pattern, east to west, includes sixteen shops which cater for most of the needs of the population within reasonable travelling distance; it also has two cafés, a post office, a licensed hotel, a hall for social functions, a masonic hall and two churches. The Sir E. Scott School here is the only secondary school in Harris with an academic stream. Most of the working population is employed in the service industries, the professions and the tweed industry. Tarbert was a fishing port of some significance in the past, and is now a refuelling point for ships.

The absence of organised industry on a large scale, such as Lewis has, is a factor which tends to bring nearer to reality any desire on the part of Harris natives to leave their native soil. There are small pockets of industry, but these are only dabs of easing ointment on the excessive unemployment sore of 27 per cent. The main occupation is of course crofting, the income from it being augmented from a variety of sources. Some crofters concentrate on the production of Harris Tweed, perhaps using the wool from their own sheep; the natural dyes from the lichens which grow on the rocks and from other plants are still used occasionally. Others specialise in knitwear. Recently shell-craft and wood-turning have been added to the traditional crafts, with a view to the tourist market. Fishing, of course, plays a part in the economy in some communities. The interest of such organisations as the Scottish Country Industries Development Trust has been concentrated on the potential in shell-fish processing, and the production of knitwear on a larger scale than exists at present. Roadwork gives employment to about thirty men, but is of course seasonal.

An apparently bright light on the employment horizon showed itself in 1965, with the opening of a quarry at Lingerbay. The mineral quarried was anorthosite, a white granite used as an abrasive in cleaning products. A 99-year lease was taken out by a subsidiary company of William Robertson (Shipowners) Limited, Glasgow. But the quarry was closed in 1967 due to lack of orders.

vision of adequate educational facilities in remote spots becomes increasingly difficult.

In its time Scarp has contributed more per head of population to the professions than has any other community of similar size. The last of the native Scarp population left the island in November 1971 : two families totalling seven people. The island has now attracted the attentions of a hippie community.

Scalpay

Scalpay Island, on the east side of Harris, was formerly occupied by two or three tacksmen in succession before being 'crofted out'. About 1843 the Harris factor settled twenty crofting families who managed to make a fair living there, but five years later another twenty families were added; some had been evicted from the island of Pabbay in the Sound of Harris. This led to some subdivision of the available land. The 1861 population was 388, but the figure rose to a peak of 624 in 1921; in 1951 it had declined to 541. It is now in the region of 450.

Island Scalpay is in fact one of the few places in the Highlands and Islands area in which the normal trends associated with remote regions are operating in reverse. The island despite its smallness—it is a mere 3 miles long and 1½ miles across—supports a thriving and dynamic community and is the envy of its neighbours. Scalpay is retaining its young folk; and it boasts some of the finest homes in the Hebrides. From the agricultural point of view it is not greatly different from other islands in the Hebrides. Its forty crofts produce a good crop of oats; but less than 20 acres of the land are re-seeded.

The land being as poor as it is, the men of Scalpay have turned their faces to the sea—for a living, not for emigration. Scalpay has the largest number of full-time fishermen and a total of thirty-three boats, twelve of which are ringnetters of over 40 ft. Native enterprise is also shown in the ship-owning firm whose vessels carry freight and passengers to many parts of Scotland and on occasion to the Continent. A Harbour Association was formed on the island in 1966 to work for local amenities for fishermen and

427
621

vis and Harris, see category 423, pp. 230-234;

195 693 473 (241) (311) (184) (224) (823) 195 361 (511)

on the Highland fringe, Lowland and Highland alike, outlying reclainable patch of arable, lying near distant, little-used pasture, frequently gave a single family the chance of a living. Such a site meant solitary toil for the man and his family; but there might be advantages such as an occasional deer from the forest, or a post as hunting 'forester' such as was held by many a Gaelic hunter-bard. In the Eastern Highlands such a high-lying croft was known as *Ruigh* (anglicised to Ry-). Traditions of poverty with individuality in isolation were handed down, for example, from one of my forebears who held such a *ruigh*, Rycorrach, one of several strung out along the 1250-feet contour in a small, high valley off Strath Spey; the last of them was abandoned only recently. Such a *ruigh* may have originally been a summer shieling, only occupied when shortage of corn-land below, coupled with new possibilities of a little profit from sheep-shearing, led to settlement there.

198 361 224 233 621 184

At the fringe of the Island's deer 'forests' of North Harris and Park, stalkers are still found in lonely lodges and dwellings, individuals often of character and worth, as they need to be; and a few isolated shepherds, such as one finds on mainland sheep farms, dwell on small islets. But in the Isles, isolated, high-lying spots for single crofts are rare. And the clearest distinction must be drawn between the true solitude of a single, isolated cottage or croft and the sociability of a group of four or five, or even two or three, crofts, such as those of lobster fishers; for even a few families form the germ of a community, in work and in leisure.

195 198 654 496 241

The potentialities of co-operative practice were overlooked by agricultural reformers, excusably enough. For when new methods were required, run-rig kept back the pace to that of the slowest, virtually arresting reform. Soon

233 473 (632)

reach their shielings. From Point district (Eye Peninsula) the cattle are still brought inland to the moors south-west of Stornoway. And from Brenera on the west the cattle are swum to the hills of the main island, just as they once were swum from Bute to the hill-pastures of Cowal in Argyllshire across the Kyle at the 'Strait of the Swimming', Colintraive (Caol-an-t-snaimh). Nothing could be more natural, indeed inevitable, than pasture in common where large, open moors were to be found. The number of animals allowed to each holding was duly apportioned and then, as now, was known as the summing or 'souming', still checked at the annual gathering (*cosgoradh*).

473 621 433 (195) (198)

Thus a cluster of conjoint farms shared "the grass on the Ben and the tillage on the machar" (*Fiar air beinn agus paighinn air machair*). Along the shore, sea-ware, drift-wood and the like were allotted, too. And, as Carmichael put it, there was even "run-rig at sea", for the fishing banks were allotted among the available crews. Most of these rights are still shared by the members of a township. But any crew can now fish freely where they choose, and no township can legally keep away strange boats, nor even steamers beyond the three-mile limit. This loss of communal rights stands in the way of remunerative fish-farming and its promise.

621 473 (593) (241) (496) (232)

Profound social implications distinguished these three concentric circles of community: the family; the farm-team and boat's crew; and the larger, township group. These implications concerned labour, duty and right. The labour of reclamation gave a 'right' to the land thus won from the moor; and the duty of labour together, for fruits equally shared, gave the farm-team and fishing crew cohesion on land or sea—team and crew working for a common purpose. On the other hand, as individual sharers in the common

621 473

pastures of machar and moor, each man had not so much a 'common interest' or duty as, individually, a 'like interest' or right. As now, each unit, whether team or individual, would tend to desire a maximum stock for itself, perhaps hoping it would have "the luck to rear" a little more than its apportioned souming, at the risk of the over-stocking which results in common loss. But though need, greed or rivalry offered temptations, morality invited careful sharing and was enforced by common interest.

473 497 (10) 632

The chief distinction between team and township was that the tasks of the farm-team were constructive and, like that of the boat's crew, active and co-operative. It is true that in the township certain tasks were co-operative, such as the wolf scaring of old times or the fox 'hunting' or shooting on mainland moors today. The modern gathering of sheep is also done together. But no constructive effort was involved in the allotment of shares on the machar or of stock on the moor, which were—and remain—matters merely for communal control, not communal effort.

511

Now, the quality of a group alters with its quantity. The intimate cohesion of a very small group of no more than half a dozen members, diminishes with an increase in number; but increase brings a compensating gain in diversity. Ten or a dozen people tend to break up into sub-groups, whether for small jobs or to enjoy conversation. The smallness of a group limits the number of relationships; an increase in number multiplies sub-groups, and life is enriched. After living long with fewer than half a dozen acquaintances, the same subjects keep cropping up in talk, the same tales are re-told, too often, and people cannot get away from one another's idiosyncrasies! A very small addition turns the scale by renewing variety. Here lay the social value of a township and neighbourhood,

621 496 (632) 198 461 496 621

embracing several hamlets. Yet the strength of community life sprang from co-operation in the farm-team and in the boat's crew.

With the passing of the joint farm the greatest disciplinary factor for work in common passed away from agriculture. The fact that fishing still remained as a social discipline, and actually developed in importance as the farm-team declined and was abolished, was to prove all the more significant to the vitality of social life until 1914 and even to the present.

(9) THE COMMUNITY ORGANISED: STEERSMAN AND CONSTABLE

621 (22)

As small groups of two to half a dozen men could manage their agricultural affairs informally, by common consent, no official was formally chosen to manage the affairs of the fellow-workers on a farm. Where prompt decisions are needed, however, even a small group should be led: a boat's crew therefore choose their helmsman-skipper and obey him at sea. And where several farm-groups made up a township, more formal deliberations were required, and to carry out their decisions they chose a responsible man, the constable.

195 621 (181) 195 622 (882)

Of the crofters' manner of deciding communal affairs in Uist, Carmichael wrote, in 1884, that these meetings "were highly interesting, as showing the ability of the people, their logical and legal acumen, their readiness of resources and, I can happily add, their invariable courtesy towards one another. There was one regular official known to us as the constable on whom there lay the chief executive responsibility. When a crofter is elected constable of his town-land, he takes off his shoes and stockings and, taking

195 (631) 632 621 (191) 621

lordly rank: a working, equalitarian democracy dominated by an aristocracy proudly refusing to work. The fascination of Gaelic community is, first, that its elements stand out so clearly, and, secondly, that links were forged in clanship which made its living chain, though heavy, a thing that shone with pride, and beauty too.

(10) CLANSHIP, COMMON DESCENT AND CLAN-HELP ('CUIDEACHY')

621 192 621 197

To what extent is it now possible to disentangle the two contrasted elements of the lord or chief and the farm-teams and townships? Prehistory is hard to unravel; but the successive waves of conquest flung upon the Island shores have left their jetsam, unmistakably. The circle of huts found near a broch or commanding site recalls the tensants' village grouped close to the castle of a chief, from early history down to the 'Forty-five, and suggests a primitive form of feudalism or of clanship. Traditions add their part. In Uist one may still hear the ancient heroic lays traditionally ascribed to Ossian, Oisean, son of Fionn or Fingal—lays of which Macpherson's sonorous prose gave free rendering. The Fingalian tales differ from the lays, being frankly fantastic. Lewis had its own cycle of Fingalian tales; examples are given by W. C. Mackenzie (1919). Both lays and legends tell of an aristocracy or warrior class, the Feinians, of their enjoyment of the chase, and of their relative comfort, with wealth in gold and silver, in banners and flowing mantles. The chase combined with riches implies the existence of a community to feed and clothe the huntsmen. The traditions of the Cuchulainn cycle, with closer approximation to historical and archaeological truth, tell the same tale. Historically, in-

173 177 621 631 (191) 192 621

coming Viking chiefs, who often intermarried with women of the older aristocracy, seem to have retained some elements of a pre-existing order, as did their successors, the Scoto-Norman lords.

So, from history back to 'proto-history', there is increasingly discerned the stages of superimposition, in the Isles as elsewhere. In Central Europe archaeology has recapitulated the stages by which peasant-villagers were raided, then conquered by desperate herdsmen, on horseback or bearing better arms, who had ridden in from the drying grasslands further east. In the Isles the later conquerors were the fierce raiders from the sea, sailing in from the fjords of the North. An unbroken chain of tradition from Viking to Gael is vividly conveyed in the stirring saga of the Lords of Dunvegan of Clanranald, composed only a year or two before the 'Forty-five (epitomised, Chapter VI (9)).

173 622 631

When the conqueror had won the submission of the conquered and secured his livelihood, comfort and leisure by their work, he came in time to bring their interests nearer to his own. Yet whenever the ambitions of two rival chiefs conflicted, the essential predatory attitude remained and either might bring fire and sword against the other's harmless people. Through time, the successive tides of emigration and storms of conquest bridged the contrast of extremes. Not two orders of chiefs and people, but successive strata, with intermixture of blood and of tradition, must be sought in the Isles as elsewhere. Traditional life in so difficult an environment tended to be diversified and to encourage all-round aptitudes in people and chief, their characters having much in common. As to blood, the history of Island Norsemen records the marriage of the new-coming chiefs with heiresses

(197)

173 622 631 (197) (171) 173 621 193 621 614 824 539 173 622 631 193 621 614 824 (551)

from the old chiefs' families, as in the genealogies of MacDonald of the Isles and the MacLeods. A special feature contrasting with English history is that claims to differences of descent, instead of being maintained—as between the Saxon and the conqueror of Norman blood—were fused. Even when the ancestor of the chief was alien to the locality, the people and the chiefs ultimately claimed to be of one and the same descent. Neighbourhood softened the impositions of the hunting herdsman upon his human herd, and the feeling of kinship brought reconciliation.

How far, then, can the Gaelic tradition, which proclaims every 'son' and 'daughter' of Leod to be of the *clann*, the 'children' of the first Leod, really broaden a blood tie? Both the differences of race to be found in clanship and the ties it formed are well brought out in a tale of Highland pride, still told with Highland laughter across the Minch in Kintail. A French skipper (an importer of claret) touching at Kintail three hundred years ago, met a short, dark man and asked him of whose clan he was. "The Clan Rae," was the reply, "but we are of two kinds, the tall, fair MacRaes and" (a little pityingly) "the short, dark MacRaes." "And which are you?" "I," said the wee, black fellow, drawing himself up, "am one of the tall, fair MacRaes!" "Then God help the short, dark MacRaes!" said the skipper. Even one link with the blood of the chief—and that not necessarily legitimate—was enough for a man to found a claim to kinship, not merely as a MacRae, but with the tall, fair chief through

* In Gaelic, as a man is called MacLeod (son of Leod), so a woman is NicLeòd (daughter), and the clan, *Clann Leòd*. The absurd addition of 'son' to a woman's name (as in English surnames such as 'Johnson') is unthinkable in Gaelic, in which a woman would be named 'John's daughter', *NicIoain*.

173 his near kin. Again, much as in the medieval *gester* of
621 France, fosterage or an heir by a clanswoman formed the
614 closest possible tie to at least one family of the people
829 from ancient to recent times. For it linked the heir by
[171] sympathy—though not by equal obligation—to elders
and playmates in childhood and his contemporaries in later
565 life.

To re-state this 'contradiction' of equality and privi-
leges, we have thus a hierarchy of 'class' imposed upon
a 'classless' society. For the joint farms and the township
were essentially classless. The two classes, the lord and
the people, were primarily opposed, war having placed the
conqueror above those who fed him. This state of things
was not active 'class-war', for the armistice could endure
indefinitely by means of the bargain made between the
classes for some exchange of services; none the less, it
was built upon class conquest.

That all should ultimately claim the lineage of their
175 chief was a remarkable solution to the hereditary opposition
526 of class. A man who knew the Islanders well, John Lane
614 Buchanan (1793), noted how in conditions of the utmost
622 poverty the poorest addressed each other as 'lady and
[574] gentleman', *bean-uasal* and *daire-uasal*, a courtesy not lost
today. And every clansman had a right to shake the hand
of his chief, as Edmund Burt observed in his vivid *Letters*
[577] *from the North* (written after 1721). Indeed the sense
of mutual obligation implicit in Gaelic society is well
illustrated by the homely word *cair*, usually translated
'right'; it is equally used for right's correlative, duty—as
when a Scots or Irish crofter may say "You've a right (a
duty) to help your mother." And for a 'right' (privilege)
to shake the chief's hand. An English equivalent would
be duty-privilege, or duty-right. Similarly, the same

175 womanhood a prey to prostitution. The licence of a chief
585 among young women was preferable to this; but evils were
inherent in the fact of lordship.

(c) TWO ISLAND BARDS: MARY MACLEOD AND THE BLIND HARPER

175 While in Lewis the continuity of clanship was sorely
63 shaken by the fall of the chiefs, the Torquil-MacLeods,
621 in Harris it was maintained in the family of the Norman-
MacLeods of Dunvegan in Skye. The family of Dunvegan
is famed for chivalry and gentleness, not only in the songs
of the past but in the speech of Skyemen to the present day.
Harris did not suffer the bloodshed endured in Lewis from
the death of Torquil until after the accession of MacKenzie
in 1611; and Harris was not involved, like Lewis, in the
troubles of 1715. MacLeod of Dunvegan retained Harris
until the end of the eighteenth century, when it was pur-
chased by a cadet of the family who had made his fortune
in the East; and it only passed out of MacLeod hands half
a century later. Hence it is that while in Lewis there is still
talk of the 'give and take' between the lesser laird and people,
in Harris there is more. In "the hereditary Hall of
MacLeod" of Dunvegan, two Island bards gave birth to
immortal song. Together, the tales of Lewis and the songs
of Harris and Skye give us an authentic record of clanship
in fact and feeling, linked with community today.

[628] In spite of the break in continuity, ease and warmth of
feeling could spring up between a MacKenzie of Seaforth
and the Lewiaman, though Seaforth was a peer of the realm,
and of a mainland name, not a MacLeod by direct descent.
Playful rhyming, chaffing contests between tilled laird and
small tenant, are recorded by A. Carmichael and W. C.

175 Mackenzie. For all that, in 1900 a crofter said: "We called
613 the old proprietor Seaforth, but I believe he right name
621 was the Prince of Welsh". To him the Earls were royal!
[829] Freedom of intercourse is embodied in the language
to this day. With 'a stranger', a little spoken Gaelic
197 lessens 'strangeness' and quickens intimacy, because
565 Gaelic conveys essential human relationships as English
576 rarely can—even the English of the 'democratic' Low-
lands. For instance, a well-disposed stranger, though
young, is usually addressed in English as 'sir' by a senior
crofter, and, just as in the South, without the expectation
of 'sir' or 'ma'am' in return. In English, that is, respect
is given to class. In Gaelic, age receives respect: *ît* is the
stranger, if the younger, who adopts the respectful 'you'
(the second person plural, *sibh*), while the crofter, if the
older, uses the familiar (and respectful) 'thou' (*thou*). If they
are of equal age, and neither is elderly, 'thou' would be
[562] used by both. Similarly, respect is given to womanhood;
and an older woman who would say 'Sir' in English will
say 'My dear' in Gaelic.[1]
614 It is not only by daily contacts that we may understand
the relationship of people to chief, but by the height of
feeling it may attain, of which the beauty of utter expression.
[175] Among the finest of the short-lived songs of praise to Gaelic
[533] clanship and its chiefs are those composed by two Island
bards, a woman of Harris and a man of the Lews. Mary
MacLeod, *Mairi Nighean Alasdair Ruaidh*, was a kinswoman
of the MacLeods of Dunvegan and Harris, and a beloved

[123] [1] Calling on the sub-postmistress in a Highland place where I was known to be a friend of the laird, I was addressed as "Sir". But hardly had we passed to Gaelic when this woman, my elder and a person of culture, laughingly used an expression then strange to me. Halted, and suddenly shy at being forced to translate, she said at last, "When thou want a *dump* (just a boy!) '*mair the the cup*!" But rightly, she would have been slightly shocked had I said 'thou' to her.

(d) TACKSMEN AND SUBTENANTRY, FACTOR AND LORD: 1611–1800

175 We saw that in the Rent-roll of Lewis in 1718 the first
421 sixty-four entries, signed personally, recorded comparatively large holdings (tacks), the annual rentals of which were
614 from £3:6:8 to over £10, the occupant of one (or more)
621 of which would be styled Tacksman or 'Man of the Farm-town' (*Fear Baile*). While one or two tacks were shared, a few tacksmen may have held more than one tack—though one cannot be sure, owing to the recurrence of the same
[551] Christian names in each clan. It is striking that half the tacks—though mostly small ones—were held by men of undoubted mainland names, of which there were twenty-two MacKenzies, four MacLennans and three Matheisons.
[166] These were doubtless the descendants of gentlemen from
the mainland who in 1611 had helped to win and hold the
[551] Island for MacKenzie of Kintail, later Lord Seaforth. Of native Lewis names the principal are MacAulay, Morison and perhaps MacIver.[1] Only three small tacks were held by MacLeods, who may have been of Island stock. Lochs and Eye on the east coast had largely been granted in tack to the new-comers; on the south-west and west coast MacAulays and MacIvers held much of Uig and a few farms in Cladach; but more of Cladach and most of Ness (in the north) were still held by joint tenants. Stornoway was held by burghers, of whom perhaps two-thirds bore mainland names. The peasantry remained as unnamed subtenants on these holdings, of which the total rents show

[114] [1] The writers of the Brend Report (1901) assumed that MacIver is a native name. This would seem to be borne out by its frequency as a surname today, in contrast to MacKenzie, Matheson or MacLennan, though W. C. Mackenzie (1919, p. 92) thought the MacIver tacksmen arrived with Seaforth.

175 they were composed of at least one to four or five hamlet-
421 farms. The tacksmen also had quarters for service.
614 Thus in Lewis a special reason, the accession of Sea-
621 forth, had led to the granting of many tacks to his own
clansmen and to natives. Elsewhere in the Highlands the
175 procedure is noteworthy during the sixteenth, seventeenth
427 and eighteenth centuries, for the collection of rents from
614 the peasantry by means of large tenants had financial
advantages for the greater landlords (T. F. Grant, 1930).
184 The tacksman's continuance in tenant depended on his
paying regularly, for the lease was not a hereditary grant.
[661] A tack could also provide for a lord's younger sons or
[565] immediate relations, such as formed the gentry of the clan.
Along with smaller lairds, these furnished the cadres of
officers who led the clan regiments down to the 'Forty-
five, and later the Highland Regiments to the line and
422 the Peninsular and Waterloo. Like MacKenzie, other
great chiefs such as Argyle or Breadalbane leased tacks
when they acquired the status of peers and took possession of
fresh lands with Royal support, after vain resistance from
native chiefs and their followers. In Lewis, the fiscal
status of tacksmen was applied both to MacKenzie's sup-
porters from the mainland and to those with ancient roots
in the north-west. Many of these may have thought a
mere lease a poor substitute for hereditary tenure, though
a legal compromise necessary if their possession was to be
[166] continued. The lack of permanent tenure ultimately led
to the departure of their descendants.
175 From the families of these tacksmen have sprung most
621 of those of Lewis birth or descent who achieved fame
614 before the twentieth century. Of the MacAulays, we saw
Zacharias was Chamberlain during and after the 'Fifteen.
554 Thomas Babington Macaulay came of the same line, as

175 did another Zacharias, closer than Thomas to the Lewis
554 tree, who worked nobly with Wilberforce for the emanci-
344 pation of the slaves.[1] Still another connection was a
621 Canadian emigrant, grandfather of the late T. B. Macaulay,
[662] LL.D. Alexander Mackenzie, the explorer of the Mac-
kenzie River, was a descendant of Lewis tacksmen.
MacIvers and Morisons also distinguished themselves.
[198] But the sons and daughters of crofters had to await the
[871] provision of education in English before they could rise
in trade, learning or war; hence few Lewismen of the
greatest Lewis name, MacLeod, achieved eminence until
the twentieth century.

175 As for the peasantry, the interposition of a new or
554 enlarged class of tenantry between themselves and the
562 superior must have meant that they had to labour on the
427 tacksman's home farm, and no doubt pay more in produce
184 or cash. Hence the Gaelic saying that if the position of
the small (joint) tenants was bad, that of the subtenants
was worse, "the Evil One itself". Following the long
fight with Fife Adventurers, hardship may have been
greatest where mainland tacksmen were placed above the
joint tenants; but even under MacAulays and MacIvers
rents may have been raised and some of the joint freedom
lost which was still enjoyed in Ness. Whatever adjust-
ments were made in an earlier period had to be re-made
with the beginning of Seaforth's new order.

In the following generations, contradictory accounts of
lairds, factors and tacksmen are given by contemporary
observers. Certain of these insisted that, given the poverty
of the lands as a whole, the chiefs and landlords, factors
and tacksmen, were the saviours of their people. Yet even
among those who supported authority in general, there was

[113] [1] Charles Booth, *Zachary Macaulay*, 1934.

175 the last of these in outlying villages after 1918. When
554 the fishery industry in the Lewis, the fishing
565 most fishermen could speak and write English, the local
421 curers were best fitted to take action not only in marketing
228 but in approaching the Government to aid the construction of piers and harbours. On the whole, their long ties with place and people, coupled with education, made them useful leaders of community in which leaders were needed to adapt life to a changing economy. Here and there one or two small farmers survive, a little apart from the main townships. Aided by a long cultural tradition, they meet changing times by combining with their inheritance a sane selection of new elements.

Looking beyond the Island to the mainland, the time is
175 approaching for a development to be made of the historic
621 parts of chief and landlord, factor and tacksman. Not only
622 is there an enlarging body of documentation, but a growing
427 understanding of communal strands in tradition and of
184 changing social economy seen in relation to geographic
factors of place and region. And in the Gaeldom, condi-
[178] tions varied greatly between bordering areas from Mar to
[182] Kintail, and from the heartland of tradition in the Hebrides. In the Island, one must remember the fundamental opposition, yet the recurrent readjustments of chiefs and people. These, and not only individual differences in character and conduct, explain the differences of experience and opinion
[829] quoted above. The people's belief, so frequently given to me thirty years ago, that it was bad factors, not the landlord, who taxed and harried them unjustly, expressed an idealistic faith in a chief, rather than the facts of economy
[565] and history. For lordship begins with the imposition of

[113] [1] A. McKerral, *Stat. Hist. Rev.*, 1947.

175 621 622 427 184 565

rents, and its end is in sight when these cease to provide for the lord's desires.

(E) STORM AND GALLEY; BATTLEFIELD AND REGIMENT

174 614 577 [501] [726]

The peaceful round of daily life formed the most enduring test of the mutual loyalty uniting the commoners of the clan, and linking chief to people. Yet the tensest ordeals came in hours of danger faced together, whether at sea in a small fishing boat or a many-oared galley, or in war in a clan company. The Gaels' own records must speak for them. Many a song of the Isles conveys the team-spirit of the crew though without describing its men.

174 614 501 538

And although Mary MacLeod's song of MacLeod's Galley be irretrievably lost, there survives one epic poem portraying the ship, the storm and, man by man, the crew who warred against the waves and won. Alexander Macdonald's *Birlinn of Clanranald* is unmatched in Gaelic, and probably in English, verse for its portraits of the crew in action, from steersman to 'look-out'. The flowing metrical translation by Pattison with Hugh MacDiarmid's vivid prose helps to give the English reader some vision of a crew of Gaelic freemen at their best.[1]

174 614 501 539 577

The poem opens in slow traditional rhythm with "the Blessing of the Ship", the arms and the crew. Then the bard, speaking for the stately skipper, "incites the sixteen oarsmen to row" out of the bay, and they row to a rousing shanty, a *Iorram*. Next, in readiness for the voyage and

[113]

[1] Thomas Pattison, *The Gaelic Bards* (2nd ed.), 1890 (pp. 1-28); and Hugh MacDiarmid (Ed.), *The Golden Treasury of Scottish Poetry* (pp. 65-85), 1940. Cf. A. Macleod (Ed.), *Sar Orain: Three Gaelic Poems*, Glasgow, 1933. The different themes of its sections, each in its own metre, have been published separately, in *The Songs of the Hebrides*, and elsewhere.

175 701 [614]

Such are the mingled traditions of the Highland regiments which served in so many wars, for right or for wrong. Of all the desperate alternatives before the Gael —famine at home, semi-slavery in the factory towns, death-stricken sea voyages, pioneering in the forested hills of Eastern North America, or war, it was this last which offered the men not only the trappings and glamour of clanship but continuing fellowship. In the regiment a Gael was among friends. Modern civilisation offered him no other life promising social continuity and the hope of a return to croft and township, "if death should spare him".

175 701 565 554 [703]

It would be wrong to suggest that only the gentry could rise to command, for as English and literacy were acquired, the sons of small tenants received commissions. British military discipline has too often driven a breach between the men and the non-commissioned officers, spoiling the latter's fitness for higher leadership. But among Highlanders "the bond of faith and affection" led naturally to commissioned rank. For generations, historic precedent

[178] [871]

was carried on in living tradition.[1] Given education, the sons of Island crofters have risen to command on land and sea; but education came late.

CONCLUSION

175 621 631 577 614

Thus in the 'little commonwealths' of the farm-hamlets grouped within the township, personal right and equal shares were balanced by common duty, summed up in the principle of duty-right or coir.

[1] The tradition of leadership calls for review but here one can only cite examples. For instance, descendants of his neighbours in Strath Spey told me that my paternal grandfather, as a penniless lad speaking Gaelic and English (in which he was literate), enlisted in the Black Watch about 1829. He was known as a N.C.O. for his power of quiet, reasoning discipline. He thrice refused the offer of a commission, which was then given to others, of whom more than one rose to high command in the battalion.

175 614 577 621 principle of duty-right or *coir*. Further, in so far as chief and people claimed unity as the children, the clan, of one ancestor, they had crystallised a fair ideal, realised by an exchange of services ('cuideachy'). Gaelic clanship was not without its Lowland counterpart in 'kindness' which linked those of one 'kind'—'kinsfolk' and neighbours—to their ferm-toun and parish, to one another, and to the laird. Tyranny and betrayal by chief and laird make one share the bitterness of grief once felt as competition for scarce land broke up 'kindness'. Yet the people's endeavour and attainment in the past give hope for the future.

175 614 621 622 All have heard of the hereditary Highland chief and many have read of the gentlemen-farmers, but too few have heard of team and crew, and township-parliament. It is time we learned not only of the aristocratic chief but of the chosen helmsman and the democratic constable. So long as the fallacy is repeated that the Highlanders "never co-operated, and could not act together except under the orders of a chief", so long will it be easy to add, "and they never will"! Historic truth may have much to teach [642] for the renewal of leadership for life together. And beyond the Highlands, the example of this aristo-democracy, at its worst and its best, may contribute to new concepts of community.

CHAPTER VII

THE SPIRITUAL LIFE OF THE COMMUNITY

INTRODUCTION

771 [221] [796] As in every form of religion rooted in communal life, the sacraments and prayers of the Gael were linked to labour and to the phases of life's cycle. While some of the 'runes' or prayers were essentially personal and others were breathed only in the closest intimacy, many were shared by a group of families: the tried team of the men or women of a joint farm, the people of a [621] neighbourhood and township or wider group. The communities being so small and isolated, their members depended greatly upon themselves and upon one another. [794] As in worship in common, so in healing of body or spirit and in the invocation of grace upon youth, now one, now another might lead in praise and prayer. So, too, the leader of a little team would lead in the dedication of their work, and, when it was completed, be 'the consecrator' of its fruit.

771 794 Where no clergy were at hand, neighbours, perforce, practised the saying of one they called their 'foster-brother': that if no more than "two of you agree on earth about anything you pray for, it will be done for you by my Father in heaven. For where two or three have gathered in my name, I am there among them" (Matt

and with the addition of 10,000 workers on full-time small-holdings, these constitute a labour force of nearly 100,000. Nevertheless, there are more crofts than farms in Scotland, and more small (part-time) crofters than farmers, besides 'full-time small-holders', of whom so many are crofters, north of the Highland line. Thus the number of crofter families forms an important item of Scotland's rural population. Of these, the families of Lewis-and-Harris form fully one-fifth, owing to the remarkable growth of population until 1925. Even in the little burgh of Stornoway many families hold a plot of land, and at heart they may be almost as much 'crofters' as townsmen.

Socially, what is meant in the Island by the term 'crofters'? Although each Island crofter cultivates his own arable holding (his croft), he shares the common pastures with fellow-crofters, each having a right to a 'sum' of so much stock, 'his souming'. Open, sandy land by the shore, if any, may also be shared. These common grazings, shared together by the crofters of one community—a hamlet, a village or township—form a social link of great significance. They distinguish what we shall call 'township crofting' from individual holding, whether of part-time or full-time small-holdings, or of true farms. The common grazings, enclosed by line C (Fig. 2), thus form an important social index. About 75 per cent of the area included forms Common (or other Crofters') Grazings. The close dots of the dotted line divide the 'Commons' from Deer Forests, as in the Island and inland from the north-western coasts. Widely spaced dots divide the Commons from the Sheep Farms and other mixed holdings further south.

Outside the tract of 'township crofting' in the north and west, the chief unit of Scots rural life is the farm,

[see p. 16 -- analyst]

CHAPTER V

FAMILY, FARM GROUP AND TOWNSHIP: THE CONTINUING COMMUNITY AND ITS SOCIAL ECONOMY TO 1815

INTRODUCTION (TO CHAPTERS V AND VI)

121 593 476 632 621 THE family, the 'conjoint' or 'farm group' of four or five families, and the larger group clustered in a glen or along a shoreland, are, in ascending order, the three concentric units whose mutual relationships we must visualise to understand the past. Enduring elements of life in family and neighbourhood today, with their own special qualities and limitations, can only be understood in terms of past needs and the relationships they evoked.

121 613 621 [171] Having seen their relationships in family, team and township, we can next turn to the reciprocal relations of the people to their chief or lord, whose position dominates European, indeed world, history and prehistory. Here our concern must be the meaning of 'clanship' to the chiefs, the joint farm-groups (or 'small tenantry') and, latterly, the tacksmen placed above them.

121 174 178 [184] We may find, throughout this study, that features and functions which at first sight seem peculiar to the Island are really local variants, more perfectly crystallised, of forms which we know existed at earlier periods in Scotland and in much of northern and western Britain. In the Isles,

by help of oral tradition and of the living witness of continuing usage, we can reconstitute Gaelic life from the view-points of both people and chief. Elsewhere, even in Scotland, only fragments of early life are recorded, in parchments written by the lawyers of landlord and king, and almost always from the privileged side. History is indebted to modern lawyers who have deciphered and published the faded documents of their predecessors. But the very training as solicitor-factors which fitted them for this specialised task, in no way prepared them to view life as seen, experienced and felt by the men and women of the past, or even by the elders or youth of the townships today, with whom they have rarely laboured and whose mother tongue they rarely understand.

(A) THE LABOURS OF MAN AND WIFE, AND THE REWARD

We have seen that until the nineteenth century the township in the main was self-contained. Its people grew, reared or caught their food, and also found the raw materials for their clothing; they built their own shelter, and cut their own firing. As a result, both men and women had each to develop "a wide range of simple skills", in the apt phrase of a Lewisman, Mr. Donald MacLean, M.A. Beyond the co-operative effort within a family, a farm group, or a body of 'fellow-townsmen'—in which each was competent to take a share according to sex and age—aptitude and family tradition initiated some local division of labour. The resident smith and the 'caird' (usually a wandering craftsman or tinker) appear in the oldest tales and in the first rent-rolls. In addition there were honorary tasks. The smith might act as the village surgeon, ready

3: Geddes K-4, 5 (1919-1952) 1955 ES10 Highland Scots
Lewis and Harris

788
539

Make smooth and even the warp of my loom
And grant thy blessing, God, on me,
On all who here find shelter and room
And dwelling . . .

Thine arm be round each woman here
Who waulks this web of mine,
O aid her in her hour of need . . .

Keep the flock that we may win
Sweet and nourishing milk to drink
And wool to give, to weans and kin,
For wear!

Even now in Harris or the Lews, a brief good wish may be uttered—a "Health and strength to the wearers!" as the perspiring women end the waulking; but in the past the web was finally consecrated. Each of the family who was to wear a portion of it was named by the weaver herself, who led the consecration (*Carmina*, No. 113).

May the well-loved wearer of my web
Never be wounded . . .
May the sanctuary shield of the Lord be his. . . .

86
32
14
13]
21]
91]
14]
15]

The significance of this gift of hard-won cloth can now be seen, first for the family but next for the neighbourly team. We can understand how each 'set' or pattern of tartan stood for the spirit of the family and the group of kin and homeland, the clan. We conceive what it meant to the Gael when the tartan, with "the Highland dress . . . or any part of it whatsoever", was forbidden "to any man or boy" in the Highlands. Women were still allowed to wear it, it was true, but the dress ceased to be a symbol of community when its wear was confined to one sex. As a single exception, the Highland dress was retained for soldiers, but the militarisation of the tartan—though it seized upon one strand of clanship, that of

3: Geddes K-4, 5 (1919-1952) 1955 ES10 Highland Scots
Lewis and Harris

of the Old Testament made itself felt, as in Lewis-and-Harris in the nineteenth century, this narrower patriarchal example hardly affected thought.[1] Rooted in a wider form of family than a patriarchate, and reverencing a Holy Family and all fellowship, Gaelic society honoured age and parenthood for their inheritance, and childhood and youth for their promise.

Such ideals of human relationship led to the veneration of the Saints of the Gospels and of later history, and also of those of legend, especially Bride. Dedications to Bride or 'Bridget' are widespread from Wales to the Lews; yet her memory has been all but lost in Britain, except in the Isles. Carmichael wrote that "Bride and her services" are dear to the hearts of the people. She is called "Bride of the white feet . . . of calmness . . . of the kine; woman-comrade . . . and woman-helper . . ." "I am in the keeping of my Saint Mary: My companion beloved is Bride" (*Carmina*, Nos. 70-71; 263-264). As joy, steadfastness and attainment are generally linked to one notable stage in the life of each 'holy companion', the example, aid and fellowship of each saint in turn was especially sought, at a corresponding stage or crisis of one's own life.

The Gael's veneration for saintly men and women was shared by Catholic peasantry throughout Christendom; but its special quality seems to have been closeness of

[1] Clanship has repeatedly been said to be 'patriarchal', as an ideal and a system. A different conclusion, that community is the root of clanship (even in its political forms), may come as a surprise. The English or Lowland reader has had access only to the writings of strangers such as Burt. Not knowing Gaelic, these derived their information from Highland speakers of English who, deliberately or unconsciously, were biased by ranking as chief or gentry, and not unnaturally explained their position as patriarchal. Thus strangers ignored the co-parental life of farm-groups and townships, economically humble but spiritually rich, as the root of a clan-community.

"The Iona Community is a Brotherhood of men within the Church of Scotland seeking to find the implications of the Kingdom of God for modern society. During the summer months they worship, work and live together on Iona, rebuilding the ruined Abbey on a co-operative basis. Half the Brotherhood are young clergy pledged to work for two years in the difficult places of the cities (after three months in Iona), emphasising the place of the Church in the New Community that is emerging in the world. The other half are skilled artisans who desire to express their labour as a ministry within the Priesthood of all Believers and create—in the building—a microcosmic witness of how labouring is transformed when seen as a Sacrament. The Brotherhood is based on Reformation principles. Several members of the Community are married. At present the artisans return to the ordinary labour market in the winter time." [1]

In the Iona Community, theology is linked to communal labour and the re-shaping of society; and its symbolic centre, Iona, is more than a literary name, or a historic ruin, to those who have set about rebuilding its cathedral tower, cloister and surrounding dwellings. Continuity is exemplified in its leader, the Rev. George F. Macleod, a descendant of Dr. Norman Macleod, the friend of McLeod Campbell. The significance of this Community to the theme of this chapter lies in the endeavour of its members to learn, by help of ancient native ways, new ways of Christian life in their own land. The attempt to link industrial Scotland, and lands beyond, to the Gaelic West, is a notable recognition of what Celtic Christianity, maintained and renewed by communal tradition, has yet to give the world.

CHAPTER IX

ECONOMIC CHANGES: 1750–1919

(A) TRANSITION: MIGRATION, FISHING AND KELP-MAKING

175 433 [621] [427] [794] [437] UNTIL the 'Forty-five the township had lived an almost self-contained life. Its traditional economy was self-sufficient except for two indispensable commodities—salt for the housewife and iron for the smith. Beyond this, the chief demand for payment was the rent to the lord, with tithes for the kirk. For these needs and demands a step towards production for exchange was required, the more so that what was exported might include the very necessities of life in 'bad years'. The rent was paid largely by the sale of a surplus steer or two, and 175 317 436 [435] drovers called for the cattle. By 1790, if not before, two or three open boats set out annually from Uig, for instance, for Glasgow, laden with salt beef and dried salt fish. Although salt seems of little account today, it once bulked large in the Budget, its price being heightened by duty, especially after 1707: "as dear as salt", was a saying, *cho* [251] *daor ris an t-salluinn.* Salt was needed to preserve the carcase of a 'cattle-beast' or sheep killed in autumn, and 175 433 for cod and herring curing. Wrecks were valuable, as on all infertile undeveloped coastlands, both for their timber and their iron. Cairds or tinkers occasionally brought [326] metal goods; or a packman called, as strange a figure then [443]

COMMUNITY FROM PAST TO PRESENT PT. II

175 511 (433) small savings, if any, have been put to the purchase of fishing gear and boats, for fishing, too, was summer work. By 1833 the poverty of the Outer Islesfolk and the bankruptcy of the landlords were such that Parliamentary attention was called to the state of the Hebrides. Poverty continued to be extreme, but need turned the people to fishing. (433) The loss of revenue to the lairds led to their making sheep farms—somewhat unwillingly—with local evictions: in Lewis chiefly from Park and from north of Stornoway, and in Harris notably from the western Machars to the eastern (423) Bays. In spite of this, it also brought about the sale of (621) Harris by Macleod, and finally of Lewis by Seaforth in 1844.[1]

(B) NEW OWNERSHIP AND CAPITAL IN LEWIS: 1844–78

175 Lewis was bought by Mr. James Matheson, a gentleman 423 of Highland family, whose fortune had been made in China. Sir James (as he became) put much capital, effort and goodwill into the management and improvement of the Island. Of the amounts expended we may distinguish, so far as possible, what he spent as a rich man for his private (131) pleasure from what he spent for the people. No sooner had Matheson bought the Island than the 'potato famine' of 1845–46 broke out. The terrible loss of life in Ireland, and the depopulation of that country which followed, would have been equalled in the Isles but for the action of landowners like Matheson—who were the descendants of 'kinsmen', not of alien conquerors—and also of subscribers

[1] A sketch map of Harris showing the areas cleared (1816–54) and areas settled as a result, together with those re-settled by government help after 1900, is given by J. B. Caird, *Scot. Geog. Mag.*, vol. 67, 2, 1951, p. 94.

175 429 311 a well cultivated small farm, a striking example of what can be done with this unpromising terrain. It is probably true that one of the objects of forming farms was to introduce improved methods and so set an example to the small tenants. The contrast, today, between Garynahine Farm and the nearby crofts, suggests that more than example is required.

161 162 115

TABLE 4

POPULATION CHANGES 1841-1851

District	1841	1851	Change	(%)
Carloway	554	659	+105	(+19)
E. L. Roag	581	717	+136	(+23)
Barnera	670	676	+6(1)	(+1)
L. L. Roag	217	259	+42	(+19)
Valtos etc.	711	484	-227(2)	(-32)
Uig Bay	520	426	-94(3)	(-18)
South	384	348	-36	(-9)

Notes: (1) Vuamore - 46 (-100%). Kirkibost, Linshader, etc. had already been cleared.
(2) Reef -180 (-96%).
(3) Carnish - 60 (-36%) - but completely cleared before 1861.
(Township figures are not available before 1841).

The birth of the crofting landscape.

175 429 37 638 A further mid-nineteenth century attempt to improve the productivity of the small-tenants' holdings was the lotting of runrig lands to form individual crofts. In a report to Seaforth c. 1800, the Rev. Headwick had recommended the abolition of runrig* and some lotting of crofts took place about 1811** about which time runrig was being abolished in North and South Uist - but many townships in Uig, as elsewhere in Lewis, escaped this lotting. In Barnera, Kirkibost was probably lotted at this time and the crofts fenced; in 1853, despite clearance, the first Ordnance surveyors were able to record the old fences (which were used as the croft divisions when Kirkibost was re-settled in 1878). The now much divided crofts of Kneep (see also fig.22) are probably of the same date. Reef appears, also, to have been lotted early, for the remnants of fences recorded by the Ordnance Surveyors in 1850-1852, (Reef was cleared in 1850), show crofts of the same general form as those of Kirkibost, and quite unlike those of the 1850 lotting. Consequently, in many townships until this date, the houses remained huddled together in tight little groups, often inter-communicating one with another. The groups, or clachans, were usually set in the midst of the arable land. The runrig system had certain disadvantages, but, as a basic agricultural structure for small holders, it had two considerable advantages which may be relevant to modern conditions. Firstly, it was flexible: within it the individual's holdings varied in size and rent and it was possible, at the periodic re-allocation, to adjust the size according to family needs. An elderly person did not need to be burdened with a holding larger than he required, or was able, to cultivate; a young man with a

[621]

[113] ** Report .... on the Condition of the Cottar Population of the Lewis. (C.5265), 1888, p.37

* The essence of runrig was that any individual's arable land was in many pieces, scattered promiscuously amongst those of his neighbours. Periodic re-allocation of pieces was usual, but the period varied and in some cases was infrequent.

[TEXT CONTINUED ON PAGE 15]

511 (46) (288) It is obvious that crofting no longer affords a livelihood in Aird; the only two families without ancillary occupations are those where all the members are elderly. Of the others with members in the working age-groups, five have one or more members employed in a civilian capacity at the R.A.F. station and there are five regular weavers.

621 178 Aird used to be a self-contained community; the land was fully cultivated and a certain amount of fishing was carried on in spite of the difficulty of drawing up the boats over the rocky beach. Now it is prosperous, but very much dependent on the R.A.F. station, and if this should ever close down, most of the younger people would have to leave in search of other employment.

CHAPTER SEVEN

VALTOS, KNEEP AND REEF

by

David G. Symes.

131 133 On the eastern side of the Aird peninsula, facing east to Loch Roag is a secondary peninsula of more moderate, but none-the-less broken relief. This, together with an adjacent area of the main peninsula, the islands of Pabay, Vacsay, Vuia Mor and several smaller islands, comprises the territorial limits of the townships of Valtos, Kneep and Reef.

133 This secondary peninsula is accidented in the extreme, with outcrops of bare rock and steeply angled small hills. The relief is greater in the west (summit 450') than in the east (summit 275'). Relatively level land is to be found only on the machairs of Reef and 133 Cliff (the latter only poorly developed) and on the glebe at Uigean. The Reef machair, 134 about 180 acres, consists of a succession landwards of tidal sands, a belt of sand dunes (c. 20' O.D.) and a sandy plain sloping gently inland towards a reed filled lagoon. The machair at Cliff is approximately 40 acres in extent; here there are fixed dunes and, in addition, the sand has been blown inland to at least 100 ft. O.D. Except where the machair sand has drifted upslope to produce a "brown machair" of mixed sand and peat, the thin epis of the Valtos peninsula are predominantly peaty. Although the length of the peninsula faces north the extremes of Atlantic weather are moderated by the protection afforded by the Aird peninsula and the islands of Pabay and Vacsay.

175 In the period before the lotting of crofts the whole peninsula was occupied by some five 429 clachans - Valtos, Cliff, Kneep, Uigean and Reef - some of which shared common pastures. 34 During the early part of the nineteenth century and earlier, apparently, than the 1850 lotting 638 carried out in most of Lewis, crofts were allotted in each of the clachan areas: Valtos and Cliff shared a common pasture and so became one township; similarly Kneep and Uigean were combined.

175 In Kneep it seems that the croft boundaries were not accepted by the crofters. Certain 311 basic divisions between groups of crofts (usually three in number) are discernable today, 427 and within these basic divisions a certain regularity of distribution of strips persists, but

[Eshost]

134 Drift is found near the shore and laps round the three hills nearly up to the road, predominantly heavy clay with small boulders; this is replaced above the road by peaty loam on rock. At one time, bere was grown on the heavy drift. There is peat accumulation on the flat land near the road to a depth of about six feet and there are one or two peat banks.
137 Vegetation is poor; there is no bracken or cover and within the crofts, moorland grasses and sedges predominate on rough land, though there are many lazy-beds sown down to clover and cock's foot. On the hills heather predominates.

175 Habost is the oldest township in Park. In 1843 Maclennan came from Shiddernish and took what are now Nos. 9, 10, 11, 12 and 13 and Aileen Tailear came from Tarasnay, Harris, 652 to No. 7. By 1886 there were thirteen crofts; in 1957 four cottars were created, there being 621 there before 1886; in 1957, No. 11 which had been shared between two brothers since 1906, became legally 11A and 11B making fourteen crofts. There are also fourteen operative units although two are worked from Kershader, both as 'hay and grazing' units, and two are worked as one unit within the township, for there are three non-crofting units.

261 Only sixteen lazy-beds are dug by spade, the rest have been drained with stone drains and 607 ploughed by tractor owned by one crofter who loans it out to Habost and Kershader. There are three 'Crofimasters' (hand-tractors) in the township but these are only heavy enough for 293 bringing in peats, hay and similar light work. The progressive Habost community has fenced off part of the common grazing, to keep the weaned lambs off the croft from August till November and so save fodder for winter when the croft land is open to grazing.

[204] Oats and potatoes alternate in the rotation, with a little sown grass for hay, sown in enclosed 546 parks of about one acre. The tendency now is to increase the number of parks, cut the hay in 291 June and build up the lambs on the new grass. Shell-sand is used to fertilise the parks but 629 elsewhere artificials, such as superphosphates, 'potato manure', potash, nitro-chalk and lime are used in addition to dung and, near the shore, seaweed. Most of the hay is taken from old lazy-beds.

251 The land is heavily overstocked: the soum is equivalent to 79 cow units, and actual stock is 255 141, whilst the figures for sheep are 191 and 618 respectively, including the sheep stocked in 652 Park Deer Forest by seven of the Habost tenants. Sales of ewes are held at Garyvard in November [262] and May and sheep and lambs are sold in Stornoway. Lambing was poor in 1958, 50-75 per cent being general, but many breeding ewes and other sheep have died.

241 The only cultivation on the common land belongs to the unofficial holdings. Behind Craigeal, however, there are some old lazy-beds, a well and ruins of a hut, which has not been used since 312 before 1882. There used to be shielings on the north side of the common on Beinn Bhuidhe and 224 below Loch na Ciste but these have not been used since 1886. Habost is one of the agricultural 292 townships and fishing is only for domestic use; looms are to be found on only four crofts and 293 trade is slack. One crofter has a lorry for contracting, carrying peats, fertilisers and stock to market and two have butcher's rounds in Loche. There are two small stores.

561 Settlement is scattered, always on elevated ground, and in many cases the new house has 572 been built in close proximity to the old house site. All have piped water either from the well or 654 from a main tank. Drinking water being carried in the latter case. Grants from the Crofting Commission are enabling new building and improvements to be carried out.

871 799 793 178 the children might not receive proper religious instruction.

"Family worship" is considered an important part 771 of daily life. Prayers should be said before meals 782 and teas, and the head of the household should read 593 passages from the Bible to the assembled members of the household every morning and evening. The practice of [178] "reading the books" prevails in households headed by [592] older men, but is less common among families headed by younger men.

794 632 621 3. The Clique of the Converted: The second network within the religious sphere is a special religious in-group, the clique of the converted (curamach). This clique constitutes a relatively strongly bounded system which to some extent competes with the township boundary system. Owen (Rees 1960) has noted that as persons become more involved with religion in the Protestant Hebrides, they tend to remove themselves from community l

Intense involvement with the church sometimes confli with township activities since people may attend Communic at times when a fank is planned, leaving the work to be done by others. When elders of the church are present at activities, such as fanks, which are otherwise usually boisterous and full of humor, behavior tends to be "properly" restrained.

Chapter 7

Conclusions:

Summary and Theoretical Considerations

A. Summary

105 [131] [484] Crofting townships of the Highlands and Islands of Scotland are within a few hours' travel of the major cities of Britain. An extremely high percentage of the young [873] people in the crofting counties attend universities and other institutions of higher education. Politically, [641] administratively, economically and in other ways, the crofting population participates in the larger urban-industrial society of Britain.

105 632 62 [121] Despite this participation, the township-qua-village-community is a relatively strongly bounded system. This thesis investigates factors contributing to the strong boundedness. From a relatively self-sufficient economic 105 178 632 241 unit using agricultural practices suited to the extensive cultivation of marginal land by smallholders, the township has during recent decades changed to one dependent on goods and services provided by the larger society.

105 241 654 Crofting activities nevertheless persist, in part because of the incentives offered by government bodies such as the Crofters Commission and the Department of Agriculture. The

101 161 162 more recent to the west, and in the industrial area of the Great Glen the trend is reversing itself. To the north and south depopulation has been more serious. To the east the general trend has been similar to that of Skye. We need not be troubled by statistics at this time, but for convenience [178] the population figures are given in Table 1. The Outer Hebrideans have preserved more of the social aspect of the old culture than the Skye people while the Mainlander has felt the effects of the processes of acculturation with more obvious results than the people of Skye. In short, the Highlands are not a homogeneous region. They represent a great diversity of conditions.

101 115 My information on the contemporary culture of the Isle of Skye was provided by the residents of three communities, the villagers of Portree and the crofters of Glendale and 101 621 Kilmuir. Portree is a small nucleated village with a population of a thousand. It is important to the study because [368] in many ways it represents an alien way of life. Here are found the county and national government offices, staffed mainly by newcomers to Skye, which serve the whole island. [344] Here too, are the grocery, drug, clothing, and hardware stores which depend on the people of at least, northern Skye [344] for a large part of their trade. There are a number of craftsmen who are equally dependent on the rural population. For the most part, the members of both groups are newcomers [368] from the Lowlands or elsewhere in the Highlands. As the [345] terminus for the mail steamer which links Skye with the mainland, and the hub of the daily bus service which connects the rural

101 621 [345] [345] [115] [164] hinterland with the outside world, Portree is a center for tourists during the summer. Due to the people's dependence on tourism and also the presence of newcomers, the villagers participate in a number of social activities which are not tolerated elsewhere on the island because of religious asceticism.

Glendale and Kilmuir are crofting communities, each with [46] a population of about 300. All, except the ministers and school teachers, are dependent on the breeding of cattle and sheep and the growing of a limited amount of grain, potatoes [47] and hay for all or a large part of their livelihood. All are bilingual, speaking Gaelic and English. Neither community [47] has a village nucleus, but both have an economic focus. Glendale [34] has a cooperative farm, and Kilmuir has a drained loch which has been divided among the small farmers. The significant [42] differences between them are three. The Glendale people are [167] land owners. In this respect they are rather unique in the [42] Highlands. The Kilmuir residents, like most Highlanders, rent [73] their crofts. The second difference is religious. Glendale [184] is religiously homogeneous while Kilmuir includes church-goers [67] of three Presbyterian sects. Finally, no formal social activities other than an annual meeting of the share-holders in the farm is allowed in Glendale, but Kilmuir has a club organization for the men who gather for lectures and discussions of economic problems.

36 basalt plateau where the light and potentially rich soil and the relatively luxuriant pasture land are valuable assets. The remainder of the island has been generally avoided, except for a few isolated areas of mixed beaches, moraine, and similar 36 162 deposits of local importance. The contrasting population densities in modern times support my assertion. With an overall density for the Island of thirteen per square mile, northern Skye has a density of nineteen per square mile in contrast to six per square mile in southern Skye. This three to one ratio has persisted for at least two centuries.

361 Until the nineteenth century all the inhabitants of Skye lived in isolated hamlet-like clusters. The majority continue to dwell in dispersed crofting communities. Indeed, the dominant characteristic of the settlement pattern is, with a single exception, the lack of nucleated villages. Skye is not unique in this respect. The Irish and the Welsh have never made the village a part of their cultural heritage.[13] The pattern I am about to describe will, no doubt, be unfamiliar to many who are only acquainted with rural communities of the Western Hemisphere. The units of settlement on Skye are on a very diminutive scale compared to those to which we are accustomed.

361 621 As we have seen, the efficient socio-economic unit is the township, the collection of individual crofts and the communal grazing lands. Skye contains 182 townships. All of them are found in an inhabited area of roughly thirty square miles.

---

[13] Conrad M. Arensberg, The Irish Countryman (New York: Peter Smith, 1950), pp. 146-155; and Alwyn Rees, Life in a Welsh Countryside (Cardiff: University of Wales Press, 1954), pp. 128-129.

to the traditions of the past. I shall discuss this further when I describe the extended family.

The Township. The township is a cooperating economic unit. Communal use of an interest in the common grazing lands gives the township its focus. Living on the several crofts, there will be found an aggregate of nuclear families and unmarried individuals who, especially in the older townships, are related and re-related on both sides. Only in the more modern townships does the degree of relationship become tenuous and finally disappear. In interpersonal activities the neighbors have a rate of interaction second only to that of the nuclear family.

The dominant social trait is the strong emphasis on the ascription of status on the basis of kinship, sex and age. There are no socially valued achieved statuses. The facts are simple. Males enjoy higher prestige than females, and the old men and women are respected by the youth. All of the same age grade and sex are essentially equal. Again we have a parallel with the Irish small farmer.[18]

There is no room for the expression of a role of leadership in economic activities. The governing principle of township administration is so-called primitive democracy. All males have an equal voice in determining the acceptance of any policy or action which concerns the group, and unanimous consent is necessary for the adoption of any change. Although each township has an elected grazing clerk and a grazing

---

[18]Cf. Arensberg, op. cit., pp. 45, 109-110; and Arensberg and Kimball, op. cit., pp. 63, 161-231.

committee, a legal requirement, these individuals lack authority. They are figureheads whose primary function is to advise the government of the decisions reached by all the crofters who share in the grazing and to regulate the use of the land by self-imposed rights. In townships where the sheep are owned as club stock the clerk serves to distribute the profits from the sale of stock, and he may also keep a tally of the individuals who are entitled to payment for labor in townships where money has replaced customary reciprocity. In any cooperative venture beyond the family level, there is no one who can step forward to act as a foreman. The assumption of this role would upset the basic status equality of the crofters, unless the person wishes to be regarded as an eccentric.

The Crofting Neighborhood. The crofting neighborhood consists of an aggregate of individuals and nuclear families who dwell in several townships, standing in close spatial proximity. It is, therefore, natural that the ties of common residence and kinship should continue to operate. The important distinguishing features between the township and the larger social entity are two: (1) cooperation in agricultural and pastoral activities is replaced by mutual aid, and (2) there is a greater wealth of formal and informal interpersonal activities in which the people associate.

There are invariably established social circles within which the individuals habitually move. One always consists of the individual's kinsmen, "his people," his family of orientation, and "his close friends," all other relatives with the fourth degree of relationship.

Township size is variable. There is a complete range from one township with a single inhabited croft and a population of three, an old man and his two sons, to one with fifty crofts, held by thirty-two families, and a population of almost eighty. Most townships contain between six and twenty crofts.

The crofts are set out in long, parallel strips, typically, at right angles to the coast, or, if the township is in a glen, across the glen. In the older townships, the houses tend to be built at one end of the strip on the least productive land. The byre, if there is one, stands at the rear or either side of the house. Exposure or road access have not always been determining factors. Most frequently, it would seem, alignment along a road is present only because the county government has built a road into the township. Only in the more modern townships, those planned or re-organized within the last fifty years, have the crofters tended to build near the road. Several of the townships lack any apparent orientation. The houses are scattered up and down the lower slopes of the hills which rise above the cultivated land.

Wherever the configuration of the land and the environmental factors of soil and rainfall permit large settlements, there is a grouping of townships into the pattern of the British open country neighborhood or the French line village.[14] Scattered among the crofts, without any nucleus of community buildings, there are, usually, a school, one or two churches,

[14] For an analysis of rural settlement patterns, see Loomis and Beegle, op. cit., pp. 229-231, 234-237.

one or more country stores, a few workshops, and a post office. Kilmuir will serve as an example of these larger settlements.

Along the shore of Loch Snizort, on the peninsula of Trotternish, there is a broad, fertile plain. Including old Loch Chaluim Chille, there are approximately ten square miles of good land. Although the soil is not cultivated as intensively as in the days when Kilmuir was "the granary of Skye," this is regarded as the best agricultural region on the island. In all there are 122 crofts, held by 105 crofters, in 9 townships. There are also two small farms. The population is slightly over 300.

The crofters' cottages are loosely strung around the old loch and across the plain in an irregular "Y" shaped pattern (Figure 3). Basically the pattern resembles the French line village, but there are several features reminiscent of the British open country neighborhood. Most of the cottages, it would seem, were originally built on the landward fringe of the plain and along the shore of a small bay, known as Camus Mor, without any regard for road access. In recent years, increasing dependence on motor transport has led to demands for roads. Now almost all the crofters, except those in Bornesketaig, have a paved road running by their door. About a third of the houses are on the county road which encircles the peninsula and links Kilmuir with the outside world via Portree.

In the center of Kilmuir, in the township of Balgown, stand two spireless churches, a church hall, a two room school,

[TEXT CONTINUED ON PAGE 46]

and the homes of the ministers and the teacher. Standing together, within a few hundred yards of each other, they provide a focal point for the surrounding area. The remainder of the buildings which we normally think of as forming a village nucleus are widely dispersed. The post office, which is also a general store, is just over a mile north of churches and school, in the township of Kilvaxter. Another mile away, off the main road, in Bornesketaig there is a small shop. South of the churches and school, almost two miles away, there is a shop and a smithy in Linicro. The remaining shops and workshops are similarly scattered hither and yon among the crofts. 621 368 621 366 368

Glendale shows much the same pattern of settlement. Stretching along the shore of Loch Dunvegan, through Glendale, on either side of the Hamara River, and out along the shore of Loch Poolteil, there are 156 crofts in 11 townships. These are the homes of 144 crofters. The total population is in the neighborhood of 350. Like the people of Kilmuir, the Glendale residents have also become dependent on roads, and they have tended to build their new cottages near a road of some sort. The single church, the post office, and the shop stand fairly close together near the center of Glendale. One school is about a mile away in Borrodale, and the other over a mile away in Colbost. Neither Glendale nor Kilmuir have a village hall. When the Glendale crofters have a meeting to discuss the club farm or when the Kilmuir crofters hold a club meeting, they use the school. Now let 361 621 [491] 368 621 [366] 621

us journey over to the "Capital of Skye" which stands on Portree Loch. 621

The village of Portree, as stated earlier, represents the only successful attempt to introduce a nucleated settlement to the island. It was created by a landlord in the early nineteenth century and has been fostered by the national and county government, especially within the last twenty years. Nothing has disturbed the English and the Lowland Scots more than the alien nature of town life in the cultural heritage of the Sgiathanach. Ever since the sixteenth century the Hebrideans have been resisting the introduction of villages. The Scottish and, later, the British, government has been only slightly less adamant in its determination that the country people should have a town, if not a burgh, come what may. [654] 621 648

Indicative of its calculated creation, Portree has been built "on the square," like so many English villages. Around the square are found the police station, courthouse, and jail; two banks and one private home; two churches and the Masonic building; and a hotel and two boarding houses. Equally indicative of the alien nature of the village, the square is normally used only when the people are going to or coming from their place of worship or business, or when they are entering or leaving Portree by the road which cuts across the square. The exceptions are an occasional civil ceremony and performance put on for the benefit of the summer tourists. 621 348 321 177

In reality, the village might best be described as an overgrown hamlet, even though it was planned. The main function of the village as far as the whole island is concerned is that 621 366

an administrative center. The government offices, however, 621 36
e scattered about the village. One is down at the pier;
other is half way out of Portree on a trunk road, and still
third is tucked away on a side road down by the shore of the
rbor. The post office is behind the court house, on the
posite end of the village, and the school, the only secondary
hool in all the Hebrides of the County of Inverness, is out
the village all together on another trunk road. For northern
ye, Portree is the shopping center. The shops are along the
in streets which run off the square and along the road which
ads down to the pier. All of them are in remodeled houses.
r the immediate area surrounding the village, Portree is a 621 368
ligious center. The churches stand together, except one
ich is on the opposite side of the village; the ministers'
mes are dispersed on the fringes of the village. Long ago 621
rtree was known as Ceilltarraglan, (burying place at the foot
the glen). The old village was no more than a church, school,
n, and jail which stood overlooking the houses of a few
shermen along the bay. The surrounding area was given over to
rming. The differing ages of the buildings show how the
llage spread along the bay, up over the terraces, out across
flats, and finally, with the assistance of the County
ncil which has built all of the new houses, on to the hill
ch overlooks the shops and the harbor. Although only the [161]
l remains as a sentinel of the past, the differing ages of
houses also tell how the population grew from a mere hand-
to 1000 in over a century and a half.

162 extreme examples, Bornesketaig in Kilmuir consists of 47 crofts
632 held by 35 crofters, but Aird in Sleat has 39 crofters who
621 rent 20 crofts. In one badly subdivided township, Calligary
427 in Sleat, one holding is held in the following shares: four
241 men each have five-twenty-fourths, one has one-sixth, and one has "a part." The whole, indeed, is more than the sum of its parts. Moreover, townships with a balance of crofts and crofters, and even those with fewer crofters than crofts, often show the effects of subdivision. Another Kilmuir township, Herbusta, is laid out in eight holdings. Although there are an equal number of landholders, several of the crofts are divided into half shares. Then, there is Kilvaxter, also a Kilmuir township, with 11 tenants and 12 crofts; one man has three full shares while two others have only half a croft each. Multiple crofts are not necessarily adjacent. Some crofters hold land in two different townships. One of my informants rents two crofts separated by over twenty miles. On foot, it takes him two days to make the trip between his two holdings.

000 Subdivision, frequently carried to its ludicrous extreme, is not a problem confined to the Highlands of Scotland. All over Europe the traditional laws of succession have had a similar result. In consequence, the governments of all European countries have been striving to initiate reform. Generally, the aim has been to consolidate scattered patches, but almost always the schemes have become more comprehensive, attempting to create economic farms and increase productivity. Since the

241 where the population has suffered the greatest decline and,
161 therefore, where enlargements, by legal or illegal means,
433 have been the most extensive, crop production has declined the most. Nor has the decline in population, accompanied by land redistribution, altered the fundamental problem.

427 The cottars (subtenants) have almost disappeared there-
241 by easing the excessive pressure on the land and removing the threat of recurring destitution. Today they are found only in a few scattered dwellings and isolated clusters. Most of them have secured some form of employment or have reached the age when a government pension is sufficient to satisfy
427 their needs. The number of crofters, on the other hand, has
241 increased. If the figures 2043 and 1227 can be accepted as
161 nearly correct for the respective numbers of crofters and
162 cottars in 1886,[15] they have increased at the expense of the latter and, also, the sheep farmer, whom they have replaced.

632 To briefly summarize the foregoing discussion of the
621 township, let us look at Kilmuir. Table 3 shows the number
161 of crofts and crofters in each of the nine townships together
162 with the acreage and "souming" rights available to each indi-
241 vidual. Although replanning during the past fifty years has
427 benefited many of the local residents, crowding upon the land
231 is still apparent.

Township Government. The township system has another marked influence on the economy of the Sgiathanach. By far the largest obstacle in the path of reform is the persistence of primitive democracy, distinguished from the democracy of Western Civilization by the requirement of unanimous consent rather than majority rule. The individual who comes to realize that it is possible to improve on the ways his father did things is deterred from attempting to introduce innovations. He cannot, for example, erect a fence around his croft unless everyone in his township approves such a departure from tradition. The dissenting voice of one old man is sufficient to thwart any plan. Unanimous decisions on all township affairs mean that the most progressive worker must keep pace with the most conservative. This fact goes a long way in explaining the essential agricultural disharmony of Skye, and most of the Highlands, with the rest of Great Britain. It is also a singular example of the incomplete adaptation of the culture to the higher socio-cultural organization.

When coupled with the many limitations on the economy, township government helps the outsider to understand why many younger crofters feel that the primary value of their few arable acres is their use as pasture. Even in townships which have been fenced, the prevailing practice is to open the crofts after the harvest. All winter long the stock is free to graze where it will. "My arable is no use at all, except to winter my sheep," said one young crofter. Another asserted, "I have three crofts and the use of one more, but it's not

worth while to cultivate any of the arable, so I use it for grazing." A case which aptly illustrates the influence of the township system as an agent of conservatism is the breedin of pigs. Although several old crofters told me how many people during the times of the "Clearances" kept a pig, they are rarely found anywhere in the Highlands today. The Biblica injunction against the flesh of swine has been taken literally The older people simply have a strong aversion to handling pigs. One man, a very successful cattle and sheep breeder, put it this way: "Pigs are filthy brutes. I just don't want to touch them -- I never have kept any and never will." At the same time, there are men who believe that the prices these animals bring at the mainland markets more than compensate for the individual's revulsion, especially as long as the Ministry of Food pays for the cost of transportation. These men cannot try branching out because they have no way to restrict the foraging animals. "Skye is ideal for pigs," on young fellow told me, "but I don't have the freedom to work the croft to suit myself."

Smaller deviations from the traditional methods of land use face the same difficulties. A progressive crofter who attempts to improve the value of his stock by growing scientifi mixtures of grasses is always penalized. As soon as the harves is over, the stock of all his neighbors will show their appreciation by concentrating on his croft, trampling his fields, and overgrazing his grass. Nor is this his only penalty. His neighbors will regard him with skepticism for his departure from the ways handed down from the past.

Not only were villages completely alien to his heritage but also he had neither the need to purchase commodities nor the opportunity to accumulate a surplus for buying more than a little grain or an occasional necessity. Whatever his small needs, they could be satisfied locally, especially, by turning to a local tacksman or the estate factor, both of whom made grain and a few sundries available on an extended credit-with-barter basis.

5 Plans were drawn up for the establishment of a village at Portree shortly after the Forty-five.[29] Over fifty years later the best that could be said of Portree was that it had "the appearance of a village."[30] Another attempt to bring a village to Skye was made in 1787 when a group of exiled Highlanders in London built the abortive fishing village of Stein.[31] As a part of the reorganization of the MacDonald estates, villages were laid out at Portree and Kyleakin sometime after 1811.[32] Kyleakin failed to develop.

[8] By 1820 Portree had become an administrative center with its own jail,[33] one of the hallmarks of civilization.

By 1845 there was a small crescent of houses along the shore, about twenty in number, and on the raised terrace there was a new inn, a church, a post office, a bank, several shops, and a street of homes.[34] The population had grown to all of 510.[35] The existence of the village depended on the summer cattle markets and the fishing industry, which was in the hands of newcomers. 175* 178* 361 421 [366] [368] [161]

Following the establishment of Portree and accompanying the gradual decline in self-sufficiency, the Island was brought into closer contact with Great Britain by an extension of regular means of communication.[36] Regular communications, of course, are a prerequisite for commercialization. There must be access to markets for the local produce and access to consumer goods. Without such access no man can specialize; with it the Sgiathanach has been diinclined to specialize. The old drove roads, the beaten paths which had served them well for many centuries, were now supplemented by roads in the Lowland sense of the term. By the end of the period most of the more accessible townships had been connected with Portree and the mainland, and a steamer had entered regular service between Portree and Glasgow. These factors paved the way for the introduction of commercial sheep farming. 175* 178* 648 [491] [505]

Each man received a permanent, compact plot of arable in pla of his former concurrent right to a whole farm. The change, the surface, seems to have been superficial. The grazings remained common property and the arable land became common property after the harvest. The significant fact is that commercialization had not yet led to a disregard for the cus ary rights of the small tenant, except in a few isolated are

There were other effects of the change in tenure beyon a leveling of the social hierarchy. By giving more people a direct share in the land emigration was stopped. The prac of subdividing the crofts among the children, as they marrie at once favored an increase in population and strengthened t family of orientation, if not the extended family. At the s time, it placed a greater dependence on the potato; the peop became hostages to the health of the potato and their own fertility. In time progressive economic deterioration began The old subsistence economy had been weakened by subdivision of the small plots, increasing dependence on external market profts from the sale of cattle, and wages from kelping or a little fishing. When the markets broke, destitution and emi gration reappeared. Finally, with a failure of the potato, economic structure collapsed. The population trends were reversed. The people had remained unspecialized in a nation of specialists.

The next stage in the process of commercialization, th growth of a village and the extension of communications, had little perceptible effect on the Sgiathanach. Villages were

alien to their heritage. There was little local need for roads and steamships, but they were paving the way for the final stage in commercialization, the conversion of the island into sheep farms.

The record suggests that the culture was suffering from disorganization and the society had been threatened by disintegration. The Revival, which began at the close of the initial period, became full blown. This movement confirms what the record suggests. A new pattern of social behavior and religious life came into being. The traditional secular patterns of interaction were being replaced by patterns of sacred interaction. New values, new statuses, and new roles were evolving to give religious sanction to the old patterns. The result was an esoteric religious hierarchy. The religious leaders, both the "Men" and the ministers, were coming from the people rather than the old hereditary families who had been closely related to the gentry. Religion replaced the clan as the focus for the culture. The similarity of the story unfolded in the Bible and the past and present conditions of the crofters made the presage of the coming dissolution vivid. By the end of the period, dissension within the Church had become a significant factor and was paving the way for individual secession. The third period of the modern era was to witness more than a social and economic transformation; there was to be religious schism.

sufficiently to make age controls an irresistible force, the prestige status of the small number of the "elect," those who had experienced a saving change, and, in particular, the elders gave them complete control over all social and religious activity. In a later chapter I shall have more to say about these facts. The important fact which I want to emphasize now is that the religious patterns provided a framework in which the culture could find continuity and through which the society could achieve a reintegration. The abhorrence of pagan-like customs resulted in a change of content, but there were positive results as well. Above all, there was a change in focus for the culture and society. The decadent belief in clan brotherhood was replaced by a sense of belonging to a known religious brotherhood.

Summary. The third period of the modern phase of Skye's culture history saw the culmination of the process of commercialization of the land. All the influences necessary for the conversion of the subsistence economy, albeit a much deteriorated economy, had begun to function. Sheep farming, on a commercial scale, formed the basis for the new economy. Newcomers with the incentive and ability to introduce improved methods of land utilization were replacing the conservative and impoverished crofters and cottars. As the commercial farmers consolidated their holdings, the communal townships were being obliterated. The concept of individual possession of the land was replacing the customary rights of the small tenants, and a clearly defined social hierarchy, based on

th degree of relationship. Although the extended 621
s now rather amorphous compared to what it must have 571
entury or two ago, it is still very real to the 602
ach. Once, perhaps, the townships and their historic 596
nts were patrilocal settlements. Then, of course, [591]
tion of the availibility of land and the legality of [175]
ion were of small importance. Now the rigid system [591]
use enforces neo-local post-marital residence, often [427]
at distance from the parents, and very often means
younger generation must join the constant outward
of the population. Thus, the extended family is
if ever, found intact. Indeed, the only times its
come together as a group is at a funeral or a wedding.
occasions the strong patrilineal emphasis becomes ap-
and the fact that the individual always remains a
his or her family group is revealed. It is, then, a
ly.

structure the extended family includes all males and 596
out to, and including, third cousins. The kinship 601
ogy is descriptive. Excepting grandchildren, all
are distinguished by sex and generation. Members of
ntal generation and lineal descendents of the parents
l kin are distinguished by their relationship to the
l's parents. Members of the grandparental and great-
ental generations and their lineal descendents are
distinguished. The same descriptive technique ex-
kinsmen of the first and second descending generations.

56

radesmen are respected, but since most are crofters, they are 554
reated like all other men.

he Village. The village contains a heterogeneous population. 621
t least a third of the families have arrived in the recent 162 167
ast. They have come to fill positions in the county and
ational government offices; in Lowland directed banks or
usiness houses which have extended their field of operations
o Skye; and in the professions as doctors, lawyers, ministers,
nd schoolteachers. A few have come to Skye to open a shop or
ffer their services as tradesmen. The remainder are either
kye folk who have recently moved into the village to see
mployment or families that have been in Portree for one or
ore generations. Very few families seem to have lived in
he village for more than three generations.

While there are many opportunities for an individual to 554
chieve status in Portree, the cultural heritage and the 184
conomic limitations under which the Sgiathanach labors has
ot allowed him to compete with the newcomers. His ability
o compete is further restricted by the prevailing policy of
he government and the national corporations to bring in
anagerial and, often, clerical personnel from the outside.
ll share one socio-economic trait; they are non-crofting. As 565
et there is no class structure beyond the polarity of the
anded gentry and the crofters who participate in village life.
here is verticality. Highest prestige status is accorded to
hose who have been accepted among the local aristocracy. Be-
ow them rank the ministers, doctors, and school teachers.

he land into large commercial farms.[26] Even had the landlords esired to emulate the results achieved elsewhere, it is doubtful hat the persistent demands of the steadily increasing numbers f people for a share in the land could have been disregarded t this time. On Skye, as in most of the Western Highlands, he arable of the old farms was simply divided into as many qual shares of five to ten acres as possible. The grazing ands continued to be held in common and used under a system f stinted rights, and the arable was used communally between arvesting and spring ploughing. Lacking any legally recognized raditional or written right to the land, the people remained enants at will, enjoying hereditary tenure as long as they ad the good will of the landlord and, especially, that of his actor.

The people, then, were each given a precisely equal share, hich was often assigned by lot, in the old farms. Just as the ld infield and outfield system had functioned to provide each an with a bit of the worst and a bit of the best soil, the hares were set out in long strips. After the former joint-enants and subtenants received their fixed allotments, they oved their dwellings from the small hamlet-like clusters near he center of each farm to the individual plots. The township ettlement patterns, as we now know it, came into existence.

The effects of this rather superficial reorganization

---

arried sons into the house. Family solidarity was strengthened 175* 178* 427 593 591
each cottage came to be the home of a three generation family
roup. Adjacent crofts, more likely than not, were bound to-
ether in a network of collateral and affinal relatives. Two
the underlying principles of the clan were reaffirmed. The
ather was the source of the means of subsistence, and the
trong, almost sentimental, attachment for the land was an
xpression of the sentimental tie of kinship. Economically,
ubdivision was paving the way for disaster. It forced a
teadily increasing dependence on the potato; the people
uld not grow enough grain for household needs.

Commercialization means more than the conversion of land 175* 178* 361 621
a source of monetary revenue and the supplanting of customary
sages by contractual relationships. For its fulfillment it
equires the growth of villages and the development of a di-
sion of labor which allows specialization. Events in England
d Lowland Scotland, could not have left the island untouched.
e first rumbles of the Industrial Revolution had been followed
a vigorous growth of urban centers. The mass movements of
e rural population into these communities, as their rights
the land were disregarded and the people were driven off
made into wage laborers, were creating a new cultural
ttern. The benefits of the towns to the nation had the
pearance of being unlimited. It was inevitable that villages
ould be advocated, planned, and fostered on Skye, the most
pulous of all the Hebrides. It was no less inevitable that
llages should have limited attraction for the Sgiathanach.

Period IV (1886 - 1953)

175 The year 1886 is a chronological hinge in the culture history of the Sgiathanach. The British government began to play a positive, continuing role in local affairs for the first time in history. Hitherto, the interest of the government had been confined to proscriptions, recruiting, and taxation, occasionally interspersed with relief for the destitute. With the change in policy, we enter the realm of the contemporary culture; therefore, all I wish to do is indicate the direction the processes, which we have been following, took under the national attempt to rechannel them. The major trends to be noted are two. The proprietors' influence in determining how the land was to be used was curtailed, and, with a redirection of the commercialization of the estates, many of the traits and complexes characteristic of the traditional culture assumed renewed importance.

Since the Napier Commission had been mainly concerned with the disregard of the customary rights of the crofters and their inconsiderate treatment by proprietors, the recommendations which were presented to Parliament sought a land reformation within the framework of local custom.[79] Unlike the Continental Commune, a local, self-governing body, the Highland township had never legally existed. Elsewhere in Scotland this communal agricultural unit had been replaced by individual farm occupancy, just as had been happening on Skye. The major proposal was a retrogressive step; the township system should be given legal

irs; the interpretation is my own responsibility.

The substantial tenants had their own private tutors, but the people, in general, received only informal schooling until well into the nineteenth century when several charitable societies entered the field.[85] All schools were essentially religious. The act of 1872, and subsequent legislation, changed the program and made education compulsory for all. It was not until the end of the century that adequate facilities were available and the system began to function, with the beginning of free education.[86]

175* 178* 658 [71

Informal control within the community was augmented by the establishment of a rural police force, with headquarters in Portree and local stations at convenient points around the Island. Health and welfare became a responsibility of the state. A regional medical plan provided doctor's care and hospital facilities for all regardless of means. Old age pensions were granted to the elderly. Later, the scope of assistance for the infirm, aged, and the poor, and the unemployed was increased. Thus, the government continually usurped many of the functions of the family and the local group, especially following the abolition of the parish council in 1929.[87] Although the parish councils, or the still older parochial boards, had no legislative powers, they did handle welfare and, until 1918, education. Now, in 1929, a Skye

Claigan, for example, the crofters felt they would do 236
tter with private flocks than with a club stock. Although 476
ch man now has his own sheep on the township grazing, they 178
e cared for like any club stock. The four crofters are
eded for success at the dippings, marking, and shearing,
d they are always at the fank on these occasions. In larger 236
wnships, those with ten or more holdings, the need for all 476
e crofters to help out at the fank is less pressing while 621
e felt need for auxiliary employment is stronger. In con- 632
quence, the cooperative work habits run less smoothly. In
attempt at adjustment, many townships have resorted to
ying the share holders for their labor from the profits.
the best of my knowledge, only one township has witnessed
e total suppression of the cooperative spirit; all the
ofters are too busy with full-time employment to bother with
e steadily declining sheep stock.

Nevertheless, it has become commonplace for the crofters [829]
complain of at least one individual in the township who
es not pull his full share, someone who is "trying to
botage the whole thing."

Independence is a personality trait, but it is best 157
scribed as a steadfast determination not to conform for the 476
re sake of conformity when an innovation handed down from 829
e outside commercial world is at stake. The old ways are the 888
st ways, even if only the old men think so. It is the old
n who uphold the traditional practices. As long as they do,
d as long as unanimous consent is required for any change,

nd Morley, loc. cit.

The maximum is harder to determine, economically. There is some limit to the number who can stock a common grazing with individually owned stock without becoming involved in complicated entanglements over right, obligations, and questions of ownership. The few townships containing more than thirty crofts in the Western Highlands (91 out of 957),[13] and the negligible number on Skye (only ten), suggests that less than thirty holdings per township, no matter how much fertile land surrounds the cluster, has been found to be the optimum. Most of the townships contain between five and twenty crofts. The fact that many large, adjacent townships, such as Bornesketaig in Kilmuir and all those in the Braes, are losing their population is a reflection of a many faceted condition we have been exploring throughout this chapter--the vast majority of the crofts are too small to provide an adequate livelihood. One of the primary causes for this state of affairs would seem to be overcrowding on the land.

632
621
233
476

Congestion. In almost all but the recently established or replanned townships, congestion is a legacy of the increase in population during the first century of the modern period, often aggravated by coerced subdivision during the period of the "Clearances." Because of this, over-all statistics have little meaning. It is quite correct to say there are some 2300 crofts on Skye and approximately 2200 crofters, but this does not mean each family has a croft to itself. To take

*175 District Council was established, but the only functions left
*178 to the Islanders were such minor ones as providing recreation
657 grounds and maintaining footpaths. Today the members of the
621 Council can only make the local needs known to the county council and carry out the functions of the county council.

*175 In more recent years the functions of the county and
*178 national governments have increased still more. Government
657 employees have multiplied. After the Second World War, the
[36] county became a landlord, building subsidized housing. Since
[361] the county has built these houses at Portree and at a few centers such as Broadford, Uig, and Dunvegan, where the police have their stations, they are still persisting in the attempt to
[49] bring villages to the island. Roads have become the concern of the county. Within this period, then, the crofter became dependent on the county and national government for the satis-
[181] faction of many of his needs. Although he resents authority, he has not shown any resentment at the continual encroachment of the government's services. To him the government is a "rich man" who has bestowed many favors and may be asked to bestow a few more, like electricity and plumbing.

*178 Like European peasants in general, the Skye crofters
181 have lost three important things: isolation, political independence, and self-sufficiency. At the same time, they have retained a good deal of their former identity, a continuity of culture, and an attachment to the land and to the traditional way of life. The culture has been modified by adaption to the higher socio-cultural organization, especially in material

share similar social attitudes and a distinctive way of life.[27] The investigator can understand the society with greater ease once he can equate the differing cultural expressions with the sense of status.

Ascribed status continues to be important in Portree, at least in stratifying the old Skye families. On the fringes of the village there are a few part-time crofters or tradesmen who keep some stock and grow a little grain and few potatoes. These men and their families as well as the crofters from the hinterland find their place in the village society through clique groups, in particular those based upon kinship and "friendship." Several of the county families reside in the village and, with the landed gentry who continue to live on their estates, take an active part in village life.

Between the two poles there is a large intermediate group. Their occupations range from the professions, including doctors, ministers, teachers, and lawyers; through employees of the national and county gouvernments, including estate factors, policemen, office managers, and clerks; to shopkeepers, tradesmen, truck drivers, and laborers. Elsewhere in Great Britain these people would fall into the middle and working classes.[28] On Skye such stratification is unimportant. If we cannot use the British scheme, we certainly cannot employ the American system developed by Warner.[29]

a question about a certain man I was told: "I can't help you on that. Whenever I go into a shop or meet them on the street, they change their conversation." Another told me I should ask the doctor, "He's the one who really knows their problems."

Summary

The society of the Sgiathanach reveals additional evidence for cultural continuity. In family structure, both nuclear and extended, the patrilineal emphasis has been preserved. Even though both suffer from chronic instability and the extended family has become rather amorphous, kinship remains an important regulator of interpersonal relationships. It involves obligations and privileges which few take lightly. Within the social units based on territory, the township and neighborhood status continues to be ascribed on the basis of age, sex, and kinship. Women have remained socially inferior to the men. As the father controls his family, the old men of the township and neighborhood exercise a power over their juniors to force conformity to traditional ways. Fundamentally, all of the same age and sex are equals. This status equality underlies the entire social structure. There is no room for a leader. When essential, the newcomer, normally the teacher or minister, and the landed gentry are expected to assume the role of leadership. In the village the emphasis on ascribed status for the Sgiathanach is also important. The majority of achieved statuses are left to be filled by newcomers. In the community, as a whole, beyond the polarity of the landed gentry and the

bove the settled area, the hill. In its spatial existence, he township is normally bounded at either extremity by one or ore similar clusters of homes and patches of land.

As it exists in space, so it exists in time. Allowing or the removal of the population during the "Clearances" nd for a certain amount of arbitrariness on the part of the overnment commissioners responsible for replanning during the ast fifty odd years, the majority of the townships are de-ended from the old farms on which the clansmen lived as tenants nd subtenants. On the rent rolls and in local traditions, he townships bear the names of these long forgotten farms. he functions of the township include the provision of a means f livelihood and systematic arrangement of social relation-hips. Both functions are made possible by the formal structure nd are facilitated by the informal organization of the members.

The next significant social unit is the neighborhood. his is not the neighborhood of current American sociological nd anthropological usage; it is the Old World open country eighborhood. As such, it corresponds to Murdock's community, the maximal group of persons who normally reside together n face to face association,"[1] and differs from MacIver's efinition of neighborhood, "the first grouping beyond the amily which has social significance and which is conscious f some local unity."[2] MacIver's simplest community, as he

50 respectively.[6]

Unlike the township, the neighborhood typically has no ormal organization and is not necessarily a cooperating, conomic unit. Always, of course, there is a consciousness f common interest. In the case of Glendale this is spiritually ymbolized by the church and economically, by the large club arm in which all the owner-occupiers have a share. In Kilmuir here are two churches, standing close together, and the crofters ave a common economic focus in the drained loch which all use n equal shares for meadowland. There is also a crofters' club. urther symbolization of their common interest is provided y traditions, memories of notable personages and events eculiar to themselves. Always, the consciousness of common nterest is expressed by a feeling of superiority over the embers of other neighborhoods.
